T. M. (Act of 1946)	233—No.	505,324 to No.	505,556, inclusive
T. M. Renewals	52		
Reissues	5—No.	23,068 to No.	23,072, inclusive
Plant Patents	1—No.	818	
Patents	697—No.	2,457,797 to No.	2,458,493, inclusive
Designs	78—No.	152,235 to No.	152,312, inclusive
Total	1,138		

Patents expiring: Patent Numbers 1,839,190 to 1,840,295, inclusive, issued January 5, 1932, expire January 5, 1949

Condition of Applications Under Examination at Close of Business Dec. 17, 1948

Total number of patent applications awaiting action, 153,948. Date of oldest new application, December 5, 1946; date of oldest amended application, April 18, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	7-2-47	5-15-47	3634
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	3-25-47	11-26-46	3026
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	3-20-48	3-23-48	1255
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	4-11-47	3-12-47	4138
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	7-8-47	1-4-47	1652
6. SURLE, H., Carbon Chemistry (part)	2-25-48	11-12-47	1949
7. HANLIN, GEORGE, Optics; Photographic Apparatus	3-18-48	12-26-47	1646
8. LEWIS, R. O., Beds; Chairs, Seats; Racks, Cabinets; Miscellaneous Furniture	3-24-47	1-17-47	4476
9. BENSON, E. B., Pumps and Fans; Fluid and Fluid-Current Motors	7-11-47	2-24-47	2470
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Peizo-electric Crystals.	3-22-48	1-24-48	1533
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	4-5-48	4-5-48	811
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	12-31-47	10-11-46	2231
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	12-5-46	12-23-46	2403
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	2-16-48	12-5-47	1341
15. HENKIN, B. Plastics; Plastic Block and Earthenware Apparatus; Glass	9-16-47	6-19-47	1923
16. LOVEWELL, N. N., Television, Telephony	3-23-48	8-26-47	1646
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Assorting or Folding; Sheet or Web Feeding.	6-10-47	11-3-46	2136
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	10-1-47	12-19-46	2122
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	12-29-47	3-17-47	1861
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Leaks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	6-22-47	3-20-47	2089
21. MADER, R. C., Textiles	12-31-47	10-27-47	1240
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices (part)	1-2-48	5-11-47	1723
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	2-5-48	12-21-46	1184
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	11-14-47	11-5-47	2803
25. BLAKELY, O. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	3-22-48	5-5-47	1746
26. YOUNG, R. R., Electricity—Generation, Motive Power; Transmission to Vehicles; Elevators	9-17-47	3-7-47	1263
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	7-22-47	2-12-47	2667
28. BRAUNER, R. H., (Acting), Internal-Combustion Engine (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Land Vehicles, Dumping, Wheel Substitutes; Vehicle Fenders.	2-18-48	12-5-47	918
29. SKLAREN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	4-21-47	4-17-47	3204
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating and Heating Systems; Illuminating Burners; Ammunition and Explosive Devices.	3-17-48	1-26-48	1689
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	4-10-48	4-8-48	2079
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	5-18-47	11-6-46	3234
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	4-10-47	1-14-47	3668
34. SAPERSTEIN, S., Railways; Track Sanders; Signals and Indicators	3-11-47	2-3-47	1368
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	2-18-47	12-31-46	3472
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	1-3-47	12-6-46	2004
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	3-5-48	5-16-47	1361
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	10-6-47	8-25-47	1542
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	3-16-47	9-9-46	2094
40. DRUMMOND, E. J., Receptacles (part); Packages	2-12-48	3-3-47	3273
41. GURLEY, R. B., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	2-2-48	11-20-46	2267
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	4-24-48	3-17-48	1169
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	3-20-48	1-21-48	1192
44. HARVEY, L. P., Refrigeration; Preserving	12-19-46	10-15-46	1019
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	7-1-47	1-8-47	3626
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	9-29-47	1-16-47	1886

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 153,948. Date of oldest new application, December 5, 1946; date of oldest amended application, April 18, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application awaiting Office action	Oldest amended application awaiting Office action	Applications awaiting action
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	2-24-48	9-4-47	2190
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	3-24-48	7-1-47	1473
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	10-24-47	10-15-47	1522
50. LEVIN, SAMUEL, Synthetic Resins	4-2-48	12-11-47	2142
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	3-20-47	12-13-47	1647
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	11-17-47	1-13-47	3363
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable	6-27-47	11-14-46	3667
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	3-19-48	8-18-47	1680
55. HERTZ, M., Artificial Body Members; Dentistry; Surgery; Toilet	12-18-47	11-4-47	1884
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making	4-15-48	1-24-48	903
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys.	7-10-47	2-7-47	3546
58. DOWELL, E. F., Abrading Processes and Apparatus; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	1-3-47	4-1-47	1973
59. SHEPARD, P. W., Inorganic Chemistry; Fertilizers; Gas, Heating and Illuminating; Preserving	10-30-47	9-26-46	1593
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	4-17-48	11-15-47	1276
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	2-10-47	9-9-46	3793
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	1-5-48	4-25-47	1686
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Carbon Chemistry (part)	2-5-48	9-23-47	1840
64. NASH, P. M., Compositions—Coating or Plastic (part); Abrasive Tool Making Processes and Materials; Fuel and Miscellaneous	5-18-48	5-18-48	1552
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	3-22-48	9-23-47	2296
66. LISANN, I., Geometrical Instruments	9-19-47	4-18-46	2027
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	2-3-48	7-19-47	1974
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	5-3-48	11-13-47	1503
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording: Recorders.	8-8-47	2-28-47	2130
70. BREWBINK, J. I., Chairman (Mechanical Arts); NILSON, R. G., (Electrical Arts); SPECK, J. R., (Chemical Arts)	12-24-46	10-26-46	975
DESIGNS: BREHM, G. L.	4-14-47	4-8-48	7275

Total number of trade-mark applications awaiting action (including renewals and republications), 36,670. Date of oldest new application, Oct. 10, 1947; date of oldest amended application, Apr. 17, 1948.

TRADE-MARK EXAMINING DIVISIONS, EXAMINERS AND TRADE-MARK CLASSES UNDER EXAMINATION	Oldest new application action by applicant awaiting Office action	Oldest amended application action by applicant awaiting Office action	Applications awaiting action
1. BARBOUR, H. E., Classes 1, 4, 5, 6 (part), 12, 31, 44	1-15-48	8-3-48	3145
2. KASCHUB, H. E., Classes 2, 15, 30, 33, 36, 46, 50	10-30-47	6-22-48	5570
3. SUMMERS, G. S., Classes 13, 21, 23, 26	10-10-47	7-6-48	5031
4. BARR, E., Classes 3, 7, 39, 40, 41, 42, 43	10-28-47	5-14-48	4618
5. RACKNOR, M., Classes 8, 17, 20, 24, 25, 32, 37, 38, 45, 47, 48, 49	12-4-47	6-4-48	3587
6. STERBA, J. R., Classes 6 (part), 9, 10, 11, 14, 22, 27, 28, 29, 34, 35	2-18-48	10-9-48	3185
7. KEYS, C. M., Classes 16, 19, 55	12-6-47	4-17-48	2160
8. GEDIMAN, H. W. (Renewals, Republications) All Classes	1-2-48	11-16-48	137
	1-2-48	11-16-48	8028

NOTICES

Errata

In the notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration Number 355,860 appearing in the OFFICIAL GAZETTE of November 16, 1948, page 632, for "Republished by registrant," read *Republished by General Chemical Company, now by merger Allied Chemical & Dye Corporation, New York, New York, a corporation of New York.*

In the notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration Number 355,861 appearing in the OFFICIAL GAZETTE of November 16, 1948, page 633, for "Republished by registrant," read *Republished by General Chemical Company, now by merger Allied Chemical & Dye Corporation, New York, New York, a corporation of New York.*

In the notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration Number 354,571 appearing in the OFFICIAL GAZETTE of November 16, 1948, page 637, for "Republished by registrant," read *Republished by General Chemical Company, now by merger Allied Chemical & Dye Corporation, New York, New York, a corporation of New York.*

In the notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration Number 354,572 appearing in the OFFICIAL GAZETTE of November 16, 1948, page 637, for "Republished by registrant," read *Republished by General Chemical Company, now by merger Allied Chemical & Dye Corporation, New York, New York, a corporation of New York.*

In the notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 431,500, appearing in the OFFICIAL GAZETTE of Oct. 12, 1948, page 332, for, "Registered June 22, 1947," read, *Registered July 22, 1947.*

In the notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 50,335, appearing in the OFFICIAL GAZETTE of Oct. 26, 1948, page 925, for "A Corporation of California," read, *A Corporation of New York.*

The notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 225,425, registered Mar. 15, 1927, Class 45, Orange Smile Sirup Company, Inc., St. Louis, Mo., appearing in the OFFICIAL GAZETTE of May 25, 1948, page 879, was inadvertent and is vacated.

Adjudicated Patents

(D. C. Mich.) Schwarzkopf reissue patent, No. 22,073, for a hard metal tool alloy, *Held* not infringed. *American Cutting Alloys, Inc.*, v. *Carboloy Company, Inc.*, 80 F. Supp. 467; 79 USPQ 51.

(D. C. Mich.) Schwarzkopf reissue patent, No. 22,074, for method of producing a hard metal alloy, *Held* invalid. *Id.*

(D. C. Mich.) Schwarzkopf reissue patent, No. 22,166, for a hard metal alloy, *Held* not infringed. *Id.*

(D. C. Mich.) Schwarzkopf reissue patent, No. 22,207, for production of hard metal alloys, especially for tools, *Held* valid and infringed. *Id.*

Interference Notice

William Henry Dean, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Patent No. 2,438,777, granted March 30, 1948, to William Henry Dean, 18, Cleveland Ave., Darlington, County Durham, England, and the application for patent of Joseph J. Mohr, Route 1, Encinitas, Calif., and a notice of such declaration sent by registered mail to said Dean at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Dean, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

December 9, 1948.

Cancellation Notice

Les Parfums Marly, Inc., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Wolf Drug Company, 21 West Park St., Newark, N. J., to effect the cancellation of trade-mark registration of Les Parfums Marly, Inc., 610 Fifth Ave., New York, N. Y., No. 315,639, dated August 7, 1934. Regent Laboratories, Inc., New York, N. Y., has been joined as a respondent party to defend the right of registration evidenced thereby. The notice of this proceeding sent by registered mail to the said Les Parfums Marly, Inc., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Les Parfums Marly, Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

December 8, 1948.

Disclaimers

2,072,416.—*Edward C. Berndt*, Norwalk, and *Harry M. Creighton*, East Norwalk, Conn. METHOD OF IRRADIATING SUBSTANCES WITH ACTIVE RAYS. Patent dated Mar. 2, 1937. Disclaimer filed Dec. 8, 1948, by the assignee, *The E. U. V. Engineering Corporation.*

Hereby enters this disclaimer to claims 13 to 18 inclusive of said patent.

2,409,038.—*Clarence W. Hansell*, Port Jefferson, N. Y. MAGNETRON AND CIRCUIT THEREFOR. Patent dated Oct. 8, 1946. Disclaimer filed Dec. 1, 1948, by the assignee, *Radio Corporation of America.*

Hereby enters this disclaimer to claim 23 of said patent.

Vol. 618 • No. 1 Tuesday, January 4, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Classification Order No. 39

November 24, 1948

The following changes in the classification of inventions are hereby directed to take effect immediately:

ABOLISH SUBCLASSES

In *class 260, Chemistry, Carbon Compounds* (Division 50)

Synthetic resins
- 74 Halogenated aromatic compounds
- Polymerized unsaturated compounds
- 83 Polyacrylyl or polyalkacrylyl
- 84 Interpolymers
- 84.5 With diolefines or cyclo- or halo-diolefines
- 85 Polyvinyl
- 86 Interpolymers
- 86.5 With diolefines or cyclo- or halo-diolefines
- 87 From vinylcarboxylate
- 88 From vinylhalide
- 90 Polyvinyl alcohol or ether
- 91 From styrenes
- 92 From acetylenes
- 92.5 From vinylidene compounds
- 92.6 From polyene compounds
- 92.7 Halo-butadienes (e. g., chloroprene)
- 93 Diolefines (e. g., synthetic rubber)
- 94 From mono-olefines
- 94.5 With sulfoxy compound

CHANGE SUBCLASS TITLES

In *class 74, Machine Elements and Mechanisms*, change the title of subclass 10 to read:

10 Dial shaft operators

In *class 179, Telephony*, change the title of subclass 2.5 to read:

Systems
- Composite
- 2.5 Superaudible telephone carrier

In *class 241, Solid Material Comminution or Disintegration*, change the title of subclass 101 to read:

Apparatus
- 101 Combined or convertible

In *class 260, Chemistry, Carbon Compounds*, change the title of subclass 79 to read:

Synthetic resins
- 79 Sulfur-containing

ESTABLISH SUBCLASSES

In *class 23, Chemistry* (Division 70)

G. A. GORBCKI, *Classifier*

Compounds
- 14.5 Of actinide series elements

In *class 74, Machine Elements and Mechanisms* (Division 12)

JOHN W. CHURCHILL, *Classifier*

Dial shaft operators
- 10.1 Preselected position
- 10.15 Step by step
- 10.2 Rotatable stop and projectable abutment
- 10.22 Digital dial type
- 10.27 Plural operator
- 10.29 Cam and follower
- 10.31 Adjustable cam
- 10.33 Sliding operator
- 10.35 Adjustable follower
- 10.37 Sliding operator
- 10.39 Rack and pinion
- 10.41 With detent or clicker
- 10.45 Plural shafts
- 10.5 Plural speed
- 10.52 Planetary
- 10.54 Separate operators
- 10.6 Cam and follower
- 10.7 Tensioned flexible operator
- 10.8 Gear drive
- 10.85 Worm or screw
- 10.9 Lever and linkage drive

In *class 154, Laminated Fabric and Analogous Manufactures* (Division 67)

J. S. BAILEY, *Classifier*

Miscellaneous processes
- Utilizing electrical or radiant energy
- 126.5 High frequency heating

In *class 260, Chemistry, Carbon Compounds* (Division 50)

HAROLD PFEIFFER, *Classifier*

Synthetic resins
- 2.3 Reclaiming
- 2.5 Pore-forming
- 45.7 With preservative (to follow subclass 45.5)
- 45.75 Heavy metal containing compounds
- 45.8 Heterocyclic
- 45.85 Carboxylic acid, salt or ester
- 45.9 Nitrogen containing compounds
- 45.95 Alcohols or phenolic compounds
- Sulfur-containing
- 79.1 Alkylene halide-polysulfide type reaction products
- 79.3 Sulfoxy compound reaction products (e. g., olefin SO_2 reaction products)
- 79.5 From polymerized unsaturated compounds
- 79.7 From S-containing monomeric compounds
- Polymerized unsaturated compounds
- 80.3 Interpolymers
- 80.5 Three or more components
- 80.7 Conjugated diolefine, cyclo- or halo-diolefine containing
- 82.1 From conjugated diolefines or cyclo-diolefines
- 82.3 With nitriles
- 82.5 With heavy metal containing polymerization aid
- 82.7 With S-containing polymerization aid
- 83.1 With N-containing polymerization aid

MISCELLANEOUS CHANGES

On page 179–1, cancel the unnumbered subclass title "Superaudible" following subclass 2.

On page 287–1, the unnumbered subclass title "Miscellaneous" should be numbered *1*.

On page 318–3, in subclass 205, change "6" to: *60*.

PRINCIPAL DISPOSITION OF ART FROM ABOLISHED SUBCLASSES

Abolished Class	Abolished Subclass	Disposition Class	Disposition Subclass
260	74	260	91.5, 640
260	83–94.5	260	79+, 80+

IN THE DEFINITIONS

5, Beds

in subclass 345, cancel (3) Note, and add:

Search Class—
- 9—BOATS AND BUOYS, subclass 13, for bed mattresses especially fitted to be converted to a life raft or life buoy. See the subclass definition for the line between these subclasses.

9, Boats and Buoys

cancel the definition of subclass 13, and substitute:

13. Buoyant mattresses or cushions for supporting a person in the water, having special features to convert the article into a life raft or having special shapes or attachments to enable the mattress or cushion to conform to or secure a body.

(1) Note.—The special features included here are, for example, flaps or rims by which the device is given the character of a boat, fastening means by which several mattresses may be linked together to form one large raft or fittings for oars.

Search Class—
- 5—BEDS, subclass 345+, for mattresses and cushions which do not have the special characteristics recited above, even though they are buoyant, waterproof or disclosed or claimed as life preservers, or have handles or straps for carrying which may also be held onto by persons in the water.

23, Chemistry

establish the following subclass definition:

14.5. Subject matter under subclass 14 including processes for the preparation or treatment of compounds containing an element of the actinide series, processes for obtaining compounds or concentrates of these elements from source material involving chemical action, and the resulting products.

(1) Note.—Elements of the actinide series are those having an atomic number of 89 or higher.

Search Class—
- 75—METALLURGY, subclass 84, for pyrometallurgical processes for obtaining actinide series elements in the metallic state.
- 252—COMPOSITIONS, subclass 410+, for catalysts and absorbents containing an actinide series element and processes for the preparation thereof.

41, Ornamentation

cancel the definition and note of subclass 6.

57, Textiles, Spinning, Twisting and Twining

in subclass 168, cancel the word "elastic" and after "strands" insert: *of elastomeric material*.

73, Measuring and Testing

in subclass 118, add:

Search Class—
- 178—ELECTRICITY, GENERAL APPLICATIONS, subclass 183, where the test of the auxiliary unit is electrical in nature; and subclass 381 where electrical timing is involved.

in subclass 206, insert:

Search this class, subclass—
- 183—for differential pressure type meters having integrating means and forming ship log navigating devices.

74, Machine Elements and Mechanisms

cancel the definition and notes of subclass 10 and substitute:

10. Assemblies particularly adapted for mechanically rotating one or more shafts into desired angular positions.

(1) Note.—The art, for the most part, is directed to the positioning of radio tuning shafts having indicating means and/or variable condensers associated therewith for adjustment.

(2) Note.—Electrically actuated dial operators are not here, even though claimed in combination with mechanical operators for these subclasses. They will be found in class 192, CLUTCHES AND POWER-STOP CONTROL, subclass 138+, and in class 318, ELECTRICITY, MOTIVE POWER SYSTEMS, appropriate subclasses (including particularly subclass 18+ which has the follow-up type motor controls). The line between these two classes is stated in the class definition of class 318 at II(8e, and under the reference to class 192 under "Search Classes" at the end of the class (318) definition.

(3) Note.—These subclasses will take the recitation of an indicator, a condenser, or a tuner by name only. Whenever specific details of the indicator, condenser or tuner are recited in detail, the device will be classified in class 116, SIGNALS AND INDICATORS, subclass 124+ (and particularly subclass 124.1+), class 175, ELECTRICITY, GENERAL APPLICATIONS, subclass 41.5, or class 250, RADIANT ENERGY, subclass 40, respectively. Where the operator is merely a screw gearing and the tuner is recited by name only, the search should be continued in this class (74) subclass 424.8.

Search this class, subclass—
- 10–110—inclusive, for non-intermittent type mechanical movements.
- 111+—for intermittent grip type mechanical movements.
- 120+—for gearing.
- 424.8—for screw gearing, and see (3) Note, supra.
- 469+—for control lever and linkage systems.
- 536—for stops for levers.
- 553—for knob or dial operators.

Search Class—
- 116—SIGNALS AND INDICATORS, subclass 124+ and particularly subclass 124.1+, for similar devices combined with specific details of means to indicate the rotary position of the shaft, and see (3) Note, supra.
- 175—ELECTRICITY, GENERAL APPLICATIONS, subclass 41.5 for specific variable condenser structure combined with operators therefor, and see (3) Note, supra.
- 192—CLUTCHES AND POWER-STOP CONTROL, subclass 138+ for power-stop limit controls and see (2) Note, supra.
- 235—REGISTERS, appropriate subclasses, for related operating devices for registers and particularly subclass 12+ for those which are keyboard operated.
- 250—RADIANT ENERGY, subclass 20+, for radio receivers, including dial operator structure; and subclass 40 for dial operators combined with specific details of tuners, and see (3) Note, supra.
- 318—ELECTRICITY, MOTIVE POWER SYSTEMS, appropriate subclasses for controlled electric motor operators, particularly subclass 18+ for follow-up type operators, and see (2) Note, supra.

establish the following subclass definitions:

10.1. Devices under subclass 10 having interengaging means by which the rotation of the shaft may be halted at a plurality of predetermined angular positions.

10.15. Devices under subclass 10.1 having means interposed between a single initiator and the shaft for rotating the shaft through a series of successive predetermined positions, the rotation of the shaft being halted at each such successive position.

Search this class, subclass—
- 126+—for mechanical movements for changing reciprocating motion to intermittent unidirectional motion, and particularly subclass 142 for lever actuators.

10.2. Devices under subclass 10.1 having a rotatable stop element for halting shaft movement and a movable abutment for the stop element, and means for moving the abutment into a position in which the stop element may contact the abutment.

(1) Note.—Electric motor control of the rotatable stop elements and/or the movable abutments will be found in class 192, CLUTCHES AND POWER-STOP CONTROL, subclasses 138+ and particularly subclass 142; and the appropriate subclasses of class 318, ELECTRICITY, MOTIVE POWER SYSTEMS, particularly subclass 18+ for follow-up type systems; see (2) Note to this class (74), subclass 10.

Search Class—
- 192—CLUTCHES AND POWER-STOP CONTROL, subclass 138+ for power-stop limit controls and see (1) Note.
- 318—ELECTRICITY, MOTIVE POWER SYSTEMS, appropriate subclasses for electric motor control, and particularly subclass 18+ for follow-up type, and see (1) Note.

10.22. Devices under subclass 10.1 in which the shaft operator is a dial and is provided with a series of single-finger-receiving openings.

Search Class—
161—TIME-CONTROLLING MECHANISM, subclass 1, for combined digital dial type operators and timers.
179—TELEPHONY, subclass 90, for telephone type dial operators.
200—ELECTRICITY, CIRCUIT MAKERS AND BREAKERS, subclass 11, for dial operated switches.

10.27. Devices under subclass 10.1 having more than one operator for controlling the shaft.

Search this class, subclass—
10.54—for separate operators for each of a plurality of speed drives of the non-selective type dial operators.
389+—for plural input single output gearing.
407—for alternate manual and power operators.
479—for plural input single output lever and linkage systems.

Search Class—
235—REGISTERS, appropriate subclasses for related operating devices for registers and particularly subclass 12+ for those which are keyboard operated.

10.29. Devices under subclass 10.27 wherein a cam and follower is interposed between the operator and the shaft.

Search this class, subclass—
10.6—for non-selective cam and follower type dial operators.
567+—for cam and/or follower structure per se.

10.31. Devices under subclass 10.29 wherein the cam is adjustable.

Search this class, subclass—
566—for adjustable cams per se.

10.33. Devices under subclass 10.31 where the cam is carried by a sliding operator.

10.35. Devices under subclass 10.29 wherein the follower is adjustable.

Search this class, subclass—
569—for followers per se.

10.37. Devices under subclass 10.35 where the cam is carried by a sliding operator.

10.39. Devices under subclass 10.27 wherein a rack and pinion gearing is interposed between at least one of the operators and the shaft.

Search this class, subclass—
425—for rack and pinion gearing per se.

10.41. Devices under subclass 10.1 in which a detent or click device tends to hold the shaft in the predetermined positions.

Search this class, subclass—
527+—for detents per se.

10.45. Devices under subclass 10 in which a plurality of shafts are rotated by a single operator.

Search this class, subclass—
389+—for single input plural output gearing.
471+—for single input plural output lever and linkage systems.

10.5. Devices under subclass 10 in which the shaft may be rotated at a plurality of speeds.
(1) Note.—In most cases, a fast speed is used for coarse rotational adjustment and a slow speed for fine adjustment.

Search this class, subclass—
336+—for interchangeably locked non-planetary gearing.

10.52. Devices under subclass 10.5 wherein a planetary gearing is interposed between the operator and the shaft.

Search this class, subclass—
350+—for planetary gearing per se.

10.54. Devices under subclass 10.5 having separate operators for each speed.

Search this class, subclass—
10.52—for separate operators for planetary gearing.
389+—for plural input single output non-planetary type gearing.

10.6. Devices under subclass 10 wherein a cam and follower is interposed between the operator and the shaft.

Search this class, subclass—
10.39+—for selective type cam and follower dial operators.
567+—for cam and/or follower structure per se.

10.7 Devices under subclass 10 wherein the operator includes a flexible strand operating in tension only, usually in the nature of a belt and pulley drive, although the strand may be anchored to one of the pulleys.

Search this class, subclass—
216.5+—for belt and pulley drives per se.

10.8. Devices under subclass 10 wherein gearing is interposed between the operator and the shaft.

Search this class, subclass—
389+—for gearing per se.

10.85. Devices under subclass 10.8 where the gearing is of the worm or screw type.

Search this class, subclass—
424.8—for screw type gearing per se.
425—for worm type gearing per se.

10.9. Devices under subclass 10 wherein a lever and linkage system is interposed between the operator and the shaft.

Search this class, subclass—
469+—for lever and linkage systems per se.

75, Metallurgy

in subclass 1, under (3) Note, change "15" to: *14.5*

cancel (4) Note, and substitute:
(4) Note.—See class 241, SOLID MATERIAL COMMINUTION OR DISINTEGRATION, for grinding and pulverizing of ores, and see the line note between this class (75) and class 241 under section 12 of the class definition of class 241.

in subclass 84, under the note, change "subclass 15, and indented subclasses" to: *subclasses 14.5–24*

116, Signals and Indicators

in subclass 124.1 add:

Search Class—
74—MACHINE ELEMENTS AND MECHANISMS, subclass 10+, for mechanical dial operators and see (3) Note to the definition of subclass 10 for the line between these two classes.

123, Internal Combustion Engines

in subclass 171, under (2) Note, add:
The mere inclusion of the cylinder head does not exclude the said devices from class 257.

128, Surgery

in subclass 1.1, in (1) Note, change "subclass 15 and indented subclasses" to: *subclasses 14.5–24*

154, Laminated Fabric and Analogous Manufactures

in subclass 2.77, in the note, after "polyvinyl resins per se" cancel the rest of the note, and substitute:
and for polyacryiyl resins per se see the appropriate subclass under subclass 80+.

establish the following subclass definition:
126.5. Processes under subclass 126 which include heating by use of a high frequency electrical current.
(1) Note.—The frequencies usually employed in processes classified in this subclass are of the order of one megacycle and higher.

Search Class—
219—ELECTRIC HEATING, subclass 47 for this type of heating per se.

167, Medicines, Poisons, and Cosmetics

in subclass 51, in (1) Note, change "subclass 15 and indented subclasses" to: *subclasses 14.5–24*.

192, Clutches and Power-Stop Control

in subclass 138, under "Search Classes" insert:
74—MACHINE ELEMENTS AND MECHANISMS, subclass 10+, for mechanical dial operators and see (2) Note to the definition of subclass 10 for the line between these two classes.

227, Heating Systems

the subclass definition following subclass 72, should be numbered 73.

241, Solid Material Comminution or Disintegration

in subclass 101, before the period insert:
, or in which parts are relatively movable or interchangeable in order to convert the apparatus to another apparatus either within or without the class definition

248, Supports

in the class definition in (1) Note, change "13" to: *14*

and insert:
(46.5) Note.—For supports for rock-drilling machines, see class 255, EARTH BORING, subclass 51+.

in subclass 2, cancel (7) Note, and substitute:
(7) Note.—For supports for rock-drilling machines, see class 255, EARTH BORING, subclass 51 and indented subclasses.

250, Radiant Energy

cancel the definitions and notes of subclasses 1.50 to 1.76, and 11,

in subclass 20, under "(2) Search Classes" insert:
74—MACHINE ELEMENTS AND MECHANISMS, subclass 10+, for mechanical dial operators, and see the notes thereto for the electrical type.

in subclass 40, under "Search Class" insert:
74—MACHINE ELEMENTS AND MECHANISMS, subclass 10+, for mechanical dial operators, and see the notes thereto for the electrical type.

252, Compositions

in subclass 301.1, under "Search Class" in the reference to class 23, change "subclass 15 and indented subclasses" to: *subclasses 14.5–24*.

260, Chemistry, Carbon Compounds

establish the following subclass definitions:
2.3 Processes under subclass 2 directed to the reclaiming of waste synthetic resin material and the products resulting therefrom.

Search this class, subclass—
710+—for processes of reclaiming waste or sulfurized natural rubber.

2.5. Processes under subclass 2 directed to the production of porous or cellular resinous bodies and the resulting products.

Search this class, subclass—
722+—for processes of making porous natural rubber.

45.7. Products under subclass 2 wherein the resin is mixed with a preserving agent not provided for above.

45.75. Products under subclass 45.7 wherein the preserving agent is a heavy metal containing compound.

45.8. Products under subclass 45.7 wherein the preserving agent is a heterocyclic compound.

45.85. Products under subclass 45.7 wherein the preserving agent is a carboxylic acid or a salt or ester thereof.

45.9. Products under subclass 45.7 wherein the preserving agent is a nitrogen containing compound.

Search this class, subclass—
45.8—for preserving agents which are nitrogen containing heterocyclic compounds.

45.95. Products under subclass 45.7 wherein the preserving agent is an alcohol, phenol, phenol ether or phenolate.

abolish the definition of subclass 74,

cancel the definition of subclass 79, and substitute:
79. Products under subclass 2 which contain sulfur in the molecule and are not provided for above.

establish the following subclass definitions:
79.1. Products under subclass 79 similar to those prepared by reacting organic compounds having at least one substituent which is directly attached to a carbon atom and which is capable of being split off with water-soluble polysulfides.
(1) Note.—This subclass includes, for example, products prepared by reacting ethylene dichloride or dichloroethyl formal with sodium polysulfide or by oxidising ethylene dimercaptan.

79.3. Products under subclass 79 which are reaction products of sulfoxy containing compounds and not provided for above.
(1) Note.—This subclass includes, for example, reaction products of olefines with sulfur dioxide as well as sulfonation products of polymerized ethylenically unsaturated compounds and polymers of polymerisable ethylenically unsaturated compounds containing a sulfoxy group.

Search this class, subclass—
49—for sulfoxy containing phenol resins.

79.5. Products under subclass 79 formed by the sulfurisation of polymerized ethylenically unsaturated compounds (e. g., vulcanization).

Search this class, subclass—
49—for sulfurized phenol resins.

79.7. Products under subclass 79 which are prepared by polymerising ethylenically unsaturated monomeric compounds containing sulfur, which is not part of a sulfoxy group, in the molecule.
(1) Note.—This subclass includes, for example, polymers prepared from vinyl thioacetate or vinyl octadecyl sulfide.

in subclass 80, after "resin-forming" insert: *ethylenically*

and number the Note (*1*),

add the following:
(2) Note.—The classification of these products is with few exceptions based upon the starting monomer rather than the final polymer. For example, a product produced by chlorinating a polymerised butadiene would be classified with diolefines in subclass 94.2, as a product resulting from a subsequent treatment thereof, rather than in subclass 92.3 as a halo-butadiene.
A notable exception is polyvinyl alcohol, which is not prepared from a monomer but generally by hydrolysis of polyvinyl acetate. However, products obtained by esterifying or etherifying a polyvinyl alcohol will follow the general rule and be classified together with polyvinyl alcohol.

establish the following subclass definitions:
80.3. Products under subclass 80 prepared by the interpolymerization of two or more different polymerizable unsaturated compounds not provided for above.

Search this class, subclass—
78.3—for products resulting from the interpolymerization of oxycarboxylic acids or their derivatives with polymerisable ethylenically unsaturated compounds.
78.5—for products resulting from the interpolymerization of polycarboxylic acids or their derivatives with polymerizable ethylenically unsaturated compounds.

80.5. Products under subclass 80.3 prepared by the interpolymerization of three or more different polymerizable unsaturated compounds.

80.7. Products under subclass 80.5 wherein at least one of the polymerizable unsaturated compounds is a conjugated diolefine or a cyclo- or halo-diolefine.

in subclass 81, change "80" to: *80.3*

in subclass 82, change "80" to: *80.3*

abolish the definitions and notes of subclasses 83 through 94.5,

establish the following subclass definitions:
82.1. Products under subclass 80.3 which are interpolymerization products of two different polymerizable unsaturated compounds, at least one of which is a conjugated diolefine or cyclo-diolefine.
(1) Note.—This subclass includes, for example, interpolymers of butadiene-1,3 with chloro-2-butadiene-1,3 or with p-methoxy styrene.

82.3. Products under subclass 82.1 wherein the other polymerizable unsaturated compound is a nitrile.
(1) Note.—Most of the patents in this and the indented subclasses are directed to butadiene-acrylonitrile interpolymers (Buna N or GR–A).
(2) Note.—Patents claiming products alone or product and process are placed in this subclass and crossed to the appropriate process subclass below. Where all the claims are directed to a process not specifically provided for below, the patents are placed in this subclass.

82.5. Processes under subclass 82.3 wherein polymerization is conducted in the presence of a heavy metal containing polymerization aid.
(1) Note.—The term polymerization aid is intended to include emulsifying agents, catalysts, initiators, promoters, modifiers or the like which affect the course of the polymerization or the properties of the final product, but does not include solvents, dispersing media or plasticizers which are provided for under subclass 29.1+.
(2) Note.—Most of the patents in this subclass and the following subclasses are directed to processes of emulsion polymerization.

82.7. Processes under subclass 82.3 wherein the polymerization is conducted in the presence of a sulfur-containing polymerization aid.

83.1. Processes under subclass 82.3 wherein the polymerization is conducted in the presence of a nitrogen-containing polymerization aid.

83.3. Processes under subclass 82.3 directed to the subsequent treatment of the interpolymer.
(1) Note.—This subclass includes, for example, the coagulation of the latex and its separation following polymerization as well as non-sulfur curing (i. e., vulcanization) of the polymer.

Search this class, subclass—
2.3—for the reclaiming of waste synthetic resins.
2.5—for the preparation of porous bodies from synthetic resins.
24.2—for processes of dissolving, dispersing or plasticising of synthetic resins.
45.7+—for the preservation of synthetic resins.
70.5—for the sulfurisation of polymerised unsaturated compounds.

83.5. Products under subclass 83.1 wherein the other polymerizable unsaturated compound is a carboxylic acid ester.
(1) Note.—This subclass includes, for example, interpolymers of butadiene-1,3 with methyl methacrylate or ethyl alpha-chlorocrotonate.

83.7. Products under subclass 83.1 wherein the other polymerizable unsaturated compound is an aromatic hydrocarbon.
(1) Note.—This subclass includes, for example, interpolymers of butadiene-1,3 with styrene (Buna S or GR-S) or with alpha-vinylnaphthalene.

84.1. Processes under subclass 83.7 wherein the polymerization is conducted in the presence of a heavy metal containing polymerization aid.

84.3. Processes under subclass 83.7 wherein polymerization is conducted in the presence of a sulfur-containing polymerization aid.

84.7. Processes under subclass 83.7 wherein polymerization is conducted in the presence of a nitrogen-containing polymerization aid.

85.1. Processes under subclass 83.7 directed to the subsequent treatment of the interpolymer.
(1) Note.—This subclass includes, for example, the coagulation and separation of the latex following polymerization as well as non-sulfur curing of the polymer.
(2) Note.—See subclass 83.3 for a list of subsequent treatments specifically provided for elsewhere.

85.3. Products under subclass 83.1 wherein the other polymerizable unsaturated compound is an olefinic (other than conjugated diolefinic) or acetylenic acyclic hydrocarbon.
(1) Note.—This subclass includes, for example, interpolymers of butadiene-1,3 with isobutylene or vinylacetylene.

85.5. Products under subclass 80.3 which are interpolymerization products not provided for above, prepared from two different polymerizable unsaturated compounds, at least one of which is a nitrile.
(1) Note.—This subclass includes, for example, interpolymers of acrylonitrile with vinyl chloride or styrene.
Search this class, subclass—
83.3+—for interpolymers of nitriles with conjugated diolefines or cyclo-diolefines.

85.7. Products under subclass 80.3 which are interpolymerisation products not provided for above, prepared from two different polymerisable unsaturated compounds, at least one of which is a carboxylic acid ester.
(1) Note.—This subclass includes, for example, interpolymers of vinyl acetate with crotonic acid.
Search this class, subclass—
83.5—for interpolymers of carboxylic acid esters with conjugated diolefines or cyclo-diolefines.

86.1. Products under subclass 85.7 in which the carboxylic acid ester has an unsaturated acid group.
(1) Note.—This subclass includes, for example, interpolymers of methyl acrylate with vinyl acetate or ethyl alpha-methacrylate with methyl acrylate.

86.3. Products under subclass 86.1 wherein the other polymerizable unsaturated compound is a halogenated hydrocarbon.
(1) Note.—This subclass includes, for example, interpolymers of methyl methacrylate with vinyl chloride or methyl acrylate with vinylidene chloride.

86.7. Products under subclass 86.1 wherein the other polymerizable unsaturated compound is a hydrocarbon.
(1) Note.—This subclass includes, for example, interpolymers of methyl methacrylate with styrene or vinyl methacrylate with isobutylene.

87.1. Products under subclass 85.7 wherein the other polymerizable unsaturated compound is a halogenated hydrocarbon.
(1) Note.—This subclass includes, for example, interpolymers of vinyl acetate with vinyl chloride or vinyl formate with vinyl fluoride.

87.3. Products under subclass 85.7 wherein the other polymerizable unsaturated compound is a hydrocarbon.
(1) Note.—This subclass includes, for example, interpolymers of vinyl acetate with ethylene or divinyl benzene.

87.5. Products under subclass 80.3 which are interpolymerisation products not provided for above, prepared from two different polymerisable unsaturated compounds, at least one of which is a halogenated hydrocarbon.
(1) Note.—This subclass includes, for example, interpolymers of vinyl chloride with allyl chloride or chlorotrifluoroethylene with ethylene.
Search this class, subclass—
83.1—for interpolymers of halogenated hydrocarbons with conjugated diolefines or cyclo-diolefines.

87.7. Products under subclass 87.5 wherein the halogenated hydrocarbon is a vinylidene halide (1,1-dihalo-ethylene).
(1) Note.—This subclass includes, for example, interpolymers of vinylidene chloride with styrene or divinyl ether.

88.1. Products under subclass 80.3 which are interpolymerisation products not provided for above, prepared from two different polymerisable unsaturated compounds, at least one of which is a hydrocarbon other than a conjugated diolefine or cyclo-diolefine.
(1) Note.—This subclass includes, for example, interpolymers of styrene with divinyl benzene or isobutylene with monovinyl acetylene.
Search this class, subclass—
83.7+, 85.3—for interpolymers of two hydrocarbons at least one of which is a conjugated diolefine or cyclo-diolefine.

88.3. Products under subclass 80 which are homopolymers prepared from monomeric heterocyclic compounds.
(1) Note.—This subclass includes, for example, polymers of N-vinyl pyrrolidone or 2-vinyl dioxolane.

88.5. Products under subclass 88.3 prepared from compounds containing the furane ring.
Search this class, subclass—
67—for polymerisation products of furfuraldehyde.

88.7. Products under subclass 80 which are homopolymers prepared from monomeric nitriles.
(1) Note.—This subclass includes, for example, polymers of acrylonitrile or alpha-methacrylonitrile.

89.1. Products under subclass 80 which are homopolymers prepared from monomeric carboxylic acid esters.
(1) Note.—This subclass includes, for example, polymers of vinyl acetate or allyl acetate.

89.3. Products under subclass 89.1 wherein the carboxylic acid ester has an unsaturated acid group.
(1) Note.—This subclass includes, for example, polymers of allyl crotonate or ethylene glycol dicinnamate.

89.5. Products under subclass 89.3 wherein the unsaturated acid group is derived from an acrylic, alpha-alkacrylic or halo-acrylic acid.

89.7. Products under subclass 80 which are homopolymers prepared from monomeric amines or amides.
(1) Note.—This subclass includes, for example, polymers of n-butylamino-4-butadiene-1,2 or methacrylamide.
Search this class, subclass—
77.5—for polyamides formed by reacting diisocyanates with diols or diamines.
78—for polyamides formed from aminocarboxylic acids or by reacting polycarboxylic acids with polyamines.

91.1 Products under subclass 80 which are homopolymers prepared from monomeric ethers.
(1) Note.—This subclass includes, for example, polymers of divinyl ether or vinyl isobutyl ether.

91.3. Products under subclass 80 which are homopolymeric alcohols.
(1) Note.—This subclass includes, for example, polyvinyl alcohol prepared by hydrolysing polyvinyl carboxylates as well as polymeric alcohols prepared from monomers such as allyl or methallyl alcohol.
Search this class, subclass—
66—for reaction products of polyvinyl alcohol and ketones.
73—for reaction products of polyvinyl alcohol and aldehydes.

91.5. Products under subclass 80 which are homopolymers prepared from monomeric halogenated hydrocarbons.
(1) Note.—This subclass includes, for example, polymers of 2,5-dichlorostyrene.

91.7. Products under subclass 91.5 prepared from monomeric acyclic halogenated hydrocarbons.
(1) Note.—This subclass includes, for example, polymers of chloroisobutylene or 1-chloro-2 vinyl-acetylene.

92.1. Products under subclass 91.7 prepared from monomeric fluorine-containing hydrocarbons.
(1) Note.—This subclass includes, for example, polymers of tetrafluoroethylene or vinyl fluoride.

92.3. Products under subclass 91.7 prepared from monomeric halo-butadienes other than fluoro-butadienes.

92.5 Products under subclass 91.7 prepared from monomeric vinyl halides (1-halo ethylene) other than vinyl fluoride.

93.1. Products under subclass 80 which are homopolymers prepared from monomeric hydrocarbons.
(1) Note.—This subclass includes, for example, polymers of cyclo-pentadiene.

93.3. Products under subclass 93.1 prepared from terpenes.
(1) Note.—This subclass includes, for example, polymers of beta-pinene or myrcene.

93.5. Products under subclass 93.1 prepared from monomeric aromatic hydrocarbons.
(1) Note.—This subclass includes, for example, polymers of styrene or vinylnaphthalene.

93.7. Products under subclass 93.1 prepared from monomeric acyclic hydrocarbons.
(1) Note.—This subclass includes, for example, polymers of propylene or amylene.

94.1. Products under subclass 93.7 prepared from monomeric acyclic hydrocarbons containing a triple bond between adjacent carbons atoms.
(1) Note.—This subclass includes, for example, polymers of acetylene or vinylacetylene.
Search this class, subclass—
275—for polymerisation products of acetylene which are fuels, lubricating oils or definite non-resinous hydrocarbons.

94.2. Products under subclass 93.7 prepared from monomeric diolefines.

94.3. Processes under subclass 94.2 wherein polymerization is conducted in the presence of a heavy metal containing polymerization aid.
Search this class, subclass—
83.3+, 83.7+—for similar processes of polymerising interpolymers of diolefines with polymerisable unsaturated nitriles and aromatic hydrocarbons, respectively.

94.4. Processes under subclass 94.2 wherein polymerization is conducted in the presence of a sulfur-containing polymerisation aid.

94.6. Processes under subclass 94.2 wherein polymerisation is conducted in the presence of a nitrogen-containing polymerisation aid.

94.7. Processes under subclass 94.2 directed to the subsequent treatment of the polymer.
(1) Note.—This subclass includes, for example, the coagulation and separation of the latex following polymerisation as well as non-sulfur curing of the polymer.
(2) Note.—See subclass 83.3 for a list of subsequent treatments specifically provided for elsewhere.

94.8. Products under subclass 93.7 prepared from isobutylene.

94.9. Products under subclass 93.7 prepared from ethylene.

in subclass 139, in the note, change "79" to: *79.5*
in subclass 478, in (2) Note, change "83, 84 and 85 and indented subclasses" to: *83.1, 85.7+, and 89.1+*
in subclass 649, add:
(1) Note.—This subclass also contains patents directed to resinous halogenated diphenyls.
in subclass 655, in (1) Note, change "subclass 92.7," to: *subclasses 83.3, 87.1, 87.5 and 92.3*
in subclass 656, in (1) Note, change "subclass 88" to: *subclasses 83.3, 87.1, 87.5 and 92.3*
in subclass 666, in (2) Note, change "82, 91, 92, 93 and 94" to: *80.7, 83, 83.1+, 85.7, 87.3, 88.1 and 93.1+*
in subclass 669, under "Search this class, subclass" change "85.5" to: *83.7* and change "91" to: *93.5*
in subclass 675.5, under "Search this class, subclass" change "80" to: *93.3*
in subclass 678, in (1) Note, both occurrences, change "92" to: *94.1*
in subclass 680, cancel "(1) Note."
in subclass 685, in (2) Note, change "79" to: *79.5*
in subclass 709, in (2) Note, change "subclass 93" to: *subclasses 83.3+, 83.7+ and 94.3+*

333, Electricity, Voltage Magnitude and Phase Control Systems

in the class definition, after "X. PHASE CONTROL SYSTEMS", insert:
Xa. VOLTAGE MAGNITUDE CONTROL SYSTEMS INVOLVING CIRCUIT INTERRUPTION
This class takes those systems wherein the voltage, current or power are regulated or controlled by the interruption of the circuit carrying the load current by means of an electronic tube.
This class excludes those systems wherein the voltage, current or power are regulated or controlled by the interruption of the circuit carrying the load current by circuit interrupting means other than electronic tubes (e. g., switches). For such systems, see class 171, ELECTRICITY, GENERATION, subclass 222, under Search Class, below.
in "XII. Search Class" in the reference to class 171, add:
Subclass 222 provides for systems wherein voltage, current or power magnitude is controlled or regulated by circuit interrupting means other than an electronic tube.
in subclass 18, insert:
(3) Note.—Similar subject matter is found in class 171, ELECTRICITY, GENERATION, subclass 222, wherein voltage, current or power magnitude is controlled by circuit interrupting means (e. g., switch) other than an electronic tube.
and under "Search Class" insert:
171—ELECTRICITY, GENERATION, subclass 222, for systems wherein voltage, current or power magnitude is controlled by circuit interrupting means other than an electronic tube.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Classification Order No. 40

November 30, 1948

The following transfers are hereby ordered to take effect Monday, December 6, 1948:

Class 21, Preserving, Disinfecting, and Sterilising, from Division 44 to Division 59.

Class 48, Gas, Heating and Illuminating, subclasses 1 through 60, 180 through 189, 216 and 217, from Division 56 to Division 59.

Class 51, Abrading, subclasses 293 through 309, from Division 58 to Division 64.

Class 260, Chemistry, Carbon Compounds:
Subclasses 124–235, 350–395, 429–448, and 453–462, from Division 6 to Division 63.
Subclasses 236–297.5 from Division 59 to Division 6.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Classification Order No. 41

December 2, 1948

The following transfers are hereby ordered to take effect Tuesday, December 7, 1948:

Class 250, Radiant Energy:
Subclass 41.9 from Division 54 to Division 70.
Subclass 84 from Division 70 to Division 54.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Classification Order No. 42

December 8, 1948

The following transfers are hereby ordered to take effect December 8, 1948:

Class 114, Ships, subclasses 20 to 25, inclusive, from Division 61 to Division 70.

Class 244, Aeronautics, subclass 14, from Division 22 to Division 70.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,449,874. MACHINE FOR THE AUTOMATIC COOLING AND HEATING OF BABY BOTTLES AND FOOD. Patented Sept. 21, 1948. A device by which a number of successive baby feedings may be kept cool and may be automatically heated at the proper feeding time. An insulated container has a rotary support divided into a number of refrigerated compartments for the bottles. The compartments successively move over a heating station. An automatic timing device is set for the desired feeding time and controls the step-by-step rotary motion of the support and the heating device, and sounds an alarm when the bottle has reached the predetermined temperature. (Owner) James M. Bruning, 547 Avenue E, Bayonne, N. J. Group 36—21. Reg. No. 15,901.

Pat. 2,449,544. SPARE TIRE CARRIER ATTACHMENT FOR TRUCKS. Patented Sept. 21, 1948. A device for supporting and quickly releasing spare tires for trucks. A pair of channels are attached to truck, connecting with a spaced cross bar to support spare tire. One end of cross bar is bolted to a plate connected to a pair of arms pivoted to a padlock. To release the tire, the lock is removed and the arms pushed downwardly. (Owner) D. R. Ballard, Box 922, Madera, Calif. Groups 33—59; 38—11—31. Reg. No. 15,902.

Pat. 2,449,171. GOLF BAG STAND. Patented Sept. 14, 1948. A stand for supporting a golf bag has self-opening and closing legs which spread to a supporting position by the weight of the bag when placed upright on the ground. A frame attached to the bag includes a cross strap with a depending tubular member housing a slidable leg. A pair of pivoted legs parallel to the slidable leg connect with a mechanism operable to swing the pivoted legs to open position when the weight of the bag bears on the slidable leg. When the bag is raised, the pivoted legs fold against side of bag. (Owner) Daniel Matthews, 3189 Dundas St., W., Toronto, Ontario, Canada. Group 39—49. Reg. No. 15,903.

Pat. 2,450,301. FOLDING BABY SEAT. Patented Sept. 28, 1948. Folding baby seat can be supported by back of chair, on seat of bench, etc. Front and rear uprights are connected by arm rests and side rails and support a tray and a footrest. Rear uprights have chair-back-engaging hooks at upper ends, clamps at lower ends for fastening to bench etc., and guide rails on inner edges in which a back slips. Seat, made of two sections hinged at outer edges to side rails, has a commode opening with a removable closure. To collapse, the seat sections are folded upwardly, the back folded against an arm rest, the foot rest swung against forward uprights, and the tray dropped to one side. (Owner) E. J. Quiggle, 93 West Main St., Shelby, Ohio. Group 25—11. Reg. No. 15,904.

Pat. 2,449,829. PORTABLE LOADING RAMP. Patented Sept. 21, 1948. Adjustable ramp may be used when it is desired to move hand trucks etc. from one elevation to another. It embodies a rectangular wheeled frame having a platform consisting of a single flat plate hinged on its under side (near one side) to a side of frame. Flat approach plates are hinged to opposite sides of platform. A fluid pressure-operated jack is pivotally connected to under side of platform near its center and to opposite side of wheeled frame to pivotally swing platform to various inclinations. When ramp is not in use, platform may be lowered to horizontal position and approach plates folded inwardly on top of platform. (Owner) Carl G. Agren, Star Route, Roberts, Idaho. Groups 33—81; 35—63—69. Reg. No. 15,905.

Pat. 2,436,064. EXTRACTION PRESS. Patented Feb. 17, 1948. Press is especially useful for continuously extracting oil from citrus fruit peel. It has a hollow perforated pressure screw of inverted conical shape rotatably mounted inside a similarly shaped perforated shell. The blades of the screw are of varying pitch to apply the greatest pressure to the pulp midway of the shell, and thereafter allow suitable expansion of the pulp adjacent exhaust end of shell to avoid clogging. Waste pulp is discharged through adjustable openings in base plate of press. The extracted fluid is drawn off from bottom of screw and from a receptacle surrounding shell. A built-in flushing system is provided for thoroughly cleaning press without dismantling it. (Owner) Mission Dry Corporation, 530 West Sixth St., Los Angeles, Calif. Group 35—51. Reg. No. 15,906.

Pat. 2,449,915. INDICATOR ATTACHMENT FOR PLANTERS. Patented Sept. 21, 1948. Attachment will indicate the level of seed or fertilizer in hoppers of grain drills during planting operations, as well as indicate stoppage of certain drill tubes. Consists of a follower plate with a hinged indicator rod at each end, and a pair of removable stops for the rods. Follower plate rests on top of contents of hopper, the rods extend upwardly through openings in cover of hopper, and the stops are adjustably mounted on the rods above cover of hopper. The stops limit downward movement of follower plate, and act as rain guards to deflect moisture away from the rods. Modification shown. (Owner) Herbert F. Stalder, 102 West 12th St., Harper, Kans. Group 35—22—65. Reg. No. 15,907.

Pat. 2,445,671. CONVERTIBLE FOLDER AND MANUSCRIPT COVER. Patented July 20, 1948. A letter file folder convertible to a manuscript cover has front and back covers formed from a single sheet divided by a central hinge-forming score line. Potential fasteners are formed along the hinge line and along the top of the cover by pairs of straight slits interrupted by uncut portions. The fasteners are so arranged that identical sheets of punched paper may be fastened to either group of fasteners. Diagonal scorelines are provided for folding the fasteners. (Owners) Ervin G. Johnson and Orville C. Whisman. Correspondence to Ervin G. Johnson, Tribune Tower, Oakland 12, Calif. Groups 26—91; 40. Reg. No. 15,908.

Pat. 2,342,348. TELEPHONE-CALL TALLY APPARATUS. Patented Feb. 22, 1944. A miniature telephone-call tally pad is mounted over the window of index card holder of a dial telephone. Held horizontally by a spring metal

strip. Alternate sheets of pad extend at one side beyond edges of intervening sheets and are bound tightly at that side to the backing. Intervening sheets are similarly bound at opposite side. As one sheet is torn off (perforations provided), the unbound end of next sheet is released. Sheets may bear consecutive numbers, and pad used as an advertising device. (Owner) Ervin G. Johnson, Tribune Tower, Oakland 12, Calif. Groups 26—23—92; 40. Reg. No. 15,909.

Pat. 2,442,292. FORM FOR PLASTIC STRUCTURAL WORK. Patented May 25, 1948. Form for poured concrete is composed of a number of individual plywood panels and 2-inch dimension lumber. The panels are rapidly assembled and dismantled (for re-use) without use of nails or bolts. They are erected horizontally, are uniform in height, but have pre-determined length. Panels may be adapted to the erection of walls, piers, floor and roof slabs, beams and girders, etc. Each panel is identical, there being no specifically designated top or bottom, right or left. The panel frames are grooved to receive wall tie rods and bored to provide aligned holes to receive the legs of a U-shaped one-half-inch round steel clamp which not only couples adjacent panels but locks the panels to an upright strongback. Additional information and photographs of panels in actual erection are available upon inquiry from James W. Hart, 113 Tilden Road, Oak Ridge, Tenn. (Co-owner) Nicholas Del Genio, 5830 Chevy Chase Parkway, N. W., Washington, D. C. Groups 24—31; 32—71. Reg. No. 15,910.

Pat. 2,442,441. AIR DEFLECTOR. Patented June 1, 1948. Deflector is rigidly mounted on the driving shaft of a plane, between the motor and the rear of the propeller, with which it rotates as a unit. The principal portion of the attachment consists of a number of radially spaced blades positioned at right angles to the plane of rotation of the propeller. The purpose of the deflector is to take and release high pressure at the front of the engine or fuselage and force it back of the blades, removing pressure at the hub portion of the propeller. As air is forced out, a higher pressure is created back of the blades, the object of which is to permit greater speed, and a higher rate of climb, with the resulting advantages. (Owner) Edward A. Shellberg, 1741 Farwell Ave., Chicago, Ill. Group 37—22. Reg. No. 15,911.

Pat. 2,449,618. FOLDABLE CART AND CAR SEAT. Patented Sept. 21, 1948. A stroller, article carrier, or automobile seat for a child is foldable into a flat, light-weight carrying case. A two-wheel chassis has a fixed frame with triangular side plates and a foldable frame with front and rear U-shaped members pivoted to the plates. When extended, supports a flexible receptacle, with leg openings for a child. Handle is adjustable for pushing. Hooks on back of frame slip over the back of an automobile seat. (Owner) Lena L. Pritchard, 9725 Cresta Drive, Los Angeles, Calif. Group 39—43. Reg. No. 15,912.

Pat. 2,445,373. HAIRPIN OPENER. Patented July 20, 1948. An opener or spreader for bobby pins, hairpins, etc. is of special use to hairdressers and beauticians. A split finger-ring to be worn on index finger or thumb has a spreader or opener attached by which the prongs of bobby pin held in other hand may be separated. (Co-owner) Erville W. Turner, Box 987, Manchester, Wash. Groups 33—73; 39—61; 40. Reg. No. 15,913.

Pat. 2,449,549. SWEEP CIRCUIT FOR CATHODE-RAY TUBES. Patented Sept. 21, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) This patent provides a method of magnifying any selected portion of a sweep circuit of an oscilloscope by applying that portion to an additional oscilloscope to permit the shape of the wave to be studied in detail. Basically, a first and second circuit connected to the grid and deflecting plates of a cathode ray tube, respectively, are tuned to different frequencies and are shocked into oscillation by short electrical impulses at the beginning and end of square wave impulses of controlled duration. (Owner) Maurice E. Byrne, 1620 Bannock St., Boise, Idaho. Group 36—13. Reg. No. 15,914.

Pat. 2,449,338. CIRCUIT CONTROL MEANS FOR MOTOR VEHICLES. Patented Sept. 14, 1948. Solenoid-actuated maker and breaker switches are included in the circuits of the heater, headlights, and other lights, and accessories, to relieve strain on the battery while the motor of an automobile is being started. The control means is operable upon bringing the starter into action and automatically disconnects all lights and accessories temporarily, the circuits being re-established on release of the starter switch. Provision is made, however, to bring warning lights into circuit while the motor is being started as a caution to approaching drivers. (Owner) Everett E. Summersett, P. O. Box 2132, Hollywood, Fla. Group 38—31. Reg. No. 15,915.

Pat. 2,234,530. RAIL JOINT. Patented Mar. 11, 1941. This patent shows a pair of plates (for use in place of railway fish plates) designed to compensate for expansion and contraction of adjacent rails and prevent objectionable pounding or hammering as car wheels pass over joint. The outer plate is formed with an offset shoulder along its top to provide a tread surface for car wheels. Registering holes in the plates for receiving the usual clamping bolts are elongated horizontally. Suitably shaped filler blocks of compressible material are provided for insertion in each hole on opposite sides of each bolt. Retaining plates, held in place by the bolts, prevent displacement of the fillers. (Owner) Walter Matlock, Cherryhill Road, South Lane 3024, Baltimore, Md. Group 33—12—92. Reg. No. 15,916.

Des. Pat. 150,922. COMBINED RADIO CABINET, CLOCK, AND LAMP. Patented Sept. 14, 1948. (Owner) Albert C. Black, 3573 Tilden Ave., Los Angeles 34, Calif. Group 25—11. Reg. No. 15,917.

Pat. 2,450,607. SITZ BATH. Patented Oct. 5, 1948. Sitz bath for use on toilet seats consists of a basin having a removable ring which rests on top of toilet seat. A converging flange depending from ring extends down into toilet bowl and surrounds upper end of basin. A row of spaced knobs around inner surface of flange at its lower end frictionally engage sides of basin to hold it suspended within bowl, and permit overflow from basin to drain into bowl without wetting toilet seat. (Owner) S. F. Oliver, 436 Linden Ave., Apt. 1, Auburn, Calif. Group 33—61—73. Reg. No. 15,918.

Pat. 1,935,622. PLANING BOAT. Patented Nov. 21, 1933. Reg. No. 15,919.

Pat. 2,039,585. PLANING BOAT. Patented May 5, 1936. Reg. No. 15,920.

Pat. 2,039,586. PLANING BOAT. Patented May 5, 1936. Reg. No. 15,921.

These three patents relate to the construction of lifting or planing surfaces for boats, seaplane pontoons, etc., in which the area of the wetted surface is reduced considerably as the boat rides over the water. A typical construction is shown in Pat. 2,039,586 in which the bottom surface of a boat is comprised of distinct diagonally and longitudinally extending planing surfaces arranged in paired relation on opposite sides of the keel. Each surface is separated from the next by a sharp jog which

tapers to zero at its rearward end, and successively decreases in angularity with the beam toward the stern. The construction makes possible the use of convex bottom portions of bow and midships sections for easier and drier riding, increased speed and seaworthiness not usual with conventional construction. (Owner) Bay Trust Company, Bay City, Mich. Group 37—32.

Pat. 2,337,175. CLOTHESLINE. Patented Dec. 21, 1943. In this clothesline a pair of end bars are provided and the end of a single piece of rope is secured to the end of one of the bars. The rope is then looped back and forth through holes in the bars to form several spaced parallel lines between the bars. Slidable clamps in some of the openings of one of the bars wedgingly engage rope to hold it in adjusted position in the openings. Each clamp is slidably mounted on a pin extending transversely through bar and opening. Several short strands of rope secured to each bar are provided for securing the bars in horizontal position to spaced supporting structures, such as posts. (Owner) Milbert D. Bible, Mosheim, Tenn. Groups 25—99; 35—81. Reg. No. 15,922.

Pat. 2,451,431. PORTABLE PLAY PEN. Patented Oct. 12, 1948. A rectangular collapsible play pen for children is formed by holding a flexible endless fence in taut upright position by detachable posts connected by guy lines to stakes driven into the ground. The fence consists of a multiplicity of palings having holes in their upper and lower ends in which rope runners are inserted. Opposite ends of each runner are connected together by a snap hook. Other snap hooks secured to top and bottom of each post connect posts to runners. Conventional rope clamps hold guy lines taut. (Owner) Milbert D. Bible, Mosheim, Tenn. Group 25—11—13. Reg. No. 15,923.

Pat. 2,450,619. LOCK CONTROLLED SWITCH. Patented Oct. 5, 1948. Switch means is actuated by latch bolt of an ordinary door lock so that when occupant of a room leaves and locks door a master switch inside room is automatically thrown to turn off lights, etc. A receptacle mounted in door frame is connected to a drain pipe, a source of fluid under pressure, and a remotely positioned hydraulic cylinder and piston which actuates master switch. A baffle valve inside receptacle is actuated by a plunger when door is locked and unlocked to control the admission and exhaustion of fluid into and out of hydraulic cylinder. (Co-owner) Charles Michael Whelan, 2560 North El Molino, Altadena, Calif. Group 36—11—19. Reg. No. 15,924.

Pat. 2,447,192. STOCKING TURNER. Patented Aug. 17, 1948. Device for turning stocking inside out leaves both hands of operator free to handle stocking. Device has a downwardly extending arm with a ball on its lower free end, and an upwardly extending pivoted arm with a similar ball on its top free end. Lower arm may be swung out of the way to the right to permit a stocking to be pulled upwardly on upper arm until toe of stocking bears against ball on upper arm. Lower arm is then swung to the left to permit stocking to be pulled downwardly on lower arm until toe of stocking bears against ball on lower arm. Lower arm is then swung to the right to permit removal of stocking by pulling upwardly on toe. A protective apron on lower end of device prevents snagging or tearing of stockings during turning operations. (Owner) Clyde Ludington, Box 894, Billings, Mont. Groups 25—99; 35—52. Reg. No. 15,925.

Pat. 2,325,293. SOAP HOLDER AND SAVER. Patented July 27, 1943. U-shaped holder supports a cake of soap on its upper side edges to permit free circulation of air around cake. It consists of a back plate (for attachment to a suitable support) with a pair of spaced side plates. The upper edge of each side plate is cut away, leaving upper edge with a steep rearwardly inclined toothed portion and a stepped forward portion. Modification shows holder formed with a pair of hooks for hanging it on bathtub. May be made of a single strip of plastic or light metal. (Owner) Darwin M. Wolf, 201 Jefferson St., Midway City, Calif. Groups 33—73; 34—41; 39—81; 40. Reg. No. 15,926.

Pat. 2,450,152. FRUIT PICKER'S CRANE. Patented Sept. 28, 1948. Fruit picker's crane has an elevated seat with conveniently positioned hydraulic controls near seat so picker may selectively manipulate controls to raise and lower seat, move it in and out, or sideways to and fro. Seat is connected by a pair of swinging arms to turntable mounted on wheeled platform. A chute, in which picker places fruit, is mounted on upper arm, and a bin is mounted on lower arm. Chute and bin are formed with oppositely disposed padded baffles so that fruit will roll down into bin without bruising. Device may also be used when performing other operations, such as pruning, etc. (Owner) Howard B. Miller, 14600 18th Southwest, Seattle 66, Wash. Group 35—22. Reg. No. 15,927.

Pat. 2,450,002. POCKET TOOTHBRUSH. Patented Sept. 28, 1948. Toothbrush resembles a fountain pen in outward appearance, being provided with a perforated removable cap which fits over the toothbrush head and engages an elongated hollow handle. A threaded cap or plug which retains a spring is fitted into the outer end of the handle. The handle accommodates a replaceable cardboard or plastic cartridge filled with a dentifrice. The opening of the cartridge is provided with a reduced neck portion which is sealed by a conical projection inside the handle and retained in place by the pressure of the spring. In use, the caps at both ends are unscrewed and the cartridge removed to allow use of dentifrice. (Co-owner) Theodore J. Jackson, 968 North Church St., Rockford, Ill. Groups 39—22; 40. Reg. No. 15,928.

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 15,929 through 16,234) are part of Schedule 6, Groups 22; 28; 35; 39—12.

Inquiries concerning these patents should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 6—Continued

Patents Relating to Uses and Treatments for Regenerated Cellulose Films

Pat. 1,914,152. Special Container. June 13, 1933. A tube such as for cigars having plicated sides and having double end folds.

Pat. 1,929,013. Adhesive. Oct. 3, 1933. An adhesive for moistureproof regenerated cellulose film comprising a water soluble adhesive, such as gelatin or casein, a resin, such as gum manila or an alkyd resin.

Pat. 1,953,096. Method and Apparatus for Packaging Materials. Apr. 3, 1934. An apparatus for inserting articles such as cigars in tubes.

Pat. 1,953,097. Method of Packaging Articles. Apr. 3, 1934. Wrapping a film around an article, such as a cigar, to form an upstanding fold, heat sealing the fold and laying against the article.

Pat. 1,953,098. Machine for Inserting Cigars or the Like in Containers. Apr. 3, 1934. A machine for inserting articles into tubes by which predetermined tube lengths are cut off, one end heat sealed, a cigar or the like inserted in the open end and the latter heat sealed.

Pat. 1,953,104. Adhesive. Apr. 3, 1934. An adhesive for moistureproofed regenerated cellulose film comprising a rubber emulsion and a water soluble agglutinant, such as starch, gelatin or casein.

Pat. 1,953,122. Apparatus for the Manufacture of Containers from Cellulose Sheets. Apr. 3, 1934. An apparatus for converting sheeting into tubing and tubes.

Pat. 1,953,946. Method of Affixing Stamps. Apr. 10, 1934. A method of affixing labels, coated with water sensitive adhesives, to a moistureproofed regenerated cellulose film by first applying to the predetermined area a sizing comprising gutta percha.

Pat. 1,957,478. Method of Applying Labels. May 8, 1934. A method for affixing labels to moistureproofed regenerated cellulose film wherein the moistureproof coating is heat ruptured and the label, bearing an energized water sensitive adhesive, applied.

Pat. 1,964,959. Method of Sealing. July 3, 1934. Moistureproof wrapping tissue containers are solvent sealed by applying the solvent directly to predetermined areas on the interior of the end of the container and merging by means of heat and pressure.

Pat. 1,977,713. Automatic Machine for Inserting Cigars or the Like in Containers. Oct. 23, 1934. Articles are inserted into tubes by a machine having means for feeding the tubular stock, for severing a tube of desired length, and for expanding, loading, and sealing the end of the tube.

Pat. 1,983,875. Laminated Material. Dec. 11, 1934. An article having moistureproofed regenerated cellulose film laminated by means of a water insoluble adhesive to paper, cloth, etc.

Pat. 1,985,898. Method of Affixing Stamps. Jan. 1, 1935. Labels having a water sensitive adhesive are affixed to moistureproof regenerated cellulose film by means of a size which comprises a resin such as the alkyd or polymerized terpene resins and a glue, such as gelatin, starch, or casein, with or without a softener.

Pat. 1,990,538. Package. Feb. 12, 1935. A box for a toothbrush has two triangular sections, one open, the other closed. The box may be overwrapped with a cellulosic film such as regenerated cellulose.

Pat. 1,992,190. Method of Laminating. Feb. 26, 1935. An adhesive comprising a gum such as gum manila, hauri, pontianak and a softener such as castor oil is used on moistureproof regenerated cellulose films.

Pat. 2,000,251. Package. May 7, 1935. Meats are wrapped in a cellulose sheet having a wax-free, non-moistureproof coating such as a cellulosic lacquer or a drying-oil lacquer.

Pat. 2,037,053. Adhesive. Apr. 14, 1936. An adhesive for moistureproof materials such as moistureproof regenerated cellulose consists of a cellulose derivative such as nitrocellulose or ethylcellulose, a resin such as gum dammar or glyptal resin and a solvent.

Pat. 2,041,418. Cellulose Cord. May 19, 1936. A regenerated cellulose ribbon twisted into a cord about a cotton string or core impregnated with glycerol.

Pat. 2,046,492. Label. July 7, 1936. A label is attached to a cellulose derivative surface normally insensitive to water soluble adhesives such as a film of moistureproofed regenerated cellulose by means of a water-energized coating which includes a water soluble agglutinant such as starch, gelatin and a solvent for the cellulose derivative surface such as diethylene glycol.

Pat. 2,060,906. Uniting Materials. Nov. 17, 1936. A transparent spliced joint comprising overlapped regenerated cellulose sheets having interposed therebetween a transparent splicing strip coated with a normally non-tacky, heat-sealable adhesive, such as balata, alkyd resin or vinyl resin coating.

Pat. 2,067,660. Package. Jan. 12, 1937. A combined display and protective package comprising a cardboard carton provided with a window opening and a flap and overwrapped with regenerated cellulose.

Pat. 2,086,735. Joining or Sealing Material. July 13, 1937. Joining or sealing plain transparent regenerated cellulose film by crimping, heat and pressure without the use of an adhesive.

Pat. 2,109,231. Machine for Loading Wrappers or Pouches. Feb. 22, 1938. Machine for inserting articles such as cigars in preformed tubes or bags.

Pat. 2,142,116. Nonfibrous Cellulosic Structure and Method of Producing Same. Jan. 3, 1939. Nonfibrous cellulosic structures, especially regenerated cellulose film, treated with sulfamic acid or its salts (ammonium sulfamate) to effect softening and flameproofing.

Pat. 2,159,743. Cellulosic Structure and Method for Preparing Same. May 23, 1939. Mold inhibitive wrapping tissue obtained by impregnating cellulosic bases such as regenerated cellulose with formaldehyde or a substance which will spontaneously decompose, evolving formaldehyde.

Pat. 2,230,550. Packaging Stockings. Feb. 4, 1941. Hosiery package in which the hosiery is supported on a card in predetermined fashion and the whole contained in a transparent envelope on which is printed a scale so that the length of the hosiery is readily apparent without opening the package.

Pat. 2,253,755. Absorption. Aug. 26, 1941. Regenerated cellulose scrap material is used as a dehydrant for organic liquids, specifically, in the drying of recovered alcoholic solvents.

Pat. 2,268,611. Process of Laminating. Jan. 6, 1942. A method of sealing moistureproof film by applying a composition containing a polymerizable monomeric solvent, such as methyl methacrylate, and polymerizing in situ.

Pat. 2,316,340. Ionograph Tape. Apr. 13, 1943. Cellophane tape is impregnated with a solution of rubianic acid to produce an electro-sensitive tape suitable for use in the electrochemical recording (ionograph) process.

Pat. 2,322,594. Dispensing Package. June 22, 1943. A package for facial tissue and similar materials, comprises a transparent cellophane overwrap and a tear device giving an elongated opening suitable for dispensing the tissue.

Pat. 2,329,179. Protection of Surfaces. Sept. 14, 1943. Heavily sized regenerated cellulose film is used as a substitute for Holland cloth to afford protection for unvulcanized rubber surfaces, such as on tire patch material, etc.

Pat. 2,349,247. Bag Closure. May 23, 1944. A folded blank is inserted in the top of a regenerated cellulose film bag to provide a pouring spout.

Pat. 2,349,369. Bag Closure. May 23, 1944. The mouth of a regenerated cellulose film bag is interfolded with a triangular blank to provide an easy opening and resealing device.

Pat. 2,356,290. Composition and Process. Aug. 22, 1944. The use of certain amide derivatives such as dimethyl formamide or dimethyl acetamide as solvent sealers for regenerated cellulose and the like film having moistureproofing coatings.

Pat 2,369,716. Bag Closure. Feb. 20, 1945. A folded blank is inserted in the mouth of a bag of regenerated cellulose film to securely close the bag and to facilitate the opening and dispensing of the contents of the bag.

Pat. 2,373,744. Bag Closure. Apr. 17, 1945. Easy opening and reclosing devices for bags of regenerated cellulose film, providing a pouring spout in which a paper form heat sealable to the bag walls but not to itself is positioned so as to form a channel to the interior of the bag, on tearing a portion of the paper.

Pat. 2,395,419. Pressure Sensitive Products. Feb. 26, 1946. Pressure sensitive tape comprises a base sheet of regenerated cellulose coated on the back side with lecithin to prevent adhesion of the tape when it is in roll or package form.

Pat. 2,422,730. Flameproofed Film and Process. June 24, 1947. Impregnation of regenerated cellulose film with glycerol, formaldehyde and simple salts of sulfamic acid such as ammonium sulfamate to make the film flame resistant but without detracting from the durability.

Patents Relating to Casting Machines for the Manufacture of Regenerated Cellulose Film

Pat. 1,910,521. Method and Apparatus for Producing a Sheet of Film of Regenerated Cellulose. May 23, 1933. Surface streaks, striations, and other irregularities are removed from regenerated cellulose film by subjecting the incompletely coagulated sheet while in the plastic state to a smoothing or calendering operation.

Pat. 2,024,752. Pressure Indicating Device. Dec. 17, 1935. Apparatus for determining the pressure in a line containing a liquid comprises a pressure dome with a [illegible] mounted so as to measure pressure in the dome; more particularly measuring pressure of liquids which change in physical properties with time, such as viscose.

Pat. 2,046,553. Film Drying Method and Apparatus. July 7, 1936. Uniformly drying regenerated cellulose film and the like by means of rollers approximately half full of hot water, the hot water being supplied by spraying onto the upper internal surface of the roller through a centrally disposed tube with orifices of predetermined size on its upper side. The water outlet is simply an overflow from the open end of the roll, i. e., no water-tight joint is used.

Pat. 2,077,836. Apparatus for Making Films. Apr. 20, 1937. Baffle plates are suspended in the coagulating bath adjacent the hopper lips to provide a relatively stagnant zone of coagulating bath into which the viscose is extruded so that excessive agitation of the bath around the extrusion orifice is avoided.

Pat. 2,082,618. Extrusion Device. June 1, 1937. A hopper lip having a body of Illium "G" with the essential edge consisting of an insert of noble metal or other noncorrodible material for use in the extrusion of viscose, as in the manufacture of regenerated cellulose film.

Pat. 2,311,755. Apparatus for Making Sheet Wrapping Material. Feb. 23, 1943. Use of curved rods for guiding film in the first tank of casting machines to produce transverse stretch.

Pat. 2,316,212. Regenerated Cellulose Apparatus. Apr. 13, 1943. Improved steam distributor tube for use in heating the drier rolls used in the drying of regenerated cellulose film.

Patents Relating to Methods and Apparatus for the Manufacture of Plain Transparent Regenerated Cellulose Film

Pat. 1,983,529. Method of Producing Sheets or Films of Regenerated Cellulose. Dec. 11, 1934. Method of producing sheets or films of regenerated cellulose of uniform moisture content comprising first superdrying and then rehumidifying.

Pat. 2,000,079. Machine. May 7, 1935. In the manufacture of regenerated cellulose film the drier rolls of the casting machine are lacquered to overcome slippage during transfer or lateral shrinkage during drying.

Pat. 2,025,376. Conditioned Material and Method of Preparing Same. Dec. 24, 1935. Mill rolls of regenerated cellulose film are conditioned by humidified aging, prior to slitting to prevent telescoping.

Pat. 2,056,982. Extrusion Device. Oct. 13, 1936. The method of casting regenerated cellulose film from viscose using Illium "G" hopper lips to produce substantially streak free film.

Pat. 2,086,178. Watermarking Pellicle. July 6, 1937. Watermarking regenerated cellulose film by impressing marks while the film is being dried.

Pat. 2,099,160. Method and Apparatus for Drying. Nov. 16, 1937. Removing moisture from rolls in the early part of the drier section of a regenerated cellulose casting machine before contact of the film therewith by playing a current of hot air against said rolls.

Pat. 2,099,162. Process and Apparatus for Drying. Nov. 16, 1937. Preliminary drying film by passing through a region of heated air out of contact with any solid surface, to prevent sticking of sized film to rolls.

Pat. 2,115,132. Manufacture of Nonfibrous Sheets and Films. Apr. 26, 1938. A method for drying regenerated cellulose film to eliminate permanent shrinkage while simultaneously producing smooth films comprising drying with a minimum tension when the film contains 100 per cent, or less, moisture.

Pat. 2,116,193. Cellulosic Structure and Method of Preparing Same. May 3, 1938. Method for preventing shrinkage of cellulosic film on the drier rolls by incorporating a shrinkage-preventing agent, such as dewaxed shellac, in the film; preferably the agent is applied simultaneously with the softening agent.

Pat. 2,141,377. Process and Apparatus for the Production of Sheeting. Dec. 27, 1938. A process of drying nonfibrous film, such as regenerated cellulose film, which provides greater control of shrinkage and preferably reduction of the amount of shrinkage of the film comprises the use of an aluminum roll having an anodised, unsealed surface.

Pat. 2,254,200. Cellulosic Sheeting. Sept. 2, 1941. Regenerated cellulose film, either during the initial drying process or as a finished film, is conditioned prior to treatment upon the compensating, or low tension, drier to remove permanent shrinkage by immersing in a mixture of water and a water miscible liquid calculated to impart a definite uniform moisture content to the film.

Pat. 2,254,203. Method and Apparatus for the Production of Sheets and Films. Sept. 2, 1941. Method of casting viscose and related films in concurrently flowing baths in long shallow trays, wherein the film is in relatively stress-free condition.

Pat. 2,254,237. Process. Sept. 2, 1941. Economical method of regenerating the sulfuric acid and salt bath used to coagulate viscose filaments and film in which concentrated sulfuric acid is added to depleted bath in an evaporator so as to utilise the heat of dilution in evaporating excess water.

Pat. 2,275,347. Cellulosic Structure and Method for Preparing Same. Mar. 3, 1942. Toughening regenerated cellulose film by allowing it to shrink freely in the early part of the drying operation.

Pat 2,275,348. Cellulosic Film and Method of Making. Mar. 3, 1942. Up to 60 per cent of the potential or maximum shrinkage of a gel regenerated cellulose film is allowed during the first stage of drying and shrinkage is prevented during the last stage of the drying process to produce a toughened film of low permanent shrinkage.

Pat. 2,306,161. Drying. Jan. 12, 1943. Apparatus for tentering regenerated cellulose film during drying in order to control lateral shrinkage of the film.

Pat. 2,338,182. Regenerated Cellulosic Film. Jan. 4, 1944. Gel viscose sheeting immediately after coagulation is transported through a gaseous environment in the presence of acid so that regeneration takes place in the sheet while it is under low tension.

Pat. 2,360,405. Regenerated Cellulosic Film Coagulating Bath. Oct. 17, 1944. Addition of alkyl substituted bensene sulfonic acid derivatives to the acid coagulating bath to reduce the number of lip wipings required to give satisfactory film.

Pat. 2,387,718. Extrusion Apparatus. Oct. 30, 1945. An improved extrusion apparatus for regenerated cellulose film comprising a body section, a pair of spaced orifice-defining lips, means for differentially adjusting said lips along the length thereof to regulate the contour of opposite sides of said orifice, and a laterally adjustable lip supporting block connected between each lip and said body section.

Pat. 2,418,660. Manufacture of Regenerated Cellulose Structures. Apr. 8, 1947. A method of producing regenerated cellulose film of a dependably low and uniform sulfide sulfur content by washing the film in hot dilute acid preliminary to bleaching.

Pat. 2,431,738. Production of Shrinkproof Film. Dec. 2, 1947. A process for making a wrinkle free regenerated cellulose film having low permanent shrinkage by coating with a water insensitive film forming material and then subjecting the coated film to water or steam and drying under very low tension.

Patents Relating to Casting Processes for Regenerated Cellulose Film

Pat. 1,910,502. Method of Producing Films. May 23, 1933. A method of producing decorated or embossed sheets of regenerated cellulose by embossing on the casting machine while the film is in the gel state.

Pat. 1,983,531. Manufacture of Sheets or Films of Regenerated Cellulose. Dec. 11, 1934. Very thin sheets or films of regenerated cellulose are cast from viscose prepared from unaged or slightly aged alkali cellulose; said viscose contains not more than four per cent cellulose and has a viscosity approximately that possessed by cellulosic solutions containing seven to eight per cent cellulose.

Pat. 2,039,883. Casting Method and Apparatus Therefor. May 5, 1936. A method of casting cellulosic sheets on a large drum which holds the film from lateral shrinkage during the coagulating and regenerating operation.

Pat. 2,042,588. Cellulose Structure. June 2, 1936. A non-deforming, highly dielectric regenerated cellulose film is produced by oil impregnation.

Pat. 2,123,493. Cellulosic Structure and Method of Preparing Same. July 12, 1938. A cellulosic material which can be obtained in various forms such as sheets, tubes, caps, etc., by treating cellulose xanthate with an aldehyde, such as formaldehyde; the cellulose xanthate-aldehyde requires no further regeneration and is clear, transparent, flexible, less sensitive to moisture than regenerated cellulose and possessed of exceptionally good dielectric properties.

Pat. 2,144,356. Method for Producing a Cellulosic Structure. Jan. 17, 1939. Method of producing regenerated cellulose film of uniform physical characteristics in all directions comprising coagulating in a metal salt bath to form the corresponding metallic cellulose xanthate, particularly zinc cellulose xanthate, stretching in a transverse direction, regenerating, purifying and drying.

Pat. 2,273,890. Cellulose Article. Feb. 24, 1942. The development of color in softened regenerated cellulose film is inhibited by amino-imino-methane sulfoxylic acid, its esters and salts.

Pat. 2,309,609. Apparatus for Making Regenerated Cellulosic Film. Jan. 26, 1943. A regenerated cellulose sheet casting machine using stationary, immersed, lower guide members in combination with upper positively driven guides in the treating tanks, said guides being arranged in a manner for leading the film in a continuous path through the treating liquids.

Patents Relating to Softeners and Sizes for Regenerated Cellulose Film

Pat. 1,979,936. Method of Coating and the Product Resulting Therefrom. Nov. 6, 1934. Coated regenerated cellulose film is rendered flexible by means of formamide applied either as a coating constituent or as a softener in the base sheet, alone or with glycerol.

Pat. 2,008,815. Process for Preventing Adhesion of Films. July 23, 1935. To reduce the tendency for stacked sheets of regenerated cellulose to stick together, the gel sheets are treated with sodium silicate and a lime salt and dried.

Pat. 2,011,246. Wrapping Material. Aug. 13, 1935. The method of reducing the sticking of stacked sheets, as of regenerated cellulose, by coating with and imperceptible layer of protein (gelatin) which is insolubilised and dried.

Pat. 2,074,336. Cellulosic Pellicle and Method for Preparing Same. Mar. 23, 1937. The method of producing flexible pellicles of cellulosic materials, such as regenerated cellulose, by treating with a mixture of a water soluble solid amide (carbamide) and other softener such as glycerol, glycol, and the like.

Pat. 2,074,349. Cellulosic Pellicles and Method for Preparing Same. Mar. 23, 1937. Cellulosic pellicles are softened by treatment with a water soluble amide which is solid at room temperature.

Pat. 2,095,129. Cellulosic Materials and Methods of Making Same. Oct. 5, 1937. Cellulosic pellicles are treated with a water soluble softener and a size to prevent adhesion during storage.

Pat. 2,120,227. Purification of Glycerol. June 14, 1938. To render glycerol suitable for use in regenerated cellulose articles, it is deodorised by treatment with activated charcoal.

Pat. 2,123,700. Nonfibrous Film and Method of Making Same. July 12, 1938. A dispersion of a cellulose derivative is used to provide an anti-sticking size for regenerated cellulose film.

Pat. 2,137,274. Cellulosic Film and Method of Making Same. Nov. 22, 1938. Solid, waxy amines or their salts are used as anti-sticking sizes for regenerated cellulose film.

Pat. 2,167,105. Cellulosic Material and Method of Making Same. July 25, 1939. Slightly water soluble salts, such as lithium phosphate, are used as sizes to make anti-sticking flexible regenerated cellulose film.

Pat. 2,170,845. Cellulosic Structure and Method for Preparing Same. Aug. 29, 1939. N-hydroxyalkyl amides are used as softeners for regenerated cellulose, ethanol formamide is a representative example of the softeners used.

Pat. 2,191,894. Cellulosic Structure and Process for Producing Same. Feb. 27, 1940. Certain polyhydric esters of carbamic acid, such as glycerol monocarbamate, as softeners for regenerated cellulose film.

Pat. 2,191,895. Plasticizing Cellulosic Structures. Feb. 27, 1940. Hydroxy acid addition products of ethanolamine, such as ethanolamine glycollate or lactate, as softeners for regenerated cellulose film.

Pat. 2,191,896. Plasticising Cellulosic Articles. Feb. 27, 1940. Formic acid addition products of ethanolamine as softeners for regenerated cellulose film.

Pat. 2,191,897. Plasticising Cellulosic Articles. Feb. 27, 1940. Levulinic acid addition products of ethanolamine as softeners for regenerated cellulose film.

Pat. 2,199,927. Cellulosic Pellicle. May 7, 1940. Hydroxyalkyl derivatives of ammonia as softeners for regenerated cellulose.

Pat. 2,206,046. Cellulosic Pellicles Coated With Anti-Sticking Agent. July 2, 1940. The use of solid, water insoluble amides as sizes for regenerated cellulose film, for example, the stable emulsion consisting of stearamide, stearic acid, and sodium silicate.

Pat. 2,215,974. Ethanolamine Hydrochloride Softener for Regenerated Cellulose. Sept. 24, 1940. The hydrochloric acid addition product of a mono-, di-, or triethanolamine as softener for regenerated cellulose film.

Pat. 2,221,383. Cellulosic Structure and Method for Producing Same. Nov. 12, 1940. Certain ammonium alkyl sulfonates, such as ammonium propane sulfonate, diethanol ammonium ethane sulfonate, and the like, as softeners for regenerated cellulose film.

Pat. 2,226,554. Sized Pellicle. Dec. 31, 1940. The use of insoluble tannates formed in situ in the film as sizing materials for regenerated cellulose film.

Pat. 2,234,016. Cellulosic Structure and Process for Producing Same. Mar. 4, 1941. Hydroxy acid amides, such as lactamide, as softeners for regenerated cellulose film.

Pat. 2,236,526. Nonfibrous Structure and Method for Preparing Same. Apr. 1, 1941. Sizing material is applied to the surface of gel regenerated cellulose or other water-sensitive film preferably by means of spraying a solution of the size in such a distribution that, in spite of uneven shrinkage of the film upon drying a uniform distribution of the size upon the surface of the dried film will result.

Pat. 2,251,752. Sized Regenerated Cellulose Pellicle. Aug. 5, 1941. The use of wax-like higher ketones as sizing agents for regenerated cellulose film.

Pat. 2,279,339. Cellulosic Structure and Method for Making Same. Apr. 14, 1942. Certain amide esters, such as diethanol formamide carbonate or N-acetyl-beta-aminoethyl acetate, as softeners for regenerated cellulose film.

Pat. 2,280,812. Purification. Apr. 28, 1942. Filtration of the glycerol or glycol baths used to soften films of regenerated cellulose through diatomaceous earth (Celite) in order to minimize discoloration of film caused by the presence of lead and iron.

Pat. 2,308,732. Colored Cellulosic Film. Jan. 19, 1943. Alkaline sizing compositions based on sodium silicate are rendered suitable for use with alkaline sensitive dyes applied to regenerated cellulose film by the incorporation of an ammonium salt of a polycarboxy organic acid.

Pat. 2,311,910. Cellulosic Article. Feb. 23, 1943. Reducing agents containing sulfur as color inhibitors for softened regenerated cellulose film, especially such containing amine derivative softeners.

Pat. 2,316,496. Process for Producing Non-Sticking, Smooth, Flameproofed, Thin, Flexible Sheeting. Apr. 13, 1943. Carnauba wax-shellac emulsion as a size for regenerated cellulose film softened with sulfamic acid derivatives.

Pat. 2,328,679. Cellulosic Structure. Sept. 7, 1943. Materials of the type of ethylene oxide polymer as softeners for regenerated cellulose film.

Pat. 2,378,479. Sheet Material. June 19, 1945. Water soluble organic sulfoxidates, including sulfones and sulfoxides, as softeners for regenerated cellulose structures; the use of high concentrations is disclosed.

Pat. 2,406,905. Method for Producing Cellulosic Structures. Sept. 3, 1946. Synthetic linear polymeric materials, such as polymers containing amide, ester, ether, ketal or acid groups, as softeners for regenerated cellulose film.

Patents Relating to Methods and Compositions for Use in the Production of Coated Moistureproof Films

Pat. 1,989,681. Moistureproof Material and Process of Making Same. Feb. 5, 1935. Regenerated cellulose films are impregnated with a moistureproofing coating comprising wax and a resin and are then coated with a nitrocellulose or cellulose ester lacquer or shellac to yield a smooth, non-tacky, moistureproof film.

Pat. 1,997,583. Composition of Matter and Material Made Therefrom. Apr. 16, 1935. Moistureproof, transparent, and flexible wrapping tissue capable of being heat sealed by heat and pressure to produce a strong joint comprising a base thinly coated on both sides with a composition comprising pyroxylin of low nitrogen content, plasticiser, wax and optionally small amounts of resin.

Pat. 2,042,589. Moistureproof Material and Method of Making the Same. June 2, 1936. A process for moistureproofing wet film of a cellulosic material, such as regenerated cellulose, comprises using a lacquer which may or may not contain water and simultaneously removing the water and lacquer solvent.

Pat. 2,051,944. Moistureproofing Composition and Method of Making Same. Aug. 25, 1936. Melt compositions for moistureproofing comprising essentially a wax composition containing rubber with desired additives as blending, hardening, or heat-seal agents.

Pat. 2,061,874. Moistureproof Material and Method of Making Same. Nov. 17, 1936. Moistureproof regenerated cellulose film is prepared by treating the wet film with an aqueous disperaion containing a moistureproofing wax, a hardening agent and a softener, by first subjecting the treated film to a temperature about equal to the melting point of the wax, and then to a somewhat lower temperature.

Pat. 2,064,292. Composition of Matter. Dec. 15, 1936. An air drying, moistureproof lacquer comprises a cellulose derivative, wax, and solvent and optional additives as resins or blending agents.

Pat. 2,077,396. Moistureproof Material. Apr. 20, 1937. A moistureproof coating composition, for wrapping tissues, comprising a cellulose derivative, rubber, wax, and optionally a resin and plasticiser.

Pat. 2,077,399. Moistureproof Films. Apr. 20, 1937. Moistureproof regenerated cellulose may be obtained by coating with a composition comprising neoprene, wax, solvent, pyroxylin, and plasticiser.

Pat. 2,077,400. Moistureproof Materials and Method of Making Same. Apr. 20, 1937. A moistureproof material comprises a base formed of regenerated cellulose coated with a composition comprising rubber and a moistureproofing wax with or without a hardening agent.

Pat. 2,085,816. Moistureproof Film. July 6, 1937. Moistureproofing compositions comprising hydrorosinate, a wax material and a cellulose derivative.

Pat. 2,094,771. Composition of Matter. Oct. 5, 1937. Moistureproofing compositions for regenerated cellulose film which comprise a major portion of wax and relatively little cellulose derivative, such as nitrocellulose, have the advantage of application, if desired, from a single solvent.

Pat 2,098,534. Moistureproof Article. Nov. 9, 1937. Moistureproofing agents for use as wax substitutes in coating compositions for regenerated cellulose film and self-sustaining film include solid alcohols, as diheptadecyl carbinol.

Pat. 2,098,535. Moistureproof Article. Nov. 9, 1937. Moistureproofing agents for use as wax substitutes in coating compositions for regenerated cellulose film and self-sustaining film include organic mono-ethers, as dioctadecyl ether.

Pat. 2,098,536. Moistureproof Article. Nov. 9, 1937. Moistureproofing agents for use as wax substitutes in coating compositions for regenerated cellulose film and self-sustaining film include solid organic polyethers, as diethylene glycol dicetyl ether.

Pat. 2,098,537. Moistureproof Article. Nov. 9, 1937. Moistureproofing agents for use as wax substitutes in coating compositions for regenerated cellulose film and self-sustaining film include solid ketones, such as stearone.

Reissue Pat. 20,845. (Original 2,098,538). Moistureproof Article. Original, Nov. 9, 1937. Reissue, dated Sept. 6, 1938. Moistureproofing agents for use as wax substitutes in coating compositions for regenerated cellulose film and self-sustaining film include solid amides such as stearanilide.

Pat. 2,098,539. Moistureproof Article. Nov. 9, 1937. Moistureproofing agents for use as wax substitutes in coating compositions for regenerated cellulose film and self-sustaining film include organic halogen compounds, such as ceryl bromide.

Pat. 2,098,540. Moistureproof Article. Nov. 9, 1937. Moistureproofing agents for use as wax substitutes in coating compositions for regenerated cellulose film and self-sustaining film include solid organic ether-esters, such as naphthoxyethyl stearate.

Pat. 2,098,541. Moistureproof Article. Nov. 9, 1937. Moistureproofing agents for use as wax substitutes in coating compositions for regenerated cellulose film and self-sustaining film include solid organic metallic compounds, such as tetracetyl lead.

Pat 2,098,542. Moistureproof Article. Nov. 9, 1937. Moistureproofing agents for use as wax substitutes in coating compositions for regenerated cellulose film and self-sustaining film include solid organic sulfur compounds, such as thio-ethers, acids, and mercaptans.

Pat. 2,100,377. Article of Manufacture and Method of Making Same. Nov. 30, 1937. Coating or casting compositions, especially adaptable for moistureproofing paper, regenerated cellulose, etc., comprising a polyether resin and a wax.

Pat. 2,108,805. Transparent Materials and Method of Producing Same. Feb. 22, 1938. Transparent and moistureproof materials, such as paper, regenerated cellulose film, etc., are produced by applying a wax undercoat and a topcoat of a cellulose derivative, a cellulose derivative and resin, or a resin lacquer which may or may not be wax-containing.

Pat. 2,137,636. Moistureproofing Process and Product Produced Therefrom. Nov. 22, 1938. Moistureproofing compositions comprising polymerised methyl methacrylate and a wax suitable for application to various bases including regenerated cellulose, cellulose esters (acetate), ethers, etc.

Pat. 2,138,578. Method and Apparatus for the Production of Cellulosic Structures. Nov. 29, 1938. The method of clarifying moistureproof material, such as regenerated cellulose film, by subjecting the coated film to a solvent vapor treatment with naphtha butyl acetate, or chlorinated hydrocarbons.

Pat. 2,144,283. Method of Moistureproofing. Jan. 17, 1939. Moistureproof cellulosic pellicles are made by adding wax to viscose, regenerating, impregnating with a blending agent, such as alkyd resins, amino polymers, rosin, etc., and drying.

Pat. 2,147,180. Moistureproof Coating. Feb. 14, 1939. Moistureproofing compositions applicable to regenerated cellulose films comprise a wax and a modified resin.

Pat. 2,147,628. Moistureproof Material. Feb. 21, 1939. Two-stage process for moistureproofing regenerated cellulose film includes coating with a moistureproofing composition comprising a gum, a wax, and a plasticiser, followed by coating said moistureproof layer with a lacquer.

Pat. 2,147,629. Coated Material and Method of Producing Same. Feb. 21, 1939. Moistureproof regenerated cellulose film made by coating with a resin and a wax, with or without a softener.

Pat. 2,159,151. Method of Moistureproofing. May 23, 1939. Cellulosic films, such as regenerated cellulose films, are coated with a molten moistureproofing composition, for example, a mixture of paraffin and candelilla wax with castor oil, passed between one set of oppositely disposed heated doctor knives to remove excess coating, then between a second set of heated doctor knives to smooth the coating.

Pat 2,159,152. Method of Making Moistureproof Material. May 23, 1939. Films such as regenerated cellulose films are coated with a molten moistureproofing composition comprised of rubber, wax, and a blending agent, such as an alkyd resin, rosin, or a vinyl resin.

Pat. 2,169,366. Moistureproof Material and Method of Making the Same. Aug. 15, 1939. Moistureproofing composition for regenerated cellulose films comprises an aqueous dispersion of the salt of an amino polymer, such as the interpolymer of dicyclohexylaminoethyl alpha-methacrylate and dimethylaminoethyl alpha-methacrylate, wax, rosin, and a softener.

Pat. 2,177,473. Adsorption Material. Oct. 24, 1939. Activated carbon for solvent recovery is washed with dilute organic acid such as acetic acid to reduce the tendency of the carbon to oxidize.

Pat. 2,193,831. Moistureproofing. Mar. 19, 1940. Moistureproofing compositions comprising nitrocellulose and either a cellulose ether or ester of a higher fatty acid.

Pat. 2,205,210. Candy Wrapper. June 18, 1940. A wrapper for sticky candies utilising regenerated cellulose film coated with a composition comprising a wax moistureproofing agent and an organic solvent soluble cellulose ether film former.

Pat. 2,205,428. Moistureproofing. June 25, 1940. Moistureproof coating compositions comprising a sulfurized organic material as a blending agent for the moistureproofing wax.

Pat. 2,209,965. Transparent Moistureproof Pellicle and Method for Making Same. Aug. 6, 1940. Self sustaining regenerated cellulose sheets are rendered moistureproof by coating with a Pliofoam wax composition.

Pat. 2,236,546. Heat Sealable Moistureproofing Composition. Apr. 1, 1941. Terpinene, maleic anhydride polybasic acid resin complexes as blending agents in moistureproofing nitrocellulose coating compositions for regenerated cellulose film.

Pat. 2,292,393. Moistureproof Sheet Wrapping Material. Aug. 11, 1942. Nitrocellulose, wax coating compositions for regenerated cellulose film in which the moistureproofness has been enhanced by the addition of polymeric methacrylate esters.

Pat. 2,306,478. Moistureproof Sheet Wrapping Material. Dec. 29, 1942. Moistureproof coating compositions having good adhesion for regenerated cellulose film comprising wax and a phenol modified rubber.

Pat. 2,307,057. Transparent Film. Jan. 5, 1943. Moistureproofing coating compositions comprising halogenated aliphatic hydrocarbon blending agents.

Pat. 2,316,274. Coating and Production of Coated Structures. Apr. 13, 1943. A polymerizable, non-volatile solvent is used, such as cyclohexyl methacrylate, as a vehicle for ingredients designed to produce upon polymerization of the solvent in situ a moistureproof coating as on regenerated cellulose film.

Pat. 2,333,730. Phenol-Rubber Polybutene Composition and Article Made Therefrom. Nov. 9, 1943. Phenol modified rubber and wax stabilized with isobutylene polymers as moistureproofing coating composition.

Pat. 2,342,209. Moistureproofed Regenerated Cellulose. Feb. 22, 1944. Moistureproof coating compositions comprising Pliolite stabilized with isobutylene derivatives.

Pat. 2,345,597. Phenol-Rubber Containing Composition. Apr. 4, 1944. Phenol modified rubber compositions stabilized with amine resins are used as adhesives and coating compositions.

Pat. 2,350,366. Moisture-Resistant Cellophane. June 6, 1944. Cyclized rubber stabilized with an amine polymer, such as a phenol formaldehyde piperazine resin, as film former in moistureproof coating composition.

Pat. 2,350,385. Cyclized Rubber Containing Basic Amino Polymers. June 6, 1944. Cyclized rubber and coating compositions containing the same are stabilized by the incorporation therein of minor proportions of basic amino polymers.

Pat. 2,364,089. Cyclized Rubber-Unsaturated Carbonyl Compound Reaction Products. Dec. 5, 1944. Moistureproof coating compositions comprising Pliolite modified and stabilized with maleic anhydride.

Pat. 2,364,158. Rubber Derivatives Products. Dec. 5, 1944. Moistureproofing coating compositions comprising phenol modified rubber stabilized with maleic acid derivatives.

Pat. 2,430,726. Heat Sealing Moistureproofing Coatings. Nov. 11, 1947. Heat sealable moistureproof coating compositions for regenerated cellulose films containing rubber modified beta naphthol and as a stabilizer therefor compounds such as N:N:N':N'-tetra-ethyl-4, 4'-diamino-diphenyl methane.

Patents Relating to the Anchorage of Moistureproofing Coatings on Regenerated Cellulose Film

Pat. 1,962,338. Moistureproof Material and Method of Making Same. June 12, 1934. A coating of hydrolysed gelation is used to anchor moistureproof coatings on regenerated cellulose film.

Pat. 1,972,869. Moistureproof Material and Method of Making Same. Sept. 11, 1934. Moistureproof coating anchored to regenerated cellulose film by means of a coating of an oil modified glyptal resin of the drying oil type, such as a perilla oil modified glyptal.

Pat. 1,990,080. Moistureproof Material. Feb. 5, 1935. A coating of unvulcanized rubber is used to anchor a moistureproofing coating to a regenerated cellulose film.

Pat. 2,022,490. Moistureproof Material. Nov. 26, 1935. An anchored moistureproof coating comprising a drying oil or a drying oil modified alkyd resin and a wax provides a non-tacky, flexible, cellulosic or albuminous sheet.

Pat. 2,030,962. Moistureproof Material and Method of Making Same. Feb. 18, 1936. An intermediate coating consisting of a drying oil is applied to the surface of nonporous films, such as regenerated cellulose films, to anchor a moistureproofing topcoat.

Pat. 2,042,638. Coated Materials and Method of Producing Same. June 2, 1936. An anchored moistureproof coating is obtained by first impregnating regenerated cellulose film with a water insoluble softener, such as tricresyl phosphate, diamylphosphate, or castor oil, which is compatible with the coating composition.

Pat. 2,087,013. Coated Articles and Method of Making Same. July 13, 1937. Anchorage of moistureproof coating composition to bases such as regenerated cellulose film by forming in situ on the base an imperceptible layer of insoluble inorganic oxide, such as alumina and silica.

Pat. 2,096,122. Cellulosic Structure and Method for Preparing Same. Oct. 19, 1937. Anchorage of moistureproofing compositions to bases such as regenerated cellulose film by means of an imperceptible layer of sulfur.

Pat. 2,122,418. Product and Process of Preparing Same. July 5, 1938. Anchorage of coating compositions, such as moistureproofing compositions, to bases such as regenerated cellulose films by means of an intermediate layer of deacetylated chitin.

Pat. 2,122,433. Coated Films and Method of Making the Same. July 5, 1938. Moistureproof coatings are anchored to regenerated cellulose films by means of an intermediate coating of amine-phenol-aldehyde resins, such as a phenol, formaldehyde, dimethylamine resin.

Pat. 2,159,007. Composite Article and Method for Producing Same. May 23, 1939. The anchorage of moistureproof coating compositions to cellulosic bases, such as regenerated cellulose film, by means of an insoluble synthetic resin of the phenol aldehyde or urea aldehyde type which may be deposited from solution, added to the viscose or prepared in situ.

Pat. 2,273,880. Moistureproof Sheet Wrapping Material. Feb. 24, 1942. The use of polymers of butadiene as anchoring agents in moistureproofing coating compositions for regenerated cellulose and related films, and also as a sub-coat for anchoring moistureproofing coatings.

Pat. 2,280,829. Coated Cellulosic Film. Apr. 28, 1942. A sub-coat comprising dimethylol urea derivatives for anchoring moistureproofing coating compositions to regenerated cellulose film.

Pat. 2,281,589. Moistureproof Wrapping Material. May 5, 1942. Ketone dimers, such as hexadecylketene dimer, oleic acid ketene dimer, are added to moistureproofing coating compositions to produce anchorage to regenerated cellulose films.

Pat. 2,301,959. Moistureproof Sheet Wrapping Material. Nov. 17, 1942. Self-anchored moistureproof coating compositions for regenerated cellulose film comprise dimethylol urea ether resins, film formers, such as chlorinated rubber or nitrocellulose, a wax, resin, and a plasticizer.

Pat. 2,432,542. Method of Producing Coated Cellulosic Sheets. Dec. 16, 1947. Improved anchorage of coatings to regenerated cellulose film, and improved heat seal is obtained by impregnating the gel film with a partially condensed, hydrophobic, melamine formaldehyde resin which is cured in situ, in the presence of hydroxy acetic acid.

Patents Relating to Plasticizers for Moistureproofing Coatings Used on Regenerated Cellulose Film

Pat. 2,047,663. Alicyclic Carbinol Esters of Polycarboxylic Acids and Process of Making the Same. July 14, 1936. Alicyclic carbinol esters of polycarboxylic acids, e. g., hexahydrobensyl phthalate, for use as plasticisers in compositions containing cellulose esters or ethers.

Pat. 2,049,207. Esters From Halogenated Paraffins. July 28, 1936. Product of the reaction of halogenated paraffin wax with a salt of a carboxylic acid, is useful as a plasticising agent in coating compositions and plastics.

Pat. 2,079,379. Coated Material and Method of Making Same. May 4, 1937. Heat sealable moistureproofing compositions comprising dicyclohexyl phthalate as plasticiser with low nitrogen pyroxylin.

Pat. 2,079,395. Cellulosic Product and Process of Making Same. May 4, 1937. Moistureproofing compositions for regenerated cellulose film comprising a cyclohexyl phthalate as plasticiser for the nitrocellulose component of said composition.

Pat. 2,101,227. Polycarboxylic Acid Esters of Poly-Unsaturated Higher Alcohols. Dec. 7, 1937. The polycarboxylic acid esters of long chain polyunsaturated alcohols from catalytic carboxyl reduction of drying oils are high boiling and useful as plasticisers for coating and plastic compositions.

Pat. 2,186,262. Composition and Method for Preparing Same. Jan. 9, 1940. Aryl sulfonamide derivatives having at least one N-substituent of four or more carbon atoms as plasticisers for cellulose derivative compositions including moistureproofing compositions, as for example, butyl toluene sulfonamide.

Pat. 2,192,814. Moistureproof Material. Mar. 5, 1940. Alicyclic substituted aryl sulfonamides as new compounds as plasticisers for cellulose derivative compositions, such as N-cyclohexyl-p-toluene sulfonamide.

Pat. 2,197,479. Carbamic Acid Esters of Monoalkyl Ethers of Polyalkylene Glycols. Apr. 16, 1940. Carbamates of ether alcohols as new materials are used as plasticisers for cellulosic materials, such as cellulose derivatives and in coating compositions.

Pat. 2,216,812. Moistureproof Sheet Material and Moistureproofing Composition. Oct. 8, 1940. Polyaryl derivatives of amides of fatty acids containing 6 to 18 carbon atoms, such as diphenyl lauramide, are used as plasticisers for cellulose derivative moistureproofing coating compositions for transparent films.

Pat. 2,216,826. Moistureproof Sheet Material and Moistureproofing Composition. Oct. 8, 1940. Mono-aryl derivatives of amides of fatty acids containing 6 to 10 carbon atoms are used as plasticizers for cellulose derivative moistureproofing coating compositions for transparent film.

Pat. 2,216,827. Cellulose Derivative Compositions of Matter and Articles Produced Therefrom. Oct. 8, 1940. Amides of long chain unsaturated aliphatic acids are used as plasticisers in moistureproofing coating compositions.

Pat. 2,293,458. Moistureproof Sheet Wrapping Material. Aug. 18, 1942. Cyclohexane sulfonamide derivatives as plasticisers in moistureproof coating compositions for regenerated cellulose film.

Pat. 2,311,831. Moistureproofing Coating Composition. Feb. 23, 1943. Copolymerized or condensed plasticisers and blending agents for moistureproofing coating compositions.

Pat. 2,374,767. Grease-Resistant Film. May 1, 1945. Oil insoluble plasticisers, such as ether alcohol phthalates, are added to heat sealable moistureproofing coating compositions to give oil and grease resistance thereto.

Patents Relating to Slip Agents for Moistureproofing Coatings Used on Regenerated Cellulose Film

Pat. 2,177,645. Moistureproof Coated Sheet. Oct. 31, 1939. Moistureproofing compositions containing as slip agents therefor organic compounds having a metal substituted for an enolic hydrogen, the compound being soluble in the solvents for the coating composition but incompletely compatible with the dry coating constituents.

Pat. 2,213,252. Coating. Sept. 3, 1940. Moistureproofing compositions containing as slip agents therefor organic compounds containing a metal substituted for a hydroxyl hydrogen; the compound, such as an aluminum salt of a modified rosin, is soluble in the solvent of the coating composition but not completely compatible with a dry coating.

Pat. 2,234,565. Moistureproof Coating. Mar. 11, 1941. A moistureproofing composition containing as slip agents therefor, as the aluminum salt of rosin and modified rosin, double metallic carboxylates soluble in the solvents of the coating composition but not completely compatible with the dry coating.

Pat. 2,388,326. Moistureproof Sheet. Nov. 6, 1945. Organic solvent insoluble, high melting solid organic materials, such as 1,2-dihydronaphthalene, as slip agents in moistureproof coatings for regenerated cellulose film.

Patents Relating to Slitting Machines and Other Mechanical Equipment Useful in the Manufacture of Thin Films

Pat. 1,980,392. Slitting Machine. Nov. 13, 1934. A bench type, open ended rewinding and slitting machine which is particularly adapted for use with cellulosic film such as regenerated cellulose.

Pat. 1,996,176. Slitting Machine. Apr. 2, 1935. A slitting machine for regenerated cellulose film in which the slitting elements consist of individually adjustable razor blades.

Pat. 2,006,943. Slitting Machine. July 2, 1935. A slitting machine comprising shear cutters especially adapted for thin cellulosic sheeting.

Pat. 2,167,669. Sealing Structure. Aug. 1, 1939. A packing gland for preventing the leakage of fluids from fluid containing receptacles around rotating shafts projecting therethrough, as for the processing tanks of a regenerated cellulose film casting machine, in which a graphite or composition ring supported by a flexible rubber diaphragm is held by hydrostatic pressure of the bath fluid against a steel ring mounted on the rotating shaft.

Pat. 2,180,119. Adsorber Apparatus. Nov. 14, 1939. An intake air distributor consisting of a tube with a tapering opening covered with fine mesh screening is used for distributing gases containing volatile solvents to the absorber units of solvent recovery equipment.

Pat. 2,181,124. Tube Cutting Apparatus. Nov. 28, 1939. An apparatus for cutting laminated paper tubes especially valuable in cutting cores for winding regenerated cellulose film. The machine comprises a combined core stop and mandrel support which rotates with the mandrel, a roller which contacts the core and drives it positively against the stop, and a driven rotary knife with a steep bevel which can be accurately and readily adjusted to cut cores of different lengths.

Pat 2,287,768. Roller Having Surface of Sponge Rubber Knobs. June 30, 1942. A sponge rubber guide roll for wrapping machines and the like useful as an idler roll over which a flexible sheet, such as regenerated cellulose film, can be passed to compensate for irregularities in the film as it leaves the feed roll in a plane.

Patents Relating to Transparentized Papers, Laminations and Special Property Films and Coatings

Pat. 1,934,824. Tracing Material. Nov. 14, 1933. A tracing sheet comprises regenerated cellulose provided with an ink retaining surface of a cellulose derivative, as nitrocellulose, a resin, a gum dammar, and a filler, as chalk, starch, or talc.

Pat. 1,983,520. Laminated Material. Dec. 11, 1934. Moistureproofed regenerated cellulose film is laminated to metal foil by means of a waxy substance, paraffin, ceresin, or hydrogenated oils.

Pat. 1,983,530. Tissue for Cigarettes. Dec. 11, 1934. Tissues for wrapping tobacco to form cigarettes comprise softener free, humidified regenerated cellulose film less than 0.02 mm. in thickness.

Pat. 1,983,870. Laminated Material and Method of Preparing Same. Dec. 11, 1934. Wrinkleproof laminated materials, one lamina of which is a film of regenerated cellulose, are prepared by preshrinking the cellulose film.

Pat. 1,963,871. Method of Laminating. Dec. 11, 1934. A process for laminating regenerated cellulose sheeting to a lacquered or printed base includes spraying the base with a solvent to increase its receptivity to the adhesive.

Pat. 1,992,249. Laminated Material. Feb. 26, 1935. An adhesive for laminating moistureproofed materials, such as moistureproofed regenerated cellulose, to paper, fabric or metal foil contains glyptal resin and polyterpene resins, which are thermoplastic and are subject to cold flow.

Pat. 1,997,857. Moistureproof Material. Apr. 16, 1935. Moistureproof wrapping material of enhanced water insensitivity consists of a cellulose acetate base coated with a composition comprising a cellulose derivative, such as nitrocellulose, a resin, such as gum dammar, a wax, and optionally a plasticiser, such as dibutyl phthalate.

Pat. 2,029,481. Esterification of Cellulosic Materials. Feb. 4, 1936. The water sensitivity of regenerated cellulose structures is reduced by esterifying the formed articles to cellulose esters insoluble in the solvents for prior esters of an equal degree of esterification.

Pat. 2,062,179. Articles of Manufacture. Nov. 24, 1936. Transparent light filters, which screen out the ultra-violet rays, useful as protective wrappers to retard rancidity development in oil-bearing foods can be sheets of regenerated cellulose having a moistureproofing coating which contains as an ultraviolet ray absorbent aminobensophenone, or diaminobensophenone. Regenerated cellulose or other base materials may be impregnated with or coated with compositions comprising the light absorbing agent.

Pat. 2,065,792. Moistureproof Gelatine. Dec. 29, 1936. The method of moistureproofing gelatine sheets which comprises hydrolysing the gelatine surface and then applying a cellulose derivative, such as nitrocellulose, a resin, such as gum mastic, and a wax-coating composition.

Pat. 2,067,066. Articles of Manufacture and Process of Preparing Same. July 13, 1937. Coated cellulosic films, such as regenerated cellulose, softened with ethylene glycol are adapted to low temperature conditions.

Pat. 2,108,804. Moistureproof Material and Process of Making Same. Feb. 22, 1938. A method for making a transparent paper by supercalendering and coating with a transparentizing and moistureproofing composition, for example, ethyl cellulose resin, and wax.

Pat. 2,108,806. Cellulose Materials and Method of Treating Same. Feb. 22, 1938. Cellulosic materials, such as paper, which are to be subsequently calendered and coated are impregnated with a wetting agent, such as sodium stearate or triethanolamine oleate.

Pat. 2,108,807. Transparent Material and Method of Making Same. Feb. 22, 1938. Transparentizing and moistureproofing paper by applying a resin undercoat, such as an ester gum paraffin wax coating, and a topcoat of moistureproofing lacquer.

Pat. 2,108,808. Transparent Materials and Method of Making Same. Feb. 22, 1938. In a method of making transparent paper sheets, the use of a water soluble impregnant for the base, such as chlorine treated starch, to fill in the pores and improve coating.

Reissue Pat. 20,847. (Original 2,108,809). Moistureproof Material and Method of Making the Same. Original, Feb. 22, 1938. Reissue, dated Sept. 6, 1938. Paper is transparentised and moistureproofed by impregnation with a wax composition comprising a moistureproofing wax, e. g. paraffin, a hard wax, e. g., carnauba wax, and a blending agent, e. g., ester gum.

Pat. 2,108,810. Transparent Material and Composition of Matter for Producing Same. Feb. 22, 1938. Cellulosic materials, such as paper, are transparentised and moistureproofed by coating with a composition of wax, a glycol softener, e. g., ethylene glycol or diethylene glycol.

Pat. 2,123,883. Article of Manufacture. July 19, 1938. Moistureproof low substituted cellulose ether film, e. g., glycol cellulose film, is used for a wrapping tissue.

Pat. 2,129,131. Pellicle and the Manufacture Thereof. Sept. 6, 1938. A tissue, capable of absorbing ultraviolet light and acting as a rancidity protective wrapper comprises a sheet of material, such as regenerated cellulose, having as an absorbent for ultraviolet rays a fluorescent compound, e. g., naphthylamine trisulfonic acid.

Pat 2,129,132. Article of Manufacture and Method for Producing Same. Sept. 6, 1938. A tissue capable of absorbing ultraviolet light and acting as a rancidity protective wrapper contains as ultraviolet rays absorbent a phenyl hydrazine.

Pat. 2,170,827. Cellulosic Pellicles and Methods for Producing Same. Aug. 29, 1939. The deformation of regenerated cellulose films caused by variations in humidity can be reduced by the addition of hydroxy esters, such as bis-ethoxyethyl malate, or beta-hydroxyethyl p-toluene sulfonamide.

Pat. 2,170,828. Pellicle and Process for Preparing Same. Aug. 29, 1939. The deformation of regenerated cellulose films caused by variations in humidity can be reduced by the addition of ether esters, such as diethylene glycol diethoxyacetate, bis-ethoxyethyl diglycolate.

Pat. 2,170,829. Film and Process for Preparing Same. Aug. 29, 1939. The deformation of regenerated cellulose films caused by variations in humidity can be reduced by the addition of carbamic acid esters, such as butoxy-ethyl carbamate.

Pat. 2,170,830. Cellulosic Pellicles and Process for Preparing Same. Aug. 29, 1939. The deformation of regenerated cellulose films caused by variations in humidity can be reduced by the addition of ether esters wherein the ether group is in the alcohol residue, e. g., bis-ethoxyethyl succinate.

Pat. 2,170,840. Cellulosic Film and Process for Preparing Same. Aug. 29, 1939. The deformation of regenerated cellulose films caused by variations in humidity can be reduced by addition of keto acids, such as propylene glycol di-levulinate.

Pat. 2,201,747. Method of Producing Moistureproof Cellulosic Pellicles. May 21, 1940. A moistureproof cellulose derivative pellicle, such as cellulose acetate, cast from a composition comprising the cellulose derivative, a moistureproofing agent, e. g., paraffin, a plasticizer and gum elemi as a blending agent.

Pat. 2,236,061. Method of Making Films, Threads, and the Like. Mar. 25, 1941. Polyvinyl alcohol films are coagulated in two baths: the first contains sodium hydroxide, the second an inorganic salt which has no oxidising action, such as ammonium sulfate.

Pat. 2,279,788. Mold Inhibitive Cellulosic Structure. Apr. 14, 1942. A mold inhibitive moistureproof coating composition which is applicable to regenerated cellulose film contains thiuram sulfide derivatives.

Pat. 2,283,809. Method of Coagulating Cellulosic Solutions. May 19, 1942. An economical process for preparing lowly methylated cellulose comprises spinning a caustic solution of the cellulose into a caustic sodium sulfate coagulating bath from which the caustic is readily recovered.

Pat. 2,284,100. Nonfibrous Films. May 26, 1942. A moistureproof, transparent, self sustaining film comprising polyvinyl alcohol, wax, plasticiser, e. g., mon-dodecyl phthalate, and blending agent, e. g., rosin.

Pat. 2,306,487. Adhesive. Dec. 29, 1942. Transparent films of regenerated cellulose have a coating of a permanently tacky adhesive comprising phenol modified rubber and optionally rosin and paraffin.

Pat. 2,321,764. Article of Manufacture. June 15, 1943. Coating compositions and adhesives comprising cyclised rubber stabilised with diamine diphenyl methane derivatives.

Pat. 2,338,432. Lamination of Water-Sensitive Films. Jan. 4, 1944. A method of laminating sheets or films of water sensitive material, such as regenerated cellulose, to sheets or films of like nature or to fibrous sheets of films in such a way as to substantially prevent permanent shrinkage which comprises applying a dry adhesive of gelatine and calcium chloride and laminating by pressure.

Pat. 2,364,112. Manufacture. Dec. 5, 1944. Film, such as regenerated cellulose, which prevents penetration of ultraviolet light is produced by incorporating therein a compound such as p-p'-diaminodibensoyl p-p'-diaminodibensoyl p-p'-diaminostilbene disulfo acid.

Pat. 2,412,148. Fuel Barrier. Dec. 3, 1946. A coating composition comprised of a partial polyvinyl butyral and a polyhydric phenol aldehyde resin for bonding layers of butadiene rubber to form a fuel tank.

Patents Relating to the Manufacture of Cellulose Acetate, Rubber Hydrochloride and Polyvinyl Alcohol or Acetal Films

Pat. 2,130,212. Treatment of Polyvinyl Alcohol. Sept. 13, 1938. Polyvinyl alcohol is rendered water insoluble, green in color and ultraviolet absorbent by treatment with cuprammonium hydroxide; it may be regenerated to water soluble polyvinyl alcohol by treatment of the complex with mineral acid or ammonia.

Pat. 2,150,106. Cellulosic Material and Process for Preparing Same. May 23, 1939. Labels having gelatin adhesives are moistened with an aqueous dispersion of a cellulose derivative, such as cellulose acetate or nitrocellulose, and a softener for the water energizable adhesive and are adhered to cellulose acetate sheeting.

Pat. 2,176,903. Manufacture of Nonfibrous Film. Oct. 24, 1939. Amines, such as stearylamine, or salts thereof are added to dopes for dry casting films, such as cellulose acetate or polyvinyl alcohol, to facilitate stripping of the film from a metal surface.

Pat. 2,190,287. Preservation of Rubber Hydrochloride. Feb. 13, 1940. Rubber hydrochloride flake is stabilized during storage by immersion in water or other liquids that do not liberate oxygen, such as acetone.

Pat. 2,198,621. Apparatus for Forming Film. Apr. 30, 1940. Polyvinyl alcohol is used to coat a dry casting surface, such as for casting a cellulose acetate foil, in order to facilitate stripping.

Pat. 2,207,702. Organic Solvent Soluble Cellulosic Film Plasticised With Glycol Diglycolate. July 16, 1940. Glycol diglycolate is used as a plasticiser for cellulose acetate sheeting.

Pat. 2,219,296. Organic Solvent Soluble Cellulosic Film Plasticised With Branched Chain Methyl Butane Diols. Oct. 29, 1940. Penta-glycol and the dimethyl dihydroxy isomers thereof are used as plasticisers for cellulose acetate sheeting.

Pat. 2,230,967. Plasticised Organic Solvent Soluble Cellulosic Film. Feb. 4, 1941. Amides, such as ethanol acetamide, methanol acetamide, and ethanol formamide are used as plasticisers for cellulose acetate sheeting.

Pat. 2,250,664. Composition of Matter and Articles Formed Therefrom. July 29, 1941. Nitrogen containing alcohols or their salts, such as ethanol formamide, ethanol acetamide, or ethanol lactamide, are used as softeners for polyvinyl alcohol structures.

Pat. 2,253,821. Plasticised Organic Solvent Soluble Cellulosic Film. Aug. 26, 1941. Isobutylene glycol or 2,3-butane-diol as a plasticiser for cellulose acetate sheeting.

Pat. 2,271,468. Water Soluble Polyvinyl Alcohol Softened With Beta-Hydroxy-Alkyl Ammonium Salt. Jan. 27, 1942. The use of nitrogen containing salts, such as beta-hydroxyethylammonium chloride and beta-hydroxyethyl-ammonium acetate, as softeners for polyvinyl alcohol.

Pat. 2,276,305. Film. Mar. 17, 1942. The use of salts of amines or inorganic acids and fatty acids containing more than six carbon atoms, such as triethanolamine stearate, benzyl-trimethyl ammonium myristate or calcium oleate, are used in polyvinyl acetate casting dopes to facilitate stripping of film formed therefrom by the dry casting process.

Pat. 2,281,410. Rubber Hydrohalides Stabilised With Aminomethyl Ureas. Apr. 28, 1942. Rubber hydrochloride, especially in the form of thin films, is stabilised against deterioration by light and oxygen by the incorporation of amino-methyl urea derivatives, such as bis (dimethylaminomethyl) urea or bis (morpholinomethyl) urea.

Pat. 2,281,436. Stable Rubber Hydrochloride Composition. Apr. 28, 1942. Polyethylene polyamide long chain aliphatic acid salts, such as triethylene tetramine monostearate, as stabilisers for rubber hydrochloride, especially in the form of thin, transparent sheets.

Pat. 2,281,437. Age Resistant Rubber Hydrochloride. Apr. 28, 1942. Rubber hydrochloride is stabilised by the incorporation of aliphatic derivatives of ammonia, such as benzyl trimethyl ammonium stearate.

Pat. 2,281,523. Film. Apr. 28, 1942. The use of inorganic salts of the higher fatty acids, such as sodium oleate, as strip agents in the dry casting of cellulose derivative film.

Pat. 2,281,567. Composition and Method of Preparing Same. May 5, 1942. Stabilisation of rubber hydrochloride by means of polymeric basic amino-nitrogen-containing bodies, such as phenol-formaldehyde-methylamine resin.

Pat. 2,290,180. Polyvinyl Acetal Sheet Material. July 21, 1942. Polyvinyl acetal films softened with castor oil to give tear resistant film.

Pat. 2,293,673. Film. Aug. 18, 1942. To improve the ease of stripping dry cast film of polyvinyl acetal, the use of a long chain ester or a salt thereof, such as dilauryl or dipalmityl phosphate, or monolauryl phthalate, in the casting dope.

Pat. 2,300,211. Film Producing Process and Apparatus. Oct. 27, 1942. Formation of a bead at the edge of the film during dry casting is prevented by applying a volatile solvent material at the sections surrounding the extreme ends of the casting zone.

Pat. 2,306,790. Film. Dec. 29, 1942. The use of salts of higher fatty acids, such as sodium oleate, ammonium palmitate, or triethanolamine stearate, in polyvinyl alcohol casting dope to facilitate stripping of the film from the dry casting surface.

Pat. 2,306,963. Films of Ethyl Cellulose. Dec. 29, 1942. The use of monobasic long chain alcohol esters or salts thereof, such as dilauryl phosphate, sodium amyl phthalate or monolauryl phthalate, in ethyl cellulose casting dopes to facilitate stripping of the film from the casting surface.

Pat. 2,306,964. Cellulosic Film. Dec. 29, 1942. As strip agents in cellulose derivative film forming material to be dry cast, such as ethyl cellulose, the alkyl (including hydroxyalkyl and aralkyl) salts of fatty acids containing more than six carbon atoms, such as triethanolamine stearate.

Pat. 2,321,732. Apparatus for Evaporative Castings. June 15, 1943. In the production of solvent soluble film, such as ethyl cellulose, polyvinyl acetal or rubber hydrochloride, by the dry casting process, the casting surface is protected against corrosion by ingredients in the casting dope by use of a dried and baked coating of an alkali metal silicate.

Pat. 2,328,646. Polyvinyl Butyral Sheet Material. Sept. 7, 1943. The use of diesters of octadecanediol, such as octadecanol diacetate, as plasticisers for polyvinyl acetal resins in the production of films or sheet material having a high tear resistance and which may be sewed.

Pat. 2,329,421. Apparatus. Sept. 14, 1943. The use of guide members at the ends of coating slot of hoppers used in the dry casting of films from film forming solution of high surface tension. The guide members which extend downward toward, and are held just out of contact with the casting surface, serve to direct the solution in a stream substantially the same width as that of the hopper slot.

Pat. 2,357,380. Antistatic Coating for Film. Sept. 5, 1944. Starch in combination with an electrolyte, such as potassium acetate, as an antistatic coating for organic solvent soluble film, such as cellulose acetate or polyvinyl butyrate.

Pat. 2,365,315. Manufacture of Fabrics. Dec. 19, 1944. Polyvinyl alcohol film as a ground or base for the manufacture of lace by the embroidery process.

Pat. 2,373,782. Preparation of Polyvinyl Ethers. Apr. 17, 1945. Etherification of polyvinyl alcohol to produce water insoluble polyvinyl alkyl ethers is accomplished by treatment with an alkali metal and an alkyl halide in the presence of liquid ammonia.

Pat. 2,374,759. Plasticised Rubber Hydrochloride Sheet. May 1, 1945. Dibutyl sebacate is used as a plasticiser for rubber hydrochloride structures.

Pat. 2,388,325. Spinning Process for Artificial Filaments. Nov. 6, 1945. Inorganic salts are removed from wet-spun polyvinyl alcohol structures by washing with acetone water mixtures.

Pat. 2,391,986. Protective Sheet for Rubber. Jan. 1, 1946. Plasticised polyvinyl alcohol film as a protective covering for uncured rubber.

Pat. 2,412,947. Dry Casting Solution of Cellulose Acetate. Dec. 24, 1946. Improved strippability of cellulose acetate film is obtained by incorporating in the casting dope a small amount of water insoluble cellulose ether, such as ethyl cellulose or benzyl cellulose which is not compatible with the cellulose acetate.

Pat. 2,419,231. Polyvinyl Alcohol Film. Apr. 22, 1947. The addition of cetyl dimethyl benzyl ammonium chloride to polyvinyl alcohol casting dope or to solutions of other water soluble polymeric film forming materials to serve both as an agent to aid the dope in wetting the casting surface and to later facilitate stripping the substantially dry film from the surface.

Pat. 2,430,065. Containers of Polyvinyl Acetals. Nov. 4, 1947. Use of a film of a partial acetal of polyvinyl alcohol in coffee bags.

Pat. 2,430,931. Laminated Fuel Tank. Nov. 18, 1947. Laminated material for fuel containers comprises a layer of a partial acetal of polyvinyl alcohol, a layer of gum rubber, and a layer of a butadiene copolymer.

Pat. 2,436,433. Process for Coating Polyvinyl Alcohol Film. Feb. 24, 1948. A transparent, heat sealable film suitable as a wrapping tissue having a base of polyvinyl alcohol and a coating of a water insoluble polyvinyl acetal resin firmly anchored to the base by reaction of an aldehyde, included in the coating composition, with the base film.

Patents Relating to the Manufacture and Use of Regenerated Cellulose Caps, Bands and Tubing

Pat. 1,937,516. Tube. Dec. 5, 1933. A paper cap provided with contact members so that a radio tube, for example, may be tested while still protected by the cap which is attached to the tube base by means of a shrinkable cellulose band.

Pat. 1,937,537. Tube. Dec. 5, 1933. A shrinkable regenerated cellulose cap, punctured to give access to the contact prongs, is used to protect radio tubes.

Pat. 1,937,538. Tube. Dec. 5, 1933. A shrinkable cap of regenerated cellulose is used to protect radio tubes.

Pat. 1,973,883. Protective Covering for Mouthpieces. Sept. 18, 1934. Shrinkable bands of regenerated cellulose as protective coverings for pipe stems.

Pat. 1,980,566. Container. Nov. 13, 1934. Containers and collapsible tubes of regenerated cellulose are formed on collapsible mandrels.

Pat. 1,995,750. Protective Covering. Mar. 26, 1935. Regenerated cellulose bands are shrunk on handles of implements, such as golf clubs, to protect the surface against marring or discoloration, without interfering with appearance and handle.

Pat. 2,013,739. Preservative. Sept. 10, 1935. A preservative, such as chlorinated cresol, is used in combination with glycerin in the shipping solution for regenerated cellulose shrinkable caps and bands to prevent the growth of mold.

Pat. 2,071,024. Cellulosic Structures and Method of Preparing Same. Feb. 16, 1937. Inorganic titanates, such as barium titanate, are added to viscose to reduce the luster and to opacify regenerated cellulose caps and bands produced therefrom.

Pat. 2,079,146. Product and Process for Preparing Same. May 4, 1937. Staining of shrinkable regenerated cellulose caps and bands on contact with cork stoppers is prevented by the addition of a material, such as zinc acetate, to the cellulose structure which will form a substantially colorless precipitate with the tannin, tannic acid and the like materials contained in cork.

Pat. 2,079,147. Method of Treating Pellicles. May 4, 1937. Rust stains on shrinkable regenerated cellulose caps and bands which appear when the closure comes in contact with metal parts containing iron are prevented by treatment with an alkaline substance, such as sodium phosphate or triethanolamine.

Pat. 2,079,160. Article of Manufacture and Method for Making Same. May 4, 1937. Process for the treatment of shrinkable regenerated cellulose caps and bands to prevent the appearance of either cork or rust stains when subsequently applied as bottle closures which comprises the use of water soluble aluminates, such as sodium aluminate in the shipping solution.

Pat. 2,106,786. Pellicles and Process Relating to Same. Feb. 1, 1938. Use of sodium nitrite in the shipping solution for shrinkable regenerated cellulose caps and bands to prevent the appearance of iron stains as well as the bleeding of direct dyes.

Pat. 2,112,717. Hollow Article. May 29, 1938. Irreversible shrinkable caps are prepared from resins, such as polymerised methyl methacrylate.

Pat. 2,137,301. Cellulosic Structure. Nov. 22, 1938. Addition of finely divided graphite to viscose to enable the production therefrom of opalescent regenerated cellulose caps, bands or similar pellicles.

Pat. 2,141,744. Article Closure and Method of Applying Same. Dec. 27, 1938. A shrinkable regenerated cellulose band having a longitudinal transparent section integral therewith.

Pat. 2,164,505. Packaging. July 4, 1939. In a shipping container for shrinkable regenerated cellulose bands, the bands are placed in trays designed to retain a small amount of shipping solution to prevent drying.

Pat. 2,171,764. Method for Making Seamless Tubing. Sept. 5, 1939. A flexible hose useful for handling gasoline, which embodies in its construction a seamless tube, as of regenerated cellulose, shrunk into place.

Pat. 2,179,571. Regenerated Cellulose Pellicle. Nov. 14, 1939. The rusting of softened regenerated cellulose shrinkable bands is prevented by the addition of triethanolamine.

Pat. 2,190,280. Recovery of Glauber's Salt. Feb. 13, 1940. Apparatus for recovering Glauber's salt by crystallization on a flat surface which enables easy removal of the crystal mass.

Pat. 2,291,238. Method and Apparatus for Producing Pellicles. July 28, 1942. Method of making tubing having spiral stripes by extruding solutions, possessing different colors or degrees of opacity, through a die in side-by-side relationship and reciprocating the extrusion die or rolling the tube upon itself.

Pat. 2,306,371. Composition. Dec. 29, 1942. To the solution in which shrinkable regenerated cellulose bands are shipped, a phenyl derivative of biguanide is added to prevent attack by mold and bacteria.

Pat. 2,307,760. Article of Manufacture. Jan. 12, 1943. Finely ground mica is added to viscose for the purpose of imparting a lustrous metallic appearance to regenerated cellulose caps and bands produced therefrom.

Pat. 2,321,762. Article of Manufacture. June 15, 1943. Isopropanol is incorporated in the shrinkable gel regenerated cellulose structure of caps and bands used as secondary closures to prevent their attack by mold and bacteria.

Pat. 2,331,974. Ornamentation. Oct. 19, 1943. Bottle bands of metallic appearance from double walled regenerated cellulose tubing, the inner layer being pigmented with titanium dioxide and the outer layer with mica and suitable dyes.

Pat. 2,358,376. Process for the Manufacture of Regenerated Cellulose Ribbons. Sept. 19, 1944. A coagulated tube of regenerated cellulose is dilated with air and slit to form a flat web.

Pat. 2,361,449. Article of Manufacture. Oct. 31, 1944. A twist-to-open device for shrinkable regenerated cellulose bands consists of a series of rounded-end rectangular perforations lying in end-to-end relationship around the band.

Pat. 2,361,464. Article of Manufacture. Oct. 31, 1944. An easily openable regenerated cellulose band having elongated perforations in the shape of an hourglass positioned end-to-end in a line around the band.

Pat. 2,361,499. Article of Manufacture. Oct. 31, 1944. A twist-to-open device for regenerated cellulose bands comprises a series of elongated perforations having the shape of two circles connected by a slit lying end-to-end around the band.

Pat. 2,375,868. Preservative Composition and Method. May 15, 1945. Attack by mold and bacteria of shrinkable regenerated cellulose caps and bands during shipment and storage, is prevented by treatment with a composition comprising a partially chlorinated petroleum hydrocarbon sulfonate, benzoic acid, levulinic acid, softener and water.

Patents Relating to the Manufacture of Regenerated Cellulose Sponges

Pat. 1,909,629. Manufacture of Artificial Sponges From Cellulose. May 16, 1933. Sponges of regenerated cellulose are formed by coagulating a mixture of viscose, sodium sulfate crystals and hemp fibers in a boiling sodium sulfate solution.

Pat. 1,974,393. Manufacture of Artificial Sponges. Sept. 18, 1934. Regenerated cellulose sponges are produced by subjecting a mixture of viscose and pore forming fillers, such as sodium sulfate, to the action of a liquid regenerating bath under pressure. Materials such as scents, disinfectants or the like may be added to the regenerating bath and thus incorporated into and retained by the sponge product.

Pat. 2,011,160. Manufacture of Artificial Sponge. Aug. 13, 1935. A process for continuously producing viscose sponges comprises pressing a mixture of viscose and pore former through a tube having alternate cooled and heated sections.

Pat. 2,026,177. Manufacture of Artificial Sponges. Dec. 31, 1935. A process for making regenerated cellulose sponges which comprises pressing a mass containing viscose and pore forming material into a tubular mold, coagulating by means of heat, removing from the mold, and cutting into pieces perpendicular to the long axis of the mold.

Pat. 2,117,392. Cellulosic Articles. May 17, 1938. Addition of sodium phosphate to a non-acid regenerated cellulose sponge coagulation bath in order to avoid contamination of the sponges by iron sulfide formed by reaction with iron equipment.

Pat. 2,133,805. Cellulosic Structure and Method of Making the Same. Oct. 18, 1938. A composite sponge having fine pores on one side and coarse pores on the other is formed by the simultaneous coagulation of two viscose masses each having a different sized pore forming material incorporated therein.

Pat. 2,138,712. Manufacture of Sponge Articles. Nov. 29, 1938. Process of making sponge articles having the viscose sponge firmly united and coated onto cellulosic structures, such as fabrics or a wooden handle.

Pat. 2,280,022. Method and Apparatus for Molding Cellulosic Structures. Apr. 14, 1942. The extrusion of a cellulose sponge mass in which the fibrous or crystalline materials are disoriented by changing the direction of flow of the mass as it passes from the extrusion orifices into the container or receiving mold.

Pat. 2,286,823. Artificial Structure. Sept. 15, 1942. Method of preparing hand sized sponges having great uniformity of pore sizes comprises extruding the sponge forming material so that the pore forming materials are disoriented by changing the direction of flow of the mass as it passes from the extrusion orifices into the container or receiving mold.

Pat. 2,289,230. Method of and Mold for Forming Cellulose Sponges. Sept. 14, 1942. A sponge mold possessing an inner surface first roughened by sand blasting followed by spraying with molten metal.

NOTICE

Imperial Chemical Industries Limited, 2 Buckingham Gate, London S. W. 1, England, has placed more than 1100 of its patents on the Register of Patents as available for license on reasonable terms. The patent numbers and titles will be published at a later date.

Correspondence in connection with these patents should be addressed to Cushman, Darby & Cushman, American Security Building, 730 15th St., N. W., Washington 5, D. C.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 4, 1949

[VOL. 618. No. 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 3, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 502,545. VISCO BROTHERS, Philadelphia, Pa. Filed May 21, 1946.

Nice'n'Brite

The word "Brite" is disclaimed.

FOR POLISHING POWDER FOR SILVER, NICKEL, CHROME, AND ALL PLATED METALS.

Claims use since Apr. 20, 1946.

CLASS 5

ADHESIVES

Ser. No. 507,096. BEAUTYKOTE CORPORATION, Newark, N. J. Filed Aug. 9, 1946.

Beautykote

FOR SYNTHETIC ADHESIVE CEMENT—NAMELY, SYNTHETIC POLYMER OF A RESIN TYPE FOR LAMINATING AND BONDING TOGETHER WOOD, TEXTILES, FABRICS, PAPER, AND VARIOUS COMPOSITION MATERIAL.

Claims use since July 12, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 506,349. RUTLEE CHEMICAL COMPANY, INC., Perth Amboy, N. J., and Washington, D. C. Filed July 26, 1946.

LUB-GEL

FOR SURGICAL LUBRICANT.

Claims use since May 1, 1946.

Ser. No. 514,040. HULL FISH MEAL & OIL CO. LTD., Hull, England. Filed Dec. 11, 1946.

Procene

FOR PREPARATION FOR USE AS A COATING OR RESIST TO PROTECT PHOTO-ENGRAVING PLATES FROM THE CORROSION OF ACIDS OR ACTION OF OTHER CHEMICAL AGENTS.

Claims use since Nov. 17, 1944.

Ser. No. 516,836. MAX HAEFELI, Basel, Switzerland. Filed Feb. 3, 1947.

PROTHACRYL

FOR DENTIFRICES, DENTURE POWDERS, DENTAL PLATE SECURING PREPARATIONS, AND CHEMICO-PHARMACEUTICAL PREPARATIONS USED IN DENTAL PRACTICE.

Claims use since 1944.

Ser. No. 516,838. MAX HAEFELI, Basel, Switzerland. Filed Feb. 3, 1947.

GUTTAFORM

FOR DENTIFRICES, DENTURE POWDERS, DENTAL PLATE SECURING PREPARATIONS, AND CHEMICO-PHARMACEUTICAL PREPARATIONS USED IN DENTAL PRACTICE.

Claims use since 1944.

Ser. No. 521,076. HARRY D. KOENIG, doing business as Anre, New York, N. Y. Filed Apr. 21, 1947.

L'Estrona By ANRE

No claim is made to the term "By Anre," apart from the mark shown.

FOR FACE AND HAND CREAM.

Claims use since Mar. 10, 1944.

Ser. No. 521,999. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed May 6, 1947.

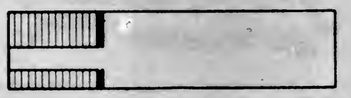
BOTULES

FOR ANTIBACTERIAL, ANTISEPTIC, ANALGESIC PREPARATION IN COLLAPSIBLE UNIT DOSAGE CONTAINERS.
Claims use since Apr. 16, 1947.

CLASS 11

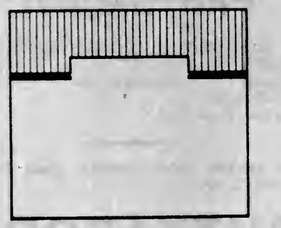
INKS AND INKING MATERIALS

Ser. No. 525,871. KRUFFEL & ESSER COMPANY, Hoboken, N. J. Filed July 3, 1947.



The drawing is lined for red.
FOR DRAWING INK.
Claims use since June 1947.

Ser. No. 525,874. KRUFFEL & ESSER COMPANY, Hoboken, N. J. Filed July 3, 1947.



The drawing is lined for red.
FOR DRAWING INK.
Claims use since June 1947.

CLASS 15

OILS AND GREASES

Ser. No. 496,670. THE SINGER MANUFACTURING COMPANY, Elizabeth, N. J. Filed Feb. 15, 1946.

S

Applicant owns Reg. Nos. 74,992 and 98,707. The drawing is lined for the color red.
FOR LUBRICATING OIL AND GREASES.
Claims use since Mar. 3, 1905, on lubricating oil; and since November 1917, on greases.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 520,967. NEWPORT INDUSTRIES, INC., Pensacola, Fla. Filed Apr. 18, 1947.

DYTIN

FOR NATURAL MIXTURE OF MONOCYCLIC TERPENE HYDROCARBONS, WHOSE CHIEF CONSTITUENT IS DIPENTENE USED PRINCIPALLY AS A SOLVENT OR DILUENT FOR PAINTS, VARNISHES, AND THE LIKE.
Claims use since Oct. 1, 1935.

Ser. No. 521,611. THE PATTERSON-SARGENT COMPANY, Cleveland, Ohio. Filed Apr. 30, 1947.

IDENTI-COLOR

The term "Color" is disclaimed apart from the mark.
FOR DRY AND READY MIXED PAINTS, PAINT ENAMELS, WOOD OR METAL STAINS, LACQUERS, AND VARNISHES.
Claims use since Mar. 27, 1947.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 525,631. P. LORILLARD COMPANY, New York, N. Y. Filed July 2, 1947.

ST LEGER

The drawing is lined for the color gold.
FOR CIGARS.
Claims use since August 1906.

CLASS 19

VEHICLES

Ser. No. 511,466. GLOSTEX PRODUCTS, INC., Chicago, Ill. Filed Oct. 25, 1946.

PRINCESS

FOR AUTOMOBILE SEAT COVERS.
Claims use since Oct. 10, 1946.

Ser. No. 513,028. CLE-DRAULIC COMPANY, Cleveland, Ohio. Filed Nov. 22, 1946.

Cle-Draulic

FOR SHOCK ABSORBERS FOR MOTOR VEHICLES.
Claims use since Oct. 28, 1946.

Ser. No. 513,388. CLE-DRAULIC COMPANY, Cleveland, Ohio. Filed Nov. 29, 1946.

The mark comprises the word "Cle-Draulic" in the form shown with the illustration of a shock absorber being disclaimed apart from the mark as shown.
FOR SHOCK ABSORBERS FOR MOTOR VEHICLES.
Claims use since Oct. 28, 1946.

Ser. No. 523,263. ARTHUR R. HARMON, Hatfield, Pa. Filed May 29, 1947.

CONICRAFT

FOR ROW BOATS, MOTOR BOATS, SAIL BOATS, AND COMBINATIONS THEREOF.
Claims use since Feb. 25, 1946.

Ser. No. 524,714. NEW YORK RUBBER CORPORATION, New York, N. Y. Filed June 24, 1947.

Airubber

FOR INFLATABLE BOATS AND INFLATABLE FLOATS FOR SUPPORTING A PLURALITY OF HUMANS.
Claims use since September 1924 on floats; and since July 1930 on boats.

Ser. No. 524,715. NEW YORK RUBBER CORPORATION, New York, N. Y. Filed June 24, 1947.

FOR INFLATABLE BOATS AND INFLATABLE FLOATS FOR SUPPORTING A PLURALITY OF HUMANS.
Claims use since September 1924 on floats; and since July 1930 on boats.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 516,880. VOL CREPE LIMITED, Glossop, England. Filed Feb. 3, 1947.

VOLACREPE

FOR FELTED TEXTILE FABRIC FOR USE AS A LINOLEUM OR OTHER SIMILAR TYPE COVERING FOR FLOORS.
Claims use since Feb. 22, 1941.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 486,810. PREMIER MILL CORPORATION, Geneva, N. Y. Filed Aug. 6, 1945.

FOR COLLOID MILLS, HOMOGENIZERS, GRINDERS, COMMINUTORS, AND MIXERS, CONSISTING OF MECHANICAL APPARATUS AND MACHINES OF VARIOUS SIZES AND FORMS ADAPTED FOR USE IN THE FIELDS OF FOOD AND CHEMICAL PROCESSING BY WAY OF GRINDING, MIXING, COMMINUTING, HOMOGENIZING, BLENDING AND SUITABLE FOR USE IN BASIC PROCESSING AND TREATING.
Claims use since Oct. 15, 1923.

Ser. No. 517,539. HENRY C. WHITWORTH, doing business as Whitworth Supply, Scott City, Kans. Filed Feb. 14, 1947.

THE KATTLE KING

No claim is made to the words "The" and "Kattle" except in combination with the other matter constituting the mark.
FOR CATTLE CHUTES OF THE TRANSPORTABLE VARIETY; APPARATUS IN WHICH CATTLE CAN BE PENNED AND HELD IN REQUIRED IMMOBILE POSITIONS FOR BRANDING, DEHORNING, AND THE LIKE.
Claims use since Apr. 26, 1946.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 482,998. C. ARTHUR MAY, doing business as Cam Manufacturing Co., Lakewood, R. I. Filed May 4, 1945.

"CAM-GRIPS"

The term "Gripe" is disclaimed.
FOR HOLDING DEVICES, SPECIFICALLY NARROW STRIPS OF FAIRLY HEAVY PAPER WITH CORES OF LIGHT WIRE, SOLD IN ROLLS OR CUT LENGTHS, FOR USE IN SHORT CUT LENGTHS BY LAUNDERERS AND GARMENT CLEANERS, AS CLAMPS TO BE PRESSED OVER THE SHOULDER FRAME OF GARMENT HANGERS AND THE LIKE, TO HOLD THE LAUNDERED GARMENT IN POSITION THEREON UNTIL DELIVERY, AND FOR OTHER TEMPORARY CLAMPING USES.
Claims use since Apr. 15, 1946.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 504,826. CARROLL H. DUNNING, Los Angeles, Calif. Filed June 29, 1946.

Dunning ANIMATIC

The drawing is lined for shading only.
FOR STILL FILM STRIP PROJECTOR.
Claims use since Sept. 1, 1944.

CLASS 33

GLASSWARE

Ser. No. 514,442. PAUL A. STRAUB & Co. INC., New York, N. Y. Filed Dec. 17, 1946.

PASCO

FOR GLASSWARE—NAMELY, BEVERAGE GLASSES OF ALL TYPES, VASES, BOWLS, DECANTERS, JARS, BOTTLES AND BOXES, AND TRAYS NOT INCLUDING CIGARETTE BOXES AND ASH TRAYS.
Claims use since 1931.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 512,483. B. G. B. MFG. COMPANY, Dearborn, Mich. Filed Nov. 13, 1946.

CROWN HEAT KING

The word "Heat" is disclaimed apart from the mark.
FOR GAS BURNERS FOR HEATING SYSTEMS.
Claims use since Jan. 8, 1946.

CLASS 37

PAPER AND STATIONERY

Ser. No. 507,494. STANDARD PRODUCTS CORPORATION, New York, N. Y. Filed Aug. 15, 1946.

FOR TISSUE IN SHEET FORM FOR CARBONIZING, CIGARETTE TISSUE IN SHEET FORM, AIRMAIL WRITING PAPER TISSUE.
Claims use since 1925 on tissue in sheet form for carbonizing; and since 1942 on airmail writing paper and cigarette tissue.

Ser. No. 510,738. BERTRAM A. STRAUSS, doing business as Columbia Pencil Company, New York, N. Y. Filed Oct. 11, 1946.

FOR MECHANICAL PENCILS.
Claims use since September 1931.

Ser. No. 520,631. KOLLER & SMITH CO., INC., New York, N. Y. Filed Apr. 14, 1947.

KOLGRADE

FOR FILING SUPPLIES—NAMELY, FILE CARDS AND FOLDERS.
Claims use since Jan. 31, 1947.

Ser. No. 525,966. THE SORG PAPER COMPANY, Middletown, Ohio. Filed July 3, 1947.

SOREX

FOR PRINTING PAPER, WRITING PAPER, TAG PAPER, BRISTOL, COVER PAPER OF HIGH STRENGTH, AND ALSO FOR SAID PAPERS OF SOMEWHAT LIGHTER WEIGHTS BUT HAVING HIGHER STRENGTH CHARACTERISTICS FOR GENERAL STRONG UTILITY.
Claims use since 1933.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 516,464. ALROY PUBLISHING CORPORATION, New York, N. Y. Filed Jan. 28, 1947.

highlight

FOR THE GRAPHIC ARTS

The words "For The Graphic Arts" are disclaimed apart from the mark.
FOR MAGAZINE.
Claims use since July 26, 1946.

Ser. No. 521,220. STREET & SMITH PUBLICATIONS, INC., New York, N. Y. Filed Apr. 23, 1947.

Shadow Mystery

The word "Mystery" is disclaimed.
FOR MAGAZINE.
Claims use since Jan. 10, 1947.

CLASS 39

WONDERFOAM

FOR SOAPS, AND SAPONACEOUS, DETERGENT BUBBLE BATH COMPOUNDS.
Claims use since Jan. 8, 1948.

Ser. No. 565,907. S. V. CAIN, INC., Peoria, Ill. Filed Sept. 27, 1948.

SCAN

FOR WAX BASE CLEANER.
Claims use since Jan. 8, 1947.

CLASS 5

ADHESIVES

Ser. No. 528,637. NATIONAL STARCH PRODUCTS INC., New York, N. Y. Filed July 15, 1947.

National

The shaded background does not represent any particular color.
FOR ADHESIVES IN THE FORM OF CEMENTS, LIQUID GLUES, FLEXIBLE GLUES, PASTES, AND MUCILAGE.
Claims use since Oct. 6, 1945.

CLASS 6

CHEMICALS, MEDICINES AND PHARMACEUTICAL PREPARATIONS

Ser. No. 529,590. BUFFINGTONS, INCORPORATED, Worcester, Mass. Filed July 26, 1947. Under section 2f of the act of 1946.

DIA-TROPINE

The word "Tropine" is disclaimed apart from the mark.
FOR TABLET FOR THE TREATMENT OF HYPERACIDITY AND PYLOROSPASMS.
Claims use since February 1937.

Ser. No. 533,040. WM. MONTGOMERY COMPANY, Philadelphia, Pa. Filed Sept. 2, 1947. CONCURRENT USE MARK.

RIVAL BLUE

The word "Blue" is disclaimed.
FOR AMMONIA AND BLEACH.
Claims use since 1901.

Ser. No. 532,468. FLO. B. MCDERMOTT, doing business as The McMott Co., Portland, Oreg. Filed Aug. 19, 1947.

MCM McMott

The surname "McMott" is disclaimed.
FOR HYGIENIC POWDER.
Claims use since May 28, 1947.

Ser. No. 535,622. PUERTO RICO DISTILLING COMPANY, Arecibo, P. R. Filed Sept. 24, 1947. Under section 2f of the act of 1946.

SUPERIOR 70

FOR TOILET LOTION.
Claims use since Aug. 12, 1930.

Ser. No. 540,337. THE STUART COMPANY, Pasadena, Calif. Filed Nov. 6, 1947. Under section 2f of the act of 1946.

the Stuart formula

The words "the formula" are disclaimed apart from the mark as shown. Applicant claims ownership of registration No. 397,611.
FOR VITAMIN CONCENTRATES.
Claims use since Apr. 5, 1941.

Ser. No. 542,436. BRISTOL-MYERS COMPANY, New York, N. Y. Filed Nov. 26, 1947.

BUFFERIN

FOR ANTACID ASPIRIN.
Claims use since Apr. 29, 1947.

Ser. No. 543,859. ALLIED CHEMICAL & DYE CORPORATION, New York, N. Y. Filed Dec 10, 1947. Under section 2f of the act of 1946.

HORNE'S DRY LEAD

Applicant claims ownership of registration No. 196,548.
FOR CHEMICAL REAGENT FOR THE PRECIPITATION OF COLORING MATTERS AND OTHER IMPURITIES FROM SOLUTIONS CONTAINING THE SAME.
Claims use since 1904.

Ser. No. 543,994. ROYCE CHEMICAL COMPANY, Carlton Hill, N. J. Filed Dec. 10, 1947.

ROYCE CHEMICAL CO.

The words "Royce Chemical Co." are disclaimed apart from the mark. Applicant claims ownership of registration No. 340,177.

FOR CHEMICALS ADAPTED FOR THE DYEING, BLEACHING, FINISHING, AND TREATMENT OF TEXTILE FIBERS AND FABRICS, AND FOR CHEMICALS ADAPTED FOR THE STRIPPING AND DISCHARGING OF DYED FABRICS AND FIBERS, SULPHONATED CASTOR OIL FOR TEXTILE PURPOSES, GUMS SUITABLE FOR THE PRINTING OF TEXTILE FABRICS, CHEMICALS ADAPTED FOR THE REMOVAL OF SIZING MATERIALS FROM TEXTILE FABRICS, SULPHONATED OLIVE OIL FOR TEXTILE PURPOSES, HYDROSULPHITE FOR TEXTILE PURPOSES, PROCESSING FLUIDS FOR TREATING HATS, SILK, WOOL, COTTON FABRICS AND ALL TYPE YARNS, ARTIFICIAL SILKS, ARTIFICIAL FABRICS, PAPER, CELLULOSE PAPER, FURS, CLOTHING, FOR RENDERING THEM WATER REPELLENT, WETTING OUT AGENT USED IN TEXTILE PROCESSING, AND CHEMICALS ADAPTED FOR THE SOFTENING AND LUBRICATING OF SILK AND OTHER TEXTILE FIBERS AND THE TREATMENT OF SILK YARNS AND OTHER TEXTILE YARNS PRIOR TO THROWING, WINDING, WARPING OR KNITTING.

WOODLEAF

FOR SUNBURN LOTION AND LOTION FOR OAK AND IVY POISONING.
Claims use since May 19, 1947.

Ser. No. 559,474. THE ARMAND COMPANY, Des Moines, Iowa. Filed May 21, 1948.

Zanzibar

Applicant claims ownership of registration No. 268,093.
FOR ROUGE AND LIP STICK.
Claims use since June 1928.

Ser. No. 560,744. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed July 6, 1948.

HIBICON

FOR ANTICONVULSANT, ANTI-SPASMODIC PREPARATIONS.
Claims use since June 17, 1948.

Ser. No. 566,806. A. H. ROBINS COMPANY, INC., Richmond, Va. Filed Oct. 11, 1948.

PABALATE

FOR ANTIRHEUMATIC PREPARATION IN TABLET FORM.
Claims use since Sept. 6, 1948.

CLASS 7

CORDAGE

Ser. No. 545,699. CHASE BAG CO., New York, N. Y. Filed Dec. 30, 1947. Under section 2f of the act of 1946.

HI-SPEED

Applicant claims ownership of registration No. 210,310.
FOR TWINE FOR CLOSING BAGS.
Claims use since 1920.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 506,108. KIRSTEN PIPE COMPANY, Seattle, Wash. Filed Oct. 27, 1947; originally filed, act of 1905, July 23, 1946.

PROTECT-O-BIT

The word "Bit" is disclaimed apart from the mark.
FOR TOBACCO PIPES AND CIGARETTE HOLDERS.
Claims use since June 1, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 535,071. POLAR WARE COMPANY, Sheboygan, Wis. Filed Sept. 19, 1947.

LAKE-SHORE

FOR ENAMEL WARE—NAMELY, POTS, PANS, AND KETTLES.
Claims use since June 1941.

Ser. No. 535,798. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

AVON

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA LAVATORIES.
Claims use since March 1933.

Ser. No. 535,799. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Sept. 26, 1947.

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA WATER CLOSETS, WATER CLOSET TANKS, LAVATORIES, URINALS, SINKS, AND LAUNDRY TRAYS.
Claims use since January 1936.

KOYLON

FOR BUILT-IN SEAT CUSHIONS OF FOAM RUBBER FOR AUTOMOBILES.
Claims use since Nov. 27, 1946

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 534,091. CORY CORPORATION, Chicago, Ill. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

CORY

Applicant claims ownership of registration No. 331,919.
FOR ELECTRIC STOVES.
Claims use since February 1936.

Ser. No. 542,659. ROCKWELL MANUFACTURING COMPANY, Pittsburgh, Pa. Filed Nov. 28, 1947.

DELTA MILWAUKEE

The name "Milwaukee" is disclaimed apart from the mark shown. Applicant claims ownership of registrations Nos. 393,095 and 322,510.
FOR ELECTRIC MOTORS, ELECTRIC WELDERS, AND PARTS THEREOF.
Claims use since July 10, 1941.

Ser. No. 543,522. RADIO CORPORATION OF AMERICA, New York, N. Y. Filed Dec. 5, 1947. Under section 2f of the act of 1946.

Cunningham

Applicant claims ownership of registrations Nos. 231,803, 174,482, and 267,728.
FOR ELECTRON TUBES USED IN RADIO RECEIVERS AND AS POWER TUBES.
Claims use since October 1920.

Ser. No. 543,756. SOLAR CORPORATION, Milwaukee, Wis. Filed Dec. 8, 1947. Under section 2f of the act of 1946.

SUPER ACTIVE

FOR ELECTRIC STORAGE BATTERIES.
Claims use since 1933.

Ser. No. 544,192. H. H. RENNEKER, San Diego, Calif. Filed Dec. 12, 1947.

Tele-Rest

No claim is made to the exclusive right to the use of the word "Rest" apart from the mark as shown.
FOR TELEPHONE SHOULDER CRADLES.
Claims use since May 1947.

Ser. No. 544,339. ETHINGTON MFG. CORP., Venice, Calif. Filed Dec. 15, 1947. Under section 2f of the act of 1946.

Emcee

FOR SOUND EQUIPMENT—NAMELY, LOUD SPEAKERS FOR AUTOMOBILE RADIOS.
Claims use since Nov. 25, 1947.

Ser. No. 544,340. ETHINGTON MFG. CORP., Venice, Calif. Filed Dec. 15, 1947.

Emcee

The representation of the human figure is merely fanciful.

FOR SOUND EQUIPMENT—NAMELY, LOUD SPEAKERS FOR AUTOMOBILE RADIOS.

Claims use since Nov. 25, 1947.

Ser. No. 547,379. BENWOOD-LINZE COMPANY, St. Louis, Mo. Filed Sept. 8, 1947.

BEAUTYCREST

FOR TEXTILE RUGS.
Claims use since Sept. 1, 1942.

Ser. No. 552,962. EVERPAST FABRICS, INC., New York, N. Y. Filed Mar. 25, 1948.

Tafetella

FOR COTTON PIECE GOODS.
Claims use since Feb. 6, 1948.

Ser. No. 553,220. SHELMAR FABRICS CORPORATION, New York, N. Y. Filed Mar. 27, 1948.

SHELPREME

FOR FABRICS MADE OF RAYON, AND OF RAYON AND COTTON.
Claims use since Mar. 1, 1947.

Ser. No. 553,449. BURLINGTON MILLS CORPORATION, Greensboro, N. C. Filed Mar. 31, 1948. Under section 2f of the act of 1946.

RomaLeda

FOR PIECE GOODS OF COTTON, SILK, LINEN, AND SYNTHETIC FIBERS.
Claims use since Dec. 18, 1940.

Ser. No. 554,507. NEWPORT FINISHING CORPORATION, Fall River, Mass. Filed Apr. 13, 1948.

No claim is made to the representation of the fabric apart from the mark.
FOR RAYON FABRIC IN THE PIECE USED FOR LINING.
Claims use since Feb. 18, 1948.

Ser. No. 559,791. CROMPTON COMPANY, West Warwick, R. I. Filed June 2, 1948.

POCKETROY

FOR FABRICS IN THE PIECE COMPOSED OF COTTON, WOOL, SILK, RAYON, NYLON, CELLULOSE ACETATE, PROTEIN FIBERS, OR MIXTURES THEREOF.
Claims use since Nov. 23, 1943.

Ser. No. 560,013. D. B. FULLER & CO., INC., New York, N. Y. Filed June 23, 1948.

ADVENTURE

FOR TEXTILE FABRICS IN THE PIECE OF COTTON, RAYON, PROTEIN FIBRES, AND MIXTURES THEREOF.
Claims use since Apr. 7, 1947.

CLASS 43

THREAD AND YARN

Ser. No. 533,540. THE CLARK THREAD COMPANY, Wilmington, Del., and Clarkdale, Ga. Filed Sept. 5, 1947. Under section 2f of the act of 1946.

BRILLIANT

Applicant claims ownership of registration No. 162,632.
FOR THREAD.
Claims use since 1898.

Ser. No. 553,441. W. WARREN THREAD WORKS, INC., Westfield, Mass. Filed Mar. 30, 1948.

LEROY

Applicant claims ownership of registration No. 192,207.
FOR SPOOL COTTON.
Claims use since Oct. 1, 1923.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Ser. No. 528,715. GAYLORD-SHELTON INC., Chicago, Ill. Filed July 16, 1947. Under section 2f of the act of 1946.

THERMIQUE

Applicant claims ownership of registrations Nos. 282,571 and 284,264.
FOR PERMANENT WAVING MACHINES, HEATERS FOR USE IN CONNECTION THEREWITH, CURLERS, PADS, CLOSING CLIPS, AND CLAMPS.
Claims use since Jan. 17, 1930.

Ser. No. 530,060. THE CLEVELAND DENTAL MANUFACTURING COMPANY, Cleveland, Ohio. Filed July 31, 1947. Under section 2f of the act of 1946.

Sani-Jerry

FOR DENTAL HANDPIECES.
Claims use since Dec. 13, 1928.

Ser. No. 535,451. ARMSTRONG CORK COMPANY, Lancaster, Pa. Filed Sept. 24, 1947. Under section 2f of the act of 1946.

FOLD-SPRAY

Applicant claims ownership of registration No. 396,871.
FOR FOUNTAIN SYRINGES.
Claims use since Jan. 8, 1940.

Ser. No. 553,034. UNIVERSAL DENTAL COMPANY, Philadelphia, Pa. Filed Mar. 25, 1948. Under section 2f of the act of 1946.

NUFORM

Applicant claims ownership of registrations Nos. 154,210 and 247,437.
FOR ARTIFICIAL TEETH.
Claims use since December 1920.

CLASS 45

SOFT DRINKS AND CARBONATED WATERS

Ser. No. 532,483. ORANGE TEACO COMPANY, Atlanta, Ga. Filed Aug. 26, 1947.

ORANGE TEACO

The word "Orange" is disclaimed apart from the mark.
FOR NONALCOHOLIC MALTLESS BEVERAGES SOLD AS SOFT DRINKS, SYRUPS, AND CONCENTRATES FOR MAKING THE SAME.
Claims use since May 14, 1934.

Ser. No. 534,748. CARR COLLINS, JR., doing business as Big Top Beverages, Dallas, Tex., assignor to Big Top Beverages Inc., Dallas, Tex., a corporation of Texas. Filed Sept. 17, 1947.

FOR SOFT DRINKS AND CONCENTRATES USED IN MAKING MALTLESS SOFT DRINKS.
Claims use since Aug. 19, 1947.

Ser. No. 542,044. THE MOREY MERCANTILE COMPANY, Denver, Colo. Filed Nov. 22, 1947.

Solitaire

Applicant claims ownership of registration No. 107,579.
FOR SODA-FOUNTAIN SYRUPS—NAMELY, PINEAPPLE SYRUP, CHOCOLATE FLAVORED SYRUP, IMITATION WILD CHERRY SYRUP, FOUNTAIN COCOA; AND GRAPE JUICE.
Claims use since Aug. 7, 1914.

Ser. No. 542,826. FILOMENA GUERRERA, Ellwood City, Pa. Filed Dec. 1, 1947.

FOR NONALCOHOLIC, MALTLESS BEVERAGES SOLD AS SOFT DRINKS.
Claims use since Nov. 20, 1947.

No claim is made to the representation of a fish apart from the mark. The representation of the human figure is fanciful.
FOR CANNED FISH.
Claims use since July 1936.

Ser. No. 534,338. FRED W. POPE AND THOMAS W. BRYANT, Lakeland, Fla. Filed Sept. 12, 1947. Under section 2f of the act of 1946.

POPE'S SUMMER

No claim is made to the word "Summer" apart from the mark. Applicant claims ownership of registration No. 363,390.
FOR FRESH ORANGES.
Claims use since July 2, 1934.

Ser. No. 534,933. STANDARD MILLING COMPANY, Chicago, Ill. Filed Sept. 18, 1947.

LOMICO

FOR WHEAT FLOUR.
Claims use since 1923.

Ser. No. 535,222. CONSOLIDATED MATERIALS COMPANY, Duluth, Minn. Filed Sept. 22, 1947.

I. G. S.

FOR SALT FOR FEEDING LIVESTOCK.
Claims use since Nov. 9, 1944.

Ser. No. 535,454. W. F. ASSAU CANNING CO., INC., Baltimore, Md. Filed Sept. 24, 1947.

Fort McHenry

Applicant claims ownership of registration No. 125,605.
FOR CANNED FRUITS AND VEGETABLES.
Claims use since Nov. 27, 1918.

Ser. No. 535,455. W. F. ASSAU CANNING CO., INC., Baltimore, Md. Filed Sept. 24, 1947.

Narragansett

Applicant claims ownership of registration No. 103,990.
FOR CANNED FRUITS AND CANNED VEGETABLES.
Claims use since Nov. 9, 1897.

Ser. No. 535,797. CALIFORNIA FRUIT EXCHANGE, Sacramento, Calif. Filed Sept. 26, 1947.

FOR FRESH DECIDUOUS FRUITS.
Claims use since 1919.

Ser. No. 539,882. THE LA HABRA CITRUS ASSOCIATION, doing business as La Habra Citrus Ass'n., La Habra, Calif. Filed Nov. 1, 1947.

BENGAL

Applicant claims ownership of registration No. 171,832.
FOR FRESH CITRUS FRUITS.
Claims use since Sept. 1, 1917.

Ser. No. 540,660. FRUITVALE CANNING COMPANY, Oakland, Calif. Filed Nov. 10, 1947.

FOR CANNED FRUITS.
Claims use since July 6, 1922.

Ser. No. 566,258. TEX-O-KAN FLOUR MILLS CO., doing business as Morten Milling Company, Dallas, Tex. Filed Oct. 4, 1948. Under section 2f of the act of 1946.

MORTEN'S BEST

No claim is made to the word "Best" apart from the mark. Applicant claims ownership of registration No. 221,548.
FOR WHEAT FLOUR.
Claims use since 1939.

CLASS 48

MALT BEVERAGES AND LIQUORS

Ser. No. 535,581. MINER-HILLARD MILLING CO., Wilkes-Barre, Pa. Filed Sept. 24, 1947.

E-Z

FOR CEREAL PRODUCT USED FOR THE MANUFACTURE OF BEER AND ALE.
Claims use since Apr. 1, 1942.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Ser. No. 543,002. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md. Filed Aug. 28, 1947.

NEPRO

Applicant claims ownership of registrations Nos. 92,905, 132,029, and 291,872.

FOR CORK DISCS FOR METALLIC CLOSURES FOR GLASS AND METAL BOTTLE AND JAR CONTAINERS. Claims use since Oct. 24, 1912.

Ser. No. 543,004. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md. Filed Aug. 28, 1947.

RAYO

Applicant claims ownership of registration No. 281,959.

FOR METALLIC CLOSURES FOR CONTAINERS. Claims use since Apr. 18, 1930.

TRADE-MARK REGISTRATIONS GRANTED

Filed Feb. 13, 1947, Serial No. 517,397. Published Sept. 14, 1948. Class 42.

441,784. BICYCLE DRAWN CARTS. MERRILL AND MCKINNEY, Indianapolis, Ind.
Filed Feb. 15, 1947, Serial No. 517,580. Published Aug. 24, 1948. Class 19.

441,785. AUTOMOTIVE SERVICE EQUIPMENT—NAMELY, AUTOMOBILE LIFTS OF THE HYDRAULIC AND HYDRAULIC-PNEUMATIC TYPE, AIR COMPRESSORS OF THE CHARACTER USED IN GARAGES AND AUTOMOBILE SERVICE STATIONS. JOHN D. COCHIN, doing business as J. D. Cochin Manufacturing Co., South San Francisco, Calif.
Filed Feb. 17, 1947, Serial No. 517,620. Published Sept. 7, 1948. Class 23.

441,786. HAND CLEANER AND HECTOGRAPH INK REMOVER. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y.
Filed Mar. 19, 1947, Serial No. 519,259. Published Sept. 28, 1948. Class 4.

441,787. AUTOMATIC DRAFT CONTROLS—NAMELY, AUTOMATICALLY OPERATING FLUE DAMPERS FOR STOVES, FURNACES, AND THE LIKE. THE HOTSTREAM HEATER COMPANY, Cleveland, Ohio.
Filed Mar. 21, 1947, Serial No. 519,395. Published Sept. 14, 1948. Class 34.

441,788. HAND BLEACHING CREAM, FACE CREAM, FACE BLEACHING CREAM, CLEANSING CREAM, HAIR PRESSING CREAM, HAIR WAVE LOTION, LIQUID PREPARATION FOR THE TREATMENT OF THE SCALP AND HAIR, AND HAIR BRILLIANTINE. VIDELLIA FISHER, Oklahoma City, Okla., and New York, N. Y.
Filed Mar. 26, 1947, Serial No. 519,577. Published Sept. 28, 1948. Class 6.

441,789. PERFUMES AND EAUX DE COLOGNE. LUBANA, S. A., Barcelona, Spain.
Filed Mar. 26, 1947, Serial No. 519,588. Published Sept. 28, 1948. Class 6.

441,790. LINOLEUM CEMENT. BENJAMIN FOSTER COMPANY, Philadelphia, Pa.
Filed Mar. 29, 1947, Serial No. 519,806. Published Sept. 7, 1948. Class 5.

441,791. VACUUM BOTTLES AND LUNCH BOXES. AFFILIATED RETAILERS, INC., New York, N. Y.
Filed Apr. 3, 1947, Serial No. 520,078. Published Sept. 28, 1948. Class 2.

441,792. SMALL BOATS, DINGHIES, TENDERS PROPELLED BY OARS, SAIL OR MOTOR, ETC. ISLAND CREEK BOAT SHOP, Oxford, Md.
Filed Apr. 5, 1947, Serial No. 520,219. Published Aug. 24, 1948. Class 19.

441,793. BEADS AND METAL SPANGLES IN THE NATURE OF TRIMMINGS. CANUET FRERES, Paris, France.
Filed Apr. 7, 1947, Serial No. 520,263. Published Sept. 21, 1948. Class 40.

441,794. DENTIFRICES IN FORM OF FLUIDS, POWDERS, OR PASTE. YASO MEDICINAL, S. A., Barcelona, Spain.
Filed Apr. 10, 1947, Serial No. 520,489. Published Sept. 28, 1948. Class 6.

441,795. CEMENT USED ESPECIALLY FOR THE CEMENTING OF LINOLEUM, ETC. H. B. FRED. KUHLS, Brooklyn, N. Y.
Filed Apr. 23, 1947, Serial No. 521,192. Published July 20, 1948. Class 5.

441,796. POWDERED CLEANING COMPOSITION ESPECIALLY FOR CLEANING AUTO BODIES, CHROME, TIRES, GLASS, AND OTHER EXPOSED PARTS; AND FOR POWDERED METAL POLISH FOR CHROME AND OTHER METAL PARTS AND FIXTURES. LELAND J. WILHARTZ, doing business as Lakeside Products, Chicago, Ill.
Filed Apr. 24, 1947, Serial No. 521,301. Published Sept. 28, 1948. Class 4.

441,797. RUST, CORROSION AND ABRASIVE RESISTANT RUBBERIZED COATING MATERIAL, IN SPRAYABLE FORM, FOR PROTECTIVELY COATING EXPOSED SURFACES OF AUTOMOBILES, ETC. MINNESOTA MINING & MANUFACTURING COMPANY, St. Paul, Minn.
Filed Apr. 25, 1947, Serial No. 521,356. Published Sept. 14, 1948. Class 16.

441,798. SHOULDER PADS IN THE NATURE OF GARMENT FINDINGS. SALEM PRODUCTS CORP., New York, N. Y.
Filed May 14, 1947, Serial No. 522,354. Published Sept. 21, 1948. Class 40.

441,799. PAINTS BOTH PASTE AND LIQUID, VARNISHES, COLORS FOR PAINTS AND ENAMELS, AND ENAMELS FOR PAINTING AND BAKING. WALTER N. BOYSEN CO., Oakland, Calif.
Filed May 20, 1947, Serial No. 522,721. Published Sept. 14, 1948. Class 16.

441,800. PERFUMES, TOILET WATERS, COLOGNES, ESSENCES; NAIL PASTES AND ENAMELS, ETC. RAMIER, SOCIÉTÉ À RESPONSABILITÉ LIMITÉE, Paris, France.
Filed May 23, 1947, Serial No. 522,927. Published Sept. 28, 1948. Class 6.

441,801. MEDICINAL PREPARATION FOR EXTERNAL APPLICATION. JEAN U. KORÉS, New York, N. Y.
Filed May 23, 1947, Serial No. 522,930. Published Sept. 28, 1948. Class 6.

441,802. WASHING POWDER. PACIFIC SOAP COMPANY, Los Angeles, Calif.
Filed May 28, 1947, Serial No. 523,187. Published Sept. 28, 1948. Class 4.

441,803. PERFUMES, LIPSTICKS, ROUGE, FACE POWDER, FACIAL MAKE-UP, ETC. LA FLORIDA, S. A., Barcelona, Spain.
Filed June 10, 1947, Serial No. 523,898. Published Sept. 28, 1948. Class 6.

441,804. NITROUS OXID, CARBON DIOXID, INSECTICIDES, INSECT REPELLANTS AND ODOR CONTROL MEDIUMS. WILLIAM B. THERM, doing business as Airite Mfg. Co., Toledo, Ohio.
Filed June 16, 1947, Serial No. 524,259. Published Sept. 28, 1948. Class 6.

441,805. SOAP (DRY POWDERED, PASTE, SEMI-PASTE, FLAKE, LIQUID, AND OTHER CONSISTENCIES), METAL POLISHES. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio.
Filed June 24, 1947, Serial No. 524,729. Published Sept. 28, 1948. Class 4.

441,806. INSECTICIDES. STANDARD OIL COMPANY, Whiting, Ind., and Chicago, Ill.
Filed June 28, 1947, Serial No. 525,126. Published Sept. 28, 1948. Class 6.

441,807. CIGAR, CIGARETTE, AND PIPE LIGHTERS, OF THE CATALYTIC TYPE, AND PARTS FOR SAID CIGAR, CIGARETTE, PIPE LIGHTERS; CIGARETTE AND CIGAR HOLDERS. LEKTROLITE CORPORATION, New York, N. Y.
Filed June 30, 1947, Serial No. 525,222. Published Sept. 28, 1948. Class 8.

441,808. LINEN AND HEMP PIECE GOODS. ROBINSON & CLEAVER LIMITED, London, England.
Filed July 1, 1947, Serial No. 525,407. Published Sept. 14, 1948. Class 42.

441,809. CHEMICAL, PHARMACEUTICAL, AND BIOLOGICAL PREPARATIONS FOR USE IN THE TREATMENT OF AILMENTS AND FOR THE CORRECTION OF DIET AND OTHER DEFICIENCIES IN HUMAN BEINGS AND OTHERS, ETC. WOODARD LABORATORIES, INC., Los Angeles, Calif.
Filed July 1, 1947, Serial No. 525,470. Published Sept. 28, 1948. Class 6.

441,810. POWDER SOLUBLE TO MAKE A CLEANING SOLUTION FOR EYE GLASSES, JEWELRY, DIAMONDS, PLASTICS, AND PRECIOUS METALS. SYLVAN M. EDISON, doing business under the name of Edison Chemical Co., Chicago, Ill.
Filed July 3, 1947, Serial No. 525,808. Published Mar. 30, 1948. Class 4.

ACT OF 1920

These registrations are not subject to opposition.

441,811. (CLASS 39. CLOTHING.) BOBRICH MANUFACTURING CORP., New York, N. Y. Filed July 30, 1945, Serial No. 486,456.

Bobrich

FOR MEN'S OUTDOOR WEAR—NAMELY, LEATHER COATS, PILE-LINED JACKETS, SWEATERS, COATS, SPORTS SHIRTS, VESTS, TROUSERS, SKI-SUITS, RAINCOATS, AND FLYING CLOTHING CONSISTING OF JACKETS, PANTS AND COVERALLS FOR AVIATORS.
Claims use since October 1943.

505,341. LACQUERS; VARNISHES; PAINT ENAMELS; AND COMPOSITIONS CONTAINING CELLULOSE ESTERS AND/OR ETHERS, ETC. ATLAS POWDER COMPANY, Wilmington, Del.
Filed July 19, 1947; originally filed, act of 1905, Dec. 28, 1946, Serial No. 514,930. Published Sept. 14, 1948. Class 16.

505,342. CANNED FRUITS AND CANNED VEGETABLES. HOLLISTER CANNING COMPANY, INC., Hollister, Calif.
Filed Sept. 19, 1947; originally filed, act of 1905, Jan. 6, 1947, Serial No. 515,307. Published Sept. 21, 1948. Class 46.

505,343. VITAMIN AND MINERAL PREPARATIONS CONTAINING DESICCATED GLANDULAR SUBSTANCES USEFUL AS A DIETARY SUPPLEMENT. ANABOLIC FOOD PRODUCTS, INC., Glendale, Calif.
Filed Oct. 10, 1947; originally filed, act of 1905, Jan. 10, 1947, Serial No. 515,526. Published Aug. 31, 1948. Class 6.

505,344. CURTAINS AND DRAPES OF RAYON, COTTON, SILK, WOOL, AND/OR COMBINATIONS THEREOF, AND FOR FABRICS IN THE PIECE OF WHICH THE SAME ARE MADE. BOB-O-LINK, INC., New York, N. Y.
Filed Dec. 29, 1947; originally filed, act of 1905, Jan. 31, 1947, Serial No. 516,660. Published Sept. 14, 1948. Class 42.

505,345. TUBULAR DISPENSING CONTAINERS FOR POWDERED MATERIAL, WHICH CONTAINERS ARE MADE OF PAPER, CARDBOARD, OR OTHER CELLULOSIC MATERIAL. CAMBRIDGE PAPER BOX COMPANY, Cambridge, Mass.
Filed Aug. 18, 1947; originally filed, act of 1905, Feb. 15, 1947, Serial No. 517,552. Published Sept. 28, 1948. Class 2.

505,346. ALL-PURPOSE LINIMENT. LEAKE CHEMICAL COMPANY, Keo, Ark.
Filed Oct. 28, 1947; originally filed, act of 1905, Mar. 15, 1947, Serial No. 519,074. Published Sept. 28, 1948. Class 6.

505,347. BAGS OF WATERPROOF PLASTIC MATERIAL AND WATERPROOF TEXTILE MATERIAL FOR DIAPERS AND LAUNDRY. THE CARIS COMPANY, Brooklyn, N. Y.
Filed Oct. 11, 1947; originally filed, act of 1905, Mar. 18, 1947, Serial No. 519,170. Published Sept. 28, 1948. Class 2.

505,348. TWINES, STRING, SASH CORD, AND CLOTHES LINE. CHARLES C. DAVIS AND COMPANY, Chicago, Ill.
Filed Nov. 7, 1947; originally filed, act of 1905, Mar. 18, 1947, Serial No. 519,180. Published Sept. 21, 1948. Class 7.

505,349. TEXTILE FABRICS COMPOSED OF COTTON, WOOL, LINEN, OR SYNTHETIC FIBERS AND MIXTURES THEREOF, WHICH FABRICS ARE RESIN IMPREGNATED FOR RESISTANCE TO WEAR, SHRINKAGE, CRUSHING, AND THE LIKE. MONSANTO CHEMICAL COMPANY, St. Louis, Mo.
Filed July 23, 1947; originally filed, act of 1905, Apr. 2, 1947, Serial No. 520,051. Published Sept. 14, 1948. Class 42.

505,350. TEXTILE FABRICS COMPOSED OF COTTON, WOOL, LINEN, OR SYNTHETIC FIBERS AND MIXTURES THEREOF, WHICH FABRICS ARE RESIN IMPREGNATED FOR RESISTANCE TO WEAR, SHRINKAGE, CRUSHING, AND THE LIKE. MONSANTO CHEMICAL COMPANY, St. Louis, Mo.
Filed July 23, 1947; originally filed, act of 1905, Apr. 2, 1947, Serial No. 520,052. Published Sept. 14, 1948. Class 42.

505,351. WOMEN'S, MISSES', AND JUNIOR MISSES' COATS. KROYWEN COATS INC., New York, N. Y.
Filed Oct. 2, 1947; originally filed, act of 1905, Apr. 15, 1947, Serial No. 520,713. Published Sept. 7, 1948. Class 39.

505,352. TOBACCO BED COVERS. CARTER DRY GOODS COMPANY, INCORPORATED, Louisville, Ky.
Filed Nov. 25, 1947; originally filed, act of 1905, Apr. 28, 1947, Serial No. 521,432. Published Sept. 14, 1948. Class 42.

505,353. COTTON PIECE GOODS. EXETER MANUFACTURING COMPANY, Exeter, N. H.
Filed Dec. 13, 1947; originally filed, act of 1905, May 3, 1947, Serial No. 521,803. Published Sept. 14, 1948. Class 42.

505,354. ROUND WORM REMEDY, CHOCOLATE COATED LAXATIVE, ETC. FURST-MCNESS COMPANY, Freeport, Ill.
Filed Sept. 19, 1947; originally filed, act of 1905, May 22, 1947, Serial No. 522,841. Published Sept. 28, 1948. Class 6.

505,355. INKING RIBBONS USED WITH BUSINESS MACHINES—NAMELY, CALCULATING MACHINES, CASH REGISTERS, TYPEWRITERS, AND THE LIKE, AND FOR CARBON PAPER. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich.
Filed July 9, 1947; originally filed, act of 1905, May 24, 1947, Serial No. 522,976. Published Sept. 28, 1948. Class 11.
1948. Class 11.

505,356. INKING RIBBONS USED WITH BUSINESS MACHINES—NAMELY, CALCULATING MACHINES, CASH REGISTERS, TYPEWRITERS, AND THE LIKE; AND CARBON PAPER. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich.
Filed July 9, 1947; originally filed, act of 1905, May 27, 1947, Serial No. 523,149. Published Sept. 28, 1948. Class 11.

505,357. MASKING SOLUTION FOR PHOTO-ENGRAVING. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo.
Filed July 5, 1947; originally filed, act of 1905, June 2, 1947, Serial No. 523,403. Published Aug. 31, 1948. Class 6.

505,358. WOMEN'S SPORT DRESSES. DEBUTANTE SPORTSWEAR, INC., doing business as Debutante Sportswear, Chicago, Ill.
Filed Nov. 14, 1947; originally filed, act of 1905, June 11, 1947, Serial No. 523,948. Published Sept. 7, 1948. Class 39.

505,359. FLAME PROOFING COMPOUND FOR ALL FABRICS. THE SELIG COMPANY, Atlanta, Ga.
Filed Sept. 3, 1947; originally filed, act of 1905, June 17, 1947, Serial No. 524,354. Published Sept. 21, 1948. Class 6.

505,360. DIAPER PINS. HOMER WELLS, Houston, Tex.
Filed July 5, 1947, Serial No. 526,680. Published Sept. 21, 1948. Class 40.

505,361. SEWING THREAD. BEMIS BRO. BAG COMPANY, St Louis, Mo.
Filed July 5, 1947, Serial No. 526,887. Published Aug. 17, 1948. Class 48.

505,362. AIRPLANES AND STRUCTURAL PARTS THEREFOR. LOCKHEED AIRCRAFT CORPORATION, Burbank, Calif.
Filed July 5, 1947, Serial No. 526,986. Published Aug. 31, 1948. Class 19.

505,363. CHEMICAL PREPARATION TO BE ADDED TO THE WATER OF A TAPE DISPENSING MACHINE FOR CONDITIONING THE GLUE OF THE GUMMED TAPE DISPENSED THEREBY. ROBLOFF MANUFACTURING COMPANY, Toledo, Ohio.
Filed July 5, 1947, Serial No. 526,974. Published Sept. 28, 1948. Class 6.

505,364. LOCAL ANESTHETIZING, NERVE BLOCKING TABLETS; LOCAL ANESTHETIZING, NERVE BLOCKING POWDERS; LOCAL ANESTHETIZING, NERVE BLOCKING SOLUTIONS; ANESTHETIC TABLETS, ANESTHETIC POWDERS, AND ANESTHETIC SOLUTIONS. ARTHUR E. SMITH, Los Angeles, Calif.
Filed July 5, 1947, Serial No. 527,211. Published Sept. 28, 1948. Class 6.

505,365. ELECTRIC SWITCHES AND FUSES. W. N. MATTHEWS CORPORATION, St. Louis, Mo.
Filed July 5, 1947, Serial No. 527,213. Published Sept. 21, 1948. Class 21.

505,366. LOCAL ANESTHETIZING, NERVE BLOCKING TABLETS, LOCAL ANESTHETIZING, NERVE BLOCKING POWDERS, ETC. ARTHUR E. SMITH, Los Angeles, Calif.
Filed July 5, 1947, Serial No. 527,215. Published Sept. 28, 1948. Class 6.

505,367. DISHWASHING MACHINES. LAKE STATE PRODUCTS, INC., Jackson, Mich.
Filed July 5, 1947, Serial No. 527,524. Published Sept. 21, 1948. Class 23.

505,368. ELECTRIC HEATING UNITS AND ELECTRIC HEATERS—NAMELY, STRIP HEATERS, SEGMENT HEATERS, RING HEATERS, DISC HEATERS, HALF-SHEATHED HEATERS, CARTRIDGE HEATERS, ETC. EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa.
Filed July 5, 1947, Serial No. 527,671. Published Sept. 21, 1948. Class 21.

505,369. ELECTRIC HEATING UNITS AND ELECTRIC HEATERS—NAMELY, STRIP HEATERS, SEGMENT HEATERS, RING HEATERS, DISC HEATERS, HALF-SHEATHED HEATERS, CARTRIDGE HEATERS, ETC. EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa.
Filed July 5, 1947, Serial No. 527,865. Published Sept. 21, 1948. Class 21.

505,370. HANDBAGS, PORTABLE CASES FOR TOILET ARTICLES MADE OF LEATHER OR SIMILAR MATERIAL, ETC. TALON, INC., Meadville, Pa.
Filed July 5, 1947, Serial No. 527,868. Published Sept. 21, 1948. Class 3.

505,371. HANDBAGS, PORTABLE CASES FOR TOILET ARTICLES MADE OF LEATHER OR SIMILAR MATERIAL, PLASTIC FABRIC AND LEATHER BAGS FOR COSMETICS, ETC. TALON, INC., Meadville, Pa.
Filed July 5, 1947, Serial No. 527,901. Published Sept. 21, 1948. Class 3.

505,372. CANNED TOMATOES, PUMPKIN, BEETS, SPINACH, ASPARAGUS TIPS, CORN, LIMA BEANS, ETC. THE GREAT ATLANTIC & PACIFIC TEA COMPANY, New York, N. Y.
Filed July 10, 1947, Serial No. 528,271. Published Sept. 21, 1948. Class 46.

505,373. HAND MANIPULABLE CAN OPENERS. ROBERT H. CLARK, doing business as Robert H. Clark Company, Beverly Hills, Calif.
Filed July 5, 1947, Serial No. 527,877. Published Sept. 7, 1948. Class 23.

505,374. CHEMO-THERAPEUTIC SUBSTANCES, ETC. GIVAUDAN-DELAWANNA, INC., New York, N. Y., assignor to Smith, Kline & French Laboratories, Philadelphia, Pa., a corporation of Pennsylvania.
Filed July 11, 1947, Serial No. 528,345. Published Mar. 23, 1948. Class 6.

505,375. AGRICULTURAL MACHINERY—NAMELY, TRACTOR DRAWN WHEELED ATTACHMENTS FOR CARRYING AGRICULTURAL TOOLS, PLOWS, ETC. MINNEAPOLIS-MOLINE POWER IMPLEMENT COMPANY, Minneapolis, Minn.
Filed July 11, 1947, Serial No. 528,361. Published Sept. 14, 1948. Class 23.

505,376. AWNING TEXTILE FABRICS, SOLD IN THE BOLT. THE HETTRICK MANUFACTURING COMPANY, Toledo, Ohio.
Filed July 12, 1947, Serial No. 528,477. Published Sept. 14, 1948. Class 42.

505,377. DYES AND DYESTUFFS. GENERAL DYESTUFF CORPORATION, New York, N. Y.
Filed July 14, 1947, Serial No. 528,565. Published Sept. 28, 1948. Class 6.

505,378. PACKAGE TYING MACHINES. B. H. BUNN COMPANY, Chicago, Ill.
Filed July 16, 1947, Serial No. 528,689. Published Sept. 21, 1948. Class 23.

505,379. PENCIL TABLETS, PEN TABLETS, COMPOSITION BOOKS, WRITING PAPER, ETC. KURTZ BROS., Clearfield, Pa.
Filed July 17, 1947, Serial No. 528,804. Published Aug. 24, 1948. Class 37.

505,380. OAKUM FOR PACKING AND CALKING. AMERICAN MANUFACTURING COMPANY, Boston, Mass., and Brooklyn, N. Y.
Filed July 18, 1947, Serial No. 528,846. Published Sept. 28, 1948. Class 1.

505,381. HARNESS SNAPS, AND SNAP HOOKS FOR HARNESSES. NORTH & JUDD MANUFACTURING COMPANY, New Britain, Conn.
Filed July 19, 1947, Serial No. 528,942. Published Sept. 21, 1948. Class 3.

505,382. FULL GRAINED AND BUFFED SOLE LEATHER. J. GREENEBAUM TANNING CO., Chicago, Ill.
Filed July 21, 1947, Serial No. 529,040. Published Apr. 27, 1948. Class 1.

505,383. HYDROCARBON SOLVENTS FOR LACQUERS AND SYNTHETIC ENAMELS. VELSICOL CORPORATION, Chicago, Ill.
Filed July 23, 1947, Serial No. 529,322. Published Sept. 14, 1948. Class 16.

505,384. PIECE GOODS—NAMELY, FABRICS OF COTTON AND OF RAYON AND OF MIXTURES OF COTTON AND RAYON. JOSEPH BANCROFT & SONS CO., Wilmington, Del.
Filed July 24, 1947, Serial No. 529,344. Published Sept. 14, 1948. Class 42.

505,385. PIECE GOODS—NAMELY, FABRICS OF COTTON AND OF RAYON AND OF MIXTURES OF COTTON AND RAYON. JOSEPH BANCROFT & SONS CO., Wilmington, Del.
Filed July 24, 1947, Serial No. 529,346. Published Sept. 14, 1948. Class 42.

505,386. CLEANING FLUID FOR CLEANING PHOTOGRAPHIC FILM. BELL & HOWELL COMPANY, Chicago, Ill.
Filed July 26, 1947, Serial No. 529,559. Published Sept. 28, 1948. Class 4.

505,387. LYE. B. T. BABBITT, INC., New York, N. Y.
Filed July 29, 1947, Serial No. 529,863. Published Sept. 21, 1948. Class 6.

505,388. MECHANICAL SWITCHES AND SWITCH STANDS FOR RAILROADS. CLEVELAND FROG & CROSSING CO., Cleveland, Ohio.
Filed July 30, 1947, Serial No. 529,963. Published Sept. 21, 1948. Class 23.

505,389. FACE POWDER. LUCIEN LELONG, INC., Chicago, Ill.
Filed Aug. 1, 1947, Serial No. 530,213. Published Sept. 28, 1948. Class 6.

505,390. PERFUMES, COLOGNES, TOILET WATERS, POWDERS, LIPSTICKS, ROUGES, AND FOUNDATION MAKE-UP PREPARATIONS. LUCIEN LELONG, INC., Chicago, Ill.
Filed Aug. 1, 1947, Serial No. 530,219. Published Sept. 28, 1948. Class 6.

505,391. FOUNDATION MAKE-UP PREPARATIONS. LUCIEN LELONG, INC., Chicago, Ill.
Filed Aug. 1, 1947, Serial No. 530,222. Published Sept. 28, 1948. Class 6.

505,392. ROUGE AND LIPSTICK. LUCIEN LELONG, INC., Chicago, Ill.
Filed Aug. 1, 1947, Serial No. 530,223. Published Sept. 28, 1948. Class 6.

505,393. PERFUMES, COLOGNES, TOILET WATERS, POWDERS, LIPSTICKS, ROUGES, AND FOUNDATION MAKE-UP PREPARATIONS. LUCIEN LELONG, INC., Chicago, Ill.
Filed Aug. 1, 1947, Serial No. 530,225. Published Sept. 28, 1948. Class 6.

505,394. VEHICLE WHEEL RIMS. THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio.
Filed Aug. 2, 1947, Serial No. 530,308. Published Sept. 21, 1948. Class 19.

505,395. PORTABLE HAND AND WHEEL MOUNTED POWER OPERATED MACHINES FOR SUB-SOIL FUMIGATION COMPRISING A HAND PLUNGER UNIT OR POWER OPERATED PUMP TO FEED FUMIGANT INTO THE GROUND AT A PRE-SET DEPTH. INNIS, SPEIDEN & CO., New York and Niagara Falls, N. Y.
Filed Aug. 5, 1947, Serial No. 530,511. Published Sept. 7, 1948. Class 23.

505,396. BUTTON LOOPS, FEATHERBONE STAYS, CORSET STAYS, MIDDY BRAID, MILITARY BRAID, RUG BINDING, ETC. THE WARREN FEATHERBONE CO., Three Oaks, Mich.
Filed Aug. 5, 1947, Serial No. 530,604. Published Sept. 21, 1948. Class 40.

505,397. C-CLAMPS. THE CINCINNATI TOOL COMPANY, Norwood, Ohio.
Filed Aug. 7, 1947, Serial No. 530,719. Published Sept. 21, 1948. Class 23.

505,398. FRESH APPLES. THEODORE REINS, doing business as Ted Reins, Payette, Idaho.
Filed Aug. 13, 1947, Serial No. 531,245. Published Sept. 21, 1948. Class 46.

505,399. COTTON PIECE GOODS. DAVIS & CATTERALL, New York, N. Y.
Filed Aug. 16, 1947, Serial No. 531,579. Published Sept. 14, 1948. Class 42.

505,400. NUTRITIVE TONICS CONTAINING MALT SYRUP, VITAMINS, AND MINERAL SUPPLEMENTS. JAMIESON PHARMACAL COMPANY, Detroit, Mich.
Filed Aug. 18, 1947, Serial No. 531,673. Published Sept. 28, 1948. Class 6.

505,401. WAFERS CONTAINING DICALCIUM PHOSPHATE AND VIOSTEROL FOR THERAPEUTIC USE WHERE CALCIUM AND PHOSPHORUS ARE INDICATED. JAMIESON PHARMACAL COMPANY, Detroit, Mich.
Filed Aug. 18, 1947, Serial No. 531,676. Published Sept. 28, 1948. Class 6.

505,402. RUBBERIZED THREAD. J. & P. COATS (R. I.) INC., Pawtucket, R. I.
Filed Sept. 3, 1947, Serial No. 533,144. Published Sept. 21, 1948. Class 48.

505,403. CANNED SALMON. MONITOR FISHERIES, INC., doing business as McGovern & McGovern, Seattle, Wash.
Filed Sept. 4, 1947, Serial No. 533,347. Published Aug. 31, 1948. Class 46.

505,404. THREAD. THE CLARK THREAD COMPANY Wilmington, Del., and Clarkdale, Ga.
Filed Sept. 5, 1947, Serial No. 533,539. Published Sept. 21, 1948. Class 48.

Filed Nov. 1, 1947, Serial No. 539,877. Published Sept. 21, 1948. Class 3.

505,440. CARBON BLACK FOR USE IN THE MANUFACTURE OF INK. GODFREY L. CABOT, INC., Boston, Mass.
Filed Nov. 5, 1947, Serial No. 540,167. Published Sept. 28, 1948. Class 11.

505,441. SOLUTION APPLIED TO LITHOGRAPHIC PAPER PLATES FOR PRESERVING THE SAME. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y.
Filed Nov. 5, 1947, Serial No. 540,176. Published Sept. 28, 1948. Class 6.

505,442. RUBBER CEMENT. CAT'S PAW RUBBER COMPANY, INC., Baltimore, Md.
Filed Nov. 6, 1947, Serial No. 540,247. Published Sept. 21, 1948. Class 5.

505,443. GIMP YARN. FRASER MANUFACTURING CO. INC., New York, N. Y.
Filed Nov. 6, 1947, Serial No. 540,270. Published Sept. 14, 1948. Class 43.

505,444. BUTTON LOOPS, FEATHERBONE STAYS, CORSET STAYS, MIDDY BRAID, MILITARY BRAID, RUG BINDING, SEAM BINDING, ETC. THE WARREN FEATHERBONE CO., Three Oaks, Mich.
Filed Aug. 5, 1947, Serial No. 540,354. Published Sept. 21, 1948. Class 40.

505,445. PHARMACEUTICAL PREPARATION—NAMELY, VITAMIN "B" COMPLEX CAPSULES. FRANK CARBONARO, doing business as Bexatol Vitamin Products, Auburn, N. Y.
Filed Nov. 7, 1947, Serial No. 540,382. Published Sept. 7, 1948. Class 6.

505,446. MEDICINAL PREPARATION HAVING ANESTHETIC PROPERTIES FOR THE USE IN LOCAL ANESTHESIA DURING MAJOR AND MINOR SURGERY AND FOR AN OINTMENT HAVING ANESTHETIC PROPERTIES. SANDOZ CHEMICAL WORKS, INC., New York, N. Y.
Filed Nov. 10, 1947, Serial No. 540,721. Published Sept. 28, 1948. Class 6.

505,447. WIRE, WIRE ROPE, AND CABLES. THE COLORADO FUEL AND IRON CORPORATION, Denver, Colo.
Filed Nov. 13, 1947, Serial No. 540,982. Published Sept. 21, 1948. Class 7.

505,448. VEHICLE HEATERS. E. A. LABORATORIES, INC., Brooklyn, N. Y.
Filed Nov. 14, 1947, Serial No. 541,109. Published Aug. 24, 1948. Class 19.

505,449. AUTOMOTIVE VEHICLES—NAMELY, PASSENGER AUTOMOBILES, TRUCKS, BUSSES, AND MOTORCYCLES. ZBROJOVKA BRNO, NARODNI PODNIK, doing business as Brno Arms Factory, National Corporation, Brunn, Czechoslovakia.
Filed Nov. 15, 1947, Serial No. 541,366. Published Sept. 14, 1948. Class 19.

505,450. WALKER STROLLERS AND STROLLERS. THE FRANK F. TAYLOR COMPANY, Norwood, Ohio.
Filed Nov. 18, 1947, Serial No. 541,602. Published Aug. 24, 1948. Class 19.

505,451. SMOKING TOBACCO. PHILIP MORRIS & CO. LTD. INCORPORATED, New York, N. Y.
Filed Nov. 19, 1947, Serial No. 541,693. Published Sept. 28, 1948. Class 17.

505,452. RAYON PIECE GOODS, COTTON PIECE GOODS, AND COMBINATIONS OF THE SAME. J. ROSENHOLZ, INC., New York, N. Y.
Filed Aug. 21, 1947, Serial No. 541,727. Published Sept. 14, 1948. Class 42.

505,453. PIECE GOODS OF RAYON, COTTON, AND OF MIXTURES OF RAYON AND COTTON. J. ROSENHOLZ, INC., New York, N. Y.
Filed Oct. 3, 1947, Serial No. 541,747. Published Sept. 14, 1948. Class 42.

505,454. PLASTIC FIREBRICK. MEXICO REFRACTORIES COMPANY, Mexico, Mo.
Filed Nov. 20, 1947, Serial No. 541,857. Published Aug. 31, 1948. Class 12.

505,455. TEXTILE FABRICS IN THE PIECE, OF SILK, RAYON, AND COMBINATIONS THEREOF. FOLKER FABRICS CORPORATION, New York, N. Y.
Filed Nov. 20, 1947, Serial No. 541,828. Published Sept. 14, 1948. Class 42.

505,456. BLEACHING, CLEANSING, ANTISEPTIC, AND GERMICIDAL COMPOUND. CLOROX CHEMICAL CO., Oakland, Calif.
Filed Nov. 25, 1947, Serial No. 542,285. Published Sept. 28, 1948. Class 6.

505,457. COAL. RAVEN RED ASH COAL CO., INC., Beckley, W. Va.
Filed Nov. 25, 1947, Serial No. 542,354. Published Sept. 28, 1948. Class 1.

505,458. TEXTILE FABRICS IN THE PIECE, OF RAYON, SILK, AND MIXTURES THEREOF. FOLKER FABRICS CORPORATION, New York, N. Y.
Filed Nov. 26, 1947, Serial No. 542,456. Published Sept. 14, 1948. Class 42.

505,459. CHEMICAL PREPARATION FOR REMOVING RUST STAINS FROM TEXTILE MATERIALS. HOOD CHEMICAL CO., INC., Pittsburgh, Pa.
Filed Nov. 26, 1947, Serial No. 542,470. Published Sept. 28, 1948. Class 6.

505,460. AUTOMOBILE BRAKE SHOES, SHOCK ABSORBERS, AND CAPS FOR AUTOMOBILE HUBS, RADIATORS, AND GASOLINE TANKS. PICK MANUFACTURING COMPANY, West Bend, Wis.
Filed Nov. 28, 1947, Serial No. 542,648. Published Aug. 24, 1948. Class 19.

505,461. LEATHER POCKET WALLETS AND BILLFOLDS. BUXTON, INCORPORATED, Springfield, Mass.
Filed Dec. 3, 1947, Serial No. 543,092. Published Sept. 21, 1948. Class 3.

505,462. CARBOXYMETHYL CELLULOSE FOR USE AS AN INGREDIENT OF ADHESIVES, THICKENING AGENTS, EMULSION STABILIZERS, DETERGENTS, TEXTILE SIZES AND FINISHES. HERCULES POWDER COMPANY, Wilmington, Del.
Filed Dec. 3, 1947, Serial No. 543,181. Published Sept. 7, 1948. Class 6.

505,463. ANTIBIOTIC WITH VASOCONSTRICTOR CONTAINING, NAMELY, PENICILLIN WITH EPHEDRINE. WYETH INCORPORATED, Philadelphia, Pa.
Filed Dec. 3, 1947, Serial No. 543,250. Published Sept. 28, 1948. Class 6.

505,464. GAS WATER HEATERS, AND COMBINATION BOILERS. JOHN WOOD MANUFACTURING COMPANY, INC., Conshohocken, Pa., Chicago, Ill., and Philadelphia, Pa.
Filed Dec. 4, 1947, Serial No. 543,344. Published Sept. 14, 1948. Class 34.

505,465. GAS WATER HEATERS, AND COMBINATION BOILERS. JOHN WOOD MANUFACTURING COMPANY, INC., Conshohocken, Pa., Chicago, Ill., and Philadelphia, Pa.
Filed Dec. 4, 1947, Serial No. 543,345. Published Sept. 14, 1948. Class 34.

The descriptive words "Chrome" and "Genuine Leather" and the representation of the piece of leather are disclaimed apart from the mark as shown.
FOR LEATHER.
Claims use since May 22, 1933.

Reg. No. 342,068. Registered Jan. 5, 1937. SCHERER LEATHER COMPANY, Cudahy, Wis. Republished by Graton & Knight Company, Worcester, Mass., a corporation of Massachusetts.

SCHERER LEATHER CO. S. MILWAUKEE, WIS.
VEL-DUR
CALF

The words "Calf" and "Milwaukee, Wis." are disclaimed apart from the mark as shown.

FOR TANNED CALF SKINS, SUEDE LEATHER BEING SPECIFICALLY EXCEPTED.
Claims use since Mar. 1, 1936.

Reg. No. 372,835. Registered Nov. 14, 1939. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

ZINOL

FOR ZINC-TREATED ROSIN SOLUTIONS IN PETROLEUM SOLVENTS.
Claims use since Nov. 22, 1937.

Reg. No. 372,836. Registered Nov. 14, 1939. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

ZITRO

FOR SOLID ZINC-TREATED ROSIN.
Claims use since Oct. 12, 1937.

Reg. No. 372,837. Registered Nov. 14, 1939. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

ZIREX

FOR SOLID ZINC-TREATED ROSIN.
Claims use since Nov. 11, 1938.

Reg. No. 372,838. Registered Nov. 14, 1939. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

HELIX

FOR SOLID LIME-TREATED PALE ROSIN.
Claims use since Nov. 5, 1935.

Reg. No. 372,839. Registered Nov. 14, 1939. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

TENEX

FOR HEAT-TREATED "X" GRADE WOOD ROSIN.
Claims use since Jan. 2, 1934.

Reg. No. 374,710. Registered Jan. 23, 1940. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

ZIKOL

FOR ZINC-TREATED ROSIN SOLUTION IN PETROLEUM SOLVENT.
Claims use since Oct. 12, 1938.

Reg. No. 392,351. Registered Dec. 23, 1941. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

FIBRONIZED

FOR EXTRUDED RESINOID PLASTIC MATERIALS IN THE FORM OF TUBES, RODS, STRIPS, AND MONOFILAMENT THREADS.
Claims use since Apr. 17, 1941.

Reg. No. 402,506. Registered July 27, 1943. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

ZINAR

FOR SOLID ZINC-TREATED ROSIN.
Claims use since Nov. 21, 1940.

Reg. No. 402,525. Registered July 27, 1943. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

NUROZ

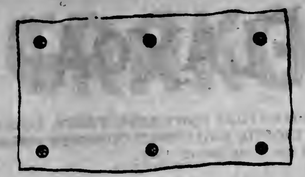
FOR POLYMERIZED, OR PARTIALLY POLYMERIZED ROSIN.
Claims use since Nov. 15, 1938.

Reg. No. 420,390. Registered Apr. 9, 1946. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

MED-O-SEAL

FOR EXTRUDED RESINOID PLASTIC TUBES, RODS, STRIPS, AND MONOFILAMENT THREADS.
Claims use since May 28, 1945.

Reg. No. 422,434. Registered July 23, 1946. GRATON & KNIGHT COMPANY, Worcester, Mass., a corporation of Massachusetts. Republished by registrant.



The representation of the piece of leather per se is disclaimed apart from the mark as shown. The drawing is lined for the color silver.

FOR LEATHER IN THE PIECE.
Claims use since Aug. 7, 1939.

CLASS 2

RECEPTACLES

Reg. No. 111,160. Registered July 4, 1916. AMERICAN VULCANIZED FIBRE CO., Wilmington, Del. Republished by National Vulcanized Fibre Co., Wilmington, Del., a corporation of Delaware.

VUL-COT

FOR WASTE-BASKETS.
Claims use since January 1911.

Reg. No. 139,227. Registered Jan. 25, 1921. WAYNE OIL TANK & PUMP COMPANY, Fort Wayne, Ind. Republished by The Wayne Pump Company, Fort Wayne, Ind., a corporation of Maryland.

Wayne

FOR TANKS.
Claims use since Feb. 6, 1920.

The word "Paste" is disclaimed apart from the mark as shown. The drawing is lined for shading only.
FOR COLD-WATER PASTE.
Claims use since Aug. 21, 1926.

Reg. No. 240,657. Registered Apr. 3, 1928. HERBERT J. GRAY, New York, N. Y. Republished by registrant.

FOR WRAPPING PAPER, TISSUE PAPER, PAPER TOWELS, TOILET PAPER, WATERPROOF PAPER, PARCHMENT AND GLASSINE PAPER, WAXED PAPER, CORRESPONDENCE ENVELOPES, BLOTTING PAPER, PAPER SEALING TAPE, AND CORRUGATED PAPER.
Claims use since Oct. 15, 1920.

Reg. No. 414,542. Registered June 12, 1945. GRATON & KNIGHT COMPANY, Worcester, Mass., a corporation of Massachusetts. Republished by registrant.

NEPTUNE

FOR ADHESIVE BELT CEMENT.
Claims use since 1902.

Reg. No. 422,598. Registered July 30, 1946. GRATON & KNIGHT COMPANY, Worcester, Mass., a corporation of Massachusetts. Republished by registrant.

FOR ADHESIVE BELT CEMENT.
Claims use since 1902.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 31,790. Registered July 5, 1898. FRIES BROS., New York, N. Y. Republished by Fries Bros., Inc., New York, N. Y., a corporation of New Jersey.

Powdered · Superior · Sweetener
.....or Glycosine.

FOR POWDERED OR LIQUID SWEETENERS, SACCHARINE SUBSTANCES, AND BENZOIC SULFINIDS, IN SOLUTION OR OTHER FORM.
Claims use since on or about Dec. 1, 1895.

Reg. No. 63,705. Registered July 2, 1907. HAROLD H. FRIES, New York, N. Y. Republished by Fries Bros., Inc., New York, N. Y., a corporation of New Jersey.

KÉLÈNE

FOR CHLORID OF ETHYL.
Claims use since 1894.

Reg. No. 87,419. Registered July 16, 1912. E. A. BROMUND COMPANY, New York, N. Y. Republished by Hood Chemical Co., Inc., Pittsburgh, Pa., a corporation of New York.

E-Z

FOR LAUNDRY-STARCH POLISH.
Claims use since Oct. 1, 1907.

Reg. No. 95,504. Registered Feb. 17, 1914. DR. CAMDEN WOOSTER, St. Louis, Mo. Republished by Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware.

DR. WOOSTER'S CORN AND BUNION REMEDY No. 1 & No. 2.

FOR REMEDY FOR HARD CORNS.
Claims use since Dec. 26, 1892.

Reg. No. 194,742. Registered Feb. 10, 1925. FLORIAN INC., Des Moines, Iowa. Republished by Florian, Inc., Des Moines, Iowa, a corporation of Iowa.

Florian

FOR FACE POWDER.
Claims use since 1907.

Reg. No. 204,448. Registered Oct. 20, 1925. SELBY, BATTERSBY & Co., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

The applicant's name and the word "Philadelphia" are disclaimed apart from the mark.
FOR FLOORING COMPOSITION, COMPLETED FLOORING, STUCCO COMPOSITION, AND MAGNESIUM CHLORIDE ENTERING INTO THESE COMPOSITIONS.
Claims use since on or about Mar. 16, 1925.

Reg. No. 204,449. Registered Oct. 20, 1925. SELBY, BATTERSBY & Co., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

The applicant's name and the word "Philadelphia" are disclaimed apart from the mark.
FOR FLOORING COMPOSITION, COMPLETED FLOORING, STUCCO COMPOSITION, AND MAGNESIUM CHLORIDE ENTERING INTO THESE COMPOSITIONS.
Claims use since on or about Apr. 1, 1925.

Reg. No. 225,186. Registered Mar. 15, 1927. KANSAS CITY WHOLESALE GROCERY CO., Kansas City, Mo. Republished by Pickwick Products, Inc., Kansas City, Mo., a corporation of Missouri.

PICKWICK

FOR BAKING POWDER AND BLUING, GLOSS STARCH, AND SALT FOR FOOD PURPOSES.
Claims use since July 1906.

Reg. No. 228,384. Registered May 31, 1927. PUBLICKER INC., Philadelphia, Pa. Republished by Publicker Industries Inc., Philadelphia, Pa., a corporation of Pennsylvania.

Alco-Wash

The word "Wash" is disclaimed apart from the mark as shown.
FOR ALCOHOL PREPARATION FOR EXTERNAL USE.
Claims use since about March 1921.

Reg. No. 236,873. Registered Dec. 27, 1927. HAROLD H. FRIES, doing business as Fries Bros., New York, N. Y. Republished by Fries Bros., Inc., New York, N. Y., a corporation of New Jersey.

KELO-FORM

FOR ANAESTHETICS.
Claims use since May 28, 1926.

Reg. No. 242,637. Registered May 29, 1928. FELTON CHEMICAL COMPANY, INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

Aquarome

FOR ALDEHYDES SUITABLE FOR PERFUMING PURPOSES, ALCOHOLS SUITABLE FOR PERFUMING PURPOSES AND NATURAL AND SYNTHETIC ESSENTIAL OILS SUITABLE FOR PERFUMING PURPOSES, PERFUMES AND TOILET WATER.
Claims use since Nov. 9, 1925.

Reg. No. 242,638. Registered May 29, 1928. FELTON CHEMICAL COMPANY, INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

Colorome

FOR ALDEHYDES SUITABLE FOR PERFUMING PURPOSES, ALCOHOLS SUITABLE FOR PERFUMING PURPOSES, NATURAL AND SYNTHETIC ESSENTIAL OILS SUITABLE FOR PERFUMING PURPOSES AND PERFUMES AND TOILET WATER.
Claims use since Dec. 17, 1927.

Reg. No. 249,714. Registered Nov. 20, 1928. HAROLD H. FRIES, doing business as Fries Bros., New York, N. Y. Republished by Fries Bros., Inc., New York, N. Y., a corporation of New Jersey.

VANALDOL

FOR ETHYL PROTOCATECHUIC ALDEHYDE.
Claims use since Dec. 12, 1927.

Reg. No. 252,606. Registered Feb. 12, 1929. MENLEY & JAMES, LIMITED, NEW YORK, New York, N. Y. Republished by Ames Company, Inc., Elkhart, Ind., a corporation of Indiana.

ALBUTESTA

FOR SOLUTION TO BE USED AS A TEST FOR URINE.
Claims use since Aug. 14, 1928.

Reg. No. 255,380. Registered Apr. 23, 1929. DR. MILES MEDICAL COMPANY, Elkhart, Ind. Republished by Ames Company, Inc., Elkhart, Ind., a corporation of Indiana.

Bromo-vess

FOR NERVE SEDATIVE.
Claims use since Sept. 18, 1928.

Reg. No. 265,227. Registered Dec. 17, 1929. HAROLD H. FRIES, doing business as Fries Bros., New York, N. Y. Republished by Fries Bros., Inc., New York, N. Y., a corporation of New Jersey.

GLY-KETOL

FOR LIQUID SOLVENT.
Claims use since June 12, 1929.

Reg. No. 272,206. Registered July 1, 1930. HAROLD H. FRIES, doing business as Fries Bros., New York, N. Y. Republished by Fries Bros., Inc., New York, N. Y., a corporation of New Jersey.

ASEPTOFORM

FOR GERMICIDE AND FUNGICIDE.
Claims use since Oct. 22, 1929.

Reg. No. 289,719. Registered Dec. 1, 1931. HAROLD H. FRIES, New York, N. Y. Republished by Fries Bros., Inc., Borough of Manhattan, New York, N. Y., a corporation of New Jersey.

CRESOPHAN

FOR ANTISEPTIC AND DISINFECTANT.
Claims use since Apr. 27, 1931.

Reg. No. 292,573. Registered Mar. 29, 1932. NORMANDY PRODUCTS COMPANY, Los Angeles, Calif. Republished by Robert H. Cromwell, Jr., Los Angeles, Calif.

TONIX

FOR HAIR SALVES, HAIR ELIXIRS, DANDRUFF PREPARATIONS, HAIR TONICS, HAIR OILS, SHAMPOOS, HAIR DYES, EYEBROW AND EYELASH GROWER, AND DEPILATORIES.
Claims use since April 1927.

Reg. No. 296,914. Registered Aug. 23, 1932. HAROLD H. FRIES, doing business as Fries Bros., New York, N. Y. Republished by Fries Bros., Inc., New York, N. Y., a corporation of New Jersey.

XEROL

FOR EMULSIFYING AGENT IN THE NATURE OF A WAX WHICH IS PRINCIPALLY USED IN THE MANUFACTURE OF PHARMACEUTICAL AND COSMETIC PREPARATIONS.
Claims use since Mar. 11, 1932.

Reg. No. 316,848. Registered Sept. 4, 1934. INDO-VIN, INC., Cincinnati, Ohio. Republished by Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware.

INDO-VIN

FOR TONIC FOR TREATING INDIGESTION, CONSTIPATION, EXHAUSTION, ACIDITY, AND HEADACHE.
Claims use since Feb. 19, 1934.

Reg. No. 322,292. Registered Mar. 5, 1935. THE DILL CO., Norristown, Pa., a corporation of Pennsylvania. Republished by registrant.

ESPOTABS

FOR LAXATIVE MEDICINE IN TABLET FORM.
Claims use since Oct. 1, 1934.

Reg. No. 330,335. Registered Nov. 26, 1935. J. ROY ALLEN, doing business as Chasers Co., New York, N. Y. Republished by Chasers, Inc., New York, N. Y., a corporation of New York.

CHASERS

FOR PREPARATION FOR NEUTRALIZING AND OVERCOMING ALCOHOLIC AND SIMILAR BREATH ODORS.
Claims use since Jan. 22, 1935.

Reg. No. 341,426. Registered Dec. 8, 1936. ROYAL DRUG COMPANY, Chicago, Ill. Republished by Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware.

The drawing is lined for red. The word "Cosmetic" is disclaimed apart from the mark as shown.
FOR CLEANSING CREAM.
Claims use since May 1, 1930.

Reg. No. 352,413. Registered Nov. 30, 1937. EFFERVESCENT PRODUCTS, INC., Elkhart, Ind. Republished by Ames Company, Inc., Elkhart, Ind., a corporation of Indiana.

Alka-Vess

FOR EFFERVESCENT ALKALIZING PREPARATION.
Claims use since May 24, 1937.

Reg. No. 352,878. Registered Dec. 14, 1937. EFFERVESCENT PRODUCTS, INC., Elkhart, Ind. Republished by Ames Company, Inc., Elkhart, Ind., a corporation of Indiana.

Salici-Vess

FOR SALICYLATE, IODIDE WITH ALKALI BUFFERS IN AN EFFERVESCENT TABLET.
Claims use since June 29, 1937.

Reg. No. 373,905. Registered Dec. 26, 1939. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

POLEOL

FOR EMULSIFIABLE PINE OIL.
Claims use since Feb. 16, 1934.

Reg. No. 384,076. Registered Jan. 7, 1941. EFFERVESCENT PRODUCTS, INC., Elkhart, Ind. Republished by Ames Company, Inc., Elkhart, Ind., a corporation of Indiana.

Calce-Vess

FOR ALKALINE EFFERVESCENT TABLETS.
Claims use since Feb. 24, 1940.

Reg. No. 401,145. Registered Apr. 27, 1943. NATIONAL CYLINDER GAS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

A NATIONAL

FOR COMPRESSED GASES—NAMELY, HYDROGEN, OXYGEN, NITROGEN, ACETYLENE, CARBON DIOXIDE, CARBOHYDROGEN, AND SOLID CARBON DIOXIDE.
Claims use since June 29, 1934.

Reg. No. 401,312. Registered May 11, 1943. EFFERVESCENT PRODUCTS, INC., Elkhart, Ind. Republished by Ames Company, Inc., Elkhart, Ind., a corporation of Indiana.

Acetyl-Vess

The word "Acetyl" is disclaimed apart from the mark as shown.
FOR ALKALINE EFFERVESCENT TABLETS HAVING AN ANALGESIC-ANTIPYRETIC ACTION.
Claims use since Feb. 24, 1940.

Reg. No. 407,446. Registered June 6, 1944. FRIES BROS., INC., New York, N. Y., a corporation of New Jersey. Republished by registrant.

CYCLONOL

FOR 1-METHYL-3-DIMETHYL-CYCLOHEXANOL-(5), HAVING THE CHARACTERISTIC ODOR AND COOLING EFFECT OF MENTHOL AND USED AS A SUBSTITUTE FOR MENTHOL.
Claims use since Sept. 17, 1943.

Reg. No. 407,882. Registered July 4, 1944. NEWPORT INDUSTRIES, INC., Pensacola, Fla., a corporation of Delaware. Republished by registrant.

POLY-TAC

FOR RESIN FOR USE IN A TACKIFIER, PLASTICIZER, REPLACER AND EXTENDER OF CRUDE RUBBER, RECLAIMED RUBBER AND SYNTHETIC RUBBER.
Claims use since Dec. 10, 1942.

Reg. No. 413,584. Registered May 1, 1945. AMES COMPANY, INC., Elkhart, Ind., a corporation of Indiana. Republished by registrant.

Barbro-Vess

FOR EFFERVESCENT TABLETS CONTAINING PHENOBARBITAL RECOMMENDED FOR USE AS A SEDATIVE IN CASES OF NEUROLOGICAL DISORDERS, ESSENTIAL HYPERTENSION, AND OTHER ALLIED CONDITIONS.
Claims use since July 31, 1944.

Reg. No. 416,742. Registered Sept. 25, 1945. PICKER X-RAY CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

VITALIX

FOR REPLENISHER FOR DEVELOPER FOR X-RAY FILM.
Claims use since November 1942.

Reg. No. 419,111. Registered Feb. 5, 1946. PICKER X-RAY CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

PERFIX

FOR FIXER FOR X-RAY FILMS.
Claims use since November 1942.

Reg. No. 421,386. Registered May 28, 1946. AMES COMPANY, INC., Elkhart, Ind., a corporation of Indiana. Republished by registrant.

BUMINTEST

FOR REAGENT TABLET FOR THE PURPOSE OF TESTING SOLUTIONS FOR THE PRESENCE OF ALBUMIN.
Claims use since Oct. 5, 1945.

Reg. No. 423,736. Registered Sept. 10, 1946. ACETOGEN ASSOCIATES, INC., Detroit, Mich., a corporation of Michigan. Republished by registrant.

ACETOGEN

FOR HIGHLY REFINED GAS USED IN THE INDUSTRIAL ARTS.
Claims use since June 1944.

Reg. No. 434,230. Registered Nov. 11, 1947. HUNTINGTON LABORATORIES, INC., Huntington, Ind., a corporation of Indiana. Republished by registrant.

SAN PHENO

FOR PERFUMED DISINFECTANT AND HOSPITAL GERMICIDE.
Claims use since Dec. 15, 1931.

Reg. No. 434,678. Registered Dec. 2, 1947. AVON PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

COTILLION CLASSIC

FOR COSMETIC SET CONSISTING OF COLOGNE AND BODY POWDER.
Claims use since Apr. 10, 1946.

Reg. No. 434,690. Registered Dec. 2, 1947. AVON PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

PIPE DREAM

FOR MEN'S TOILETRIES—NAMELY, TALC FOR MEN, DEODORANT, AFTER SHAVE LOTION, STYPTIC CREAM.
Claims use since Oct. 3, 1946.

CLASS 12
CONSTRUCTION MATERIALS

Reg. No. 118,162. Registered Aug. 21, 1917. CONCRETE ENGINEERING COMPANY, Omaha, Nebr. Republished by Ceco Steel Products Corporation, Chicago, Ill., a corporation of Nebraska.

CECO

FOR STRUCTURAL IRON AND STEEL BUILDING MATERIALS.
Claims use since Apr. 1, 1914.

Reg. No. 154,043. Registered Apr. 4, 1922. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

THERMOLITH

FOR REFRACTORY CEMENT.
Claims use since June 15, 1921.

Reg. No. 160,206. Registered Oct. 17, 1922. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

FIREBOND

FOR REFRACTORY CEMENT.
Claims use since June 15, 1921.

Reg. No. 172,134. Registered Aug. 21, 1923. BOLCOM CANAL LUMBER CO., Seattle, Wash. Republished by W. A. Steigleder, doing business as Speed Gets 'Em Lumber Company, Seattle, Wash.

SPEED GETS 'EM

FOR LUMBER.
Claims use since June 1920.

Reg. No. 188,715. Registered Sept. 2, 1924. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR FIRE BRICK AND REFRACTORY CEMENTS.
Claims use since May 1, 1928.

Reg. No. 204,448. Registered Oct. 20, 1925. SELBY, BATTERSBY & CO., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

The applicant's name and the word "Philadelphia" are disclaimed apart from the mark.
FOR FLOORING COMPOSITION, COMPLETED FLOORING, STUCCO COMPOSITION, AND MAGNESIUM CHLORIDE ENTERING INTO THESE COMPOSITIONS.
Claims use since on or about Mar. 16, 1925.

Reg. No. 204,449. Registered Oct. 20, 1925. SELBY, BATTERSBY & Co., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

The applicant's name and the word "Philadelphia" are disclaimed apart from the mark.
FOR FLOORING COMPOSITION, COMPLETED FLOORING, STUCCO COMPOSITION, AND MAGNESIUM CHLORIDE ENTERING INTO THESE COMPOSITIONS.
Claims use since on or about Apr. 1, 1925.

Reg. No. 255,478. Registered Apr. 23, 1929. CHARLES E. PUTMAN, doing business as Colonial Cedar Company, Seattle, Wash. Republished by registrant.

COLONIAL

FOR WOOD, SLATE, COMPOSITION, AND PAPER SHINGLES.
Claims use since Jan. 12, 1925.

Reg. No. 265,538. Registered Dec. 31, 1929. CHARLES E. PUTMAN, doing business as Colonial Cedar Company, Seattle, Wash. Republished by registrant.

MAJORS

FOR WOODEN SHINGLES.
Claims use since Nov. 27, 1928.

Reg. No. 265,539. Registered Dec. 31, 1929. CHARLES E. PUTMAN, doing business as Colonial Cedar Company, Seattle, Wash. Republished by registrant.

JUNIORS

FOR WOODEN SHINGLES.
Claims use since Nov. 27, 1928.

Reg. No. 310,762. Registered Mar. 6, 1934. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

HARWACO BOND

The word "Bond" is disclaimed apart from the mark as shown.
FOR REFRACTORY CEMENT.
Claims use since Nov. 10, 1932.

Reg. No. 315,912. Registered Aug. 14, 1934. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

ALUSITE

FOR FIRE BRICK.
Claims use since Aug. 28, 1926.

Reg. No. 321,533. Registered Feb. 5, 1935. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

HW

FOR REFRACTORY, INSULATING, AND ACID-PROOF BRICK.
Claims use since Jan. 2, 1932.

Reg. No. 331,438. Registered Jan. 7, 1936. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

DURO

FOR ACID-PROOF BRICK.
Claims use since Mar. 17, 1915.

Reg. No. 353,278. Registered Dec. 28, 1937. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

MAGNEX

FOR FIRE BRICK.
Claims use since Mar. 6, 1937.

Reg. No. 415,351. Registered Aug. 7, 1945. HARBISON-WALKER REFRACTORIES COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

VEGA

FOR FIRE BRICK.
Claims use since Dec. 23, 1942.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 139,050. Registered Jan. 18, 1921. WAYNE OIL TANK & PUMP COMPANY, Fort Wayne, Ind. Republished by The Wayne Pump Company, Fort Wayne, Ind., a corporation of Maryland.

Wayne

FOR NOZZLES AND NOZZLE-CASINGS.
Claims use since May 1914.

Reg. No. 255,451. Registered Apr. 23, 1929. SLOAN VALVE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

GEM

FOR FLUSH VALVES.
Claims use since about Oct. 15, 1928.

Reg. No. 271,429. Registered June 3, 1930. SLOAN VALVE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

XPELOR

FOR VALVES FOR USE IN WATER SUPPLY SYSTEMS.
Claims use since about Oct. 15, 1928.

Reg. No. 284,196. Registered June 16, 1931. SLOAN VALVE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CROWN

FOR FLUSH VALVES.
Claims use since about Dec. 29, 1930.

Reg. No. 284,212. Registered June 16, 1931. SLOAN VALVE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

NAVAL

FOR FLUSH VALVES.
Claims use since Oct. 1, 1930.

Reg. No. 349,785. Registered Sept. 7, 1937. HARVEY-WHIPPLE, INCORPORATED, Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

TRIPALATOR

FOR OIL BURNER ATOMIZERS.
Claims use since Jan. 1, 1935.

Reg. No. 368,758. Registered June 27, 1939. SNELL-JONES TACK CORPORATION, Brockton, Mass., a corporation of Massachusetts. Republished by registrant.

PRESTO

FOR GLAZIERS' POINTS.
Claims use since Dec. 15, 1938.

Reg. No. 410,682. Registered Dec. 12, 1944. SLOAN VALVE COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ROYAL

FOR FLUSH VALVES FOR WATER SUPPLY SYSTEM.
Claims use since 1911.

Reg. No. 410,773. Registered Dec. 19, 1944. NATIONAL CYLINDER GAS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

TORCHWELD

FOR GAS PRESSURE REGULATORS.
Claims use since about 1920.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 399,595. Registered Jan. 19, 1943. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

CORVIC

FOR COPPER AND COPPER ALLOY WELDING RODS.
Claims use since Mar. 22, 1935.

CLASS 15

OILS AND GREASES

Reg. No. 187,280. Registered July 29, 1924. THE ELCO PETROLEUM COMPANY, St. Louis, Mo. Republished by The Elco Lubricant Corporation, Cleveland, Ohio, a corporation of Ohio.

QUALITY
ELCO OILS
SERVICE

The words "Quality," "Oils," and "Service" are disclaimed apart from the mark as shown.
FOR GASOLINE.
Claims use since Jan. 6, 1923.

Reg. No. 257,541. Registered June 11, 1929. PANHARD OIL CORPORATION, New York, N. Y. Republished by Panhard Oil Corporation, New York, N. Y., a corporation of Delaware, assignor to New York Lubricating Oil Company, a corporation of New York.

EXCELSOL EXCELSOL EXCELSOL EXCELSOL

FOR LUBRICATING GREASES AND LUBRICATING OILS FOR MACHINERY, ENGINES, MOTORS, AND DYNAMOS.
Claims use since Dec. 14, 1928.

Reg. No. 262,469. Registered Oct. 15, 1929. THE CINCINNATI OIL WORKS CO., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

The words "High Compression" are disclaimed apart from the mark as shown.
FOR GASOLINE.
Claims use since Oct. 1, 1928.

Reg. No. 292,691. Registered Mar. 22, 1932. THE ELCO GREASE & OIL COMPANY, Cleveland, Ohio. Republished by The Elco Lubricant Corporation, Cleveland, Ohio, a corporation of Ohio.

GEAR SAFETY No. 28

The notation "No. 28" is disclaimed apart from the mark as shown.

FOR LEAD BASE LUBRICATING GREASE.

Claims use since on or about May 1, 1931.

Reg. No. 349,996. Registered Sept. 14, 1937. THE ELCO GREASE & OIL COMPANY, Cleveland, Ohio. Republished by The Elco Lubricant Corporation, Cleveland, Ohio, a corporation of Ohio.

ELCO

FOR LUBRICATING OILS AND GREASES.

Claims use since on or about Jan. 6, 1923.

Reg. No. 387,690. Registered May 27, 1941. THE ELCO GREASE AND OIL COMPANY, Cleveland, Ohio. Republished by The Elco Lubricant Corporation, Cleveland, Ohio, a corporation of Ohio.

The lining on drawing is for shading purposes only. Applicant disclaims "28" apart from the mark as shown.

FOR LUBRICATING OILS AND GREASES.

Claims use since on or about January 1937.

Reg. No. 422,620. Registered Aug. 6, 1946. ARCHIE T. STRATTON, Cleveland, Ohio. Republished by registrant.

FOR LUBRICATING OIL FOR ADDITION TO GASOLINE, FUEL OIL, OR CYLINDER OIL TO PREVENT STICKING VALVES AND TO REDUCE GUM, WAX, AND VARNISH FORMATION.

Claims use since May 2, 1942.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 67,166. Registered Jan. 21, 1908. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Metalastic

FOR MIXED PAINTS.

Claims use since May 7, 1902.

Reg. No. 129,333. Registered Feb. 17, 1920. BOSTON VARNISH COMPANY, Everett, Mass., a corporation of Massachusetts. Republished by registrant.

Kyanize

FOR PAINTS AND ENAMELS FOR WOOD, METAL, AND THE LIKE.

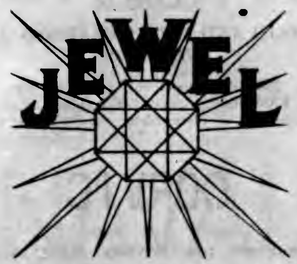
Claims use since 1907.

Reg. No. 138,246. Registered Dec. 21, 1920. THE GEM HAMMOCK & FLY NET COMPANY, Milwaukee, Wis. Republished by Gem Products, Inc., Milwaukee, Wis., a corporation of Wisconsin.

FOR POLISH FOR FURNITURE, AUTOMOBILES, FLOORS, WOODWORK, ETC.

Claims use since May 28, 1917.

Reg. No. 150,639. Registered Jan. 3, 1922. WADSWORTH-HOWLAND COMPANY, Chicago, Ill. Republished by Jewel Paint & Varnish Co., Chicago, Ill., a corporation of Illinois.



FOR WALL-FINISH, IRON-ENAMEL, MIXED PAINT, VARNISH-STAIN, OIL STAIN, IRON-PAINT, FLAT

PAINT, VARNISH, TUB AND CAN ENAMEL, ALUMINUM PAINT, RIM-COATING, GUN-METAL FINISH, CYLINDER-ENAMEL, TIRE-DRESSING, BLACK AUTO-ENAMEL, WHITE ENAMEL, OIL COLORS, JAPAN COLORS, AUTO, WAGON, AND MILL PAINT, RIM-COATING, GUN-METAL FINISH, AND TIRE-DRESSING BEING IN THE NATURE OF PAINTS, POLISH FOR AUTOMOBILES, CARRIAGES, PIANOS, FURNITURE, AND ANY VARNISHED SURFACE.

Claims use since 1890.

Reg. No. 152,785. Registered Mar. 7, 1922. THE GEM HAMMOCK & FLY NET COMPANY, Milwaukee, Wis. Republished by Gem Products, Inc., Milwaukee, Wis., a corporation of Wisconsin.

KLEEN-O

FOR OIL FOR MOPS.

Claims use since Nov. 24, 1916.

Reg. No. 169,451. Registered June 19, 1923. ENTERPRISE PAINT MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

ENTERPRISE

FOR READY-MIXED AND PASTE PAINTS, VARNISHES, PAINT ENAMELS, WOOD FILLERS, COACH COLORS, LIQUID PAINT USED TO PRODUCE A SLATE-LIKE SURFACE AS IN THE MAKING OF BLACKBOARDS, STAINS, OCHER, AUTOMOBILE FINISH, FURNITURE POLISH, AND PAINT FOR RENEWING SHADE CLOTH.

Claims use since 1893.

Reg. No. 195,884. Registered Feb. 24, 1925. THE SMITH-ALSOP PAINT AND VARNISH COMPANY, Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

The words "Hi Grade Paint and Varnish Products" are disclaimed apart from the mark as shown.

FOR WOOD FILLER, ENAMELS, PAINTS, AND VARNISHES.

Claims use since May 1, 1924.

Reg. No. 199,379. Registered June 9, 1925. THE SMITH-ALSOP PAINT AND VARNISH COMPANY, Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

FLOORKON

FOR PAINT FOR USE UPON CEMENT FLOORS.

Claims use since Feb. 10, 1910.

Reg. No. 206,095. Registered Nov. 24, 1925. THE SMITH-ALSOP PAINT AND VARNISH COMPANY, Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

SACOLITE

FOR PASTE AND READY-MIXED PAINTS.

Claims use since Nov. 10, 1924.

Reg. No. 244,116. Registered July 10, 1928. THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Republished by General Atlas Carbon Company, Boston, Mass., a corporation of Massachusetts.

GASTEX

FOR CARBON BLACK.

Claims use since about Feb. 8, 1928.

Reg. No. 304,176. Registered June 27, 1933. THE SMITH-ALSOP PAINT AND VARNISH COMPANY, Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

The words "Exterior," "Enamel," "Speed," "Safety," "Hi-Grade," "Paint," "Varnish," and "Products," are disclaimed apart from the mark as shown.

FOR PAINT ENAMEL FOR EXTERIOR USE.

Claims use since Feb. 1, 1933.

Reg. No. 315,497. Registered July 31, 1934. THE SMITH-ALSOP PAINT AND VARNISH COMPANY, Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

LIN-O-VAR

FOR VARNISH FOR LINOLEUM.

Claims use since June 20, 1933.

VEHICLES

Reg. No. 39,008. Registered Oct. 7, 1902. GEORGE M. HENDEE, Springfield, Mass. Republished by Indian Motocycle Company, Springfield, Mass., a corporation of Massachusetts.

INDIAN

FOR MOTORCYCLES.

Claims use since about Jan. 1, 1898.

Reg. No. 237,231. Registered Jan. 3, 1928. ROGERS FIBRE COMPANY, Kennebunk, Maine. Republished by National Vulcanized Fibre Co., Wilmington, Del., a corporation of Delaware.

Leatheroid

FOR BOXES, TRUCKS, CANS, BARRELS, MILL BASKETS, TRAYS, AND WASTE BASKETS MADE PARTLY OR WHOLLY OF FIBER BOARD.

Claims use since about 1884.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 106,128. Registered Oct. 12, 1915. THE WHITNEY BLAKE COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

<WEB>

FOR INSULATED WIRE AND CABLES.

Claims use since Aug. 1, 1914.

Reg. No. 185,527. Registered June 17, 1924. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

IRV-O-SLOT

FOR ELECTRICAL INSULATING MATERIAL—TO WIT, FLEXIBLE LAMINATE SHEET MATERIAL MADE OF TEXTILE FABRIC AND FIBROUS PAPER WITH AN INTERMEDIATE LAYER OF NONDRYING PLASTIC COMPOUND HAVING DIELECTRIC PROPERTIES.
Claims use since Mar. 1, 1921.

Reg. No. 210,431. Registered Mar. 16, 1926. NATIONAL VULCANIZED FIBRE CO., Wilmington, Del., a corporation of Delaware. Republished by registrant.

PHENOLITE

FOR LAMINATED FABRICATED MATERIAL FOR ELECTRICAL INSULATION.
Claims use since Mar. 1, 1925.

Reg. No. 393,129. Registered Jan. 27, 1942. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

IRV-O-LITE

FOR EXTRUDED PLASTIC TUBING FOR ELECTRICAL INSULATION.
Claims use since September 1939.

Reg. No. 393,130. Registered Jan. 27, 1942. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

IRV-O-VOLT

FOR VARNISHED TUBING FOR ELECTRICAL INSULATION.
Claims use since May 1, 1939.

Reg. No. 397,541. Registered Sept. 8, 1942. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

HYFLEX

FOR EXTRUDED PLASTIC TUBING FOR ELECTRICAL INSULATION.
Claims use since Mar. 11, 1942.

Reg. No. 397,542. Registered Sept. 8, 1942. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

TRANSFLEX

FOR EXTRUDED PLASTIC TUBING FOR ELECTRICAL INSULATION.
Claims use since Dec. 15, 1941.

Reg. No. 401,176. Registered Apr. 27, 1943. NATIONAL CYLINDER GAS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

OXYGEN APPARATUS NATIONAL ACETYLENE

The words "Oxygen," "Acetylene," and "Apparatus" are disclaimed apart from the mark as shown.
FOR ALTERNATING CURRENT ELECTRIC WELDING APPARATUS AND DIRECT CURRENT WELDING APPARATUS.
Claims use since Sept. 1, 1940.

Reg. No. 402,190. Registered July 6, 1943. THE WHITNEY BLAKE COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

PLASTITE

FOR INSULATED WIRES AND CABLES.
Claims use since Dec. 17, 1942.

Reg. No. 402,320. Registered July 13, 1943. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

IRV-O-FLEX

FOR EXTRUDED PLASTIC TUBING FOR ELECTRICAL INSULATION.
Claims use since Dec. 17, 1942.

Reg. No. 405,222. Registered Jan. 11, 1944. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

IVI-FLEX

FOR EXTRUDED PLASTIC TUBING FOR ELECTRICAL INSULATION.
Claims use since July 30, 1943.

Reg. No. 406,670. Registered Apr. 18, 1944. THE WHITNEY BLAKE COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

STRATO-CABLE

The word "Cable" is disclaimed apart from the mark as shown.
FOR INSULATED WIRES AND CABLES OF THE TYPE USED IN COMMUNICATIONS, INSTRUMENT WIRING, AND OTHER INSTALLATIONS EXCEPT WIRING FOR ELECTRICAL LIGHT FIXTURES.
Claims use since Dec. 30, 1942.

Reg. No. 421,195. Registered May 21, 1946. THE WHITNEY BLAKE COMPANY, Hamden and New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

TELEPRENE

FOR INSULATED ELECTRIC WIRE.
Claims use since Sept. 18, 1945.

Reg. No. 424,948. Registered Oct. 29, 1946. IRVINGTON VARNISH & INSULATOR CO., Irvington, N. J., a corporation of New Jersey. Republished by registrant.

IRV-O-FLATSEME

The word "Flatseme" is disclaimed apart from the mark as shown.
FOR YELLOW VARNISHED CAMBRIC TAPE, USED FOR ELECTRICAL INSULATION PURPOSES.
Claims use since Nov. 27, 1945.

Reg. No. 427,000. Registered Jan. 21, 1947. THE WHITNEY BLAKE COMPANY, Hamden and New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

TELEPLATE

FOR INSULATED ELECTRIC WIRE.
Claims use since Mar. 22, 1946.

Reg. No. 434,737. Registered Dec. 2, 1947. MARSHALL FIELD & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Fieldcrest

FOR ELECTRICALLY HEATED BLANKETS OF ANIMAL, VEGETABLE, MINERAL, AND SYNTHETIC MATERIAL AND MIXTURES THEREOF.
Claims use since Feb. 7, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 137,977. Registered Dec. 14, 1920. THE CRAWFORD MCGREGOR & CANBY COMPANY, Dayton, Ohio. Republished by Sport Products, Inc., Cincinnati, Ohio, a corporation of Ohio.

"MACGREGOR"

FOR GOLF CLUBS AND GOLF BALLS.
Claims use since about Mar. 1, 1897.

Reg. No. 188,932. Registered Sept. 9, 1924. THE CRAWFORD MCGREGOR AND CANBY COMPANY, Dayton, Ohio. Republished by Sport Products, Inc., Cincinnati, Ohio, a corporation of Ohio.

MACGREGOR DAYTON.O.

The words "Dayton, O." are disclaimed apart from the mark as shown.
FOR GOLF CLUBS.
Claims use since March 1897.

Reg. No. 382,319. Registered Oct. 22, 1940. O. F. MOSSBERG & SONS, INC., New Haven, Conn., a corporation of Connecticut. Republished by registrant.

Targo

FOR TARGET THROWING DEVICES.
Claims use since on or about May 13, 1940.

Reg. No. 383,234. Registered Nov. 26, 1940. O. F. MOSSBERG & SONS, INC., New Haven, Conn., a corporation of Connecticut. Republished by registrant.

TARGO

FOR TARGETS AND CLAY PIGEONS.
Claims use since on or about July 5, 1940.

Reg. No. 384,990. Registered Feb. 11, 1941. O. F. Mossberg & Sons, Inc., New Haven, Conn., a corporation of Connecticut. Republished by registrant.

MOSSBERG Targo

FOR TRAPSHOOTING GAME INCLUDING A SPECIALLY FORMED FIREARM FOR SMALL CALIBRE SHOT SHELLS, A TRAP FOR THROWING TARGETS, HANDLE FOR TRAP, READILY FRACTURABLE TARGETS, A NET FOR CATCHING MISSED TARGETS, AND A SPECIAL TARGET HOLDING CONTAINER.
Claims use since on or about July 1, 1940.

Reg. No. 389,077. Registered July 22, 1941. Tykie Toy Company, Piqua, Ohio, a firm. Republished by registrant.

TYKIE TOY

The word "Toy" is disclaimed apart from the mark as shown.
FOR BABY TOYS—NAMELY, BABY RATTLES AND BABY TEETHING TOYS.
Claims use since July 15, 1940.

Reg. No. 412,736. Registered Mar. 20, 1945. Cavendish Trading Corporation, New York, N. Y., a corporation of New York. Republished by registrant.

SUN GIRL

FOR ROLLER SKATES, GOLF CLUBS, GOLF BALLS, FISHING LINES, BASEBALL BATS, BASEBALLS, TENNIS RAQUETS, TENNIS BALLS, BADMINTON SETS, FOOTBALLS, BASKET BALLS, TOY BUILDING SETS, BOARD GAMES PLAYED WITH PEGS, DOLLS AND DOLLS' CLOTHES.
Claims use since Feb. 8, 1938.

Reg. No. 413,447. Registered Apr. 24, 1945. Cavendish Trading Corporation, New York, N. Y., a corporation of New York. Republished by registrant.

SPORTWAY

FOR PLAYING CARDS, NOISE MAKERS—NAMELY, TOY WHISTLES, HORNS, AND RATTLERS; ADJUSTABLE TOY ANIMALS, PULL TOYS, TOY BUILDING SETS, DOLLS, DOLLS' CLOTHES, OPTICAL TOYS, TOY FURNITURE, BOARD GAMES PLAYED WITH PEGS, CARDBOARD CUT OUT TOYS—NAMELY, JIG SAW PUZZLES AND BOOK WARDROBE CUT-OUTS AND DOLLS; FISHING LINES, GOLF CLUBS, BASEBALL BATS, BASKET BALLS, GOLF AND TENNIS BALLS, TENNIS RACKETS AND FOOTBALLS.
Claims use since Feb. 27, 1939.

CLASS 23

FOR CANNED FRUITS AND CANNED VEGETABLES.
Claims use since May 3, 1940.

Reg. No. 402,416. Registered July 20, 1943. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

RY-BLEN-DO

The expression "Ry-Blen" is disclaimed apart from the mark as shown.
FOR RYE FLOUR AND WHEAT FLOUR MIXTURE.
Claims use since Dec. 14, 1942.

Reg. No. 410,640. Registered Dec. 5, 1944. SCHENLEY DISTILLERIES, INC., New York, N. Y. Republished by Schenley Distillers Corporation, New York, N. Y., a corporation of Delaware.

P-G-F

PRO-GRA-FLAV

FOR DISTILLERS' DRIED GRAINS USED FOR POULTRY FOOD.
Claims use since June 7, 1944.

Reg. No. 417,647. Registered Nov. 6, 1945. CAMARILLO CITRUS ASSOCIATION, Camarillo, Calif., a corporation of California. Republished by registrant.

CAMA-RIO

The drawing is lined for shading only.
FOR FRESH CITRUS FRUITS.
Claims use since May 19, 1945.

Reg. No. 419,074. Registered Feb. 5, 1946. NORTH DAKOTA MILL & ELEVATOR ASSOCIATION, doing business as North Dakota Mill & Elevator, and State Mill & Elevator, Grand Forks, N. Dak., an association of North Dakota. Republished by registrant.

BIG FIFTEEN

FOR WHEAT FLOUR.
Claims use since about Aug. 1, 1932.

Reg. No. 426,785. Registered Jan. 14, 1947. CAAR CANNING COMPANY, Redkey, Ind., a corporation of Indiana. Republished by registrant.

REDKEY

The drawing is lined for red.
FOR CANNED TOMATOES, CANNED TOMATO PUREE, CANNED JUICE, CANNED BEANS WITH PORK AND CANNED PEAS.
Claims use since August 1917.

Reg. No. 433,956. Registered Nov. 4, 1947. JEWETT & SHERMAN CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

VANSHERRI

FOR FOOD FLAVORING EXTRACT.
Claims use since 1942.

CLASS 47

WINES

Reg. No. 373,562. Registered Dec. 12, 1939. J. H. & J. BROOKE LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

J. H. & J. Brooke

FOR WINES.
Claims use since 1900.

Reg. No. 376,017. Registered Mar. 12, 1940. SAN GABRIEL WINE CO., INC., New York, N. Y. Republished by Napa Valley Grape Products, Inc., New York, N. Y., a corporation of New York.

The drawing is lined for red.
FOR WINES.
Claims use since December 1938.

Reg. No. 433,040. Registered Aug. 20, 1946. UPLAND WINERY, Sunnyside, Wash., a firm. Republished by registrant.

UPLAND

FOR WINE.
Claims use since October 1936.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 95,334. Registered Feb. 10, 1914. MILWAUKEE-WAUKESHA BREWING COMPANY, Milwaukee, Wis. Republished by Fox Head Brewing Co., Waukesha, Wis., a corporation of Wisconsin.

FOR LAGER-BEER, ALE, STOUT, AND MALT TONIC.
Claims use since about June 4, 1894.

Reg. No. 100,633. Registered Oct. 20, 1914. THE GOTTLIEB BAUERNSCHMIDT STRAUS BREWING COMPANY, Baltimore, Md. Republished by The Globe Brewing Company, Baltimore, Md., a corporation of Maryland.

ARROW

FOR LAGER-BEER.
Claims use since Feb. 22, 1913.

Reg. No. 100,909. Registered Oct. 27, 1914. THE GOTTLIEB BAUERNSCHMIDT STRAUS BREWING COMPANY, Baltimore, Md. Republished by The Globe Brewing Company, Baltimore, Md., a corporation of Maryland.

ARROW

FOR LAGER-BEER.
Claims use since Feb. 22, 1913.

Reg. No. 129,228. Registered Jan. 27, 1920. TERRE HAUTE BREWING COMPANY, Terre Haute, Ind. Republished by Terre Haute Brewing Company, Inc., Terre Haute, Ind., a corporation of Indiana.

C.V.

FOR CEREAL MALT BEVERAGE.
Claims use since July 19, 1917.

Reg. No. 395,846. Registered June 16, 1942. FOX HEAD WAUKESHA CORPORATION, Waukesha, Wis. Republished by Fox Head Brewing Co., Waukesha, Wis., a corporation of Wisconsin.

FOX HEAD
OLD WAUKESHA

FOR ALE.
Claims use since Dec. 1, 1894.

Reg. No. 399,383. Registered Jan. 5, 1943. FOX HEAD WAUKESHA CORPORATION, Waukesha, Wis. Republished by Fox Head Brewing Co., Waukesha, Wis., a corporation of Wisconsin.

FOR LAGER AND PALE BEER.
Claims use since 1895.

Reg. No. 405,409. Registered Feb. 1, 1944. FOX HEAD WAUKESHA CORPORATION, Waukesha, Wis. Republished by Fox Head Brewing Co., Waukesha, Wis., a corporation of Wisconsin.

Fox Head
"400"

FOR BEER.
Claims use since July 30, 1935.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 316,760. Registered Sept. 4, 1934. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

TROUBADOUR

FOR WHISKEY.
Claims use since May 3, 1934.

Reg. No. 328,095. Registered Sept. 17, 1935. MARTELL & Co., Cognac, France. Republished by J. & F. Martell, Inc., New York, N. Y., a corporation of New York.

J&F.MARTELL

FOR BRANDY.
Claims use since 1873.

Reg. No. 343,353. Registered Feb. 16, 1937. SCHENLEY DISTRIBUTORS, INC., New York, N. Y. Republished by Schenley Distillers Corporation, New York, N. Y., a corporation of Delaware.

A A

FOR WHISKEY.
Claims use since Mar. 27, 1936.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 217,553. Registered Sept. 7, 1926. H. W. SELLE & Co., Chicago, Ill. Republished by American Excelsior Corporation, Chicago, Ill., a corporation of Delaware.

PROTEX

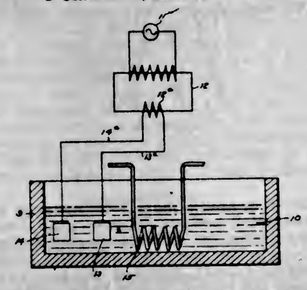
FOR PACKING PADS MADE OF EXCELSIOR OR SIMILAR PACKING MATERIAL AND HAVING A COVERING OF PAPER OR SIMILAR MATERIAL AND DESIGNED FOR USE IN PACKING OBJECTS FOR SHIPMENT.
Claims use since Dec. 15, 1922.

REISSUES

JANUARY 4, 1949

23,068
ELECTROLYTIC POLISHING OF STAINLESS STEEL

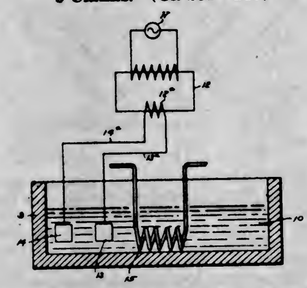
Alexander L. Feild, Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation, a corporation of Ohio
Original No. 2,442,591, dated June 1, 1948, Serial No. 460,296, September 30, 1942. Application for reissue September 30, 1948, Serial No. 51,942
5 Claims. (Cl. 204—140)



1. In the polishing of a stainless steel product, the art which comprises, immersing the product to be polished in a bath containing by volume 80% to 40% of concentrated nitric acid and the remainder concentrated acetic acid, and while maintaining the bath at a temperature below 25° C. passing only alternating current through said bath between the product and a cooperating electrode immersed therein, the current density being at least ½ amperes per square inch of product surface.

23,069
ELECTROLYTIC POLISHING OF STAINLESS STEEL

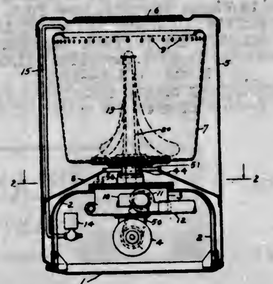
Alexander L. Feild, Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation, a corporation of Ohio
Original No. 2,442,592, dated June 1, 1948, Serial No. 635,451, December 17, 1945, which is a division of Serial No. 460,296, September 30, 1942. Application for reissue September 30, 1948, Serial No. 51,943
5 Claims. (Cl. 204—140)



1. The art of electro-polishing a stainless steel product which comprises, immersing the product to be polished in a bath containing by volume 80% or more of concentrated aqueous nitric acid (sp. gr. 1.40–1.42) and the remainder being water, and while maintaining the bath at a temperature below 25° C., passing only alternating current through said bath between the product and a cooperating electrode immersed therein, the current density being at least ½ amperes per square inch of product surface.

23,070
CLOTHES WASHER

Nelson H. Henderson, Syracuse, N. Y., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Original No. 2,301,046, dated November 3, 1942, Serial No. 361,324, October 15, 1940, which is a division of Serial No. 267,575, April 13, 1939. Application for reissue April 20, 1944, Serial No. 531,964
16 Claims. (Cl. 68—23)



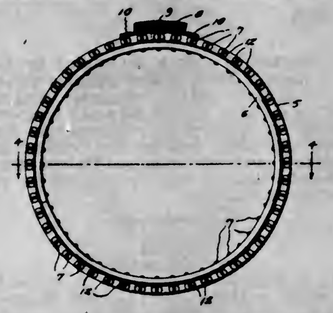
14. Driving mechanism comprising in combination a rotary driving member, two concentric driven members, the outer driven member forming an extended bearing for the inner driven member and being directly connected to a tub, the inner driven member being directly connected to an agitator within said tub and mechanism including an oscillatory device and means for oscillating the inner driven member actuated by said driving member for imparting oscillations to the inner driven member, mechanism tending at all times to transmit rotary motion to the outer driven member and means operable to render said last mentioned mechanism inoperative including a friction brake and to permit said first mechanism to transmit oscillations to said inner driven member.

23,071
HAND LOOM

Monte K. Durrin, Little Rock, Ark.
Original No. 2,409,743, dated October 22, 1946, Serial No. 563,511, November 15, 1944. Application for reissue April 29, 1948, Serial No. 25,980
3 Claims. (Cl. 28—15)

1. A hand loom comprising an outer frame, an inner frame, said inner frame being provided with a multiplicity of outstanding work holding pins, the outer frame being provided with a

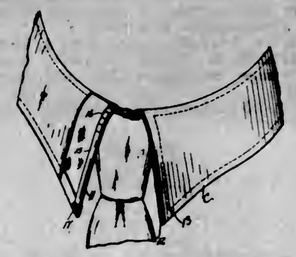
multiplicity of notches for receiving the outer ends of said pins to guard against work thread catching thereon, the outer frame being split and a resilient connector between the ends of said



outer frame, said resilient connector including a ridged guide, said guide having one edge notched to coincide with the notches of the adjacent edge of the outer frame.

23,072
SHIRT COLLAR SHAPING DEVICE
Max M. Newman, New York, N. Y., assignor of one-half to Victor Newman, New York, N. Y.
Original No. 2,426,519, dated August 26, 1947, Serial No. 668,887, May 10, 1946. Application for reissue October 24, 1947, Serial No. 781,884
16 Claims. (Cl. 2—132)

4. Collar shaping means comprising a hollow, elongated section of metallic material, a fabric strip received within said hollow and clamped therein by said section, said fabric strip extending from both ends of said section, and a series of discrete, rigid members supported by one end of said fabric strip, said fabric strip extending past said rigid members whereby said collar shaping means is provided with soft tips at both ends thereof.



16. Collar shaping means comprising a flattened, elongated body member of rigid, frangible metallic material for stiffening a collar edge, and a fabric strip enclosed and clamped within by said flattened body member so as to extend throughout the length of said body member, said fabric strip further extending past at least one end of said body member.

PLANT PATENTS

GRANTED JANUARY 4, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

813
LIGUSTRUM PLANT
Fuller Tresca, Jacksonville, Fla.
Application December 17, 1946, Serial No. 716,692
1 Claim. (Cl. 47—59)

A new and distinct variety of Ligustrum plant substantially as herein disclosed, characterized by its generally low wide outline or configuration, by the greater density of its leaves and branches as compared with other varieties of *Ligustrum japonicum*, resulting from the presence of a substantially greater and more closely spaced number of branches and leaves of smaller size, and by the gracefully arching and downwardly recurving habit of its branches, whereby an overall weeping appearance is presented.

PATENTS

GRANTED JANUARY 4, 1949

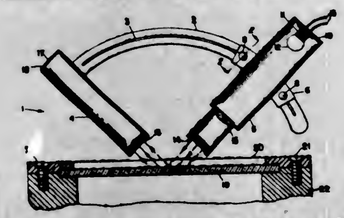
2,457,797
PROCESS FOR THE PREPARATION OF A PIGMENT COMPLEX, INCLUDING A REACTED STARCH
William L. Craig, Westport, Conn., assignor to R. T. Vanderbilt Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application June 16, 1945, Serial No. 599,957
2 Claims. (Cl. 106—306)

2. A process for preparing pigments comprising reacting raw starch at a temperature approximating 20–25° C. with calcium chloride in an aqueous medium, the concentration of calcium chloride in said aqueous medium being in excess of approximately 35% by weight on the aqueous component, and thereafter reacting with the aqueous reaction product of this first step an aqueous solution of a salt of the class consisting of sodium carbonate and sodium tetraborate, and separating the precipitated carbonate or borate complex from the aqueous reaction medium.

2,457,798
PRODUCTION OF TIN FLUOBORATE
Alfred L. Ferguson, Ann Arbor, Mich., assignor to Federal-Mogul Corporation, Detroit, Mich., a corporation of Michigan
No Drawing. Application March 18, 1944, Serial No. 527,149
2 Claims. (Cl. 23—59)

1. The method of producing tin fluoborate, which comprises mixing fluoboric acid and cupric oxide, heating the resulting mixture to dissolve the cupric oxide and form a solution of copper fluoborate, adding to the said solution metallic tin to react with the solution and produce tin fluoborate and precipitating metallic copper from the solution.

2,457,799
INSTRUMENT FOR DETECTING STRAIN IN TRANSLUCENT MATERIALS
Orville L. Altenberg, Long Beach, Calif.
Application January 28, 1946, Serial No. 643,952
1 Claim. (Cl. 88—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

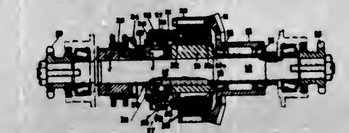


An instrument for detecting mechanically impressed strains in translucent materials including an arcuate guide bracket, a cylindrical light projecting tube overlying the bracket and having its longitudinal axis disposed radially of the arc about which said bracket is curved, clamp means for adjustably fastening the tube to the bracket whereby said tube is movable through an arcuate path longitudinally of said bracket, an electrical lamp in the outer end of the tube, a plate of polarizing material closing the inner end of said tube, a lens interposed between the lamp and plate for condensing and directing light rays from said lamp through said plate, a cylindrical light receiving tube carried by one end of the bracket and having its longitudinal axis disposed radially of the arc about which said bracket is curved, the receiving tube being disposed in the plane of movement of the projecting tube and having an axial sight opening in its outer end, and a plate of polarizing material closing the inner end of said receiving tube, said plates of polarizing material having their polarization planes set substantially at right angles, said tubes being positionable with respect to a sheet of translucent material so that emitted polarized light rays are directed at an angle through the translucent material to be tested and reflected into said light receiving tube, the presence of stresses being detectable by the reflection of feathery light.

2,457,800
SELF-SEALING VENT CAP
Joseph W. Allen, Washington, D. C.
Application October 16, 1944, Serial No. 558,899
5 Claims. (Cl. 137—139)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a self-sealing vent cap for storage battery cells or the like having a hollow cap with an opening for establishing communication between the cap and the atmosphere; a resilient external valve seat for said opening, a valve for said seat, and weight means in said hollow for releasably holding said valve on its seat in either the upright or inverted positions of said cap.

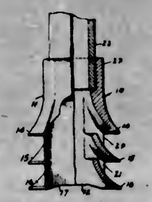
2,457,801
FRICTION CLUTCH WITH ADJUSTMENT FOR TORQUE TRANSMITTING CAPACITY
Charles F. Ball, Franklin, Pa., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application September 20, 1944, Serial No. 554,994
15 Claims. (Cl. 192—54)



1. In a friction clutch having a series of clutch discs, the combination of a pressure plate, an adjusting member bolted to said pressure plate,

springs under compression disposed between said pressure plate and said adjusting member, and means for moving said pressure plate axially into and out of loading pressure applying relation to said clutch discs including a member sliding axially, to which member said adjusting member is attached for movement as the former slides and relative to which member said adjusting member is axially adjustable to different fixed relations.

2,457,802
SILENCER AND RECOIL REDUCER FOR FIREARMS
August Bauer, Beechhurst, N. Y.
Application June 6, 1944, Serial No. 538,981
1 Claim. (Cl. 89—14)



Recoil reducing means for firearms, comprising a structure having at one end means for securement to the muzzle of the firearm to form an axial extension thereof, said structure having spaced upper and lower imperforate walls defining an axial bore for the passage of a bullet; and a succession of mutually spaced pairs of vanes of airfoil cross section connecting said upper and lower walls at diametrically opposite sides of said structure to define a plurality of side openings therefor, said vanes curving forwardly and outwardly of the bore of the structure; the mutual spacing between successive pairs of vanes decreasing toward the discharge end of the structure, and the spacing between the inner ends of each pair of vanes, measured transversely across the bore, increasing successively from the muzzle end to the discharge end of the structure.

2,457,803
SPRING CLIP FABRIC AMMUNITION BELT
Guy T. Bixby, Dayton, Ohio
Application August 19, 1944, Serial No. 550,295
8 Claims. (Cl. 89—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

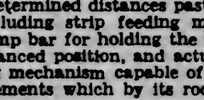
1. An ammunition belt comprising a body having a plurality of fabric cartridge-receiving means including a plurality of cartridge pockets each having a longitudinal axis, and a plurality of separate spring rings, one for each cartridge pocket, anchored to said body and constructed and arranged to encircle each said cartridge pocket in a plane normal to said longitudinal axis to at least indirectly and individually grip cartridges disposed in said receiving means.

2,457,804
SYNTHETIC BLOOD SUTURE AND METHOD
John O. Bower, Wyncote, Pa.
No Drawing. Application July 29, 1944, Serial No. 547,317
20 Claims. (Cl. 128—335.5)

3. An extruded surgical suture, the structural basis of which comprises, as a major component, the non-volatile residue of the corpuscular portion of blood.

2,457,805
ALIPHATIC ESTERS OF 2,4,5-TRICHLOROPHENOL
Arthur R. Cade, Rutherford, and William S. Gump, Upper Montclair, N. J., assignors to Burton T. Bush, Inc., New York, N. Y., a corporation of New Jersey
No Drawing. Application November 2, 1946, Serial No. 707,520
4 Claims. (Cl. 260—479)

1. Novel chemical compounds having the structural formula:



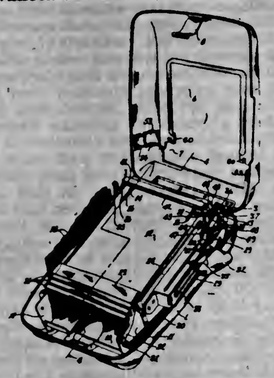
wherein R is a member selected from the group consisting of H and an alkyl radical containing not more than eleven carbon atoms.

2,457,806
INDUCTANCE COIL
Eugene R. Crippa, United States Army
Application June 11, 1946, Serial No. 676,051
2 Claims. (Cl. 175—359)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An inductive element having high inductance and low external field, comprising; a non-magnetic, insulating form, a closely wound coil positioned intermediately thereon, and a high permeability coating applied externally to the form and coil, in part impregnating interstices of the latter and extending therefrom along the form.

2,457,807
AUTOGRAPHIC REGISTER
John T. Davidson and John H. Kroemer, Dayton, Ohio, assignors to The Standard Register Company, Dayton, Ohio, a corporation of Ohio
Application May 21, 1942, Serial No. 443,944
10 Claims. (Cl. 282—18)

9. An autographic register wherein continuous strips of record material are progressively advanced predetermined distances past a recording position, including strip feeding mechanism, a movable clamp bar for holding the record strips in their advanced position, and actuator for the strip feeding mechanism capable of rocking and sliding movements which by its rocking motion elevates the clamp bar to release the record strips for advancement and by its sliding movement

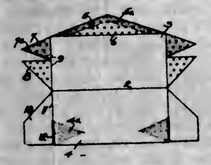


actuates the strip feeding mechanism to advance the record strips.

2,457,808
FLUORESCENT RED CELLULOSE ACETATE FIBERS
Robert G. Dort, Summit, N. J., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application March 14, 1945, Serial No. 582,811
2 Claims. (Cl. 8—57)

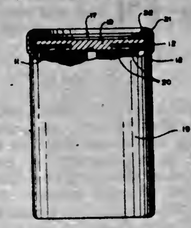
2. Colored, fluorescent cellulose acetate filamentary materials of high color intensity under visible as well as ultra-violet illumination having a finely divided pigment consisting of zinc sulfide fluorescent in a red color incorporated therein and colored with a fluorescent dyestuff consisting of the hydrochloride of diethyl-m-amino-phenolphthalein.

2,457,809
ENVELOPE HAVING TAMPER DETECTION MEANS
Donald L. Drummond, Santa Maria, Calif.
Application August 23, 1945, Serial No. 612,192
5 Claims. (Cl. 229—83)



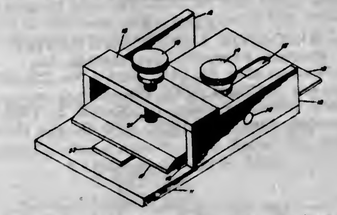
1. An envelope including a piece of material folded upon itself to form a front and a rear panel, a perforated flap integral with the extremity of the front panel remote from the fold, said flap being folded back over the rear panel, adhesive means for attaching the flap to the rear panel, inwardly folded perforated tabs on opposite sides of the front panel extending between the latter and the rear panel, inwardly folded ears on opposite sides of the rear panel between the latter and the front panel, adhesive means for securing the tabs and ears on each side to one another and both ears to the inner face of the rear panel, at least one of the adhesive means including a layer of impregnated paper adhesively attached to one portion of the envelope, a piece of indicator paper adhesively attached to the impregnated paper whereby discoloration of the indicator paper may be observed through the perforations, and a layer of adhesive on the outer face of the indicator paper for securing it to another portion of the envelope.

2,457,810
SEALING DEVICE FOR DRY CELLS
Grenville B. Ellis, Red Bank, N. J., assignor to the United States of America as represented by the Secretary of War
Application May 10, 1945, Serial No. 592,952
4 Claims. (Cl. 136—133)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a primary cell comprising a metallic container, electrodes and an electrolyte within the container, the combination of a metallic disc on one of the electrodes, a grommet insulating the disc from the container, said disc and grommet having opposed annular interfitting channels each sealingly receiving a portion of the other.

2,457,811
WORK HOLDING DEVICE
Albert F. Emrich, Valley Stream, N. Y.
Application May 22, 1945, Serial No. 595,219
1 Claim. (Cl. 144—290)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

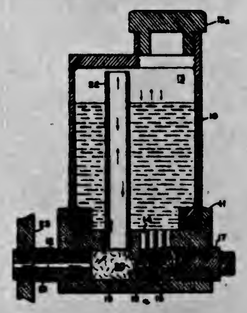


A work holding device comprising a base plate and two parallel side plates, a squaring plate slidably contained within said side plates and resting upon said base plate, said sliding plate being in slidable and lockable engagement with said base plate, a clamping plate contained within said side plates and rotatably mounted about an axis normal to said side plates, said axis being spaced above said base plate sufficiently to permit the clamping portion of said clamping plate to be nearer said base plate than other portions of said clamping plate are, whereby said clamping plate may be brought to bear on work less high than said plate and positioned on said base against said squaring plate, and adjustable means for moving the said clamping portion of said clamping plate into and out of proximity with said base plate.

2,457,812
STORAGE AND DISPLAY BOX
Thomas Byrd Epps, Boston, Mass.
Application June 14, 1945, Serial No. 599,894
3 Claims. (Cl. 206—45.13)

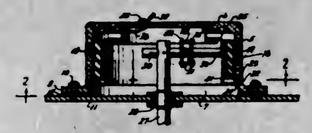
1. A box of the character described made from sheet material and having, in combination, a body comprising a bottom wall in the form of a right-angled parallelogram; a perpendicular rear wall; two spaced-apart box-like side walls at opposite sides of said bottom wall each of which is connected with the proximate side of said bottom wall and also with the proximate end of said rear wall; an adjustable easel disposed between said side walls comprising a panel that is hingedly connected at its one end with the front of said bottom wall and also comprising a single prop panel hingedly connected with said first-mentioned easel panel; an adjustable cover flap hingedly connected at its one end with said rear wall and providing a closure for the top and front of said body when occupying its closed position, and a flexible link connecting said prop panel and cover flap through which the latter acts when opened to adjust the prop panel into a position where it supports said hinged panel of the easel in an elevated position where it is fully exposed to view from the front.

2,457,813
LUBRICATOR AND MIXING DEVICE
Howard Avery Flagge, Norfolk, Va.
Application May 24, 1945, Serial No. 595,622
1 Claim. (Cl. 184—55)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



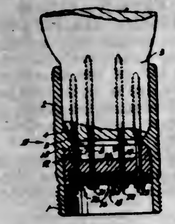
A lubricator for feeding lubricant into a fluid chamber wherein successive pulsations in fluid pressure recur, said lubricator comprising a housing having a lubricant reservoir therewithin, said housing having a reservoir replenishing opening at the top thereof, a plug for sealing said opening, a standpipe extending vertically through said reservoir to adjacent the top thereof, a base on which said reservoir housing is mounted, a chamber in said base to which chamber said standpipe is connected, a loosely packed wick in said base chamber, a restricted passage connecting said base chamber to the fluid chamber to be lubricated, a second chamber in said base, a restricted opening connecting said base chambers together, a tightly packed wick in said second base chamber and a passage between said second base chamber and the bottom of said lubricant reservoir, whereby pressure pulsations may pass through said restricted passage to said first base chamber and through said standpipe to the top of said reservoir, and lubricant from said lubricant reservoir may pass down through said second base chamber from said passage therebetween, slowly through the tightly packed wick and through said restricted opening connecting said base chambers to said first base chamber to be picked up and carried by said pressure pulsations passing therethrough back to the fluid chamber to be lubricated.

2,457,814
SEALED POTENTIOMETER
Irving Gordy, Eatontown, N. J.
Application August 9, 1946, Serial No. 689,355
6 Claims. (Cl. 201—56)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



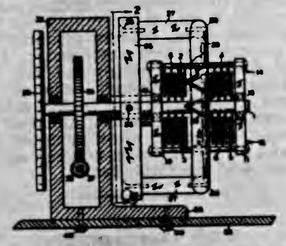
1. In a device of the class described, a tubular casing closed at one end with an opening in the opposite end thereof, a resistance strip mounted within the casing, a nonporous metallic tubular diaphragm mounted within the casing between the resistance strip and the opening and being normally closely spaced from said resistance strip, said diaphragm being secured at the outer end sealed to the casing, annular flexible sealing closure means formed at the inner end of the tubular diaphragm and extending from said end in sealing engagement with the closed end of the casing to protect and hermetically seal the resistance strip within the casing between the diaphragm and the inner wall of the casing, terminal posts extending through the casing wall and secured airtight therein, one post being electrically connected at its inner end with said diaphragm and another post extending into the closed space between the casing wall and the diaphragm and connected with said resistance strip, and rotatable shaft operating means extending centrally of the diaphragm and concentrically of the casing having means thereon to force a portion of the diaphragm into electrical contact with a selected part of the resistance strip to establish an electrical circuit including the resistance strip in the circuit of the device from said terminal posts through said diaphragm and said resistance strip.

2,457,815
PROPELLER BLADE ATTACHMENT
Marvin C. Green, Dayton, Ohio
Application August 2, 1944, Serial No. 547,762
11 Claims. (Cl. 170—173)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



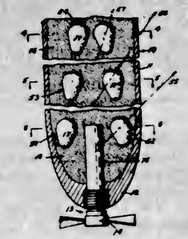
1. In a propeller mount, a propeller blade having a shank, a hub member having ferrule means receiving the shank of said propeller blade, and means for securing the propeller blade shank to said hub member comprising a plate member associated in fixed relation with said hub member and having a recess in one face thereof opposite the hub member ferrule means, compression plate means slidingly disposed in and completely covering said recess and capable of tilting action, an elastic material confined within and completely filling said recess between said compression plate means and the walls of said recess and adapted to flow in the manner of an incompressible liquid, and a plurality of tension members bearing on the compression plate means with a portion passing through the compression plate means, elastic material and plate member and secured to said propeller blade shank and operative to compressively stress said elastic material between said compression plate means and said plate member when said tension members are tensilely stressed.

2,457,816
VARIABLE PERMEABILITY TUNER
Henry H. Grimm, Dayton, Ohio
Application February 27, 1945, Serial No. 580,062
3 Claims. (Cl. 250—40)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



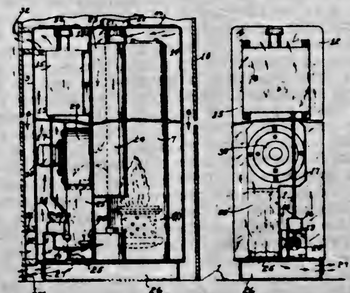
1. Radio apparatus for tuning over a wide band of resonant frequencies comprising in combination variable capacitance and inductance means mechanically and electrically coupled, said variable capacitance means comprising split stator plates and split rotor plates, the split rotor plates being dielectrically mounted with respect to said split stator plates on a rotatable shaft, said inductance means comprising a plurality of symmetrically arranged inductance coils supportively mounted on said variable capacitance means and electrically coupled with said split stator plates to be in parallel with said variable capacitance means, a yoke member secured to said rotatable shaft and rotatable in unison therewith, a resonance changing annular member mounted on said yoke member and circumferentially extending through the inductance coils axially thereof, means for rotating said shaft for circumferentially rotating said annular member with respect to the axial lengths of said coils simultaneously with the rotation of the split rotor plates.

2,457,817
BOMB
Garland L. Harrell, Hurst, Ill.
Application March 31, 1944, Serial No. 528,999
5 Claims. (Cl. 102—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an explosive projectile, a main bursting charge, a plurality of secondary projectiles completely embedded in said main charge as a supporting matrix, each secondary projectile comprising a hollow body of fragmentizable material and containing an explosive charge, a delay action fuse extending into said explosive charge, including a primer and firing pin, said pin having a portion extending to a point adjacent the periphery of said body, and a shell of yielding cushioning material completely inclosing said body and having a portion adjacent the firing pin constructed and arranged to yield in response to the force of the explosion of the main bursting charge to operate said pin to cause the explosion of the secondary projectile.

2,457,818
DOWNWARD FORCED FLOW AIR HEATER FOR ROOMS
Sidney J. Heiman, St. Louis, Mo.
Application December 7, 1944, Serial No. 567,025
4 Claims. (Cl. 126—110)



1. A unit space heater comprising an upright cabinet adapted to be supported on the floor of

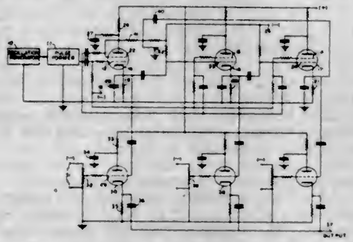
the room to be heated and having an upper and a lower opening into said room, an upright partition within said cabinet and engaging along the interior of the same to form a first and a second compartment sealed from one another, an upright combustion drum in the first of said compartments and having a flue extending therefrom for carrying off products of combustion, an upright duct within said first compartment and engaging said drum to form an upright heated air passageway with the latter and extending to adjacent the top of said drum, said duct communicating at its upper and lower ends with said upper and lower openings respectively of the cabinet and communicating with the second compartment through said partition, means in the second compartment for forcibly passing air downwardly through said passageway from said upper opening into the room through said lower opening, said cabinet having an air inlet therethrough into said second compartment adjacent its lower end and an air outlet therethrough adjacent the upper end of said compartment for directing an independent supply of air upwardly therethrough and cooling said last-mentioned means.

2,457,819

SIGNAL GENERATION SYSTEM

Conrad H. Hoeppner, Washington, D. C.

Application November 14, 1946, Serial No. 709,857
5 Claims. (Cl. 332—9)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A signal generator device for producing a series of intelligence conveying pulse type signals in which each of the signals is individually spaced from a preceding reference signal in accordance with intelligence to be conveyed, comprising; means producing a series of accurately spaced timing signals, individual primary gaseous electron tubes for each intelligence quantity to be conveyed, means interconnecting the primary electron tubes in a tandem manner so that one tube may be controlled in operation by a preceding tube of the tandem in accordance with the timing signals, enabling means permitting initiation of conduction in a primary electron tube for a first quantity in accordance with a first timing signal, individual secondary gaseous electron tube means for each intelligence quantity to be conveyed, separate integrator means connecting each of said secondary tubes to a corresponding primary tube, said last named means being operative to render each of said secondary tubes conductive in response to the establishment of conduction in the corresponding primary tube but time delayed therefrom, the time delay being in duration dependency on the corresponding intelligence quantity to be conveyed, a common output channel, and means delivering a signal into the common output channel in response to a change in conductivity conditions of the secondary electron tubes.

2,457,820

AMINO ACID SOLUTION AND PROCESS FOR PREPARING THE SAME

Eugene E. Howe, Linden, and Max Tishler, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application December 27, 1945, Serial No. 637,498
3 Claims. (Cl. 167—65)

1. An aqueous amino acid solution for parenteral, rectal, and oral administration containing not more than 5% of the essential amino acids in the inactive d-form, solid components of said solution being free of dicarboxylic acids and comprising the natural essential amino acids leucine, isoleucine, phenylalanine, valine, methionine, threonine, arginine, histidine, and lysine, racemic essential amino acids including tryptophane, and the non-essential amino acid glycine.

2,457,821

TRACTOR POWER PLANT AND DRIVE WHEEL UNIT

Alfred C. Johnson, San Jose, Calif., assignor to Food Machinery and Chemical Corporation, a corporation of Delaware

Application April 21, 1945, Serial No. 589,611
11 Claims. (Cl. 180—52)

9. A tractor, comprising: a frame structure including a forwardly directed motor mounting bracket and a vertically disposed pivot means; a transmission incorporated in said frame structure and including a forwardly directed drive shaft, laterally directed axles and drive means between said shafts and axles; juxtaposed traction wheels for said axles; a motor mounted on said bracket; a control for said motor including a cable extending therefrom through the axis of said pivot means; a trailing unit including trailing wheels, and a frame having a journal fitting said pivot means; a steering member mounted on said pivot means; a steering wheel mounted on said frame and a drive connection between said steering member and steering wheel.

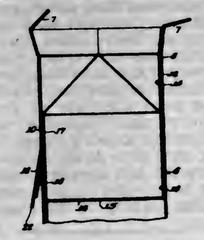
2,457,822

MILK CONTAINER

John Paul Jones, Omaha, Nebr., assignor to Dairy Specialties, Inc., Omaha, Nebr., a corporation of Nebraska

Application April 26, 1944, Serial No. 532,774
4 Claims. (Cl. 229—7)

1. In a cream separating milk container, a receptable having a wall opening extending upwardly from the cream level with a partially severed closure tongue, a cream separating partition secured within the container at the lower cream level and having upward wall attached extremities, one of which seals the opening in the wall of the container and provided with a frangible



closure tongue secured to and opened by the corresponding tongue of the container.

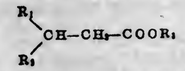
2,457,823

PRODUCTION OF PYRAZOLONE AZO DYES

John David Kendall and Douglas James Fry, Ilford, England, assignors to Ilford Limited, Ilford, Essex, England, a British company

No Drawing. Application November 29, 1945, Serial No. 631,792. In Great Britain December 1, 1944
6 Claims. (Cl. 260—159)

1. A process for the production of azo dyestuffs which comprises reacting a diazonium compound with a compound of the formula:



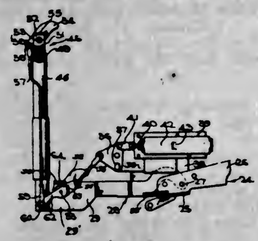
where R_1 and R_2 are each selected from the class consisting of —CN, —COOH, —COOalkyl, —COalkyl, —COaryl, —$CONH_2$, —CONHalkyl, and —CONHaryl, and R_3 is selected from the group consisting of hydrogen and alkyl, the said reaction with the diazonium compound being effected in the presence of strong alkali and the said diazonium compound being present in a proportion of at least two molecular equivalents per molecular equivalent of the compound of the aforesaid formula.

2,457,824

GUN MOUNT WITH FOLDABLE FIRING CONTROL FRAME

John H. Kochevar, Bisbee, Ariz.

Application May 4, 1945, Serial No. 592,052
2 Claims. (Cl. 89—136)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A gun mount for machine guns and the like, comprising a gun cradle having right and left rearwardly diverging frame portions terminating rearwardly of a gun mounted in said cradle, a generally rectangular extension frame comprising parallel side members and a transverse member rigidly connecting said side members adjacent one of their ends, each said side member being pivoted at its other end, on a common first axis, upon the rear end of a respective frame portion, whereby said extension frame may be pivoted from a first upright position at the rear of and extending above said gun, to a second position beneath and closely adjacent said cradle, a lower grip carried by one said frame portion, a first lever pivoted on said one frame portion on a second axis, means responsive to pivotal movement of said first lever in one direction only to fire a gun carried by said cradle, an operating connection between said lower grip and first lever, a second lever pivoted on said second axis, a lost motion connection between said levers whereby motion of said second lever in said one direction only correspondingly pivots said first lever, an upper grip on said extension frame having a part pivoted on a third axis, and a link connected to said part at one end and pivoted at its other end to said second lever on an axis normally coincident with said first axis, whereby either grip may be used to fire said gun.

2,457,825

ACYLATING THIOPHENE

Alvin I. Kosak, Columbus, Ohio, and Howard D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application September 28, 1945, Serial No. 619,250
17 Claims. (Cl. 260—329)

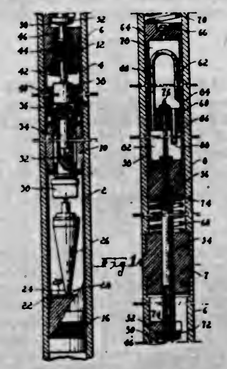
1. A process for nuclear acylation of an acylatable thiophene, comprising reacting an acylatable thiophene with an acylating agent selected from the group consisting of acyl halides and anhydrides of carboxylic acids in the presence of an iodine catalyst.

2,457,826

WELL SURVEYING DEVICE

Gottdank L. Kothny, Strafford, Pa., assignor to Sperry-Sun Well Surveying Company, Philadelphia, Pa., a corporation of Delaware

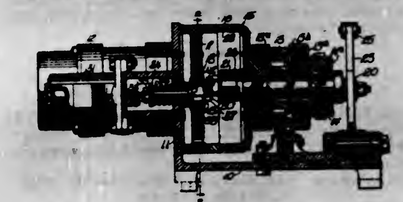
Original application July 22, 1943, Serial No. 495,709. Divided and this application February 19, 1947, Serial No. 729,463
4 Claims. (Cl. 33—205.5)



4. In combination with a well surveying instrument having electrical recording means therein, a protective casing therefor, timing

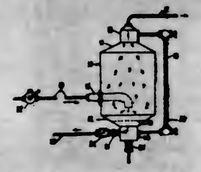
means for said instrument located within said protective casing, resilient means reacting between the casing and the timing means for supporting the timing means within the casing, and means releasably mechanically suspending the well surveying instrument from the timing means, the last mentioned means providing an electrical connection between the timing means and the well surveying instrument insulated from the casing, and said resilient means being located between the timing means and the well surveying instrument.

2,457,827
ONE-REVOLUTION LATCH-OPERATED CLUTCH
Cecil P. Love, Rock Island, Ill.
Application July 14, 1945, Serial No. 605,172
6 Claims. (Cl. 192—26)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



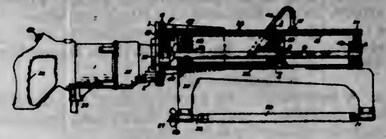
1. In an actuator for a gun firing mechanism, a driving drum, a driven shaft, base means journaling said drum and shaft for rotation about a common axis, a bearing on said shaft eccentric of said axis, a clutch unit journaled on said bearing and having a part engageable with the inner periphery of said drum, a projection on said unit offset therefrom parallel with said axis, a control element slidable on said base means parallel with said axis, said element having first and second lugs spaced parallel with said axis and also spaced circumferentially of the path of said projection to permit said projection to pass therebetween, power means operable to move said element between first and second positions wherein said lugs lie in the path of said projection respectively, said lugs overlapping in said axial direction; and actuator means connected for operation by and in response to rotation of said shaft.

2,457,828
MARINE FUEL SYSTEM
Edward C. Lloyd, Silver Spring, Md.
Application February 1, 1945, Serial No. 575,721
7 Claims. (Cl. 210—51)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



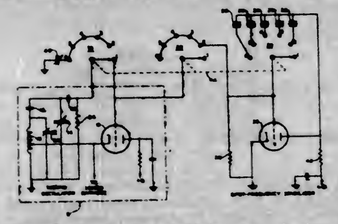
1. A fluid separating system for fluids of different specific gravities comprising, a pump, a fluid supply line leading to the pump, a closed chamber in which said fluids separate by gravity interposed in said supply line, said chamber having an inlet delivering into the chamber, a main fluid outlet delivering fluid of one specific gravity from the chamber through said supply line to the pump, an auxiliary outlet for fluid of another specific gravity delivering from the chamber, valve means for said outlet, and means for increasing the rate of flow into the chamber to a value greater than the rate of flow from the chamber to the pump to forceably expel said fluid of another specific gravity from the chamber through the auxiliary outlet when said valve means is open, the last said means comprising a second pump interposed in the portion of said fluid supply line leading to the chamber.

2,457,829
POWER-DRIVEN HAND HACKSAW
Charles D. Miller, Davenport, Iowa
Application June 2, 1944, Serial No. 538,671
4 Claims. (Cl. 29—73)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



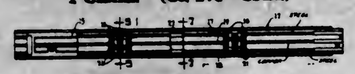
3. In a power-driven hand hacksaw, an elongated tubular housing having a slit extending at least a substantial distance along its length, a drive shaft rotatably mounted in said housing and having on its periphery spirally extending guide structure doubled back on itself to provide an endless and returning guide, a frame for mounting a saw blade or the like, a plurality of spaced apart hanger members projecting from the general top portion of said frame and extending into said housing through the slit therein, a bearing on each of said hangers rotatably receiving said drive shaft, anti-friction means of each of said hangers riding in engagement with the inner surface of said housing for transmitting to said housing thrust applied to said frame during operation of said hacksaw, and a swivelly mounted follow member supported by one of said hanger members adapted to travel to and fro in engagement with said guide of the drive shaft as the latter is rotated.

2,457,830
SPOT FREQUENCY OSCILLATOR SYSTEM
George F. Moynahan, Jr., Sacramento, Calif.
Application March 5, 1946, Serial No. 652,211
8 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



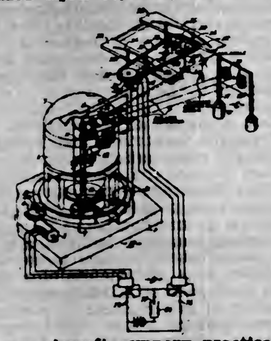
1. The method of stabilizing an electron tube oscillator, having a load circuit which is tunable over a predetermined frequency range, at at least one frequency within said range, comprising the steps of altering the circuit of said oscillator to function as a radio-frequency amplifier tuned by said load circuit, tuning said load circuit to said one frequency, and impressing stable oscillations upon said amplifier, said one frequency having a harmonic relation to said stable oscillations.

2,457,831
ELECTRICITY CONDUCTOR UNIT
Joseph F. O'Brien, Jersey City, N. J., assignor to John B. Pierce Foundation, New York, N. Y., a corporation of New York
Application June 9, 1943, Serial No. 490,146
1 Claim. (Cl. 173—324.1)



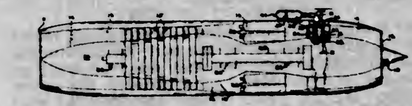
An electrical conductor unit of a seriatim system of conductor units, comprising a preformed raceway housing of insulating material provided with three conductor-carrying channels; three electrical conductors fitting within the respective conductor-carrying channels, two of said conductors being of ferrous metal and one being of copper; a jumper disposed within said housing and electrically connecting the said two ferrous conductors in parallel; and a pair of outlet terminals serving a pair of plug-insert openings of said housing, one of said terminals being electrically connected to one of the said ferrous conductors, and the other of said terminals being electrically connected to the said copper conductor.

2,457,832
AIRCRAFT GUNNERY PRACTICE RANGE
Fred S. Peerman, Washington, D. C.
Application June 2, 1945, Serial No. 597,292
17 Claims. (Cl. 35—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



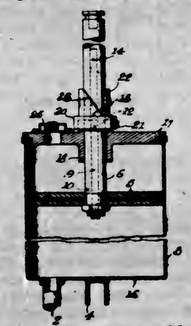
1. In an aircraft gunnery practice range, a rotary support disposed to rotate about a substantially fixed vertical axis, a fixed scoring target, a sighting target movably disposed above said rotary support at one side of the said vertical axis to move in a predetermined path in a vertical plane extending substantially radially toward said vertical axis, adjustable control means for controlling the rate of rotation of said rotary support about said vertical axis and adjustably controlling the rate of movement of the sighting target toward said rotary support, and a gun mounted on said rotary support to swing in azimuth substantially about the aforesaid vertical axis independently of rotation of the rotary support and in elevation, said gun having sighting means thereon with a sighting axis disposed in registration with the sighting target when the axis of the gun is in registration with said scoring target.

2,457,833
CARTRIDGE STARTER FOR COMBUSTION GAS TURBINES
Arnold H. Redding, Swarthmore, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 3, 1943, Serial No. 474,522
3 Claims. (Cl. 60—49)



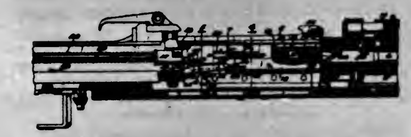
1. In combination with a gas turbine power plant comprising a stator and rotor with the rotor carrying at least one row of axial flow blading and the stator including inner and outer structures providing an axial flow annular passage, and apparatus within said annular passage and driven by said rotor for supplying motive fluid to said blading for driving the rotor; of starting means for the plant comprising a circumferential row of nozzles formed in said outer structure outward of said blading, said nozzles being arranged to direct a gas at high velocity against said blading to secure rotation of said rotor independently of said motive fluid, and means for supplying gas under pressure to said nozzles, said last-mentioned means including an annular chamber carried by said structure and means utilizing a cartridge to provide gas under pressure for said chamber.

2,457,834
CONTROL DEVICE FOR VACUUM CYLINDERS
Howard E. Ricketson, United States Army
Application October 25, 1945, Serial No. 624,633
5 Claims. (Cl. 121—38)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



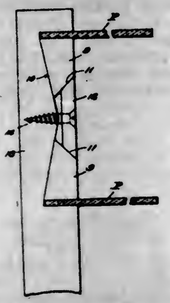
1. A vacuum cylinder assembly comprising a vacuum cylinder provided with a closure at both ends, a piston disposed within said cylinder, means for connecting one end of said cylinder with a source of vacuum, a piston rod extending through the other end of said cylinder and connected to said piston, a check valve permitting a rapid exhaust flow from the cylinder to the atmosphere, said check valve carried by the last-named end of said cylinder, and means for metering atmospheric air through said piston rod.

2,457,835
GUN BOLT
Sigmund Schiff, Cincinnati, Ohio
Application December 5, 1945, Serial No. 633,031
5 Claims. (Cl. 89—191)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



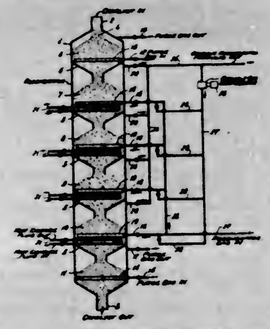
3. A gun bolt comprising a breechblock forming the lower section of the bolt, an upstanding wall on said breechblock and provided with an opening, a breechblock slide forming the upper section of the bolt, means attached to said breechblock slide for moving the same rearwardly, and spring means connecting the breechblock and breechblock slide for limited lengthwise sliding movement of the breechblock slide relatively to the breechblock, said breechblock and breechblock slide having complementary recesses forming a bore, a spring projected firing pin contained in the bore and adapted to be projected through the opening in said upstanding wall, and engaging shoulders on the breechblock slide and firing pin for retracting the firing pin from the opening when the breechblock slide is moved rearwardly relatively to the breechblock.

2,457,836
JOINT
Hasen A. Schofield, San Francisco, Calif.
Application April 20, 1945, Serial No. 589,289
3 Claims. (Cl. 20—0.5)



1. In an article of knock-down furniture a structural element having an elongated recess terminating at opposed shoulders, the inner wall of the recess having surfaces converging to a peak, whereby the recess gradually increases in depth from said peak to the respective shoulders, panel elements bearing against the respective shoulders and extending straight into the recess, spacing means interposed between the panel elements and positioned in the recess, said spacing means having a recess the walls of which converge along straight lines at an angle of lesser degree than the angle of the converging surfaces of the first-named recess whereby, when the said spacing means is positioned in the first-named recess and between the panels, the middle portion thereof will be spaced from the peak in the first-named recess, and means accessible between the panels for drawing the middle portion of the recessed spacing means toward the inner wall of the recess in the structural element, thereby to distort the spacing means and expand it longitudinally to bind upon the inserted panels.

2,457,837
MULTISTAGE REGENERATION OF A MOVING BED CATALYST
Thomas P. Simpson, Woodbury, and Charles V. Hornberg, Wenonah, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application May 21, 1943, Serial No. 487,900
2 Claims. (Cl. 252—242)



1. In a process for regenerating a moving substantially compact column of particle form solid contact mass material contaminated by combustible carbonaceous deposit by burning of the deposit wherein the burning tends to occur in a narrow flame front along at least the intermediate portions of the column length the improvement which comprises the following steps: flowing the particle form solid material as a substantially compact, vertical, continuous column downwardly through a series of regeneration zones, each of said zones being in free solid flow communication with adjacent zones, supplying spent contact material to the uppermost zone at a temperature substantially below that desired for the regeneration, withdrawing regenerated contact material from the lowermost zone, independently introducing a regeneration gas to each of said zones to pass through the solid material therein, independently withdrawing gaseous regeneration products from each of said zones while substantially excluding its interflow between zones, causing the contact material temperature to rise quickly to an effective burning temperature in said uppermost zone and maintaining the solid material in each zone at a temperature suitable for combustion of said carbonaceous deposit but below a temperature which would cause heat damage to said solid material, effecting a spread of the burning flame front in zones lying intermediate the uppermost and lowermost zones substantially throughout said zones by recycling a controlled amount of gaseous products of regeneration only to said intermediate zones, the recycled gaseous products of regeneration being introduced to each of the intermediate zones independently of their introduction to the other of said intermediate zones, and said products of regeneration being introduced into each of said intermediate zones at a rate controlled independently of the rate of regeneration gas introduction thereinto.

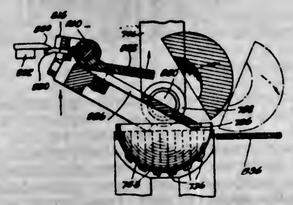
2,457,838
FLUORESCENT CELLULOSE ACETATE FILAMENTS
Richard E. Sitzler and George E. Dennison, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application May 4, 1946, Serial No. 667,499
2 Claims. (Cl. 8—50)

1. In a process for the production of colored, fluorescent cellulose acetate filamentary materials exhibiting substantially the same color under visible as well as ultra-violet illumination, the step of dyeing the cellulose acetate textile material having incorporated therein a finely divided pigment consisting of zinc sulfide fluorescent in a red color with a dyebath comprising p-nitro-benzene-azo-4-methyl-2-di - hydroxyethyl - aminobenzene, water and sulfonated ricinoleic acid.

2,457,839
ROCKET
Leslie A. Skinner, United States Army, Washington, D. C., assignor to the United States of America as represented by the Secretary of War
Application September 8, 1941, Serial No. 410,940
4 Claims. (Cl. 102—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

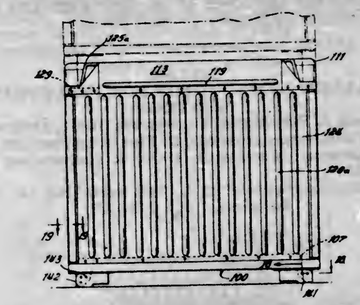
1. A pressure block for a rocket discharge tube comprising a body of frusto-conical shape adapted to engage the wall of said tube, means forming charge cups in each end of said body, means forming a diaphragm having a perforation therein between said cups, a delay element igniter in the charge cup in the rear end of said body, a delay element in said perforation, and a driving charge igniter in the charge cup in the forward end of said body.

2,457,840
DISCHARGING PEELED FRUIT FROM GROOVED CUPS OF HALF-FRUIT PEELING MACHINES
Henry A. Skog, Olympia, Wash., assignor to Special Equipment Company, Portland, Oreg., a corporation of Oregon
Application July 23, 1942, Serial No. 452,052
39 Claims. (Cl. 146—241)



1. In a fruit treating machine, a cup for receiving fruit to be treated, a conveyor to which said cup is secured for carrying fruit received in the cup from a peeling station to a fruit discharging station, a peeling knife movable through the cup at the peeling station in juxtaposition to the fruit supporting surface of the cup, said cup having in its fruit supporting surface a plurality of grooves receiving a portion of the peeling displaced by the knife as it moves through the fruit, and fruit ejecting means comprising a fruit discharging member mounted to move through the cup at the fruit discharging station in direction transverse to said grooves whereby said grooves retain the peeling in the cup as said member moves through the cup to discharge the fruit from the cup.

2,457,841
FREIGHT CONTAINER
Leathem D. Smith, Richard A. Stearn, and Carl R. Christianson, Sturgeon Bay, Wis.; said Stearn and said Christianson assignors to said Smith; Alva Smith, administratrix of said Leathem D. Smith, deceased
Application May 7, 1945, Serial No. 592,376
15 Claims. (Cl. 220—1.5)

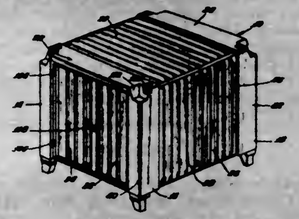


1. A freight container comprising a body having top, bottom and side walls, legs depending from said body, upwardly open leg sockets permanently mounted in the upper part of said container each in vertical alignment with a depending leg for seating similar legs of another container, side walls on the leg sockets which cooperatively hold the legs of a superposed container from lateral movement in any direction, and a lifting eyelet mounted within the recess of each leg socket and adjacent to the side walls of said sockets.

2,457,842
FREIGHT CONTAINER
Leathem D. Smith, deceased, late of Sturgeon Bay, Wis., by Alva F. Smith, administratrix, Sturgeon Bay, Wis., and Richard A. Stearn, Sturgeon Bay, Wis.; said Stearn assignor to Alva F. Smith, as administratrix of the estate of said Leathem D. Smith, deceased
Application October 4, 1946, Serial No. 701,102
11 Claims. (Cl. 220—1.5)

1. A fabricated metal freight container having a right parallelepiped shape comprising a rectangular bottom, a column vertically mounted on the bottom at each corner thereof, a leg pivotal around a horizontal shaft mounted on the bottom in vertical alignment with each column, two bases on each leg angularly spaced from each other with respect to the shaft and each in the same vertical line when in effective position, one base being at a greater distance from the shaft than the other base, each base being spaced from the container bottom when in effective position,

an upwardly open leg socket rigidly mounted on the top of each column in vertical alignment with whichever depending leg base is in effective position, side walls on said sockets which cooperatively engage either base of the legs of a superposed similar container and hold the legs and the container against lateral movement in any direction, side walls joining the columns and their superposed leg sockets to each other, and a top joining the top edges of the side walls and the top of the leg sockets to each other.

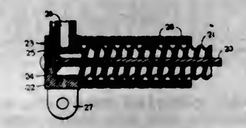


2,457,843

FLEXIBLE CONDUCTOR FOR INDUCTION HEATING

Harold A. Strickland, Jr., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio

Application September 2, 1944, Serial No. 552,402
4 Claims. (Cl. 174—47)



4. A cable for induction heating adapted to be coiled into an inductor comprising a flexible metal tube having a tendency to flatten beyond excessive bending, conduction connectors at the ends of said tube, and a plurality of axially short adjacent, rigid, insulating rings loosely spaced along said tube intermediate said connectors in close proximity to said tube, said rings being spaced a distance less than their axial length, the opposed faces thereof adapted to abut along the inner edge when the cable is coiled, said rings being adapted to prevent localized flexure of said tube when being coiled into an inductor.

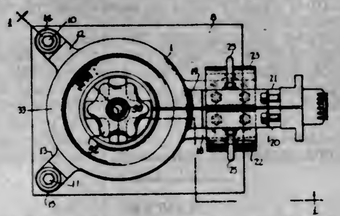
2,457,844

INDUCTION HEATING COIL PROVIDED WITH STRESS-RELIEVING SUPPORTS

Harold A. Strickland, Jr., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio

Application October 13, 1944, Serial No. 558,504
5 Claims. (Cl. 219—13)

2. In an induction heater in combination, a fixed supporting base means, a curved open-sided continuous inductor which is subject to expansion and contraction as a whole relative to its axis of curvature with temperature changes, said inductor having two adjacent independent ends which are spaced apart and which have permissible movement relative to each other upon expansion or contraction of the inductor, electrical connections for both of said inductor ends, the connections for at least one of said ends providing free movement thereof about the axis of the inductor, and relatively fixed support means at one or more points between said inductor and said base means, the point of support nearest a flexible end being located at such a minimum distance therefrom as to permit it to have free movement, said support means at each point of independent support providing turning movement for portions of said inductor relative thereto about a line parallel with the axis of the inductor, and in the case where support is provided at a plurality of points these points being angularly spaced apart but all lying within an arc of not over 180 degrees of curvature, whereby the said ends of the inductor are permitted to have free movement relative to each other and the inductor is relatively free to expand and contract without rigid constriction.



2,457,845

INDUCTION HEATING APPARATUS FOR HEAT-TREATING THE INTERIOR SURFACE OF ELONGATED SMALL-DIAMETER TUBULAR WORKPIECES

Harold A. Strickland, Jr., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio

Application January 12, 1945, Serial No. 572,461
15 Claims. (Cl. 219—13)

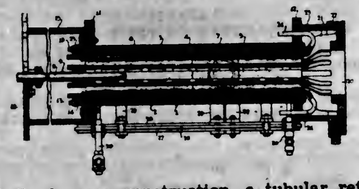
1. Induction heating apparatus comprising an arbor having inner and outer concentric tubular current conductors circumferentially spaced from each other for a large portion of the length thereof to form a fluid-conducting channel therebetween, said outer conductor extending axially beyond the adjacent end of said inner conductor, a closure for said adjacent end of said inner conductor, an electrically conductive closure for said extending end of said outer conductor, a hollow inductor having hollow terminals, said terminals extending through the closure for the outer conductor, one of said terminals being electrically connected with the outer conductor through said last-named closure and being in communication with the channel between said conductors and the other terminal being insulated from said last-named closure and extending through the other closure into communication with the interior of the inner conductor, said other terminal being electrically connected through said other closure with said inner conductor, the channel between said conductors, the interior of said inner conductor and the hollow of said inductors and the terminals thereof defining a path for the flow of cooling fluid in contact with both said conductors, and a cooling fluid inlet connection for one of said conductors and a cooling fluid outlet connection for the other of said conductors.

2,457,846

SLIDE RAIL SUPPORT FOR INDUCTOR FURNACE WORKPIECES

Harold A. Strickland, Jr., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio

Application April 11, 1946, Serial No. 661,234
6 Claims. (Cl. 219—13)



6. In furnace construction, a tubular refractory lining for the furnace chamber, a plurality of axially aligned and radially displaced support tubes secured to the inner surface of said lining, said tubes having a front furnace end extension beyond said lining having sections outwardly turned relative to the lining tube axis and reversely turned terminal sections parallel to the lining tube axis, and end supports for said lining and tubes, the terminal sections of the support tubes being adapted for direct connection to the front support for holding the tubes and lining in fixed position.

2,457,847

TALL OIL-CELLULOSE ETHER COMPOSITION

Warren Stubblebine, Manheim Township, Lancaster County, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania

No Drawing. Application July 31, 1943, Serial No. 496,966
14 Claims. (Cl. 260—17)

5. A composition of matter comprising coumarone indene resin and a compatible mixture obtained by heating a major proportion of tall oil and a minor proportion of an alkali-insoluble cellulose ether selected from the group consisting of ethylcellulose and benzycellulose.

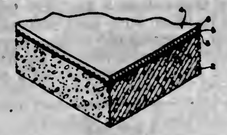
2,457,848

FLOOR AND WALL COVERING

Warren Stubblebine, Manheim Township, Lancaster County, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania

Application July 31, 1943, Serial No. 496,967
9 Claims. (Cl. 260—17)

1. A hard surface floor or wall covering or the like comprising from about 20% to about 40% by weight of a binder composed essentially of from about 55% to about 65% of an alcohol soluble phenol-modified coumarone-indene resin having a melting point between 5° C. and 15° C., and from about 35% to about 45% of an alkali-insoluble cellulose ether selected from the group consisting of ethylcellulose and benzylcellulose; and from about 60% to about 80% by weight of filling material.

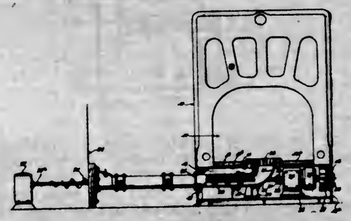


2,457,849

STOKER

Robert W. Suman, Chicago, Ill., assignor, by mesne assignments, to Timken Silent Automatic Division, The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio

Application May 5, 1945, Serial No. 592,133
21 Claims. (Cl. 110—45)



1. The combination with a heating boiler or furnace having means forming a closed base compartment provided with openings in its side walls, a combustion chamber above the compartment, and a partition, having an opening, separating the compartment from the chamber, of a retort positioned in the base compartment, a tuyère supported on and communicating with the retort and communicating with the combustion chamber through the opening in said partition, a conveyor for delivering fuel to the retort extending through one of the side wall openings of the base compartment from an exterior source of supply, an air pressure fan registering with another of said side wall openings of the base compartment, mechanism for controlling the flow of air to the fan, means for conducting air from the fan to the tuyère, a prime mover in the base compartment drivingly connected to the fan, and transmission means extending from the prime mover to the fuel conveyor and connected to the latter at a point remote from the retort.

2,457,850

METHACRYLATE POLYMERIZATION PRODUCT AND PROCESS

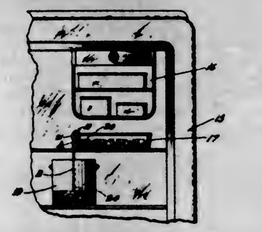
Joseph D. Surmatis, Boston, Mass., assignor to Gustavus J. Esselen, Inc., Boston, Mass., a corporation of Massachusetts

No Drawing. Application April 27, 1944, Serial No. 533,053
2 Claims. (Cl. 260—83)

1. The process of producing polymeric methacrylic acid esters which comprises the step of polymerizing by heat in a slow continuous reaction an ester of methacrylic acid and a mono-

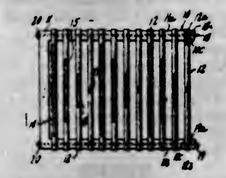
hydric saturated aliphatic alcohol containing 1 to 4 carbon atoms in the presence of concentrated sulfuric acid and an acid restraining agent of the group consisting of glacial acetic and propionic acids within the range 5 to 70% concentrated sulfuric acid to 98 to 30% acid restraining agent, the proportion of monomer to the mixture of sulfuric acid and acid restraining agent being approximately 1 part of monomer to 2 parts of the mixture.

2,457,851
DEVICE FOR USE IN CONNECTION WITH DEFROSTING REFRIGERATORS
Irving W. Taft, Weehawken Township, Hudson County, N. J., assignor to Kidde Manufacturing Co., Inc., a corporation of Delaware
Application October 16, 1944, Serial No. 558,829
5 Claims. (Cl. 62—1)



1. An article of manufacture comprising an elongated wick member, and a clip member on said wick member between the ends thereof having a portion extending about said wick member for securing said clip member to said wick member and having a U-shaped portion of greater width than said wick member adapted to be positioned over the side wall of a receptacle and serving as a support for a bent portion of said wick member extending over the same and serving as a shield to prevent liquid dripping from said wick member at the bent portion thereof.

2,457,852
REED STRUCTURE
Joseph Tiefenthal, Forest Hills, N. Y.
Application October 18, 1946, Serial No. 703,956
9 Claims. (Cl. 139—33)



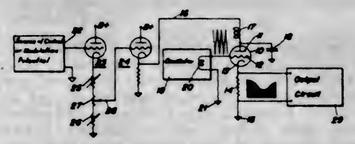
1. A reed structure of the character described comprising a frame, a plurality of elements carried by said frame, said elements being provided with series of parallel slots, and means provided on said elements to adjust the slots to different lengths, the slots of one of said series alternating with the slots of another series, said slots being adapted to accommodate therein warp threads, whereby said warp threads may be shifted within said slots to produce sheds for the introduction of a weft thread.

2,457,853
TREATMENT OF TEXTILES AND COMPOSITION THEREFOR
Henry L. Van Mater, Highland Park, N. J., assignor, by mesne assignments, to National Lead Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application September 20, 1944, Serial No. 555,644
5 Claims. (Cl. 117—135.5)

1. The method of rendering textile goods water repellant which comprises impregnating the goods with a solution of a soluble double carbonate of zirconium and a soluble soap in amounts to react to form a zirconyl mono fatty acid compound at a temperature below which reaction occurs and thereafter elevating the temperature of the so impregnated goods above 60° C. so that reaction occurs with precipitation of zirconyl mono fatty acid compound.

4. A waterproofing composition which comprises an alkaline aqueous solution of a soluble soap, and a soluble double carbonate of a zirconium salt and an alkali metal carbonate, the soap and zirconium salt being present in amounts sufficient to form a zirconyl mono fatty acid compound.

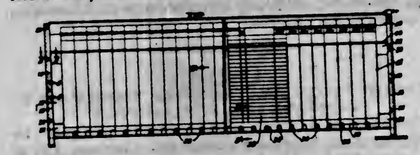
2,457,854
CONTROLLABLE OUTPUT CIRCUIT
Edwin C. Vestal, Jr., Siler City, N. C.
Application October 8, 1946, Serial No. 701,862
11 Claims. (Cl. 332—38)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A controllable output circuit comprising a tube having a grid, a plate, and a cathode, an output impedance having a resistive component substantially equal to the reciprocal of the mutual conductance of said tube, one end of said impedance being connected to said cathode, means connected between said plate and the other end of said impedance effective to apply a controllable voltage to said plate, a grid circuit connected between said grid and said other end of said impedance, means effective to apply to said grid circuit an oscillating input signal voltage having a minimum negative excursion sufficient to drive said grid below plate current cut-off and a minimum positive excursion sufficient to drive said grid into grid conduction, an impedance in said grid circuit responsive to grid conduction current to substantially limit the voltage applied to said grid, and an output circuit connected across said output impedance.

2,457,855
ACCOUNTING AND FILING DEVICE
Herbert Weston, New York, N. Y.; vested in the Attorney General of the United States
Application October 1, 1942, Serial No. 460,463
4 Claims. (Cl. 129—16)

1. In a card register, a holder adapted to support cards in echelon comprising a panel, end members to support the panel, a supporting member for cards secured to the panel longitudinally along the lower portion thereof, pins disposed along the supporting member to position the cards, bushings on the pins, and a retaining

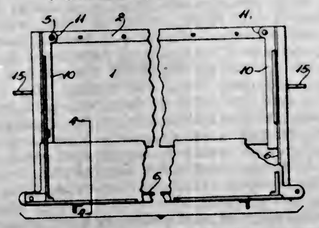


member engaging the upper edge of the cards and panel and comprising a magnifying channel-shaped clasp.

2,457,856
CHEMICAL RETTING PROCESS OF PRODUCING BAST FIBERS
Jacob Johan Zeehuisen, Scheveningen, Netherlands; vested in the Attorney General of the United States
No Drawing. Application March 28, 1940, Serial No. 326,496. In the Netherlands March 22, 1939
2 Claims. (Cl. 92—10)

1. A chemical retting process of producing bast fibres from vegetable materials which comprises the treatment of said fibres from one to one and one-half hours by immersing said materials in a bath containing about 0.5% of hydrogen peroxide, 0.5% of ammonium phosphate, and 1% of urea at a temperature of about 50° C., raising the temperature of said bath and materials to 80–100° C. to thereby break up said materials, and subsequently removing the xyloid constituents from the material treated by mechanical means.

2,457,857
TOP ENDGATE
Charles R. Adams, Donavon, Saskatchewan, Canada
Application September 18, 1946, Serial No. 697,771
6 Claims. (Cl. 296—51)

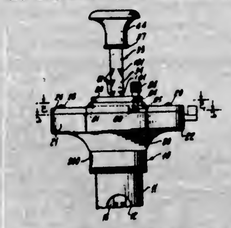


6. A top end-gate assembly for waggon or truck boxes comprising in combination a horizontally rectangular gate-panel and structure supporting same, said supporting structure embodying a pair of vertical opposing flanges on the rear ends of the waggon or truck box sidewalls, extending normally towards each other therefrom, an elongated tie-member secured to said panel parallel with the top edge thereof at least adjacent thereto, studs extending through the ends of said tie-member and the upper ends of said flanges for suspending said panel in situ and to counteract the spreading of said truck or waggon box side-walls under load, and means upon at least one of said side walls adjacent the flange thereon for tightening the adjacent panel-edge thereagainst, consisting of an internally threaded bushing on said side-wall, a screw-threaded shank extending therethrough, and an element secured to said gate-panel having a diagonal thrust surface against which said shank bears to seal said panel-edge against said flange.

2,457,858
PACKAGE CARRIER AND CORD CUTTING DEVICE
Joseph Alexander, New York, N. Y.
Application March 29, 1945, Serial No. 585,408
1 Claim. (Cl. 7—14.1)

A carrier for parcels, packages and like articles, tied by means of a string element and comprising an elongated handle having a centrally disposed circular groove, a hook member engaging said groove and adapted to move in said groove about the horizontal axis of said handle, said hook member including a loop portion depending from said handle and terminating in a lower end for normally engaging said string element, said loop portion being provided with a substantially straight portion and with a leg portion substantially parallel to and spaced from said straight portion, a substantially S-shaped intermediate part integral with said loop portion extending in the space between said straight portion and said leg portion and providing with said latter portions two constricted passageways, first and second passageway, respectively, and a knife blade integral with said loop portion and directed toward said second passageway which is defined by said S-shaped intermediate part and said leg portion, whereby said string element when moved through said first passageway disengages intact from said loop portion and when guided through said second passageway will first be severed and then disengaged from said loop portion.

2,457,859
HYPODERMIC SYRINGE
Harold S. Austin, Dallas, Tex.
Application July 12, 1947, Serial No. 760,677
10 Claims. (Cl. 128—215)



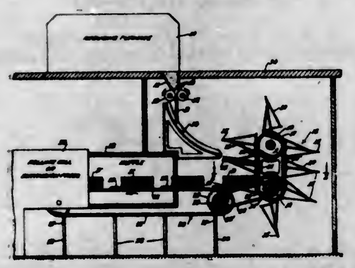
1. In a hypodermic syringe, the combination with barrel structure, plunger means reciprocable in said barrel structure and having a series of abutment means arranged longitudinally thereof, and a movable engaging stop means selectively to be positioned in the path of the series of abutment means when said plunger means is in one radially angular position with respect to said barrel structure so that said plunger means may be moved longitudinally step-by-step with respect to said barrel structure for successive discharge of dosages, said stop means being out of the path of the series of abutment means when said plunger means is in another radially angular

position with respect to said barrel structure; of control means for rotating said plunger means to and temporarily holding it in one of the two positions selectively and alternately to disable and activate the cooperating functioning of said abutment and stop means, said control means comprising means rotatably mounted on said barrel structure and having a way slidably receiving said plunger means, means substantially preventing relative rotation between said rotatable means and said plunger means, and means temporarily to hold said rotatable means in either of two radially angular positions on said barrel structure reciprocably to guide said plunger means in either of its two positions.

2,457,860
DELAY FUSE COMPOSITIONS
Owen G. Bennett and Jack Dubin, Baltimore, Md., assignors to Catalyst Research Corporation, Pittsburgh, Pa., a corporation of Maryland
No Drawing. Application June 19, 1945, Serial No. 600,415
4 Claims. (Cl. 52—2)

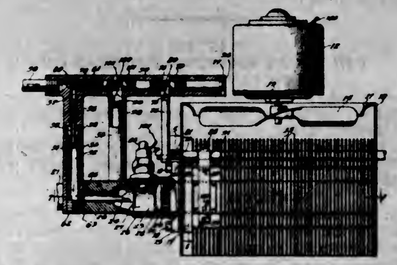
4. A delay element composition comprising powdered zirconium metal, powdered nickel metal produced by evaporation of mercury from a nickel amalgam, an oxidizing agent selected from the group consisting of chlorates, perchlorates and nitrates, and an oxidizing agent selected from the group consisting of water-insoluble chromates, manganese dioxide, lead monoxide, and red lead, and said metals and oxidizing agents being in proportions to give a predetermined burning rate with production substantially wholly of solid products of combustion.

2,457,861
METHOD OF MANUFACTURING METAL PRODUCTS
Herman A. Brassert, Washington, Conn., assignor to H. A. Brassert & Company, New York, N. Y., a corporation of Illinois
Original application May 14, 1943, Serial No. 486,989. Divided and this application February 15, 1945, Serial No. 577,962
6 Claims. (Cl. 29—189)



1. The method of making metal products, which consists in reducing metallic oxide material in a reducing zone below temperatures at which the material frits or agglomerates, compacting the reduced material in finely-divided form into self-sustaining plate-like briquettes while corrugating the same in parallel relation and separating the corrugated briquettes, assembling a plurality of said briquettes in superimposed flatwise relation with their corrugations interfitting, heating the superimposed briquettes to the welding point to at least partially weld the reduced material and briquettes together into a billet, and then deforming the billet while so heated into a metal product, the several steps being immediately successive in a continuous process.

2,457,862
COMBUSTION HEATER WITH THERMALLY CONTROLLED FUEL SUPPLY
Theodore S. Briskin, Chicago, Ill., assignor to Excel Auto Radiator Company, Chicago, Ill., a corporation of Delaware
Application December 21, 1942, Serial No. 469,668
5 Claims. (Cl. 158—28)

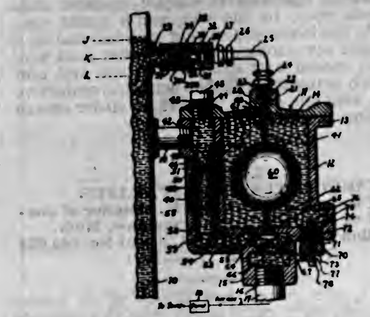


1. In a combustion heater of the class described having heat generating means wherein the amount of heat generated thereby is responsive to the amount of fuel supplied thereto, the combination of a fuel control valve for regulating the amount of fuel supplied to said combustion heater, an outlet conduit for said heat generating means, a sliding control member for determining the position of said valve, a spring bearing against said control member to bias said valve to its open position, said control member being provided with a plurality of transverse slots, slidably mounted wedge-shaped members extending into said slots and separately adapted to be displaced to bear against said control member to hold the same in a predetermined axial position against the bias of said valve, said slots being wider than said wedge shaped members to permit independent movement of said control member, a manually adjustable member engaging one of said wedge shaped members for determining the position thereof, and thermally responsive means mounted in heat receiving relationship with respect to said outlet conduit and engaging another of said wedge shaped members to displace said sliding control member and valve toward closed position from its position as determined by said first mentioned wedge shaped member when the heat transmitted from said outlet conduit to said thermally responsive means is in excess of a predetermined amount.

2,457,863
AIR CHARGER
Arthur W. Burks, Decatur, Ill., assignor to Decatur Pump Company, Decatur, Ill., a corporation of Illinois
Application February 1, 1945, Serial No. 575,693
9 Claims. (Cl. 103—6)

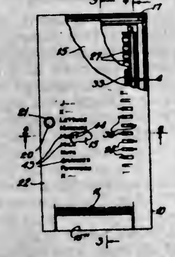
1. An air charger for maintaining pneumatic pressure in a hydro-pneumatic tank in response to the tank pressure and the suction effect of the pump supplying water to said tank, said charger comprising a casing having an opening for connection to said tank and to said pump intake, an air intake into said casing, a Venturi-

type aspirator operable upon a flow of water therethrough to draw water out of said casing and air through said air intake into said casing, and a float controlled valve operable upon



said casing being substantially filled with air to close said opening for connection to said pump intake, whereupon continued flow of water through said aspirator fills said casing with water for expelling air therefrom into said tank.

2,457,864
PURCHASE SHEET MARKING DEVICE
Philip H. Burn, Forest Hills, N. Y.
Application January 8, 1946, Serial No. 639,865
17 Claims. (Cl. 164—112)



1. A device of the class described comprising an elongated case, a plurality of characterized openings spaced longitudinally of one wall of the case, the case being adapted to support elongated strips, with one end of a strip accessible outwardly of one end of the case, piercing elements pivotally mounted in the case and having fingerpiece portions protruding outwardly through the openings of said case, each strip having indicia thereon in registering alinement with said piercing elements when the strip has one end thereof accessible through one end of the case, said piercing elements being manually movable into piercing position, manually actuated means in the case for moving said strip into operative engagement with said elements supported in piercing position to pierce the strip in alinement with the indicia thereon registering with said last named elements, means for supporting each piercing element in piercing and non-piercing positions, said last named means comprising a hook-shaped flange extending longitudinally of said openings, and said elements having spring members operatively engaging the flange in supporting said elements in operative and inoperative positions.

2,457,865
TOY WAGON
Asa B. Carmichael, Tujunga, Calif.
Application December 7, 1945, Serial No. 633,413
3 Claims. (Cl. 46—107)

1. A toy vehicle comprising a wagon including front and rear wheels, a wagon body mounted on said wheels, a shaft extending forwardly of said wagon body, at least one toy horse fixed to said shaft, said horse being provided with front and hind legs having sections forming knees and shoulder joints, a power means concealed in said wagon body for driving at least one of said wheels to move the vehicle, and means operable from said front wheels for moving the horse's legs during the movement of the vehicle to simulate a horse-drawn wagon, said means for moving the horse's legs comprising a pair of elastic members for each leg, one elastic member to flex the leg and the other elastic member to straighten the leg, and means to alternately operate the elastic members for each leg.

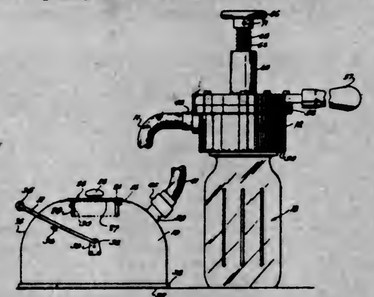
2,457,866
CONDENSATION OF ALCOHOLS
Clare A. Carter, South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application May 26, 1945, Serial No. 596,079
14 Claims. (Cl. 260—642)

1. Process for producing higher molecular weight aliphatic alcohols from an alcohol having at least one hydrogen atom on the alpha carbon atom, which comprises heating and reacting at least one such aliphatic primary monohydric alcohol of lower molecular weight, including a primary alcohol having a least four carbon atoms, with a small amount of a caustic alkali, while refluxing the mixture and continuously removing from the reaction mixture water as rapidly as it is formed in the resultant reaction, when approximately at least 95% of the caustic alkali has reacted with the alcohol, adding a dehydrogenation catalyst to the reaction mixture and continuing the heating and refluxing of the mixture while continuously removing from the reaction mixture water as rapidly as it is formed in the resultant condensation reaction, and recovering from the reaction mixture the higher molecular weight alcohol present therein.

2,457,867
APPARATUS FOR VACUUM SEALING CANNED FOOD
William J. Chambers, Chicago, Ill.
Application September 22, 1945, Serial No. 617,979
7 Claims. (Cl. 226—82)

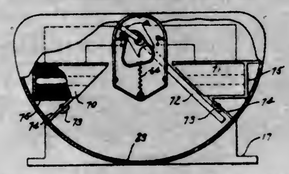
1. A portable home apparatus for sealing containers of the type having a radially projecting shoulder located below the mouth of the container comprising a portable head provided with a heat insulated handle and inlet means for connection

to a source of heated steam, said head comprising a metal member formed with an annular wall and a downwardly open, substantially cylindrical sterilising chamber, the size of said chamber being such that it is adapted to receive the open end of the container for food when the lower edge of said wall rests upon said shoulder, said wall being provided with an annular steam chamber communicating with said inlet means and the wall of said annular steam chamber being provided with a multiplicity of radially and downwardly directed steam apertures adapted to project steam downwardly into the mouth of said container for food, said head being provided with a centrally located plunger extending outwardly from said



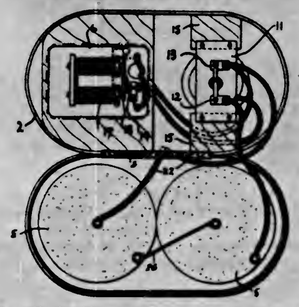
head through a guide boss, and supporting means carried by said plunger in said sterilising chamber for supporting a cover for the food container above said downwardly directed apertures when the plunger is in its uppermost position, said supporting means having a predetermined resistance to the release of the cover whereby, after the bottom of the cover and the food container have been sterilized by injection of steam between them, and the cover has been depressed into engagement with the food container by said plunger, the condensation of steam inside the food container beneath the cover causes a vacuum which pulls the cover from said supporting means when the plunger is again lifted, leaving the cover held to the food container by the vacuum in the food container.

2,457,868
MAGNETIC WINDSHIELD WIPER
Robert Richard Chiesa, Johnsonburg, Pa.
Application March 23, 1948, Serial No. 16,532
1 Claim. (Cl. 172—126)



A magnetically operated windshield wiper comprising a wiper shaft, an armature attached to and depending from the shaft, a magnet at each end of the path of rocking movement of the armature, a switch-operating member rockable on and insulated from the shaft, an electric circuit, switches in the circuit and closed in alternation by the switch operating member, an actuating arm rocking on the shaft and insulated therefrom, oppositely disposed flanges on the switch operating member, a finger on the actuating arm adapted to engage the flanges alternately for rocking the switch operating member, cooperating means between the shaft and arm for causing rocking of said arm on the shaft, a substantially triangularly shaped member carried eccentrically by the arm, and a spring connected to the lower end of said member and to a fixed point for tripping the arm after said arm has been rocked past dead center, the arm and the switch actuating member being in conductive relation with one end of the circuit, either switch completing the circuit.

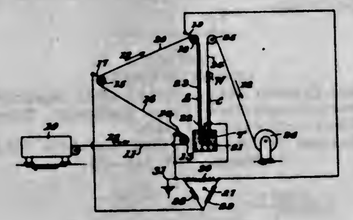
2,457,869
CIRCUIT TESTING APPARATUS
Earl L. Clemens, Saginaw, Mich., assignor of one-half to Mildred Clemens, Saginaw, Mich.
Application December 20, 1944, Serial No. 569,023
1 Claim. (Cl. 175—183)



A circuit testing arrangement comprising a container, consisting of two hinged hollow sections, the lower section being provided with a hole and adapted to house the cells of a dry cell battery, the upper hollow lid section carrying the testing equipment on its top wall, said equipment including a buzzer, a buzzer support plate for the same and a shield covering said buzer and further including a lamp socket mounted adjacent to said buzzer support, said top wall being provided with a hole near the lamp socket for accommodating a signal lamp, mounted on the lamp socket, a transparent dome shaped cover over said hole, connecting posts on said buzzer and lamp socket, testing cables passing through the hole in the lower container section to the outside, one of said cables being connected with the battery and the other with one of the aforesaid connecting posts, and further flexible cables adapted to be accommodated within the space enclosed by the upper lid section, said cables establishing a flexible connection between the battery, and one of the connecting posts and a parallel connection between said buzzer and said signal lamp.

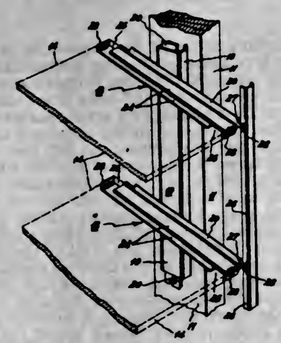
2,457,870
THREE-PHASE ELECTRIC RESISTANCE WIRE HEATING APPARATUS
John Cook, Ridgewood, N. J.
Application May 21, 1946, Serial No. 673,388
6 Claims. (Cl. 219—11)

1. Electrical wire annealing device, including four contact wheels over which the wire is successively drawn, means for supplying a predetermined voltage between the first and second of said contact wheels, means for supplying greater voltage between the second and third of said contact wheels, means for supplying the greatest voltage between the third and fourth of said contact wheels, and means interconnecting and grounding both said first and said fourth contact wheels, whereby current flows in a longitudinal direction only through said wire, between said contact wheels, and the wire is progressively



heated as it passes over said contact wheels, whereby the wire enters and leaves said device at substantially zero potential, and whereby the wire is progressively heated without exceeding a predetermined maximum temperature at any point.

2,457,871
ADJUSTABLE LOUVER SHUTTER OR BLIND
Clifford Edward Cooper, Newtown, near Sydney, New South Wales, Australia
Application December 15, 1943, Serial No. 514,412
In Australia December 22, 1942
3 Claims. (Cl. 20—62)



1. In a device of the character described, a channelled supporting fitting applied to the side of a window frame, louvre members, pivotally mounted in said fitting, operating means housed within the channelled fitting and operably connected to the louvre members, a protecting strip projecting angularly from each member and extending substantially throughout the width thereof, and a connecting and bridging member pivotally connected with the outer face of each protecting strip, said connecting and bridging member being angular in cross section whereby, when said louvre members are closed said connecting and bridging member jointly embraces the protecting strip and the adjacent portion of the supporting fitting to exclude draught and rain from the pivotal mountings and operating means for the louvre members.

2,457,872
VULCANIZABLE COPOLYMERS OF A VINYL ARYL COMPOUND, BUTADIENE AND MALEIC ESTERS
Gaetano F. D'Alelio, Cleveland, Ohio, assignor to Pre-phy-lac-tic Brush Company, Northampton, Mass., a corporation of Delaware
No Drawing. Application December 11, 1946, Serial No. 715,599
2 Claims. (Cl. 260—78.5)

1. A resinous copolymerization product of a mixture comprising 50 to 90 parts of a compound of the formula $CH_2{=}CR'Z$ where R' is selected from the group consisting of hydrogen and a methyl radical and Z is an aryl radical, 5 to 30 parts of a butadiene-1,3 having the formula

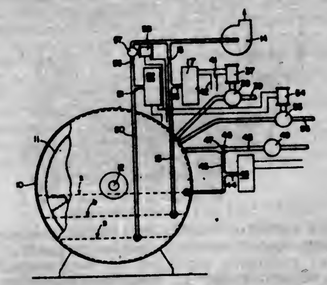
$$CH_2{=}\underset{R^1}{C}{-}\underset{R^2}{C}{=}\underset{R^3}{CH}$$

wherein R^1 and R^2 are selected from the group consisting of hydrogen, alkyl, aryl, chloraryl and a cycloaliphatic radical which is free of ethylenic unsaturation and R^3 is selected from the group consisting of hydrogen and methyl, and when R^3 is methyl, R^1 is methyl and R^2 is hydrogen, and 5 to 40 parts of a diester, said diester being the esterification product of maleic acid and an aliphatic monohydric alcohol which is free of ethylenic and acetylenic unsaturation, the major component being selected from the group consisting of the $CH_2{=}CR'Z$ compound and the diene.

2,457,873
VULCANIZABLE COPOLYMERS OF ACRYLONITRILE, BUTADIENE AND MALEIC ESTERS
Gaetano F. D'Alelio, Cleveland, Ohio, assignor to Pre-phy-lac-tic Brush Company, Northampton, Mass., a corporation of Delaware
No Drawing. Application December 11, 1946, Serial No. 715,600
2 Claims. (Cl. 260—78.5)

1. A resinous copolymerization product of a mixture of 15–20 parts of butadiene-1,3, 60 to 80 parts acrylonitrile, and 5 to 10 parts of ethyl maleate.

2,457,874
FLUID LEVEL INDICATOR
Archibald H. Davis, Jr., Cleveland, Ohio, assignor to American Machine and Metals, Inc., East Moline, Ill., a corporation of Delaware
Application December 20, 1942, Serial No. 515,011
2 Claims. (Cl. 177—311)



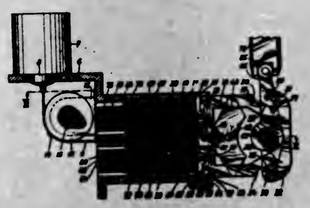
1. Apparatus including an aspirator drawing fluid continuously through a tube connected to the side of the tank which responds to the arrival of the surface of liquid being poured into the tank

to the level of the entrance of the tube into the tank by indicating the increased suction required to draw liquid fluid rather than gaseous fluid through the tube comprising, in combination, a tank, a tube entering the tank at a given height above its bottom, a contraction in the tube, an aspirator beyond the contraction continuously drawing fluid from the tank through the conduit and the contraction, means responding to the pressure differential between the entrance of the tube into the tank and a given point in the tube between the tank and the contraction, means preventing the pressure-responsive means for responding to pressures up to the suction pressure developed by the aspirator when drawing a gaseous fluid through the tube.

2,457,875
COMPARTMENTED HATBOX HAVING FIXED AND REMOVABLE RADIAL PARTITIONS
Amina E. Day, Los Angeles, Calif.
Application May 8, 1946, Serial No. 668,123
3 Claims. (Cl. 206—3)

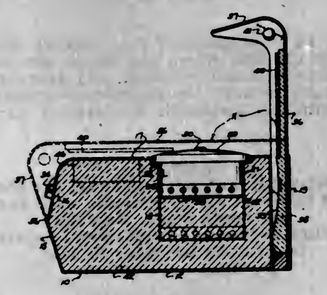
2. A hat box having a hollow body formed with an inwardly extending annular flange seat about its inner wall, a cover therefor, a removable multiple compartment hat receiving tray seated on said flange seat, said tray comprising a disk-shaped base having a central upstanding hub member and interconnected radially extending partitions formed integrally therewith, oppositely extending locking shoulders formed on said partitions, and a plurality of removable partitions having arcuate flanges on their inner ends adapted to be slidably received by said locking shoulders.

2,457,876
SELECTING CONTROL DEVICE
Ernest Alphonse Derungs, Le Locle, Switzerland
Application October 27, 1942, Serial No. 507,853
In Switzerland October 9, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires October 9, 1962
17 Claims. (Cl. 74—335)



1. In a selecting control device, control means for change speed gears, a stationary part, a first group of members mounted on said stationary part, a second group of members movable into different positions by said first group, said first group including driving means for effecting alternating rectilinear translatory movement of said second group relatively to the first group for moving the members of said second group into any one of the different positions thereof on the meeting of said second group with said first group at the end of the alternating rectilinear movement of said second group, and a third group of members movable by and in dependence upon the positions of said second group to actuate said control means.

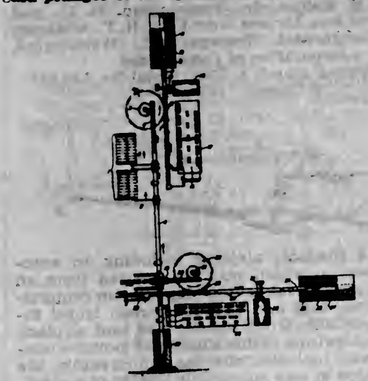
2,457,877
COOKING UNIT
Halbert Creston Doner, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 23, 1942, Serial No. 466,582
3 Claims. (Cl. 219—35)



3. A cooking stove of the character described, including a housing projecting horizontally from a wall and unsupported from beneath and having a top wall and a front wall, said front wall being provided with an upwardly and rearwardly inclined upper portion merging into said top wall, and means for performing all of the cooking operations below the surface of the top wall comprising a plurality of cooking recesses therein, cooking vessels adapted to fit within certain of said recesses, heating means within said recesses, a cover for each of said vessels lying substantially flush with the top wall of the housing when said vessels are in the cooking recesses, and a cover for said housing overlying the covers of said cooking vessels when said housing cover is in closed position, and having a forward portion shaped to fit over the inclined upper portion of the front wall of said housing to form a continuation of the inclined lower portion thereof.

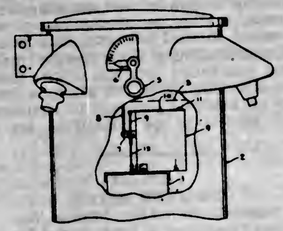
2,457,878
SOLENOID-OPERATED SWITCH
Arthur S. Dubuar, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 2, 1944, Serial No. 566,276
11 Claims. (Cl. 179—27.52)

1. In a multiposition switching device, a series of electromagnetic coils, there being one coil for each position of said switch, an electromagnetic plunger, in position to be acted upon by said coils when energized, means for energizing a first coil to advance the plunger a first step, for then energizing the second coil followed by the deenergization of the first coil, and for repeating the operation of energizing a succeeding coil and deenergizing a preceding coil to advance said plunger one step for each such repeated op-



eration, and means associated with said plunger for establishing succeeding electrical connections.

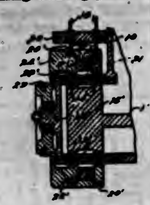
2,457,879
PROTECTING DEVICE FOR TRANSFORMERS
Ralph H. Earle, Wauwatosa, Wis., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application July 5, 1946, Serial No. 681,610
9 Claims. (Cl. 116—114)



8. In a device of the class described, an electrical instrumentality having insulation, an insulating liquid medium surrounding said electrical instrumentality and arranged to conduct heat away from said electrical instrumentality, a section of the same insulation as that used in said electrical instrumentality, said section being submerged in said liquid medium, an indicator normally occupying a first position, means restrained by said section of insulation and operatively connected to said indicator, and biasing means for causing said indicator to move to a second position when said section of insulation has aged to a predetermined point.

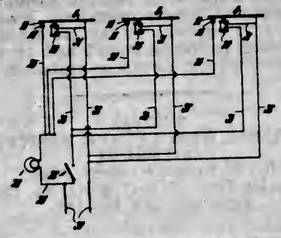
2,457,880
DRIVE MEANS FOR COMPRESSORS OR THE LIKE
Franklin W. Edwards, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application July 21, 1944, Serial No. 547,480
1 Claim. (Cl. 172—284)

In an electromagnetic drive means for a compressor or the like, a hermetically sealed casing for the compressor having a cylindrical portion extending therefrom constructed of alternately disposed rings of magnetic and non-magnetic material; an end plate for closing the end of the said extending casing portion, and a plurality



of non-magnetic studs disposed axially of said rings for securing said rings and plate together in fluid tight relation.

2,457,881
FIRE ALARM
Ulrich S. Fisher, Holyoke, Mass.
Application July 18, 1947, Serial No. 761,971
1 Claim. (Cl. 177—355)

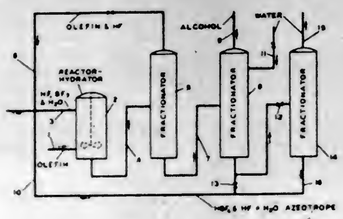


Fire alarm apparatus comprising in combination, a plurality of separate alarm mechanisms each including, a movable alarm actuating member and a flexible movable heat responsive element adapted to releasably hold said member in non-actuating position and to move and release said member as it moves under the influence of heat, pairs of contacts one of which is carried by each of said heat responsive elements and the other of which is separate therefrom and engaged by the said one contact as said element moves under the influence of heat, an electrically operated control alarm, a source of electrical energy, circuit connections between said source of energy, alarm and said pairs of contacts whereby as any heat responsive element moves under the influence of heat the alarm is energized, solenoids operatically related to said heat responsive elements and adapted when energized to move said elements and bring the contacts of the pairs into engagement, other circuit connections connected to the first-named connections and to said source of energy, and a switch in said last named circuit connections for closing said other circuit connections for simultaneously energizing the solenoids from said source of power and simultaneously moving said elements to engage said contacts and energize said alarm.

2,457,882
HYDRATION OF OLEFINS
Frederick E. Frey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application October 17, 1944, Serial No. 559,115
10 Claims. (Cl. 260—640)

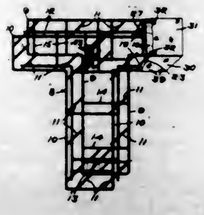
1. The process of converting ethylene to ethyl alcohol, which comprises subjecting ethylene to the action of an aqueous solution consisting of

hydrogen fluoride and boron trifluoride dissolved in water, the weight of hydrogen fluoride being 10 to 50 per cent by weight of the total hydrogen fluoride and water and the weight of boron fluoride being minor with respect to the hydrogen fluoride, with the molar ratio of hydrogen fluoride



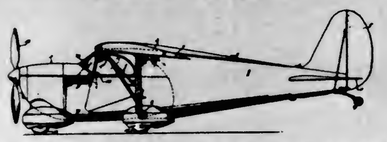
to olefin greater than 1 and not greater than 10, at a reaction temperature between 200 and 300° C. and a sufficient superatmospheric pressure to maintain said aqueous solution in liquid phase, for a reaction period between 5 and 15 minutes, and recovering ethyl alcohol so produced.

2,457,883
DETACHABLE WIRE LETTER WITH FABRIC COVERING
Ira W. Fuller, Roxbury, Mass.
Application June 11, 1947, Serial No. 753,912
3 Claims. (Cl. 40—140)



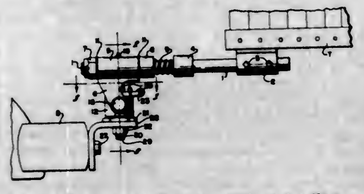
1. An advertising sign comprising a background element, a plurality of symbol elements each having a skeleton wire framework presenting spaced wires which bound the symbol at both the front and the back, intermediate wires connecting both the opposite sides of the front bounding wires and also the front and rear bounding wires at the sides of the framework, all such intermediate wires being located in planes inside the planes of the bounding wires, a backing element of relative stiff sheet material situated within and with its edges in frictional engagement with said front bounding wire, the front face of said backing element being flush with said bounding wire, a second backing element located between the front and rear bounding wires at the sides, top and bottom of the framework and with its edges in frictional engagement with said front and rear bounding wires, said second backing element having its outer face substantially flush with the bounding wires, an envelope of fabric covering and adhesively secured to the outer face of both backing elements, and seperable fasteners for removably securing each symbol element to the background element.

2,457,884
ROADABLE AIRPLANE
Robert E. Fulton, Jr., Washington, D. C., and Octavio Jose Alvarez, New York, N. Y., assignors to Continental, Incorporated, Washington, D. C., a corporation of Connecticut
Application March 3, 1945, Serial No. 580,847
6 Claims. (Cl. 244—2)



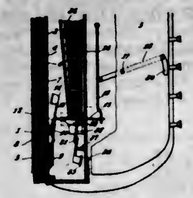
1. In a roadable airplane including an automobile section which may be removed from an airplane section, said automobile section comprising a power unit and wheels for road travel including guidable front wheels, and said airplane section comprising lifting wings and movable control surfaces including ailerons and elevators, the combination in said automobile section of a steering wheel, a shaft connected to said steering wheel to be rotated thereby, bearing means mounting said shaft for rotary movement and for endwise movement, a connection to said shaft for moving the elevators upon endwise movement of the shaft, a rotatably mounted member having a driving engagement with said shaft for rotation thereby but being free of endwise movement by the shaft, a power take-off means on said member for operative connection to the front wheels to guide them upon rotation of said shaft, another power take-off means on said member for moving the ailerons, and a connection from said last named means to said ailerons, said last named connection including a Geneva-type mechanism permitting continued rotation of the member in the same direction after the ailerons have been moved to an extreme position to thereby enable the front wheels to be guided to an extreme position.

2,457,885
TRAILER HITCH
James Earle Gatch, Macon, Ga.
Application December 5, 1946, Serial No. 714,317
4 Claims. (Cl. 280—33.15)



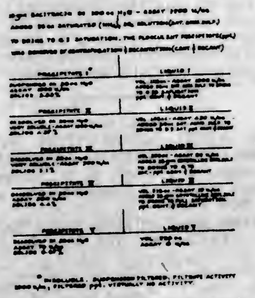
2. Device for connecting a car to a trailer comprising a king bolt formed with an annular groove, means for mounting the king bolt in a vertical position on a car bumper, a collar adapted to rotatably embrace the king bolt having oppositely disposed latch members arranged to seat in the annular groove of the king bolt when the collar is in operative position on said bolt, a tubular housing formed with spaced, parallel off-set lugs adapted to embrace said collar and connected to said collar by aligned pivots, a draw-bar having a medially disposed abutment, one end portion of said draw-bar slidably disposed in the tubular housing and having means to prevent withdrawal therefrom, a compression spring positioned on the draw-bar intermediate the tubular housing and the abutment on the draw-bar, and means for securing the other end of the draw-bar to the trailer.

2,457,886
TREMOLO DEVICE FOR ACCORDIONS
Walter Gerber, Bern-Bumplitz, Switzerland
Application December 18, 1945, Serial No. 635,680
In Switzerland January 6, 1945
7 Claims. (Cl. 84—376)



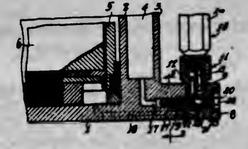
1. In an accordion on the melody side thereof, an intermediate partition located between the bellows and the sounding section, two apertures in said partition for the flow of air therethrough, a vibrator comprising a metal plate mounted on a leaf spring which is disposed in one of said apertures, said metal plate being predetermined in weight and said leaf spring being predetermined in thickness by the desirable frequency of said vibrator, a movable flap for controlling the air flow through the other aperture, operating means in operable connection with said flap and said vibrator for opening said flap and simultaneously immobilizing said vibrator from outside, and resilient means tending to close said flap and simultaneously supersede the immobilization of said vibrator.

2,457,887
PURIFICATION OF BACITRACIN
John T. Goorley, Hudson, Ohio, assignor to Ben Venue Laboratories, Inc., Bedford, Ohio, a corporation of Pennsylvania
Application April 3, 1947, Serial No. 739,227
6 Claims. (Cl. 260—236.5)



1. That method of purifying crude bacitracin which comprises providing an aqueous solution of crude bacitracin, adding ammonium sulfate to said solution to partially saturate it and fractionally precipitate inert impurities substantially insoluble in water, separating the solution from the precipitate of inert material, adding further ammonium sulfate to the separated solution to precipitate bacitracin in purified and water-soluble form, and recovering the precipitate of purified bacitracin.

2,457,888
STRAINER FOR PUMP JACKS
Edward P. Grimes, Los Angeles, Calif.
Application April 10, 1945, Serial No. 587,540
3 Claims. (Cl. 210—164)



3. A strainer unit for insertion in a screw-threaded counterbore communicating between an axially directed passage continuing from its inner end and a lateral passage intermediate its ends, the outer end of said counterbore being open, the screw-threaded portion of said counterbore being connected intermediate its extremities by said lateral passage, said strainer unit comprising: a stem sealingly engageable with the walls surrounding the outer open end of said counterbore, said stem including spaced sets of screw threads, said stem being reduced in diameter between said screw threads and cooperating therewith to form an annular chamber adapted to communicate with said lateral passage when said sets of screw threads fit the screw threads of said counterbore at opposite sides of said lateral passage, said stem also being bored to form a passage communicating between its inner end and said annular chamber; and a tubular strainer closed at one end and secured by its other end to said stem whereby upon insertion of said stem in said counterbore a strainer interrupted passageway is formed between said axial passage and said lateral passage.

2,457,889
WIDE PROPELLER BLADE MANUFACTURE
Frederick A. Gruetjen, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application October 23, 1943, Serial No. 507,367
1 Claim. (Cl. 29—156.8)

In the manufacture of wide hollow metal propeller blades, the steps of pressing the trailing edge of an air foil section having the pitch twist of the blade to provide an edge portion having at least one entire plane surface at substantially right angles to the chord of the blade, forming an edge extension embodying the pitch twist of the blade and having a similar corresponding edge portion, and electrically flash butt welding said formed edges together, said edge portions being substantially flashed from the parts during the welding to present an integral section of continuous blade contour after the flash has been removed from the joints.

2,457,890
MUFFLER
Gale H. Hedrick, Chicago, Ill., assignor to Maremont Automotive Products, Inc., Chicago, Ill., a corporation of Illinois
Application September 10, 1943, Serial No. 501,874
9 Claims. (Cl. 181—57)

1. A muffler comprising a casing having an inlet and an elongated outlet of reduced width with

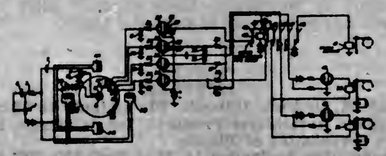
respect to the inlet, the cross-sectional area of the outlet being at least equal to the cross-sectional area of the inlet, and means within the casing separating the same into compartments, said means including plates having perforations, one

of said plates having a non-perforated portion, the non-perforated portion being disposed between the inlet and outlet so that the exhaust gases circulate through the separate compartments before discharging through the outlet to the atmosphere.

2,457,891
ELECTRON DISCHARGE DEVICE
Andrew F. Henninger, George D. Henninger, and Ralph W. Reitherman, Chicago, Ill.; said Reitherman assignor of one-sixth of the whole to said Andrew F. Henninger and one-sixth of the whole to said George D. Henninger
Application January 12, 1945, Serial No. 572,506
4 Claims. (Cl. 250—27.5)

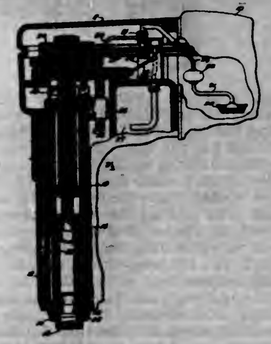
1. An electron discharge device having an enclosing vacuous shell, an insulating tube having a closed bottom mounted therein partially defining the discharge path, an electrode within said tube terminating short of the free open mouth of said tube, a second electrode exteriorly of said tube at substantially the upper edge of said interior electrode, and a grid between the open mouth of said tube and said second electrode collaborating with said electrodes to determine, in accordance with its degree of energization, the breakdown potential of said device.

2,457,892
PULSE TESTING EQUIPMENT
Frank H. Hibbard, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 26, 1943, Serial No. 492,472
10 Claims. (Cl. 179—175.3)



9. Pulse testing means comprising a condenser, means for charging said condenser in accordance with the duration of a pulse, electron discharge apparatus having field magnets for generating a rotating electron beam, a circuit for generating a two-phase transient current in said field magnets in accordance with the charge on said condenser to rotate said beam, and means operated in accordance with the extent of the rotation of said electron beam in response to said transient current to indicate the relative length of said pulse.

2,457,893
MACHINE TOOL LUBRICATING SYSTEM
Emil J. Hlinsky, Milwaukee, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis., a corporation of Wisconsin
Application February 23, 1945, Serial No. 579,459
3 Claims. (Cl. 184—6)

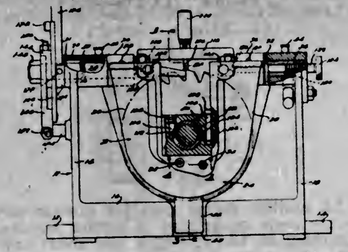


1. In a machine tool, a vertical spindle head, a spindle quill depending from and arranged for vertical axial adjustment relative to said head, a bearing in the lower end of said quill, a spindle rotatably mounted in and projecting downward from said bearing, a pressure lubricating system arranged to supply lubricant to said spindle head, means to convey lubricant to said bearing in said quill, a suction conduit arranged to withdraw excess lubricant from the region of said bearing, and an aspirator connected to said suction conduit and associated with said pressure lubricating system in manner to be operated by the flow of lubricant therethrough to exhaust said excess lubricant through said suction conduit.

2,457,894
CARBIDE FEED MECHANISM FOR BATTERIES OF ACETYLENE GENERATORS
Harry Hooper, New York, N. Y., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application April 12, 1945, Serial No. 588,019
14 Claims. (Cl. 48—88)

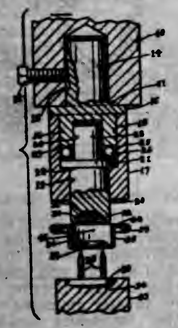
14. A battery of acetylene generators connected to a single gas line, carbide feed means for each of said generators, a weight-motor for operating each of said carbide feed means, the weights of the motors for operating the feed means of the several generators being at different levels, pressure responsive means subject to the pressure of the acetylene gas in said gas line, and means controlled by said pressure responsive means and operatively connected to the motor weights for substantially simultaneously starting and stopping the descent of said motor weights to assure that they reach the low point of their descent in sequence.

2,457,895
GRINDING FIXTURE
George Hohwart, Detroit, and John Simmons, Washington, Mich., assignors to N. A. Woodworth Company, Detroit, Mich., a corporation of Michigan
Application December 29, 1945, Serial No. 638,235
12 Claims. (Cl. 51—225)



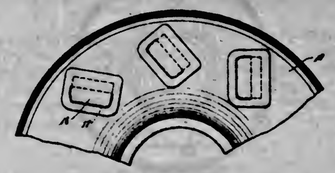
1. A grinding fixture for milling cutters comprising a support having spaced horizontal bearings disposed in alignment with each other; a cradle frame having journals mounted in said bearings and adapted to rock about said journals; a manually operable handle attached to one of said journals for use in rocking said cradle frame on said journals; adjustable means for limiting rocking movement of the cradle frame; means carried by said cradle frame and disposed at one side of the axis about which it moves adapted to position and hold a cutter with the side and end surfaces of at least one of its teeth predetermined distances from said axis; and pivoted means engageable with the mentioned surfaces of said cutter to limit movement of the latter beyond said predetermined distances.

2,457,896
STAPLE SETTING DIE
Otto J. Hueister, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application January 7, 1946, Serial No. 639,498
11 Claims. (Cl. 218—5)



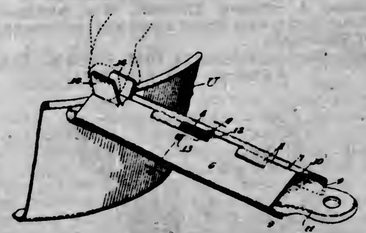
1. A tool for stapling fastener devices to supports, a staple setting die comprising a holder, an anvil, means on the anvil and holder providing free rotation of the anvil about its axis in said holder, said anvil having at its lower end a prong-turning socket, said socket having a spherical surface, a rib dividing said socket centrally, and said rib being adapted to space prongs of a staple in the socket at opposite sides thereof in the operation of setting said prongs.

2,457,897
TIRE AND ATTACHABLE VANE THEREFOR
Raymond J. Hull and Robert W. Hurah, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application February 12, 1944, Serial No. 522,074
2 Claims. (Cl. 244—103)



1. A tire having a sidewall, and a vane unit vulcanized thereto, said unit comprising a substantially flat vulcanized body of resilient rubber-like material having a shallow recess in its exposed face, and a vane comprising resilient rubber-like material integral with said body seated in said recess and hinged to said body along one margin of said vane, said vane being arranged with its hinge line oblique to a radius of the tire.

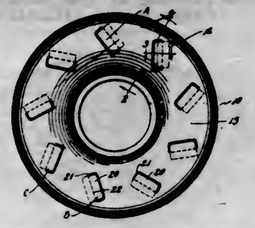
2,457,898
AUXILIARY HANDLE
Frederick E. Hummel, Chicago, Ill.
Application September 25, 1944, Serial No. 555,653
2 Claims. (Cl. 16—114)



1. As a new article of manufacture, an auxiliary handle adapted for use in connection with a utensil having an outwardly projecting handle, and comprising a pair of complemental oppositely positioned downwardly divergent rigid one-piece side pieces having at the bottom margins thereof inturned flanges for gripping the utensil handle and embodying at their top margins a longitudinal series of alternately arranged tubular parts, certain adjoining parts of said series being spaced apart so as to provide therebetween an elongated opening, a pivot pin extending through said tubular parts and forming therewith a hinge connection for permitting the side pieces to swing freely to and from one another, and a spiral spring disposed in said opening, ex-

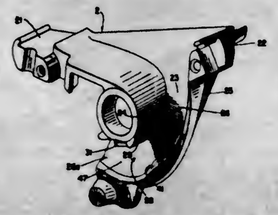
tending around the pivot pin, having the ends thereof connected directly to the side pieces, and arranged and loaded so that it urges said side pieces inwards in order to bring the inturned flanges into gripping relation with the side margins of the utensil handle.

2,457,899
VANED TIRE
Robert W. Hurah, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application December 31, 1942, Serial No. 516,449
11 Claims. (Cl. 244—103)



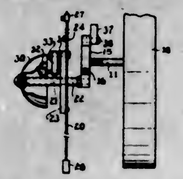
1. A tire comprising an annular body having a side wall comprising rubber-like material, and vanes comprising rubber-like material integral with said side wall at spaced-apart positions thereabout providing resilient, hinged connections with said side wall, the hinge lines of said vanes being each inclined at the position of connection to a radial plane which includes the axis of rotation of the tire, each vane having reinforcing weftless elements extending across the hinge line, said elements being separable laterally with respect to one another under resilient restraint of said rubber-like material.

2,457,900
GRAIN DRILL FEED MECHANISM
William A. Hyland, Horicon, Wis., assignor to John Deere Van Brunt Company, a corporation of Wisconsin
Application September 18, 1944, Serial No. 554,654
4 Claims. (Cl. 222—311)



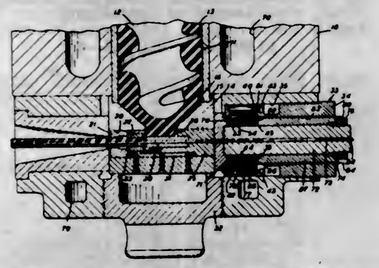
1. In a seeding device, a seed cup, a rotatable feed wheel mounted for rotation in said cup and including a seed-engaging outer flange, a seed passage formed by portions of said seed cup and said feed wheel, said passage being shaped so as to have a throat portion through which seed normally are discharged by the rotation of said feed wheel, and a protuberance carried by the radially outer portion of said seed cup adjacent the periphery of said feed wheel and having a cam-like wall extending generally radially inwardly beyond said feed wheel flange and having a smooth curve generally forwardly in the direction of rotation of said feed wheel and generally radially inwardly up to the apex of said protuberance and then generally radially outwardly away from said apex, said apex lying appreciably above, or radially inwardly of, the inner surface of said feed wheel flange between the flange of said feed wheel and the opposite side of said seed passage.

2,457,901
REEL SIGNAL UNIT
James Gordon Jackson, Port Alberni, British Columbia, Canada, assignor of one-half to James Nelson Trumpour, New Westminster, Canada
Application November 24, 1947, Serial No. 787,733
8 Claims. (Cl. 116—67)



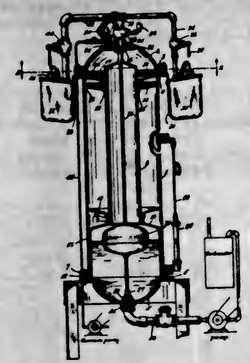
8. An audible signal unit for motion picture projector reels comprising a carrier adapted to be mounted on the end of a reel shaft and rotatable therewith, a stub shaft projecting outwardly from the carrier eccentrically of the reel shaft, a pendulum pivotally mounted on the stub shaft, a weight on the lower portion of the pendulum, said pendulum extending above the stub shaft, a counterbalance adjustably mounted on the upper part of the pendulum, a counterbalance adjustably mounted on the carrier diametrically opposite the stub shaft, a bell carried by the stub shaft, and a hammer on the pendulum for striking the bell when the pendulum starts to swing at a predetermined speed of the reel shaft.

2,457,902
PRESSURE MEASURING APPARATUS
David D. Jones, Norwalk, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application January 18, 1946, Serial No. 642,044
6 Claims. (Cl. 73—140)



1. A pressure measuring apparatus, which comprises an extruding head having a passage extending therethrough which is provided with an entrance end and an exit end, means for forcing material into the central portion of the passage under pressure, means mounted slidably in the passage in the extruding head between the central portion and the entrance end of the passage for preventing flow of the material toward the entrance end of the passage, compressible means positioned in the passage in the extruding head between the entrance end of the passage and the flow preventing means and being compressible along its axis, fixed means for holding the compressible means against the flow preventing means so that the material under pressure compresses the compressible means, and means for measuring the pressure on the material from the compression of the compressible means.

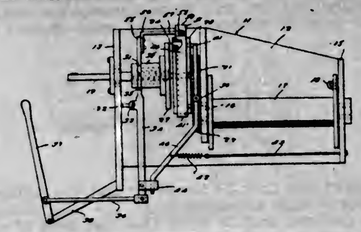
2,457,903
BEVERAGE PREMIX SYSTEM
James Kantor and Edward F. Rosenberg, Chicago, Ill., assignors to The Liquid Carbonic Corporation, Chicago, Ill., a corporation of Delaware
Application July 16, 1943, Serial No. 494,972
9 Claims. (Cl. 183—2.5)



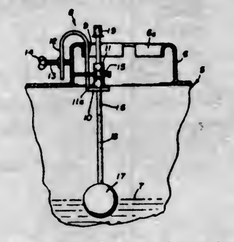
5. In an apparatus for preparing a carbonated beverage, in combination, a mixing tank, an inlet nozzle arranged in the top of said tank, a syrup tank associated with said mixing tank communicating with said nozzle, a water tank associated with said mixing tank and communicating with said nozzle, means for maintaining a partial vacuum in said mixing tank for creating a flow from said water and syrup tanks into said mixing tank and for deaerating the mixed liquids in said mixing tank, said water tank being adapted for connection with a water supply and said syrup tank being adapted for connection with a syrup supply, means for shutting off the inflow of water to said water tank when the liquid in said water tank rises to a predetermined level, means for shutting off the inflow of syrup through said syrup tank when the liquid in said tank rises to a predetermined level, means for shutting off the inflow through said nozzle and means controlled by the liquid level in each said water and syrup tanks for operating said shut off means when the liquid level in said syrup or water tank falls below a predetermined level.

2,457,904
BUCK RAKE WINCH CLUTCH AND BRAKE CONTROL
Richard C. Kenck, Augusta, Mont.
Application February 13, 1948, Serial No. 8,257
4 Claims. (Cl. 254—187)

1. A winch apparatus comprising a support, a drive shaft journaled in said support, a drum rotatably mounted on said drive shaft, a reel journaled in said support, means coupling said reel to said drum, a brake band secured to said support and encircling said drum, means biasing said brake band into braking contact with the drum, a sleeve keyed to said shaft and slidable axially thereon, a friction disc on said shaft between said sleeve and said drum and movable into engagement with said drum, a lever pivoted to said support and engaging said sleeve to move the sleeve axially responsive to rotation of said lever, and means carried by said lever and engageable with said brake biasing means for relieving the braking tension on said brake band responsive to the rotation of said lever.



2,457,905
FUEL TANK INDICATOR
Arthur J. Korody, Cardington, Ohio
Application April 10, 1947, Serial No. 740,667
2 Claims. (Cl. 73—322)

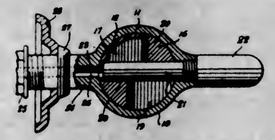


2. An indicator attachment for a tractor type fuel tank filler neck comprising a U-shaped bracket, said bracket being of a size to arch over and straddle a portion of said filler neck, the outer limb of said bracket being provided with set screw releasably engageable with the outer surface of said filler neck, the inner limb of said bracket having its terminal laterally directed and providing a foot, said foot being apertured and having a sleeve lined up with said aperture and rising vertically from the foot, said sleeve constituting a guide member, said sleeve being provided on diametrically opposite sides with outstanding ears having screw-threaded holes, and set screws threaded through said holes, said set screws being on diametrically opposite sides of the sleeve and engageable with the inner surface of said filler neck, an indicator rod slidable through said sleeve, and a float on said rod.

2,457,906
BEER FAUCET
Peter G. Larkin, New York, N. Y.
Application March 26, 1946, Serial No. 657,082
3 Claims. (Cl. 137—69)

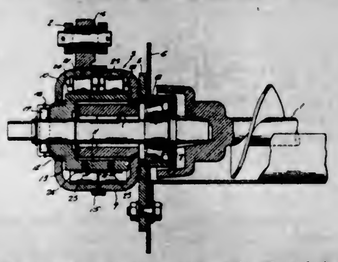
1. A faucet comprising a tubular body, a rotatable core contained therein and provided with an horizontal slot with a flared opening and an end wall, a port hole in said end wall, an inlet

in said body positioned to register with said port hole when the core is in one position, an outlet in said body in juxtaposition to the flared opening in said slot, a dispensing nozzle attached to said outlet, a tubular extension on the rear end of the nozzle positioned to project into said slot and abut the rear wall thereof, means for rotating said core to position the end wall of said slot



between the inlet of the body and the adjacent orifice of said extension when the core assumes one position and to align the port hole of said end wall in juxtaposition with the inlet of said body and the orifice of said extension when the core is turned in the opposite direction, and means for limiting the rotation of said core to a predetermined arc.

2,457,907
CLUTCH AND BRAKE DEVICE
Philip C. Malmsten, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application September 23, 1946, Serial No. 698,651
1 Claim. (Cl. 192—12)



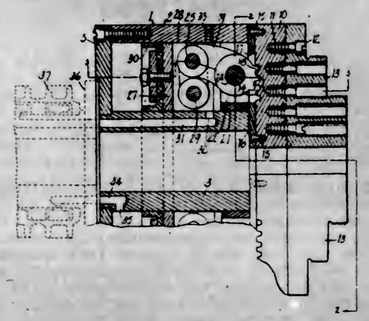
In a clutch unit for communicating intermittent rotary movement to a driven member, a housing encircling said driven member and separated axially of the member into a fixed section and an oscillating section, a cam surface provided longitudinally of said driven member, separate cages disposed on said cam surface with a freely rotatable drive roller confined in one cage beneath the rotatable section of the housing and a corresponding braking roller confined in the other cage beneath the fixed section of the housing, a common bracket securing said cages to the driven member and leaving the cages free to reciprocate independently of each other transversely of said cam surface, and a spring disposed between said bracket and each cage to bias the rolls to wedging action between the cam surface and their respective housing to intermittently drive and brake the driven member upon oscillation of the oscillating housing section.

2,457,908
COUPLING
Carl E. Meyerhoefer, Brooklyn, N. Y., assignor to Lewyt Corporation, Brooklyn, N. Y., a corporation of New York
Application July 24, 1947, Serial No. 763,377
4 Claims. (Cl. 285—163)

1. In a vacuum cleaner assembly a coupling for wand and accessory sections, said coupling including the adjacent ends of tubular sections to be telescopically disposed with respect to each other, the outermost of said sections having an annular groove in its inner face, a flexible ring extending within said groove and having its inner edge defining a circle of less diameter than the

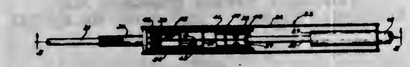
innermost section to be embraced thereby, said sections at their adjacent ends presenting reduced and tapered surfaces for contact with each other and the tapered surface of the innermost of said sections presenting an edge portion of less diameter than the internal diameter of the outermost of said sections.

2,457,909
HYDRAULIC CHUCK
William J. A. McKay and Arthur J. Koon, Grand Rapids, Mich.
Application August 15, 1946, Serial No. 690,653
7 Claims. (Cl. 279—4)



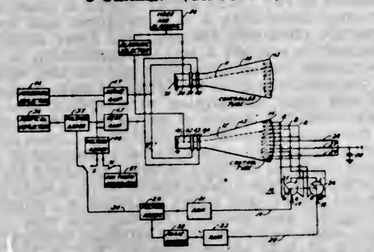
1. A hydraulic chuck comprising a body member having inner and outer cylindrical portions joined together at their ends in spaced relationship by front and rear end plates, said front plate being cut away in a series of radially extending slots, said slots being under-cut or widened at their inner edges, a pair of shoe slide members positioned in each of said slots and having notched outer edges engaging the undercut portions of said slots, a jaw slide member positioned between each of said pairs of shoe slides and having rack teeth formed on the rear faces thereof, shoe plates secured to the back of each jaw slide and connected to the backs of the shoe slides associated therewith, said shoe plates defining apertures exposing said rack teeth, a spider member mounted between said cylindrical portions and adjacent said shoe plates, pinion levers pivoted on said spider and having teeth engaged with said rack teeth, an annular piston positioned between said cylindrical portions, links pivotally connected between said piston and said pinion levers whereby axial movement of said piston causes radial movement of said jaw slides, said inner cylindrical member defining passages whereby fluid under pressure may be admitted to either side of said piston, and jaw members secured to said jaw slides.

2,457,910
FLEXIBLE CABLE
Peter J. McLaren, New York, John A. Vaughan, Hempstead, and Victor A. Svensson, New York, N. Y., assignors to The W. L. Maxson Corporation, New York, N. Y., a corporation of New York
Application February 2, 1946, Serial No. 645,142
23 Claims. (Cl. 74—501)



1. A cable assembly comprising a sheath, a slender power transmitting element in said sheath movable lengthwise therealong to actuate a device by remote control, rollable bearing means for supporting said element in said sheath for lengthwise movement therein, and means automatically operable upon lengthwise movement of said power transmitting element for positively driving said supporting means in the direction of movement of said power transmitting element at a rate which is different from but predetermined with respect to the rate of lengthwise movement of said power transmitting element.

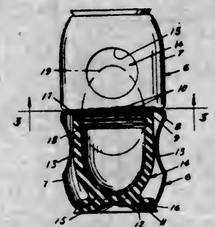
2,457,911
DEVIATION CORRECTION FOR CATHODE-RAY BEAMS
Allen C. Munster, Philadelphia, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application November 23, 1946, Serial No. 711,969
8 Claims. (Cl. 315—9)



1. In an electrical system: means for producing a first beam of electrified particles; means for producing a second beam of electrified particles; means, including common means, for simultaneously deflecting both said beams cyclically along similar preselected paths; means for maintaining said second beam at substantially fixed intensity during deflection along said path; means associated with said second beam and responsive to deviations of said second beam from its preselected path for generating correcting voltages identifiable with the direction of said deviations; and means operating in synchronism with said deflection cycles for selectively applying said correcting signals to both said beams in such manner as to oppose said deviations.

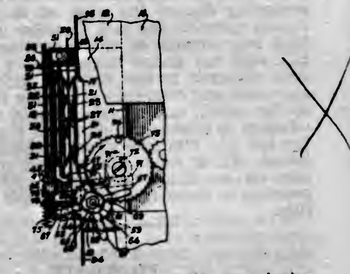
2,457,912
EGG OPENER WITH AN ANNULAR CUTTING FLANGE AND SUCTION CUP HOLDER
Victor E. Murray, Cincinnati, Ohio, assignor of three-fifths to W. O. Mashburn, Jr., and one-fifth to Robert Adair Black, both of Cincinnati, Ohio
Application December 6, 1945, Serial No. 633,089
9 Claims. (Cl. 146—2)

4. An egg opener comprising a pair of footed cups of rubber like material conjointly adapted to enclose an egg from its opposite ends, a shell of rigid material connected to each cup at the foot thereof and concentrically surrounding the body of the cup, and an inturned cutting ring at the top of each shell and disposed in a plane immediately above the plane of the top of the



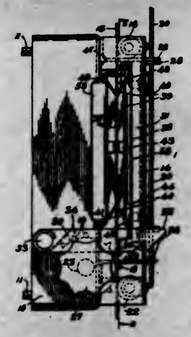
associated cup, the footed cups being yieldable adjacent their respective connections with the associated rigid shell members whereby relative shifting of the cutting rings transversely of an inserted egg permits the mouths of said cups to independently assume eccentric relationship with the operative edges of the cutting rings.

2,457,913
FILM GATE
Otto R. Nemeth, Chicago, Ill.
Application May 22, 1944, Serial No. 536,720
13 Claims. (Cl. 88—28)



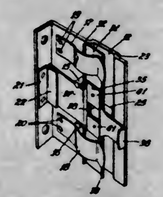
1. In combination in a strip film projector, means for guiding a strip of film in a predetermined path, a pair of transparent panels adapted to press the film strip therebetween and hold it against buckling during projection of a concentrated light beam therethrough, one of said panels being mounted to remain stationary relative to the film, means carrying the second panel including relatively stationary supporting structure and means movable relative to said supporting structure carrying said panel, a plurality of movement guiding members rigid with said carrying means and projecting slidably through the supporting structure, resilient means normally operative between such supporting structure and said panel-carrying means for urging the latter towards said one transparent panel, cam surfaces on said rigid members, and means movably mounted on said supporting structure and engageable with said cam surfaces for selective coaction therewith for urging the rigid members into movement in a direction away from said panels and thus moving the panel-carrying means and thereby the second panel in opposition to said resilient means to effect a separation of such panel relative to the first mentioned panel and thus release the film for movement between the panels.

2,457,914
CONVERTIBLE FILM GATE CONSTRUCTION
Otto R. Nemeth, Chicago, Ill.
Application May 22, 1944, Serial No. 536,723
2 Claims. (Cl. 88—23)



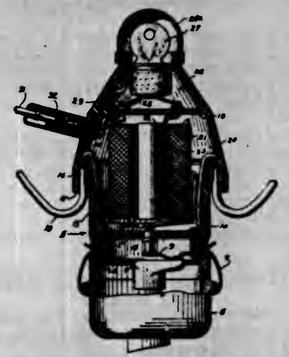
1. In combination in a film gate construction for strip film projectors, a film gate structure including an offset outwardly extending mounting flange having a shoulder extending in the same direction as the edge of the flange, a rail, supporting means for the rail, said rail having a flange cooperating with the supporting means to form a channel adapted for slidably receiving said mounting flange, the edge of said rail flange closely approaching said shoulder in the assembled relationship of the mounting flange and rail, said rail flange having a stop notch in its edge adjacent to one end and including a cam approach and clearance extending from said end to the notch, and a node on said shoulder and adapted to engage in said notch for interlocking the rail and film gate structure against unintentional sliding displacement, said node and the edge on said flange defining said clearance being coactive to resist free sliding of the panel structure.

2,457,915
FILM GATE
Otto R. Nemeth, Chicago, Ill., assignor to Otto R. Nemeth, Inc., Chicago, Ill., a corporation of Delaware
Application July 8, 1946, Serial No. 682,979
9 Claims. (Cl. 88—17)



1. In a film gate for motion picture projectors, the combination of a frame element consisting of a sheet metal stamping having a mounting portion and a flat face portion, with a film channnel formed in the face portion; together with a pressure plate consisting of a sheet metal stamping adapted to be positioned within the aforementioned film channel; a handle for the pressure plate; and spring means positioned to engage the pressure plate and normally maintain it in the film channel; said pressure plate and film channel having cooperating cam surfaces adapted to lift the plate from the channel and maintain it in spaced relationship with the channel in response to manual manipulation of the handle.

2,457,916
IGNITION APPARATUS
Thabous A. Newton, Flomaton, Ala.
Application January 8, 1946, Serial No. 639,713
1 Claim. (Cl. 123—148)



In apparatus of the class described, a housing adapted to cap a distributor having a rotor, said housing comprising a pair of upper and lower separate chambers therein, the lower chamber adapted to contain a coil for connection to the distributor, contacts depending from the bottom of the lower chamber and adapted to be engaged by said rotor, an ignition wire leading into the lower chamber, a pair of contacts in the bottom of the upper chamber adapted to be connected to said wire and coil, a lock barrel suspended in the upper chamber having a member threaded therethrough for rotary adjustment toward and from the bottom of said upper chamber, a conductor carried by said member for bridging said contacts when said member is adjusted toward the bottom of said upper chamber, and a key for rotating said member, said housing having a closure removable for access to said member to insert said key therein.

2,457,917
PURIFICATION OF TITANIUM HALIDES BY TREATMENT WITH METAL HYDRIDES AND DISTILLATION
Douglas Gillison Nicholson, Pittsburgh, Pa.
No Drawing. Application September 23, 1947, Serial No. 775,745
9 Claims. (Cl. 202—57)

1. A method for purifying a titanium tetrahalide which comprises intimately associating said halide with a salt-like metal hydride, at an elevated temperature.

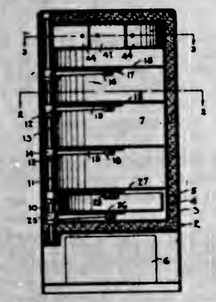
2,457,918
SOAP CONTAINER
Melvin A. Pierce, Waitsburg, Wash.
Application March 22, 1946, Serial No. 656,405
1 Claim. (Cl. 45—28)

A soap container, including a resilient base member having a pair of aligned bores therein, flanged metallic sleeves seated in said bores, cup

means for securing said base to a support, a wire hook having straight parallel fingers extending from its extremities and adapted for insertion

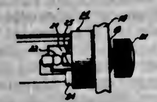
to said sleeves, and a flexible open mesh bag adapted for threading on said hook and normally depending therefrom, inversion of said bag serving to eject the soap therefrom.

2,457,919
CIRCULAR REFRIGERATOR WITH PIVOTED ROTATABLE SHELVES
James Eaton Ramsey, Houston, Tex.
Application February 7, 1944, Serial No. 521,294
5 Claims. (Cl. 62—89)



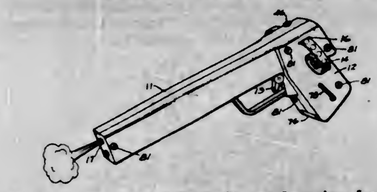
1. A refrigerator including a circular housing having a door portion hinged to swing outwardly and curved to conform to the housing, an upstanding support member disposed substantially upon the circular inside wall of the housing, a plurality of swingable arms vertically adjustable up and down on said support, and rotatable shelves on said arms whereby access may be had to every portion of each shelf.

2,457,920
UNITARY VOLUME-CONTROL SWITCH AND DIALITE ASSEMBLY
John F. Rider, New York, N. Y.
Application September 6, 1946, Serial No. 695,330
2 Claims. (Cl. 201—56)



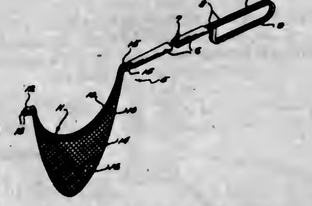
1. In combination, a volume control resistor having a movable contact member and having a central rotatable hollow shaft to which said contact member is attached, a pilot lamp stationarily mounted in registry with the open rear end of said shaft, and a knob attached to the forward end of said shaft said knob having at least a light transmitting central region arranged for illumination by the passage of light from said lamp through said hollow shaft.

2,457,921
AUTOMATIC CAP PISTOL
William Riederich, Elmhurst, Ill.
Application April 27, 1944, Serial No. 533,975
6 Claims. (Cl. 42—57)



2. A toy cap pistol including a housing having barrel and grip portions, having a port, firing means, cap tape-feeding means and means for driving the firing means and the feeding means to fire a succession of caps, means for retarding the operation of the driving means comprising a gear train and an air propelling member driven thereby, and means cooperating with the air-propelling member to cause it to blow smoke from the caps through the port.

2,457,922
NET
Herman V. Robinson, Thorsby, Ala.
Application August 7, 1946, Serial No. 688,941
2 Claims. (Cl. 43—12)

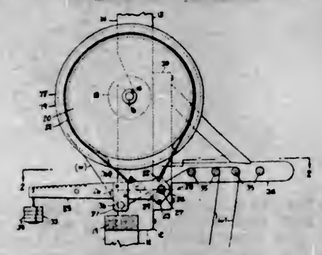


1. A fish net comprising in combination, a tube-like socket, a pair of parallel rods rotatably positioned in said socket and protruding at both ends therefrom, a pair of handles provided on the protruding ends of said rods at one end of said socket, the remaining end portions of said rods being arcuated and constituting complemental sections of a collapsible frame, a sack of netting secured to said frame, and means for restricting the rotation of said rods.

2,457,923
WARP BEAM LETOFF FOR LOOMS
Thomas M. Russell, Jr., Middletown, Conn., assignor to The Russell Manufacturing Company, Middletown, Conn., a corporation of Connecticut
Application August 26, 1947, Serial No. 770,707
5 Claims. (Cl. 139—109)

5. In a self-regulating section-beam let-off for looms: a frame; a section-beam; pivotal-means arranged to rotatably mount said section-beam on said frame; brake-means for said section-beam comprising a pair of brake-bands, a pair of brake-arms, a pivotal-member arranged to secure the forward ends of said brake-arms to said frame forwardly of the pivotal-means of said section-beam, and fastening-members arranged to secure the ends of said brake-bands to said brake-arms at points above and below respectively the median lines thereof and rear-

wardly of said pivotal-member; a warp-roller; means to secure said warp-roller to said brake-arms rearwardly of said brake-band fastening-members and below the median lines of said

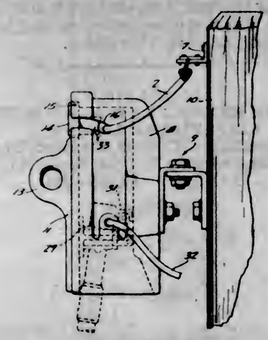


brake-arms the warp of said beam passing from the back side thereof under said roller forwardly to said loom; and a warp-tensioning weight supported at the rear end of each of said brake-arms.

2,457,924
PACKAGE
Leroy L. Salfisberg, South Orange, N. J., assignor to Ivers-Lee Company, Newark, N. J., a corporation of Delaware
Application March 8, 1945, Serial No. 581,598
2 Claims. (Cl. 206—56)

1. A dispensing package comprising opposed flat layers of tearable flexible packaging material sealed together along zones which form and bound an elongate compartment between said layers to receive articles closed at its ends and including a plurality of sections spaced longitudinally of said compartment which communicate with each other only through normally open passages between adjacent sections of such normal cross-sectional area as normally to prevent movement of the articles from one compartment section into another, said passages being formed by portions of said sealed zones extending from opposite sides of said compartment into the spaces between adjacent sections of said compartment and leaving portions of said layers unsealed and said sealed zones and said packaging material being of a nature that they may be deformed or stretched to increase the cross-sectional area of each passage and permit movement of an article therethrough upon exertion of outward pressure on the walls of said passage caused by the forcing of an article from an adjacent compartment section into said passage by application of squeezing pressure on the exterior of two opposite walls of said compartment section behind said article, whereby an endmost compartment section can be opened by tearing said packaging material outwardly of said section or between it and an adjacent section to permit removal of the article therefrom and accidental removal of the articles from the other compartment sections being prevented through said passages but deliberate removal of said articles being possible by squeezing them through said passages between the respective sections and said opened section or by tearing open the corresponding sections.

2,457,925
AERIAL CABLE CUTOUT
George C. Salmons and Lee J. Dornbos, Stroudsburg, Pa., assignors to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application March 17, 1947, Serial No. 735,196
4 Claims. (Cl. 200—114)

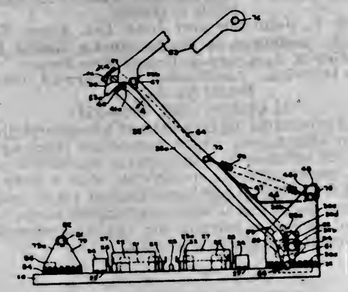


1. A cutout construction arranged to normally electrically connect an unbroken line conductor to a load conductor comprising an insulating housing having an open front and having slotted sides with the slots extending inwardly from the front edges of the sides and arranged to allow passage of the unbroken line conductor inwardly of the housing, an upper stationary terminal having fastening means for electrically connecting the unbroken line conductor to the upper stationary terminal, a lower stationary terminal electrically connected to the load conductor, cut-out means normally electrically connecting the upper and lower terminals, and a hinged door for said housing arranged to provide access to the fastening means of the upper terminal, said door having wings extending inwardly of said housing when said door is closed and arranged to close that portion of the slots not occupied by the said unbroken line conductor.

2,457,926
FILM LOADING DEVICE
Robert Sardeson and Edward H. Savela, Minneapolis, Minn., assignors to Pako Corporation, Minneapolis, Minn., a corporation of Delaware
Application July 10, 1944, Serial No. 544,278
18 Claims. (Cl. 95—100)

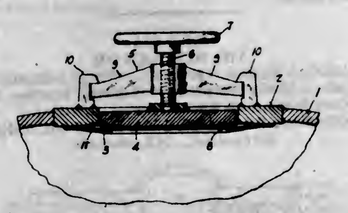
1. A loading device for placing films in a film hanger, which hanger has a plurality of gripping means each comprising pairs of gripping members resiliently urged into position for gripping said films at spaced points about their edges having in combination, a base, a plurality of spaced supports on said base adapted to have films laid thereon respectively with their flat sides engaging said supports, the edge portions of said films overhanging the edges of said supports respectively, resilient means on said base on which said hanger is placed in position substantially parallel to and above the plane of said films and

adjacent said films, abutment members on said base arranged to engage one of the members of each of said pairs, means movable toward said films and hanger and engaging said hanger constructed and arranged to exert pressure on said hanger and move the same parallel to said films to relatively move said members of each pair and separate the members of each of said pairs and to engage flex and move one of said members



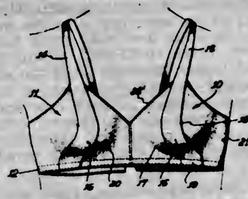
of each pair nearer said film, against, and past the edge portions of said films respectively, to cause said edge portions to be bent about said edges of said supports respectively and to be released and to snap back and be positioned between said members respectively so that said members will grip said films when said pressure is released by reverse movement of said third mentioned means.

2,457,927
CLOSURE FOR PRESSURE VESSELS
Charles M. Scudder, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application May 2, 1945, Serial No. 591,799
5 Claims. (Cl. 220—57)



1. A closure for a manway opening in the wall of a vessel or the like confining fluid under pressure, which comprises a reinforcing ring welded within the manway opening to reinforce the vessel adjacent said opening, a flexible plate-like ring member having its outer edge portion welded to the reinforcing ring and its inner edge portion freely disposed and projecting within the manway opening, a cover seated on said flexible ring and provided to close the opening in the vessel, and a bail assembly secured to said reinforcing ring and to the center of said cover to hold said cover seated on the flexible ring and flex the latter inwardly to pre-load the ring so that it follows the cover and maintains a seal therebetween as the cover yields outwardly under pressure from the fluid confined in the vessel.

2,457,928
BRASSIÈRE CONSTRUCTION
Zelta M. Silva, Los Angeles, Calif., assignor to Tichenor & Ferguson, Los Angeles, Calif., a partnership composed of Celfax C. Tichenor, E. Stirling Ferguson, and Mary L. Smith
Application February 25, 1946, Serial No. 649,834
2 Claims. (Cl. 2—42)



1. In a brassière made of flexible, compliant material and including a pair of preformed, breast-receiving pockets, a waist band and shoulder straps, the combination of: a strap section carried by and angularly traversing each breast-receiving pocket, each strap section traversing the upper portion of a pocket in a downward and inward direction from a zone of connection with a shoulder strap to a zone displaced inwardly from the apex of the pocket, then changing direction at said zone and traversing the lower portion of the pocket downwardly and outwardly to the waist band.

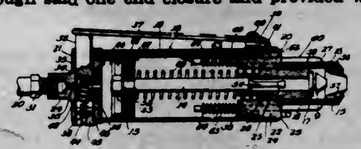
2,457,929
SAFETY ATTACHMENT FOR SHOTGUNS
James E. Slockbower, Ramsey, N. J.
Application February 5, 1946, Serial No. 645,619
2 Claims. (Cl. 42—70)

1. A safety attachment for shotguns comprising, in combination, a tubular housing open at the ends thereof, a downwardly extending bracket at one end of said housing, said bracket adapted to be secured to a gun stock, a slidable plunger extending into said one end of said housing, a push button at the outer end thereof and a transversely extending pin at the inner end of said plunger, a longitudinal slot in said housing, said pin protruding through said slot and engageable with the safety catch of a gun upon which the device is mounted, a retainer in the other end of said housing, and a compression spring extending between the inner end of said plunger and said retainer and normally holding said plunger and said associated catch in the locked position.

2,457,930
FLUID PRESSURE OPERATED DEVICE FOR INSERTING CUSHION PADS
Herbert A. Smith, Pasadena, Calif., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application July 17, 1944, Serial No. 545,376
4 Claims. (Cl. 29—235)

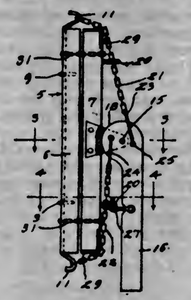
1. A portable device adapted to insert an oversized resilient cushion pad or like article into an

aperture in a structural part and comprising a cylinder with end closures, a nozzle connected fixedly to, and extending lengthwise of, the cylinder, disposed outwards of one of the end closures so as to define therebetween a pad receiving space, adapted to have the outer end thereof placed against the aperture defining portion of the structural part, and having a centrally disposed orifice the outer end of which is approximately the same in size as the aperture, a piston mounted in the cylinder to slide back and forth between the end closures, valve controlled means for introducing fluid under pressure into the end of the cylinder having the other endclosure in order to force the piston towards said one end closure, a piston rod having one end thereof connected to the piston and its other end extending slidably through said one end closure and provided with



a ram of less width than the orifice in the nozzle positioned in centered relation with said orifice and shaped and arranged so that after insertion of the pad into said space and placement of the outer end of the nozzle against said aperture defining portion of the part and in response to shift of the piston toward said one end closure and relatively to the cylinder, it operates to extrude the pad part way through the nozzle and into the aperture, and automatic piston actuated means whereby when the rod is slid by the piston to a position wherein the ram is disposed adjacent the outer end of the nozzle the piston, rod and ram are arrested and the nozzle and cylinder are caused to be shifted away from the structural part in order to extrude the remainder of the pad from said nozzle.

2,457,931
CLAMP
Zelmer E. Snow, Arvada, Colo.
Application May 7, 1947, Serial No. 746,497
4 Claims. (Cl. 24—243)



1. In a clamp of the character described, a pair of elongated bars forming clamping jaws, one of said bars being provided with a hook disposed beyond each end thereof, a lever having one end pivotally supported on the other bar and outwardly of the outer side thereof and a pair of flexible members having remote ends detachably connected to said hooks and engaging slidably over the outer end corners of the last mentioned bar or jaw and having opposite adjacent ends pivotally connected to the lever on opposite sides of and spaced from the lever pivot whereby said flexible members will be tightened when the lever is swung in one direction relatively to the jaws for drawing the jaws together and into clamping relationship.

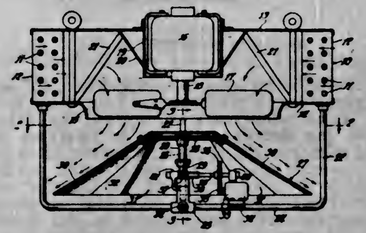
2,457,932
SALTS OF TOCOPHERYL PHOSPHORIC ACID ESTERS
Ulrich V. Solmssen and John Lee, Essex Fells, N. J., assignors to Hoffmann-La Roche Inc., Nutley N. J., a corporation of New Jersey
No Drawing. Application February 12, 1946, Serial No. 647,198
11 Claims. (Cl. 260—333)

1. A process of making salts of tocopheryl phosphoric acid esters, which comprises reacting an alcoholic solution of a tocopheryl phosphoric acid ester, under aqueous conditions, with a base selected from the group consisting of alkali metal, alkaline earth metal, and ammonium bases, said alcohol being a solvent for the corresponding tocopheryl phosphate acid salt.

2,457,933
PROCESS FOR ELECTROLYTIC REDUCTION OF PENTONIC ACID LACTONES
Hans Spiegelberg, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application January 18, 1946, Serial No. 642,111. In Switzerland November 10, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 10, 1964
10 Claims. (Cl. 204—77)

1. A process of reducing an inner lactone of a pentonic acid to a sugar which comprises subjecting an aqueous electrolyte containing a salt of a metal capable of forming an amalgam and containing said lactone to electrolysis treatment in an electrolysis cell, said reduction being effected at an amalgam cathode in said cell, and maintaining said electrolyte acid-responsive to Congo indicator throughout said reduction of the lactone to the sugar.

2,457,934
AIR DEFLECTOR
Benjamin Spieth, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application August 26, 1944, Serial No. 551,404
10 Claims. (Cl. 98—40)



1. In combination with a unit heater and a motor driven fan, a supporting frame carried by the unit heater, a spindle supported by said frame, a rotatory cone-shaped deflector whose axis is substantially coaxial with the axis of the motor shaft, and whose base is disposed in one and the same plane, said deflector having several cone

segments, some of which extend at a greater angle of inclination to the axis of the cone than others, and means to rotatably support the deflector on said spindle with its apex end disposed on the discharge side of the fan.

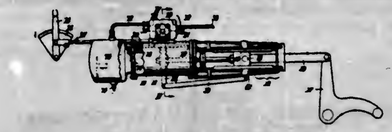
2,457,935
COLLAPSIBLE CHILD'S CARRIAGE
George A. Stackhouse, Oakland, Calif., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich.
Application May 4, 1945, Serial No. 591,923
16 Claims. (Cl. 280—41)

13. In a collapsible carriage, the combination with a running gear frame, of wheels, wheel hangers pivotally mounted on said frame, a collapsible handle, means for locking said handle in its erected and collapsed positions, operating connections for said handle to said wheel hangers whereby they are simultaneously actuated to wheel erecting and to wheel collapsing positions, and wheel supporting springs disposed in oppositely facing outwardly bowed relation with their upper ends connected to the said wheel hangers to swing therewith.

2,457,936
JET-POWERED LIFTING ROTOR FOR ROTARY WING AIRCRAFT
Edward A. Stalker, Bay City, Mich.
Application March 21, 1945, Serial No. 583,919
8 Claims. (Cl. 170—135.4)

1. In combination in a rotary wing aircraft, a hollow blade, means supporting said blade for rotation about an upright axis, said blade having a spanwise slot in its surface adapted to discharge a gaseous flow therethrough, a partition within said blade dividing the interior thereof into a plurality of ducts each having a portion of said slot as an exit, means to cause combustion in a said duct to raise the temperature of said air therein, and flap means on said blade associated with said duct in which combustion has taken place to provide increased flow area to accommodate the greater volume of flow of the heated air therethrough.

2,457,937
FLUID MOTOR WITH EMERGENCY SUPPLY RESERVOIR
Carleton K. Steins, Merion, and Harry A. Heke, Altoona, Pa., assignors to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 26, 1944, Serial No. 519,724
3 Claims. (Cl. 60—57)



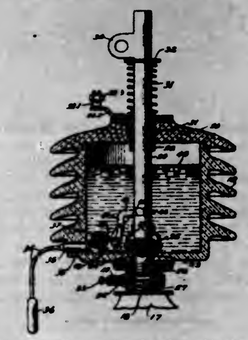
1. In a power reverse gear for steam locomotives and the like, a double-acting cylinder; control means for selectively controlling flow of pressure-fluid from a supply source to the opposite ends of the cylinder; a reservoir normally in communication with the pressure fluid supply source; and means incorporated in said control means automatically operative in the event of failure of the supply source, to trap pressure-fluid in the reservoir for availability in a number of subsequent emergency operations of the gear.

2,457,938
OPHTHALMIC MOUNTING WITH CONCEALED LENS-CARRYING AND NOSE-GUARD-CARRYING ARMS
Frederick A. Stevens, Providence, R. I.
Application March 23, 1946, Serial No. 656,548
1 Claim. (Cl. 88—42)

An ophthalmic mounting comprising a bridge member having an intermediate portion and two end portions respectively joined to the intermediate portion and depending therefrom, and two one-part arms each having upper and lower ends, the upper end only of one of the arms being connected to the bridge member in the neighborhood of the junction between the intermediate portion and one of the end portions, the upper end only of the other arm being connected to the bridge member in the neighborhood of the junction between the intermediate portion and the other end portion, the lower ends of the arms being disposed in the neighborhood of and to the rear of the lower ends of the respective end portions, the points of connection between the upper ends of the arms and the bridge member being disposed at the rear of the bridge member and the arms extending downward below their respective said points of connection behind the respective end portions to conceal the arms substantially completely behind the respective end portions of the bridge member when viewed from the front of the bridge member, the lower end of each arm being provided with a lens-carrying member and a nose-guard-carrying member, the lens-carrying members being secured to the outer side faces of the said lower ends of the said arms behind the lower portions of the respective end portions of the bridge, and a nose guard carried by each nose-guard-carrying member, the arms and the nose-guard-carrying members being bendable

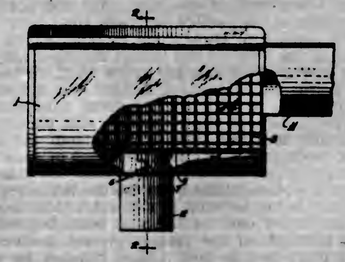
throughout their lengths to permit of a wide range of adjustment of the positions of the lens-carrying members and the nose guards while maintaining the arms substantially completely concealed behind the respective end portions.

2,457,939
HIGH-VOLTAGE SWITCH
Charles L. Streep, Oak Park, Ill.
Application December 15, 1944, Serial No. 568,279
8 Claims. (Cl. 200—140)



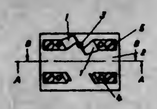
1. A cut-out device for high voltage transformers wherein the windings of the transformer are immersed in a body of oil, said cut-out device comprising an insulated hollow housing closed at both ends and containing an arc-quenching medium therein, a stationary contact located in the medial lower end of said housing and provided with upstanding spring contact clips, an elongated movable contact arm axially positioned in said housing and in alinement with said stationary contact, the upper end of said arm extending through and beyond the upper end of said housing, an axially positioned bearing in the upper end of said housing in which said contact arm is movable, spring means surrounding the portion of said arm extending beyond the upper end of said housing to normally urge disengagement of said contact arm and stationary contact, a keeper formed on said contact arm adjacent the lower end thereof, a latch bar located within said housing, one end thereof arranged to seat in said keeper, and temperature-responsive means for solely actuating said latch bar upon abnormal rise in temperature of the oil in the transformer.

2,457,940
GUTTER LEADER UNIT
Joseph W. Swenson, Summit, N. J.
Application August 14, 1946, Serial No. 690,493
4 Claims. (Cl. 108—28)



1. A gutter leader comprising a relatively deep chamber formed from suitable material and adapted to have a gutter enter an end of the chamber above the bottom thereof, a drain nozzle leading out of the bottom of the chamber, an expansible sleeve loosely fitting within the drain nozzle and projecting above the bottom of the chamber with means for determining the amount of projection, the sleeve fit being such as to pass water along the exterior surface of the sleeve into said nozzle, a strainer having a sectional view somewhat like a U and extending the length of the chamber with the bottom of the U positioned near the top of said sleeve with the arms of the U extending to lines near the top of the chamber.

2,457,941
THERMOCONTACT
Henrik Szabó, Stockholm, Sweden, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a company of Sweden
Application February 21, 1946, Serial No. 649,357
In Sweden March 16, 1945
1 Claim. (Cl. 200—142)

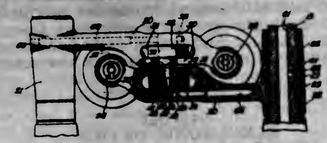


Thermocontact preferably for fire alarm installations comprising two bimetal strips, the inner ends of which are adapted to be fastened to a base or the like, each strip consisting of a long portion projecting from the base and a short portion projecting at an angle from said first mentioned portion, means in the form of an easily fusible metal alloy for soldering the outer ends of the short portions of the strips together, one of the strips, in its whole extent, being arranged on one side of a plane running between the ends which are soldered together and the other strip, in its whole extent, being arranged on the other side of said plane, and said long portions lying in different planes forming an angle with each other and running substantially perpendicular to said first mentioned plane.

2,457,942
GEAR CONSTRUCTION AND ARRANGEMENT
Rollin P. Van Zandt, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application April 16, 1947, Serial No. 741,818
2 Claims. (Cl. 74—432)

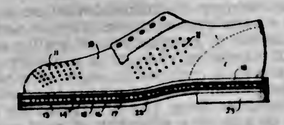
1. A cluster gear adapted to be mounted on a splined shaft comprising, separate gear parts having splined bores for reception of the shaft, and means for connecting said gear parts together including lugs on each gear part interengageable upon relative rotation of the parts to secure them against axial separation whereby the splined connection of the parts on the shaft will prevent their separation.

2,457,943
ROCKER ARM CONSTRUCTION
Jesse G. Vincent, Grosse Pointe, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 13, 1945, Serial No. 628,018
10 Claims. (Cl. 74—519)



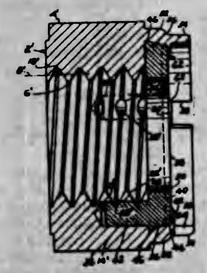
1. A rocker arm construction of the character described comprising an arm member, a cam-engaging roller, an axle supporting said roller and extending transversely of said arm member with the ends of the axle lying within the limits of the side faces of said member, means for holding the axle against endwise and rotational movement relative to said member and subjected to operational stresses, and axially extending means in said axle mounted substantially free of operational stresses for preventing dislodgement of said first-mentioned means.

2,457,944
VENTILATED SHOE
Andreas G. Vlastos, New York, N. Y.
Application July 10, 1947, Serial No. 759,932
8 Claims. (Cl. 36—3)



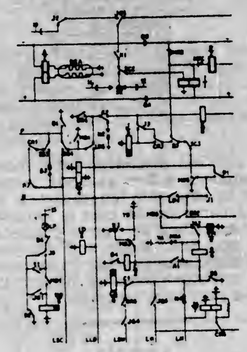
1. A shoe including an insole formed of open mesh netting, a slip-sole of flexible resilient plastic having channels open to the netting and open at the sole edge, a rubber sheet outside the slip-sole, a welt above the insole, stitches passing through the welt and the sheet, and a wear sole cemented to the rubber sheet.

2,457,945
SELF-LOCKING NUT MEANS AND THE LIKE
Adolph F. von Seden, Los Angeles, Calif.
Application March 2, 1944, Serial No. 525,185
3 Claims. (Cl. 151—7)



1. In a castellated nut of the class described, a body member, a threaded bore passing through said body member, a tapered recess at one end of said nut and extending into said body member, a plurality of sockets in said recess, extending into said body member and passing through a portion of said threads, an insert washer means having a plurality of longitudinally extending inserts and disposed in said tapered recess and said sockets, respectively, for engaging and pressing the cooperative threads of a screw when passing through the thread convolutions of said nut, a tapered annular edge at the inside section of said insert washer means for engaging the threads of cooperative screw, and ledge means at the outer edge of the wall of said recess for holding said last mentioned means in place.

2,457,946
TOLL METERING BY DISCRIMINATING SELECTOR REPEATERS
Reginald Taylor and George Thomas Baker, Liverpool, England, assignors to Automatic Electric Laboratories Inc., Chicago, Ill., a corporation of Delaware
Application December 11, 1944, Serial No. 567,552
In Great Britain February 16, 1944
9 Claims. (Cl. 179—9)



1. In a telephone system, a satellite exchange, a selector repeater including a two motion switch in said exchange, and local lines and metering equipments accessible to said switch, a main exchange line, a calling line connected to said repeater, said repeater operated to seize said main exchange line and operated in response to impulses received over said calling line to repeat them over said main exchange line and to operate said two motion switch, and discriminating means controlled by the primary movement of said switch for causing it to associate an idle metering equipment with said calling line when the main exchange line is desired or to extend the calling line over an idle one of said local lines and release the main exchange line.

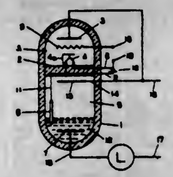
2,457,947
HIGH-FREQUENCY OSCILLATION TUBE
Albert G. Thomas, Lynchburg, Va.
Application December 21, 1942, Serial No. 469,602
11 Claims. (Cl. 250—27.5)

1. An electronic tube comprising, a cathode, an electron receiving element adjacent said cathode, a secondary emitting element on the opposite side of said cathode and at greater distance therefrom than said electron receiving element, an apertured electron accelerating element between said

secondary emitting element and said cathode and closely adjacent said secondary emitting element,

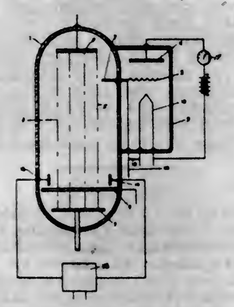
said electron receiving element and said secondary emitting element being electrically connected.

2,457,948
ELECTRON DISCHARGE DEVICE
Albert G. Thomas, Lynchburg, Va.
Application February 16, 1945, Serial No. 578,244
9 Claims. (Cl. 250—27.5)



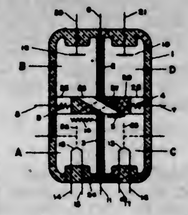
1. In an electron discharge tube, means forming two chambers, a first cathode, a grid, and a first anode in one said chamber; a pool type cathode, a second anode, and a control element in the other said chamber; an impedance element connecting said first anode and one terminal of said first cathode, and another impedance element connecting the other terminal of said first cathode and said pool type cathode.

2,457,949
COMBINATION BEAM SHIFT-GRID CONTROL TUBE
Albert G. Thomas, Lynchburg, Va.
Original application August 14, 1943, Serial No. 498,621. Divided and this application May 31, 1945, Serial No. 596,906
5 Claims. (Cl. 250—27.5)



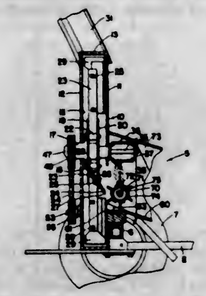
1. An electronic tube comprising, a first cathode, a first anode positioned to receive electrons from said first cathode, a second cathode spaced from said first cathode, a second anode positioned to receive electrons from said second cathode, grid means positioned intermediate said cathodes and said anodes for controlling electron flow between said first cathode and said first anode, and means intermediate said second cathode and said second anode for producing a field to shift the stream of electrons travelling from said second cathode to said second anode relative to said grid means to vary the potential thereof.

2,457,950
ELECTRONIC DEVICE
Albert G. Thomas, Lynchburg, Va.
Original application January 18, 1945, Serial No. 573,366. Divided and this application November 15, 1945, Serial No. 628,784
12 Claims. (Cl. 250—27.5)



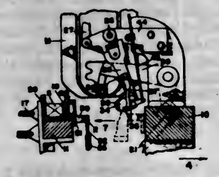
1. In an electron discharge device, an envelope, partition means with openings therein and forming a plurality of compartments within said envelope, an anode in each of a plurality of said compartments, a cathode in each of a plurality of said compartments, and means for controlling flow of electrons from any of a plurality of said cathodes to any of a plurality of said anodes.

2,457,951
ROTARY FEED CUTTER WITH SHEAR BAR ARRANGED ON A CHORD
Miles H. Tuft, Lancaster, Calif., assignor, by mesne assignments, to Deere Manufacturing Co., a corporation of Iowa
Original application May 11, 1942, Serial No. 442,563. Divided and this application August 30, 1944, Serial No. 551,933
14 Claims. (Cl. 146—112)



3. In a rotary cutting machine of the class described, the combination of a relatively stationary shear member having a main cutting edge along one side thereof, said shear member having a plurality of laterally spaced ridges extending generally transversely of said cutting edge along the surface which receives the material to be cut, said ridges terminating in cutting edges disposed in a plane with said main cutting edge and in angular relation therewith, a rotary chopping member having cutting edges movable substantially in said cutting edge plane, and a feed roll disposed adjacent said cutting edges and spaced from said material receiving surface to provide for passage of material between said roll and said surface toward said cutting edge but spaced therefrom a distance less than the height of said ridges, said roll being notched to receive the latter in intermeshing relation.

2,457,952
PNEUMATIC THREAD CONTROL FOR LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application May 4, 1946, Serial No. 667,411
19 Claims. (Cl. 139—256)

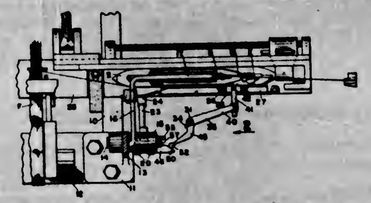


1. In a weft replenishing loom having a lay along which a thread extends from a depleted shuttle to the adjacent selvage, cutter and clamp mechanism between the selvage and shuttle effective to cut said thread and clamp the part thereof extending from the mechanism to the selvage, a selvage cutter effective to sever said part of the thread at the selvage subsequent to clamping thereof, whereupon said part of the thread depends from the cutter and clamp mechanism, and a pneumatic thread remover on the lay traversing a path below said cutter and clamp mechanism and into which the lower end of said part of the thread is drawn pneumatically subsequent to cutting at the selvage while still held by said mechanism, the latter subsequently releasing said part of the thread and the latter then being drawn into said pneumatic remover.

14. In thread cutter and clamping mechanism for two vertically spaced threads in a loom, cutter and clamp means movable in one direction with respect to the mechanism for action on the lower one of said threads, and an auxiliary cutter moving with and located above said cutter and clamp means and movable in the opposite direction with respect to the mechanism for cutting the upper one of said threads.

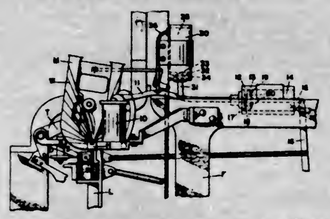
2,457,953
THREAD CUTTER FOR WEFT REPLENISHING LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application April 2, 1947, Serial No. 738,884
10 Claims. (Cl. 139—263)

4. In a filling cutter mechanism for a weft replenishing loom, a member moved forwardly by the lay during a replenishing operation of the loom, a pivot located at one side of the path of movement of the member, a lever on the pivot having a cutter element located thereon on that side of the pivot opposite to the member and having an arm extending toward said path of the member, resilient means urging the arm toward said member and causing said lever to turn to effect rearward movement of the cutter element as the member moves forwardly, and means on



the member having an inclined surface located forwardly of said pivot and engaging said arm and effective during forward movement of the member to enable the resilient means to move the arm forwardly at instantaneous rates of motion greater than the corresponding instantaneous rates of motion of the member.

2,457,954
PNEUMATIC THREAD HOLDER FOR WEFT REPLENISHING LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application October 1, 1947, Serial No. 777,305
6 Claims. (Cl. 139—247)

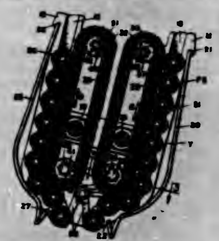


1. In a pneumatic control for the weft ends of reserve bobbins in a weft replenishing loom, storage means for air under subatmospheric pressures, a pneumatic holder for the weft ends, an air pump, hollow means of relatively large internal cross sectional area interconnecting the air pump, storage means and pneumatic holder, the pump effective on a working stroke thereof to create subatmospheric pressures within the storage means and pneumatic holder, and hollow pneumatic means of relatively small internal cross sectional area connecting the storage means and pneumatic holder enabling the subatmospheric pressures created within the storage means by said pump to create subatmospheric pressures within the pneumatic holder subsequent to completion of said working stroke.

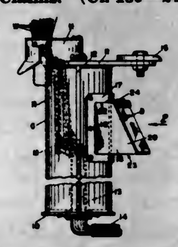
2,457,955
THREAD CONTROL FOR BOBBINS IN MAGAZINES
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application October 18, 1947, Serial No. 780,673
7 Claims. (Cl. 139—247)

7. In a weft replenishing loom magazine formed with a guideway down which reserve bobbins

wound with conical ended weft packages move by gravity toward transfer position, a belt having a flexible endless band supporting a mass of deformable fibers part of which extend along the guideway in frictional contact with the adjacent parts of the conical ends of the weft packages, and roll means rotatable on the magazine and around which the band extends, the bobbins when descending along the guideway causing the parts of the mass of fibers in engagement therewith to move down along the guideway and cause the band to move around and rotate said rolls.



2,457,956
THREAD CUTTER FOR PNEUMATIC THREAD RECEIVERS FOR LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application October 25, 1947, Serial No. 782,133
14 Claims. (Cl. 139—247)

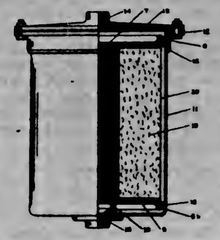


1. In a pneumatic thread control system for the weft ends of reserve bobbins in a weft replenishing loom, a hollow collector into which the weft ends are drawn by subatmospheric pressures which exist normally within the collector, a normally closed door on the collector which when open affords access to the interior of the collector and through which the weft ends can be drawn manually, and cutter means supported by the collector adjacent to the door to cut the weft ends after the latter have been drawn through the door.

2,457,957
INSECTICIDAL COMPOSITION OF PYRETHRINS AND 3,4-OXYMETHYLENE-PHENYL-1-BUTYLGLYCOL SYNERGIST
Herman Wachs, Brooklyn, N. Y., assignor, by mesne assignments, to U. S. Industrial Chemicals, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application March 25, 1946, Serial No. 657,064
4 Claims. (Cl. 167—24)

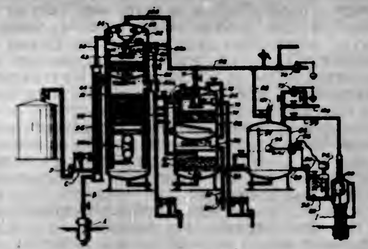
1. An insecticidal composition the active insecticidal ingredients of which comprise pyrethrins and as a synergist therefor, 3,4-oxymethylene-phenyl-1-butylglycol.

2,457,958
FILTER
Earl C. Walker, Altadena, Calif.
Application February 7, 1945, Serial No. 576,522
6 Claims. (Cl. 210—169)



1. A filter unit comprising: a plurality of sectoral elements each having integrally joined permeable side and end walls but open at its base, said sectoral elements joined edge to edge along the side margins of their bases and rolled into a hollow cylinder whereby the side walls of adjacent sectoral elements are in contiguous mutually supporting relation and the open bases of said sectoral elements are directed radially outward; and sealing means closing the axial ends of said cylinder.

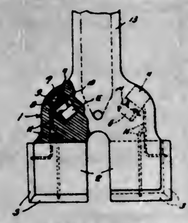
2,457,959
FILTERING TANK FOR WATER DISPOSAL SYSTEMS
Jay P. Walker, Tulsa, Okla., assignor to National Tank Company, Tulsa, Okla., a corporation of Nevada
Application January 19, 1942, Serial No. 427,330
3 Claims. (Cl. 210—49)



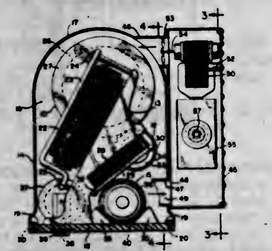
1. A filtering tank for a salt water disposal system including, an upper chamber having a water inlet, a lower chamber, a pressure equalizing pipe extending from the upper chamber to the lower chamber, a filter in the upper chamber, means for maintaining a water level in the upper chamber, a filter bed in the lower chamber, a water discharge pipe leading from the upper chamber from below the filter therein and discharging in the lower chamber above the filter bed therein, and a water discharge pipe leading from the lower chamber below the filter bed thereof.

2,457,960
DRILL BIT
William E. Walker, Houston, Tex.
Application June 15, 1944, Serial No. 540,405
3 Claims. (Cl. 255—61)

1. In a drill bit including cutting edges, a closed container mounted on said bit and containing an indicating material, there being a communicable passage extending from said container and terminating at a point within said cutting edges, an explosive cooperatively associated with said container, a source of electric current carried by said bit and grounded to the latter, an ignitible element operatively associated with said explosive and electrically connected to said source, and a conductor insulated from said bit extending through said passage and having one end connected to said ignitible element and its other end positioned in the termination point of said passage, whereby wearing away of the cutting edges to an extent such as to remove the insulation from the end of the conductor complemental thereto and bring said conductor into electrical contact with said bit causes the ignitible element to ignite the explosive and upon the ignition of the explosive to open the container and discharge the indicating material into the surrounding hole.

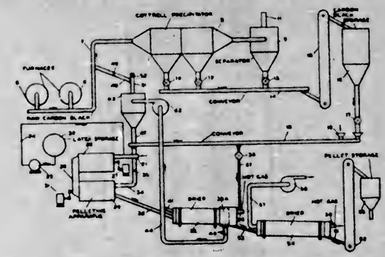


2,457,961
X-RAY UNIT
Bruno F. Wehmer, Melrose Park, Ill., assignor to The Wm. Meyer Company, Chicago, Ill., a corporation of Illinois
Application September 26, 1946, Serial No. 699,534
2 Claims. (Cl. 250—89)



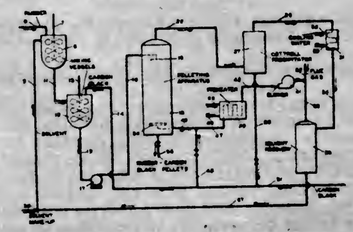
1. An X-ray unit comprising, in combination, an X-ray tube, transformer means having high and low voltage windings for providing operating potentials to said tube, said X-ray tube having cooling fins thereon, a main housing for said X-ray tube and transformer means, said main housing having a Sylphon type expansion-compensating bellows therein including means providing a passage communicating with external atmospheric pressure, an auxiliary housing on one side of the main housing and provided with two fluid flow passages communicating with the main housing, one of said fluid flow passages being adjacent the cooling fins on the X-ray tube and the other being adjacent the high voltage winding of the transformer means, said main and auxiliary housings together providing a liquid-tight container and being substantially filled with an electrical insulating heat-conveying liquid, a cooling radiator mounted in said auxiliary housing and having connections for the flow of coolant therethrough, and electrically driven impeller means mounted in said auxiliary housing for effecting flow of said heat-conveying liquid from the main housing through the passage adjacent the cooling fins and into the main housing through the passage adjacent the high voltage winding of the transformer means so that said cooling radiator cools the heat-conveying liquid intermediate said passages in said auxiliary housing.

2,457,962
AGGLOMERATION OF POWDERED MATERIAL
Thomas H. Whaley, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application February 19, 1945, Serial No. 578,738
5 Claims. (Cl. 260—766)



2. The process of making a carbon black product which comprises wetting dry flocculent carbon black with latex, forming the wetted carbon black into pellets, contacting said wet pellets with further dry flocculent carbon black, contacting the pellets containing latex with heated dry gas at a temperature within the range of about 300° F. to about 500° F. for a period of time sufficient to remove the major portion of the water therefrom, and contacting the partly dried pellets with a second stream of dry gas at a temperature within the range of about 200 to about 300° F. for a period of time sufficient to remove substantially all of the remaining water therefrom.

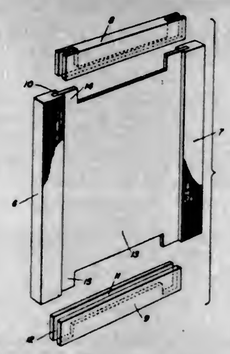
2,457,963
PELLETING CARBON BLACK
George Thodos, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 21, 1946, Serial No. 642,447
5 Claims. (Cl. 18—1)



1. A process for the production of small discrete particles of carbon black and rubber comprising spraying a slurry of carbon black in a solution of rubber axially and at a central point into the inlet end of a cylindrical contacting zone having an inlet end and an outlet end with re-

spect to flow of said carbon black and rubber, maintaining a helically moving hollow cylindrical layer of hot gas and flocculent carbon black adjacent the cylindrical wall of said zone and surrounding said sprayed slurry of carbon black and rubber and removing dry discrete particles of carbon black and rubber containing a surface layer of carbon black.

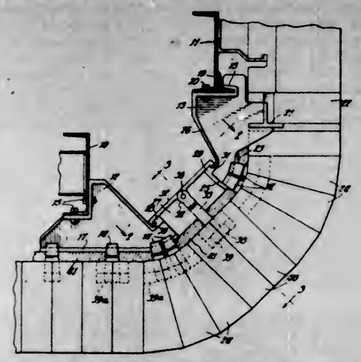
2,457,964
PANELLING CONSTRUCTION
John McCord Wyche, Hugo, Okla.
Application September 8, 1945, Serial No. 615,141
1 Claim. (Cl. 20—15)



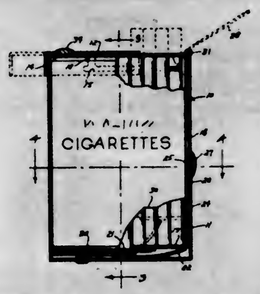
A panel construction comprising a pair of side frame members provided with longitudinal inner edge grooves therein extending from end to end thereof and being of uniform depth respectively, a rectangular panel having straight sides of the same length as said members fitting in said grooves flush with the ends of said members and formed with rectangular extensions at the corners of the panel projecting in part out of said grooves, and top and bottom frame members fitting between said side members and formed with longitudinal inner edge grooves fitting over said panel between the corner extensions, said top and bottom frame members having transverse through end grooves therein fitting over the projecting parts of said extensions.

2,457,965
REPLACEABLE FURNACE ARCH NOSE CONSTRUCTION
William George Young, Chicago, Ill., assignor to Chicago Fire Brick Company, a corporation of Illinois
Application October 30, 1944, Serial No. 561,081
7 Claims. (Cl. 110—99)

1. A nose arch construction for furnaces, comprising a supporting framework including pairs of oppositely disposed supporting castings having tile supporting means thereon, wedge shaped tile carried by said means at the adjacent ends of the castings, each casting of a pair having a shelf thereon, a bar resting on the shelves and providing a bridge between the two castings of a pair, a tile hanger suspended from the bar, and nose tile carried by said hanger and removably mounted thereby between the wedge shaped tile carried by the opposite castings of a pair of said supporting castings, the wedge shaped tile having their axes disposed at an angle with respect to each other, the said nose tile being as small in cross section at the furnace end as they are intermediate the ends whereby they may be lifted out by raising the bar from said shelves.



2,457,966
DISPENSING CIGARETTE CASE
Joseph P. Zaidan, Philadelphia, Pa.
Application November 6, 1946, Serial No. 708,127
2 Claims. (Cl. 206—41.2)

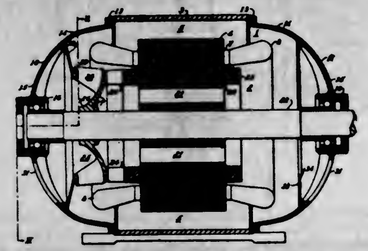


1. A cigarette case of the kind described comprising a body having an open upper end, an L-shaped ejector in said body on one side thereof, resilient means constantly urging said ejector upwardly in said body, a sliding cover on one side of said body opposite from said ejector, a hinged cover on the upper end of said ejector, said hinged cover partially underlying said sliding cover in the closed position thereof whereby said ejector is restrained in said case in the closed position of said sliding cover and is urged upwardly to extend from said case upon sliding of said sliding cover to the open position.

2,457,967
HIGH VELOCITY MOTOR VENTILATION
Ward D. Abbott, Orchard Park, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 21, 1946, Serial No. 711,328
10 Claims. (Cl. 171—252)

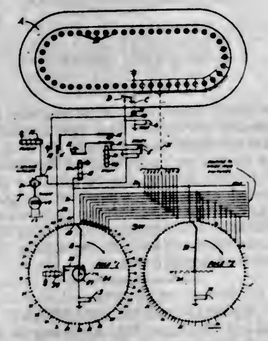
1. A dynamo-electric machine comprising a stator-member and a rotor-member, said stator-member having a stator-frame and a stator-core supported by the stator-frame, the stator-frame

comprising an outer enclosure-member spaced radially from the major portion of the outer periphery of the stator-core and thus defining a plurality of axially extending stator-ventilating ducts which admit of an axial airflow over the stator-core from one end of the core to the other, and a stator-winding carried by the stator-core; two perforated brackets mounted on the stator-frame, one at each end; bearings carried by said perforated brackets; said rotor-member having a rotor-core having a plurality of axially extending rotor-ducts, and having a shaft which



is supported by said bearings; characterized by said rotor-member having internal blower-means for producing an end-to-end flow of cooling air, entering the machine through one perforated bracket, passing through said axially extending stator-ventilating ducts, and leaving the machine through the other perforated bracket, and also having internal blower-means for recirculating air through the rotor-ducts and the same stator-ventilating ducts in such direction that both the end-to-end airflow and the recirculation are in the same direction in said stator-ventilating ducts.

2,457,968
AUTOMATIC PACING SYSTEM
Charles C. Allen, River Forest, and Jacques J. Filliung, Jr., Chicago, Ill.; said Filliung assignor to said Allen
Application October 5, 1946, Serial No. 701,604
9 Claims. (Cl. 177—337)



1. In an automatic pacing system for pacing racers or the like on a race course, signals spaced along said race course, means for operating said signals in successive order, and at a rate that is variable at different portions of said race course, means at the starting line for initiating the operation of said signals when the racer starts the race, and means for stopping the operation of said signals after the last signal is operated independent of the position of racer on the race course.

2,457,969
ROTATION DEVICE FOR ROCK DRILLS
James H. Anderson, Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application March 28, 1947, Serial No. 737,898
3 Claims. (Cl. 121—7)

1. In apparatus of the character described, a casing having a piston chamber, a reciprocatory piston therein, a fluid actuated oscillatory member in the casing having a plurality of radially extending vanes, a plurality of wings on the casing to define pressure chambers for the vanes, passages in the casing for conveying all of the exhaust fluid from the piston chamber to the pressure chambers for actuating the member, atmospheric exhaust ports in the casing for the pressure chambers controlled by said vanes, a chuck rotatable within the member, a working implement in the chuck to receive the blows of the piston, and means for connecting the chuck intermittently with the said member for rotating the chuck during movement of the member in one direction.

2,457,970
PROCESS FOR PRODUCING MICROSPHERICAL SILICA GELS
James C. Ballie, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application August 11, 1945, Serial No. 610,404
8 Claims. (Cl. 252—259)

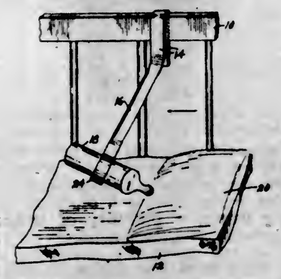
1. The process of preparing strong microspherical silica catalysts, substantially free of alkali metal, which comprises removing the alkali metal from an alkali metal silicate solution containing about 2 to 10 per cent SiO_2 by passing said alkali metal silicate solution into contact with an ion exchange resin having the power of combining with alkali metal ion, dispersing the resulting silica solution substantially free of alkali metal in a stream of a dehydrating gas whereby the solution is formed into droplets and the drop-

lets are suspended in said gas, maintaining the said droplets in suspension for sufficient time to permit said silica to gel in microspherical form and drying said microspherical gel particles while in suspension in said gas and out of contact with solid surfaces.

2,457,971
SILICA SOL
Vanderveer Voorhees, Homewood, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application November 29, 1945, Serial No. 631,768
5 Claims. (Cl. 252—313)

1. The process of making substantially alkali metal-free silica sol from an alkali metal silicate solution which comprises adjusting the concentration of said solution to an SiO_2 content of between about 10 and about 30 per cent and contacting said solution with an ammonium ion exchanger by flowing said solution thru a mass of said exchanger in granular form.

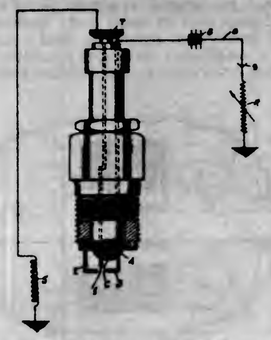
2,457,972
NURSING BOTTLE HOLDER
Lillian D. Bailey, Leominster, Mass.
Application August 14, 1946, Serial No. 690,401
1 Claim. (Cl. 248—103)



An article of manufacture comprising an elongated flat strip of relatively, stiff but resilient material, such strip having an integral hook at one end thereof in form of an inverted U, the arms of the U being parallel, one arm of the U being free ended and the other arm of the U continuing in an extension down away from the arms of the U at an angle thereto, said continuing extension terminating in a closed expansible loop having a free end overlapping the strip material so that the loop is closed even though expanded to a considerable extent, said loop being disposed well below the U-shaped hook to depend into an enclosure with the hook supported above the loop on a vertical support, whereby the angled extension must lie at an angle to the vertical support to hold a nursing bottle in horizontal spaced relation to the vertical support.

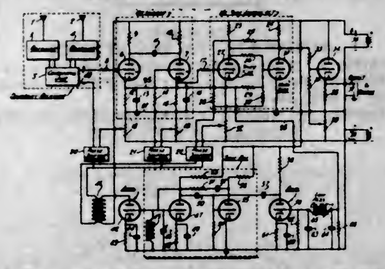
2,457,973
IONIZING MEANS AND METHOD OF IONIZATION
Marietta Blau, New York, N. Y., assignor to International Rare Metals Refinery, Inc., New York, N. Y., a corporation of New York
Application August 31, 1945, Serial No. 613,869
6 Claims. (Cl. 315—111)

1. A spark plug which has an insulating core and a pair of firing electrodes which are separated by a spark gap, a radium cell fixed to said core, said cell producing a gaseous decay product of radium which disintegrates to produce successive ionizing decay products which include radium A, radium B, and radium C, said cell being permeable to said gaseous decay product, a conductive collector fixed to said core, means for impressing a



sufficient negative potential on said collector to collect ionizing decay products resulting from the disintegration of said gaseous decay product upon the surface of said collector, said collector being sufficiently close to said spark gap to ionize the medium therein by means of said collected ionizing decay products.

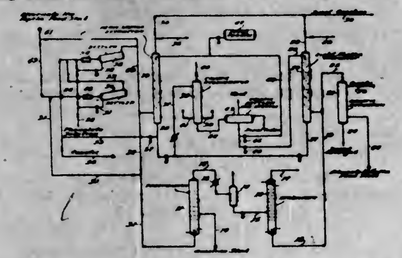
2,457,974
PULSE TYPE TELEGRAPH RECEIVER
Warren H. Bliss, Orono, Maine, assignor to Radio Corporation of America, a corporation of Delaware
Application June 17, 1943, Serial No. 491,088
20 Claims. (Cl. 178—88)



1. In a pulse communication system, a receiver having means for collecting the incoming pulse signals, an electron tube trigger circuit, an audio frequency oscillator operating at the fundamental pulse frequency, means for combining the output of said local oscillator with the output of said receiver and applying the resultant wave to said trigger circuit, said means including a phasing circuit, and means for synchronizing said oscillator from said trigger circuit.

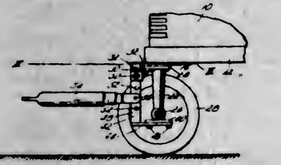
2,457,975
REMOVING MERCAPTANS
John A. Bolt, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application March 9, 1944, Serial No. 525,663
7 Claims. (Cl. 196—33)

1. The process of removing mercaptans from a sour light naphtha substantially free of phenols which comprises continuously contacting said light naphtha with a caustic alkali solution containing phenols as a solutiser sufficient to substantially increase the solubility of mercaptans therein, thereby extracting mercaptans from said naphtha and simultaneously decreasing the concentration of phenols in said caustic solution owing to the distribution of phenols between said caustic solution and said naphtha, separating said caustic solution from said naphtha, re-



moving mercaptans from said caustic solution thereby regenerating it for further use, recycling said regenerated caustic solution to the naphtha extraction step and controlling the phenols concentration of said caustic solution by contacting a regulated portion of it with a stream of heavy naphtha containing a substantially higher concentration of phenols than said light naphtha first mentioned, and returning the said portion to the light naphtha contacting cycle.

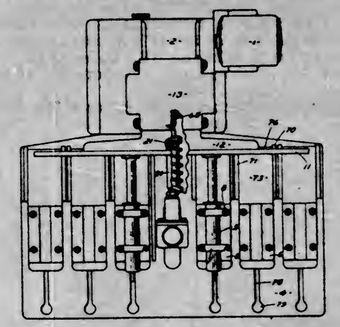
2,457,976
TRACTOR HITCH
Clyde E. Clapper, Kansas City, Mo.
Application February 10, 1947, Serial No. 727,662
5 Claims. (Cl. 280—33.5)



1. In combination with a tractor having a front axle carried by a rotatable vertical steering stem extending downwardly from the frame of said tractor, a tractor hitch comprising a vertical member rigidly connected at its upper and lower ends with said stem, means for adjusting the effective vertical length of said member, and means for attaching a drawbar to said member, at a variable elevation thereon.

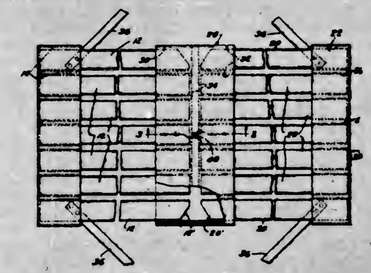
2,457,977
CONTINUOUS INJECTION MACHINE
Leonard T. Cookson, Kalamazoo, Mich., assignor to The Upjohn Company, Kalamazoo, Mich., a corporation of Michigan
Application October 27, 1945, Serial No. 625,658
9 Claims. (Cl. 128—218)

1. In a machine for actuating a plurality of syringes, the combination comprising: a source of rotary motion; means for selectively reducing the velocity of said rotary motion and translating it into lineal motion; a cross-head mounted for reciprocating motion; means responsive to said lineal motion effecting movement of said cross-head; means for individually mounting said plurality of syringes for independent and dissimilarly timed cooperation with said cross-head including a plurality of platforms mounted for selective adjustment axially of said syringes; means for individually, and releasably locking said platforms against such axial movement and



means for mounting a syringe on and demounting same from each of said platforms, all so arranged and constructed that the syringes may be individually actuated at predetermined separate periods and may be individually mounted or demounted all without interfering with the movement of said cross-head.

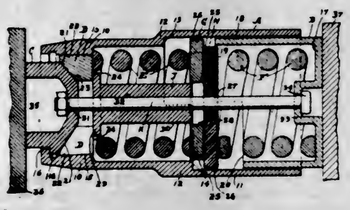
2,457,978
SELF-OPENING COLLAPSIBLE CHAIR
Frank J. Curran, Hinsdale, Ill.
Application September 25, 1946, Serial No. 699,111
1 Claim. (Cl. 155—153)



A collapsible chair of the character described having a back and a seat, the back being formed of parallel slats, the seat being formed of parallel slats, a member formed of flexible material and disposed between the rear ends of the seat slats and the lower ends of the back slats, said member being formed to provide pockets receiving the ends of said slats, the lateral slats of the seat and back at their adjoining ends being angularly cut away inward from the outer edges of the slats to permit these lateral slats to be turned into angular relation with their companion slats, means flexibly connecting the upper ends of the back slats, means flexibly connecting the outer ends of the seat slats, flexible straps connected to the upper ends of the lateral back slats and the forward ends of the lateral seat slats, a coiled spring member disposed between the lower end of a back slat and the inner end of a seat slat, said spring having legs, one leg extending for a

distance behind the back slat and the other leg extending for a distance below the seat slat, then through openings in the slats and then parallel with and slidably held against the forward face of the back slat and the upper face of the seat slat.

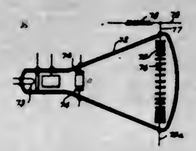
2,457,979
FRICTION SHOCK ABSORBING MECHANISM FOR RAILWAY DRAFT APPLIANCES
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application September 30, 1946, Serial No. 700,317
5 Claims. (Cl. 213—34)



1. In a friction shock absorbing mechanism, the combination with a friction casing; of a friction clutch slidingly telescoped within the front end of the casing; a spring follower member slidingly telescoped within the rear end of the casing, said follower being movable inwardly of the casing to a predetermined extent less than the full compression stroke of the mechanism; front and rear springs within the casing yieldingly opposing relative movement of said clutch and spring follower member toward each other; a follower plate engaging the rear end of said front spring; a second follower plate engaging the front end of said rear spring, said follower plates being normally in engagement with each other to transmit the force from one spring to the other to effect compression thereof in series during movement of said spring follower member inwardly of the casing to said prdetermined extent; stop means on said spring follower member engaged by said first named follower plate after said spring follower member has been moved inwardly of the casing to said predetermined extent to arrest relative movement of said first named follower plate and spring follower member, said front spring being compressed between the clutch and the first named follower plate upon inward movement of the clutch with respect to the friction casing; and pressure transmitting means movable inwardly of the friction casing with said clutch and engageable with said second named follower plate after said spring follower member has been moved inwardly of the casing to said predetermined extent to move said second named follower plate toward said spring follower member to compress said rear spring in tandem with said front spring.

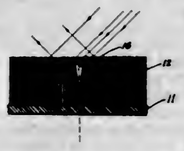
2,457,980
METHOD OF AND APPARATUS FOR BUNCHING ELECTRONS
Lee de Forest, Los Angeles, Calif.
Application September 1, 1944, Serial No. 552,265
8 Claims. (Cl. 315—21)

1. In a device of the character described, the combination of: a substantially circular conductor; a plurality of oscillators mounted on and spaced along said conductor; means for producing



a cathode beam; and means for causing said beam to impinge upon said oscillators in sequence.

2,457,981
CATHODE BEAM TUBE
Lee de Forest, Los Angeles, Calif.
Application November 24, 1944, Serial No. 564,973
3 Claims. (Cl. 250—164)

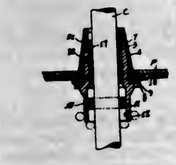


1. A light valve for a cathode beam projection tube, comprising: a large number of light-transparent, parallel flexible fibres of uniform dimensions; and electronic means adapted for so displacing a portion of said fibres relative to the other of said fibres that the transference of light through said displaced fibres is impaired.

2,457,982
METHOD OF PRODUCING BUILDING PANELS
Otto A. Deichmann, San Francisco, Calif.
Application December 9, 1942, Serial No. 468,441
1 Claim. (Cl. 25—154)

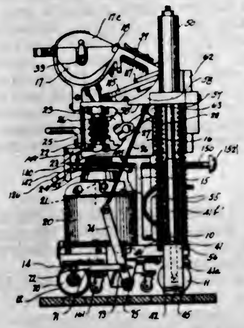
The method of applying spaced coatings to a horizontal prefabricated building panel having spaced studs with a layer of open mesh lathing attached to the lower sides of said studs and grounds connecting each of the adjacent ends of the studs and extending below said lower sides and said lathing; consisting in laying said panel with the grounds engaging a horizontal casting platform for spacing said studs and lathing thereabove and with side forms on all sides thereof resting on said platform; then flowing plaster through said lathing against the platform, the grounds and the side forms until said lathing is embedded in the plaster; then attaching an impervious covering material with a superimposed layer of open mesh lathing to the upper sides of the studs; and then flowing plaster through the last-named lathing and against the impervious material and the side forms until the last-named lathing and the upper sides of the studs are embedded in the plaster applied thereto.

2,457,983
PRESSURE-TIGHT GROMMET
Jan de Swart, Los Angeles, Calif., assignor, by mesne assignments, to Shellmar Products Corporation, Mount Vernon, Ohio, a corporation of Delaware
Application December 12, 1944, Serial No. 567,862
15 Claims. (Cl. 285—6.5)



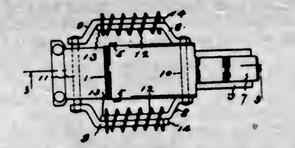
1. A pressure-tight grommet, comprising: an element having a plurality of expansible tongues; a conduit; a tubular member adapted to expand said tongues and having an abutment flange adapted to co-act with said tongues to secure a plate therebetween; means adapted to secure said element and said tubular member together; a sealing member interposed between said plate and flange; and a sealing means interposed between said tubular member and conduit.

2,457,984
FLOOR NAILING MACHINE
Daniel J. Dougherty, Snohomish, Wash., assignor of forty-nine one hundredths to Oscar A. Gregorson, Seattle, Wash.
Application August 21, 1945, Serial No. 611,826
6 Claims. (Cl. 1—46)



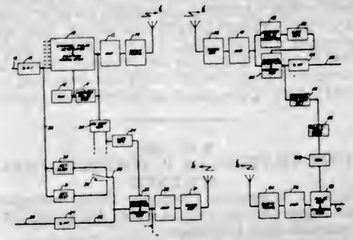
1. A floor nailing machine comprising a base, rollers supporting said base for its straight line travel across a floor, a motor on the base, a shaft continuously driven by the motor, a clutch operable by the driven shaft to drive one of the rollers to cause intermittent advance movements of the base across a floor and means to cause the clutch to effect movements of alternate short and long intervals of definite length, nail driving means on the base, and devices operated by said driven shaft to effect a nail driving operation following each advance movement of the base.

2,457,985
CLOSURE FASTENER
Louis M. Dyson, New Britain, Conn.; Beatrice N. Dyson, administratrix of said Louis M. Dyson, deceased, assignor to The American Hardware Corporation, New Britain, Conn., a corporation of Connecticut
Application February 2, 1945, Serial No. 575,810
10 Claims. (Cl. 292—247)



1. A closure fastener which comprises a catch, a shackle member, and a loop pivoted thereto and extending to engage said catch; said loop comprising a pair of oppositely disposed U-shaped portion with the side extensions thereof in sliding relation at opposite sides of said shackle member, and spring means between the ends of and abutting said extensions for urging said portions to shorten said loop and thereby draw the catch towards the shackle member.

2,457,986
SYNCHRONIZATION OF TIME DIVISION MULTIPLEX COMMUNICATION SYSTEM
James O. Edson, Great Kills, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 11, 1945, Serial No. 634,359
15 Claims. (Cl. 250—9)

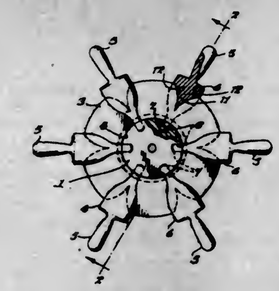


1. In a system for two-way communication between a main station and a plurality of substations by time division multiplex, the method of regulating the time of transmission from each substation to prevent interference between the channel pulses from the respective substations received at the main station which comprises, transmitting from the main station for each channel a pulse having a characteristic proportional to the time position of the received pulse of that channel, and regulating the transmission from each respective substation in accordance with said characteristic of the respective pulse received from the main station.

2,457,987
HELM WHEEL
Joseph Egedi, Buffalo, N. Y.
Application April 7, 1947, Serial No. 739,874
3 Claims. (Cl. 114—160)

1. A helm wheel comprising a hub, a plate constituting the body of the wheel and having a central opening by means of which it is fitted closely upon the perimetric surface of the hub,

the plate being substantially co-planar with the central plane of the hub and the hub being provided with radially extending sockets open to its perimetric surface, and radially extending spoke elements provided at their outer ends with handles and at their inner ends with axial extensions secured in the sockets with a close fit, the spoke elements being each provided in a central longitudinal plane with a recess which in the lateral dimension is of diametric extent and in the longitudinal dimension extends from a point suitably inward of the handle to and through the exten-



sion, the plate having a close fit in the recesses of the spoke elements, the spoke elements have side portions which provide the side walls of the recesses and the recesses being so formed as to provide webs which project radially inward from the parts of the spoke elements which are of continuous cross section, the plate having recesses open to its perimetric face and which conform in dimensions and outline to the webs and the webs having a close fit within the recesses of the plate, the sockets being substantially symmetrical to the central plane of the plate as fitted upon the hub.

2,457,988
PREPARATION OF P-ACETYLPHENYL ACETATE
William S. Emerson, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application April 6, 1946, Serial No. 660,311
2 Claims. (Cl. 260—479)

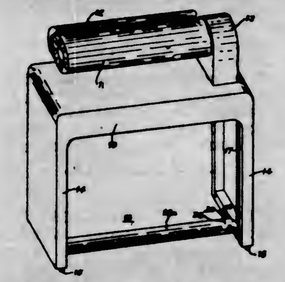
1. A method of preparing p-acetyl-phenyl acetate which comprises contacting p-ethyl-phenyl acetate with oxygen at a temperature above the boiling point of water in the presence of a catalyst consisting of from 80 to 20 parts by weight of chromium oxide and 20 to 80 parts of cobalt hydrate, the reaction being conducted under conditions such that the gaseous reaction products are immediately removed from the reaction zone.

2,457,989
BRASSIÈRE
Ruth Ettleson, Chicago, Ill.
Application August 2, 1946, Serial No. 688,265
5 Claims. (Cl. 2—42)

2. A garment of the class described comprising a pair of breast-receiving cups, each of said cups having a pair of marginal stiffening members, said members being positioned at each side of each cup and extending upwardly and diagonally to a common point at the top center of each cup to form a Gothic arch, and a medial stiffening member extending from the bottom center of each cup

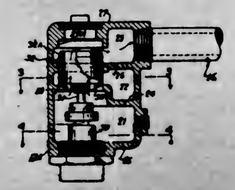
to the top of the Gothic arch formed by the side stiffening members.

2,457,990
IRONING MACHINE CONTROL
Donald K. Ferris, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application November 14, 1942, Serial No. 465,563
3 Claims. (Cl. 38—56)



1. An ironing machine comprising an elongated standard having downwardly directed supports at each end of said standard, ironing mechanism supported on said standard, a pedal extending between said supports and controlling the starting of the ironing operation of said mechanism by downward movement of said pedal to ironing controlling position, casters on said supports, and brake means for preventing movement of said ironing machine on said casters, and means rendered operative by downward movement of said pedal beyond its ironing controlling positions for applying said brake means.

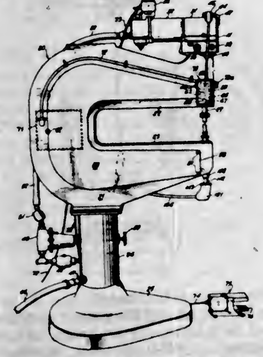
2,457,991
ENGINE TEMPERATURE CONTROL DEVICE
Robert W. Fernstrum, Detroit, Mich., assignor to Gray Marine Motor Company, Detroit, Mich., a corporation of Michigan
Application September 26, 1945, Serial No. 618,692
1 Claim. (Cl. 123—178)



Temperature control means for water jacketed marine engines having a water circulating pump, said control means consisting of a casing having

a water inlet connected to the water outlet of the engine jacket and having a pair of outlets for the water one outlet of which is connected to the intake of said pump and the other outlet leading to a point of discharge, said casing being divided by a pair of partitions into three chambers, an end one of which is the inlet chamber, said partitions and the end walls of said casing being substantially parallel and provided with a through passage, a unit consisting of a thermostat and a sleeve valve having a beveled end mounted in alignment on a screw plug, threaded into the end wall adjacent the inlet chamber and having the thermostat in said inlet chamber supporting the valve extending through said partitions, and a seat in the other end wall opposite the other end of said passage and into which the beveled end of said valve is adapted to move, said valve when the cooling water temperature is low, so located that water entering said casing is substantially all directed into the chamber leading to the pump and as said temperature increases is moved endwise by said thermostat to direct a part of said water to the discharge outlet in increasing proportion.

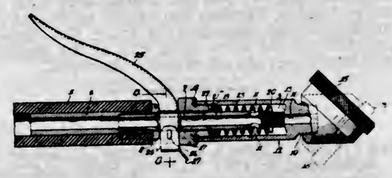
2,457,992
DIMPLING MACHINE
Howard R. Fischer, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a corporation of New Jersey
Application January 15, 1945, Serial No. 572,839
20 Claims. (Cl. 153—21)



1. In a press having a pair of jaws spaced apart and individually supporting mutually opposite tools for forming work sheets, operable means for bringing one of the tools toward the other tool upon a work sheet to form the latter and for separating the tools from each other, and movable control means adapted in one position to initiate operation of the operable means and in another position adapted to cause reversal thereof to separate said tools, the combination of an electrical actuating means connected to the control means and capable of moving the latter from the one position to the other, an electric switch means for controlling the circuit of the electrical actuating means to allow current from a current source to flow through and actuate said electrical actuating means and thereby move said operable means, a switch operating member movably associated with said other tool and projecting a sufficient limited distance toward the respectively opposite one tool to be moved by a work sheet when placed in proper forming position in relation to said other tool, a foot switch associated with the mentioned circuit for initially closing it at will, means communicating the movement of the switch operating member to said electrical switch means to effect closure of the latter, and automatic means arranged to be actuated in response to a predetermined pressure between the tools for causing said control means to reverse operation of said operable means for separating said tools and releasing the work sheet upon completion of the forming of the latter.

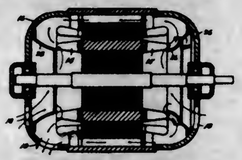
20. In a machine of the class described, a combination comprising a punch holder, a punch, resilient compression means mounted on the punch holder, means to retain the compression means in operative position including a ring adapted for limited longitudinal movement in a slot on the punch holder, means to preload the compression means to a predetermined degree of compression, a sleeve movably mounted on the punch holder and spaced from the punch, support means for the sleeve arranged between the sleeve and the compression means, and switch operating means connected to the sleeve support, said sleeve being movable by the weight of a work sheet when the latter is placed in proper forming position to transmit motion through the sleeve support to the switch operating means thereby to actuate a switch and being further adapted thereafter to maintain the work sheet in planar position by the transmission of reactive force from the resilient compressions means through the sleeve support means during the pressing operation.

2,457,993
SPRAYING DEVICE
Lynn Fletcher and John Winks, Lowell, Mich., assignors to Lowell Specialty Company, Lowell, Mich., a corporation of Michigan
Application July 20, 1944, Serial No. 545,773
3 Claims. (Cl. 251—134)



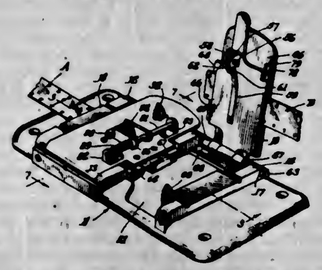
1. In a spraying device, the combination of a tube, a valve carried thereby, a body surrounding the tube and provided with a seat adapted to engage said valve, said body being longitudinally movable on the tube to open and close said valve and also rotatable with respect to the tube, spring means interposed between the tube and the body for holding said seat against said valve, a fulcrum member mounted on the tube in spaced relation to said body a handle having a bifurcated end portion straddling said tube between said fulcrum member and said body, said handle being arranged to contact said fulcrum member and said body when actuated whereby said body may be moved against the force of said spring to open said valve, a thumb latch carried by said bifurcated end of said handle for latching said body in open valve position, and a single pin extending through said handle and said latch for holding the handle on said tube and pivoting said latch on the handle.

2,457,994
DOUBLE-END-VENTILATED MOTOR
William H. Formhals and James H. Penney, Buffalo, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 13, 1947, Serial No. 734,502
3 Claims. (Cl. 171—252)



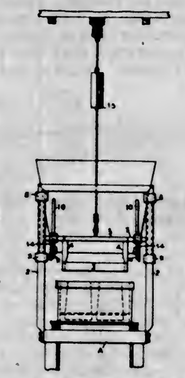
1. A double-end-ventilated dynamo-electric machine comprising: a stator-member having a laminated stator-core with an airgap-bore, stator-windings having end-turns projecting from each end of the stator-core, and an imperforate stator-frame extending around the stator-core in spaced relation to at least a portion of said stator-core so as to provide one or more axially extending stator-ventilating passageways outside of said stator-core and inside of the stator-frame; a rotor-member having a laminated rotor-core, a shaft, and substantially radially blowing fan-means disposed to blow air onto the stator end-turns at each end of the machine; and two end-brackets, one at each end of the machine, each end-bracket having an outer peripheral registry-portion engaging its end of the stator-frame, and a centrally disposed shaft-supporting bearing carried by each bracket; one of the brackets having only inlet ventilating-openings, disposed near the bearing; the other bracket having inlet-openings disposed near its bearing, and also exhaust-openings disposed nearer to the periphery of the bracket for exhausting all of the air admitted into the machine through the inlet-openings in both brackets; and means for providing directed air-paths within the machine from the inlet-openings, through the two fan-means, over both stator end-turns, through the axially extending stator-ventilating passageways from the non-exhausting to the exhausting end of the machine, and finally out of said exhaust-openings.

2,457,995
FILM SPLICER
Leo Frankel, Chicago, Ill., assignor, by mesne assignments, to City National Bank and Trust Company of Chicago, as trustee
Application February 21, 1945, Serial No. 579,031
4 Claims. (Cl. 154—42.1)



1. A film splicer comprising a base member having a plurality of transverse ribs, a base plate secured to said base member, a rod secured between two of said ribs, said rod extending longitudinally of the base member along one edge thereof, a clamping plate hinged to said rod for cooperating with said secured base plate to form a fixed film holding assembly, a second rod secured between two of said ribs and extending along an edge of the base member opposite to that of said first rod, the axis of said rods being parallel, a base plate pivoted to said second rod, and a clamping plate also pivoted to said second rod, the said pivoted base plate and last mentioned pivoted clamping plate comprising a pivoted film holding assembly, the base plates and clamping plates of said two film holding assemblies having contiguous straight cutting edges and being in such mutually overlapping relation that two film ends may be cut at the same time and held with the cut ends overlapping.

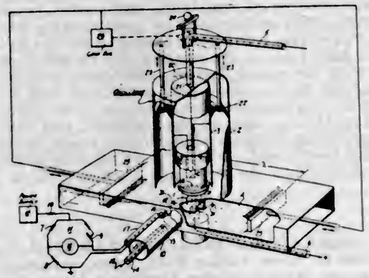
2,457,996
RODDING ATTACHMENT FOR PLASTIC BLOCK MACHINES
Frank C. George, Orlando, Fla., assignor, by mesne assignments, to F. C. George Machine Company, Orlando, Fla., a corporation of Florida
Application April 29, 1946, Serial No. 665,776
2 Claims. (Cl. 25—41)



1. A rodding attachment for a plastic mold machine having a settling and compacting mold supported on a base, vertical rods in opposite sides of the base, a rodding foot, having a cutting edge, movable toward and away from the mold, a movable support carrying the foot and a runner bracket on the support arranged to slide on the vertical rods for guiding it in a vertical path toward and away from the mold.

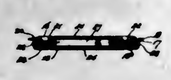
2,457,997
ULTRA HIGH FREQUENCY POWER MEASURING SYSTEM
Ralph W. George, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 26, 1943, Serial No. 480,612
9 Claims. (Cl. 171—95)

1. The combination with an ultra high frequency generator including a radio frequency oscillator tunable over a band of frequencies, a hollow body resonator for determining the frequency of said oscillator, of a measuring device including an attenuator in the form of a hollow metallic pipe having one end inserted into said resonator, said attenuator having a Wollaston wire coupled across said one end of said pipe, said wire being in coupling relation with the



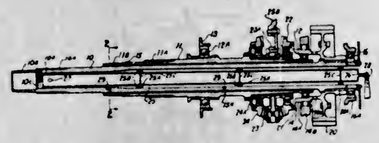
radio frequency magnetic field in said resonator, and a resistance change indicator circuit coupled to said Wollaston wire.

2,457,998
COIN-HOLDING DEVICE
Edward J. Hayes and Frank Winter, Chicago, Ill.
Application March 22, 1946, Serial No. 656,398
8 Claims. (Cl. 206—79)



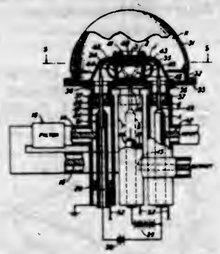
2. In a device of the kind described, a ring having an internal flange surrounding an opening therethrough, a second ring adapted to nest in the first ring in frictional engagement therewith, said second ring having an internal flange surrounding an opening therethrough, and a pair of transparent discs received within the second mentioned ring, at least one of said discs providing a circular seat for a coin of such depth that the flat portions of said discs are held separated by the coin, said discs being engaged adjacent the peripheries thereof by said internal flanges.

2,457,999
LUBRICATION MEANS FOR DUAL PROPELLER SHAFT ASSEMBLIES
Edward A. Hulbert, Detroit, Mich., assignor to Continental Aviation and Engineering Corporation, Detroit, Mich., a corporation of Virginia
Application March 28, 1946, Serial No. 657,805
5 Claims. (Cl. 184—6)



1. A shaft assembly for dual propellor drive consisting of a pair of concentric tubular shafts, bearings in the outer shaft in which the inner shaft is mounted for rotation and means for lubricating said bearings, said lubricating means consisting of means for continuously supplying lubricant at the rearward end of said inner shaft and means for conveying liquid lubricant to the forward end of said inner shaft, means providing for return flow of said lubricant along the inner wall of said inner shaft and passageways from said inner wall to said bearings.

2,458,000
FEEDBACK AMPLIFIER OR OSCILLATOR
Sydney B. Ingram, Fairlawn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 6, 1943, Serial No. 509,192
6 Claims. (Cl. 179—171)



2. A high frequency device arranged to operate at a given high frequency comprising an electron tube having a cathode, a control grid and an anode, a high frequency circuit connected to the cathode and the control grid, a high frequency circuit connected to the anode and the control grid, each of the said high frequency circuits having distributed inductance and capacitance extending a plural odd number of quarter wavelengths at said operating frequency and being tuned in accord with said operating frequency whereby harmonically related modes of oscillation including one at said operating frequency and one at a lower frequency are determined, a regenerative energy feedback connection external to the tube between the two said high frequency circuits, and means associated with the feedback circuit to prevent substantial feedback of energy at the said lower frequency.

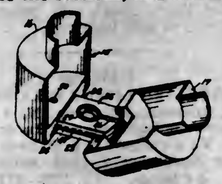
2,458,001
METHOD OF PREPARING AN ELASTOMER
Iral B. Johns, Ames, Iowa, assignor to Iowa State College Research Foundation, Ames, Iowa, a corporation of Iowa
No Drawing. Original application December 11, 1942, Serial No. 468,691. Divided and this application September 12, 1945, Serial No. 615,921
5 Claims. (Cl. 260—345)

1. A process for the production of sylvan which comprises the passing of hydrogen through a bath of liquid furfural to substantially saturate the hydrogen with furfural and the passage of the furfural-laden hydrogen at a temperature above 160° C. over a reduced copper hydroxide catalyst reduced at a temperature of about 210° C.

2,458,002
LOCK
Thomas Kaskouras, Chicago, Ill.
Application October 17, 1945, Serial No. 622,905
6 Claims. (Cl. 70—211)

1. In a device of the kind described and for use with a door knob, a casing operable to enclose said door knob and comprising a pair of sections, a member connecting said sections and having

means slidably receiving coacting means fastened to the other of the sections, and means arranged



on the member and effective to lock the pair of sections against relative movement.

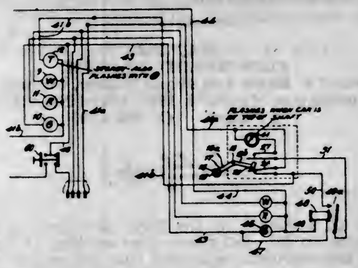
2,458,003
INFANT BATHING DEVICE
Dewey M. Kennedy, Rochester, N. Y.
Application November 18, 1944, Serial No. 564,168
1 Claim. (Cl. 4—177)

In an infant bathing device having a flexible tub and a foldable supporting structure including two pairs of foldable cross-legs, the improvement which comprises a shelf for receiving various articles used in the care of an infant, a pin pivotally connecting the legs of each pair of cross-legs together at a point below the level of the tub, a slotted bracket at each end portion of the shelf pivotally and detachably connecting the shelf to the pins, whereby the shelf may be swung from an inoperative folded position to an horizontal operative position, and hinged braces cooperatively interconnecting the shelf and the supporting structure which secure the shelf in its horizontal operative position.

2,458,004
OUTDOOR JACKET
Roy H. Kerr, Stillwater, Minn., assignor to St. Croix Garment Company, Stillwater, Minn., a partnership
Application October 5, 1946, Serial No. 701,555
4 Claims. (Cl. 2—93)

1. In a garment of the class described, a body part open at the front and having neck and arm openings, means for closing the front of the body part, a sleeve and shoulder part comprising front sections having their upright edges spaced apart, said sleeve and shoulder part fitting over the upper portion of the body part with its neck opening registering with the neck opening in the body part and being permanently stitched to the body part around the neck of the garment only, whereby the sleeve and shoulder part may move relatively to the body part to permit full freedom of movement of the wearer's arms without pulling in any part of the garment, and means whereby the upright edges of the front sections of the sleeve and shoulder part may be detachably secured to the body part when so desired.

2,458,005
ELEVATOR CONTROL APPARATUS
Edward O. Kern, Cedar Falls, Iowa, assignor to Wagner Manufacturing Company, Cedar Falls, Iowa, a corporation of Iowa
Application June 25, 1945, Serial No. 601,519
4 Claims. (Cl. 177—336)



1. Flashing means for showing that an elevator is standing at the top of an elevator shaft, said means including a cam plate on the elevator shaft at the top thereof and a cam secured to the elevator, operable when the cam on the elevator rides against the cam plate, said cam being adapted to make an electric circuit to cause a flashing signal on a control board, said flashing means being adapted to operate only on a green signal, when the elevator is at the top.

2,458,006
BIDIRECTIONAL BLOWER
Lee A. Kilgore, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 24, 1946, Serial No. 705,570
19 Claims. (Cl. 230—134)

1. A bidirectional blower-means, comprising the combination, with a bidirectionally rotatable shaft, of a blade-supporting shroud-means for providing, in effect, a running shroud carried by the shaft; at least sixteen radially disposed blades, supported, at one end, by one side of said blade-supporting shroud-means, with a fluid-entrance space between the inner periphery of the blades and the shaft; and an outer shroud-means for providing, in effect, an annular shroud operatively associated with the outer ends of the blades, said annular shroud having an inner peripheral fluid-entrance diameter approximating the inner periphery of the blades at the outer ends of the blades; each blade having two approximately plane, approximately parallel, sides; each blade also having a rounded entrance-edge at the inner periphery of the blades, and a pointed trailing-edge at the outer periphery of the blades, substantially all parts of the entrance- and trailing-edges of the blades approximating a right-angular relation to the airflow-lines at the respective points.

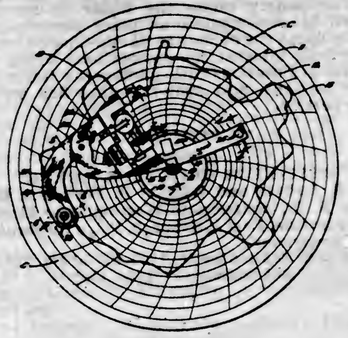
2,458,007
SECURING BAND OR RING
George A. Knapp, Syracuse, N. Y., assignor to R. E. Dietz Company, New York, N. Y.
Application August 28, 1946, Serial No. 691,789
2 Claims. (Cl. 24—19)

1. A contractible split securing ring including a fastening screw connecting the opposing end portions of the ring for contracting the ring, each of said portions having a depression and having between said depression and the extremity of said end portion lengthwise alined integral lugs of approximately semicircular form which respectively project inwardly and outwardly from said end portion and together form a bearing and guide passage surrounding and through which said screw passes, said screw having a head which occupies one of said depressions and engages the adjacent lug, and a screw threaded nut on said screw which occupies said second depression and engages the lug adjacent thereto.

2,458,008
CAN-BODY MAKER
Peter Kruse, Brooklyn, N. Y., assignor to Lima-Hamilton Corporation, Hamilton, Ohio, a corporation of Virginia
Application June 16, 1944, Serial No. 540,597
4 Claims. (Cl. 113—8)

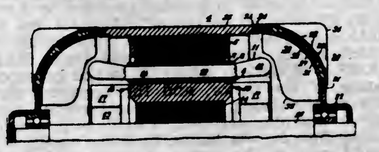
1. A can-body maker, comprising a longitudinally extending horn, means for wrapping a body blank around the horn and positioning it for having a hook of designed width formed thereon at the first hook forming station, an anvil at the first hook forming station and a co-acting reciprocatory blade for forming a first hook, and means for advancing the body blanks step wise along the horn from the first to a second hook forming station, a second anvil at the second hook forming station, having a grooved ledge on its inner side against which said first hook rests in a position to interlock with the second hook when the body-blank is moved away from the second hook forming station, means for expanding a body blank, with the first hook held by said grooved ledge to draw the body blank to a position in which the second side edge extends beyond the second anvil, an amount equal to the width of the second hook, a blade coacting with said second anvil for forming the second hook, and means for guidedly moving said hooked body blank along the horn from said second hook forming station, thereby to cause the hooks to interlock.

2,458,009
SQUARE ROOT RADIAL AVERAGER
George Lory, Los Angeles, Calif.
Application March 13, 1944, Serial No. 526,285
11 Claims. (Cl. 33—1)



1. A square root radial averager comprising a guide plate, a tracer point thereon, an arm on the guide plate, and an integrator having a wheel mounted on the arm, said integrator being adjustable along the length of the arm to position the plane of the wheel in alignment with the tracer point, said arm being mounted for rotation upon the guide plate to permit the integrator to swing relatively to the guide plate into engagement with a chart being traced by the tracer point.

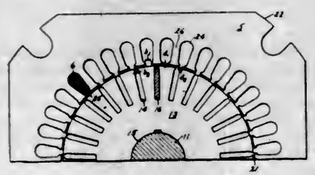
2,458,010
TOTALLY ENCLOSED NONVENTILATED MOTOR
Leon R. Ludwig, Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 20, 1947, Serial No. 735,838
11 Claims. (Cl. 171—252)



1. A totally enclosed non-ventilated dynamo-electric machine comprising a stator-member

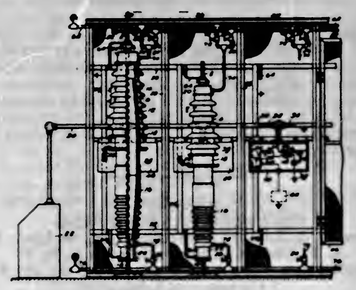
having a stator-core with an airgap-bore therein, and a stator-winding having end-turns projecting from each end of the stator-core, a rotor-member having a rotor-core rotating within the stator-bore, said rotor-member also including a shaft and two fan-means, one under each of the stator end-windings at the two ends of the machine, two perforated machine-enclosing, bearing-supporting brackets, one at each end of the machine, each bracket having a centrally located shaft-supporting bearing and a radially outwardly and axially inwardly extending cup-shaped portion having its rim substantially air-tightly secured to the stator-member, so that the stator end-turns are enclosed, with a ventilating space between said end-turns and the bracket at that end of the machine, each bracket having a plurality of perforations in its cup-shaped portion, each bracket being made of a metal having relatively high strength and a relatively high melting-point, and a cast heat-transfer metal-portion, of relatively low strength, relatively light weight and a relatively low melting-point, associated with each cup-shaped bracket-portion, each heat-transfer metal-portion having an inner portion completely lining the inside of its cup-shaped bracket-portion, an outer portion completely lining the outside of its cup-shaped bracket-portion, integral joining-portions filling the bracket-perforations and joining the inner and outer portions, and heat-radiating fins on the outer portion.

2,458,011
DEEP-NECK HIGH-FLUX MOTOR
Leon R. Ludwig and William H. Formhals, Buffalo, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 20, 1947, Serial No. 775,264
20 Claims. (Cl. 172—120)



1. A general-purpose, commercial-frequency, N-pole, squirrel-cage motor having normal starting-current, normal starting-torque, normal efficiency, and normal power-factor, comprising a stator-core having partially open slots carrying a primary winding, and a rotor-core having partially open slots and having a cast squirrel-cage winding, characterized by the ratio of the effective depth of the necks of the teeth between the stator-slots, divided by the slot-opening of the stator-slots being in a range bounded by a minimum value which is not substantially less than $(0.15 + 0.6/N - 0.8/N^2W)$, and a maximum value which is not substantially more than $(0.31 + 2.3/N^2 - 0.2/NW)$, where W is the horsepower rating of the motor, and the apparent airgap flux-density being at least substantially $(38 + 7W^{0.5})$ kilolines per square inch, said apparent airgap flux-density being the flux-density which would exist at the center of the pole if the flux of the pole had a sinusoidal space-distribution in the airgap.

2,458,012
APPARATUS FOR HIGH FREQUENCY DIELECTRIC HEATING OF CONDENSER BUSHINGS
Carl J. Madsen, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 3, 1946, Serial No. 659,227
12 Claims. (Cl. 219—47)



1. A dielectric heating system for treating a plurality of condenser bushings of different sizes and of a type having a central conductor having opposite ends, a capacitive wrapping about said conductor and an outer mounting fitting about said wrapping and lying between said conductor-ends, said system comprising a high-frequency generator, a plurality of heating stations, each adapted to receive a condenser bushing, a common power-transmission line extending from said generator to each of said stations, each station comprising a coupling transformer having a high impedance primary winding and a secondary winding, circuit means at each station connecting each primary winding to said transmission line, with the primary windings of the several stations in parallel, connection means at each station for connecting the associated secondary winding thereat across said central conductor and said mounting fitting of the condenser bushing at the associated station, the last said connection means comprising a variable inductor, the last said connection means at each station comprising a pair of conductors at a common potential, adapted to be connected to the opposite ends of said central conductor, and comprising an insulated conductor adapted to be connected to said mounting fitting.

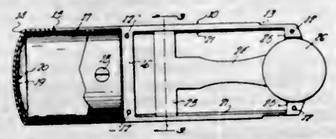
2,458,013
SELENIUM RECTIFIER ELEMENT AND METHOD OF MANUFACTURING SAME
Tore Gunnar Malmberg, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden
No Drawing. Application February 27, 1945, Serial No. 580,077. In Sweden March 4, 1944
6 Claims. (Cl. 175—366)

1. In the manufacture of selenium rectifier elements in which a selenium layer is applied onto a metallic base, such layer is converted into an electrically conducting state, and a metallic counter-electrode applied over such layer, the step of treating the converted layer before the counter-electrode is applied with a compound of at least one of the metals of the group consisting of zirconium, thorium, hafnium and titanium.

2,458,014
THERMOCOUPLE SAFETY PILOT SWITCH
Leroy A. Matson, Forest Lake, Ill., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a corporation of Wisconsin
Application May 15, 1944, Serial No. 535,575
9 Claims. (Cl. 200—87)

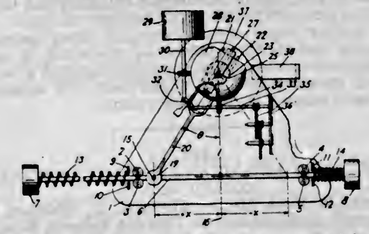
3. In a control device of the class described, in combination, an electromagnet, an armature stem movable axially in opposite directions, an armature carried by said stem for movement to attracted position relative to said electromagnet by movement of said stem in one direction and to retracted position by movement of said stem in the opposite direction, an axially movable plunger coaxial with said armature stem and having an end wall, an actuating pin mounted for axial sliding movement in the end wall of said plunger at the axis thereof, said pin abutting endwise with said armature stem on one side of the end wall of the plunger and having an abutment between its ends for cooperation with said plunger whereby axial movement of said plunger in one direction moves the actuating pin axially therewith and said armature to attracted position by the abutment of said actuating pin with said armature stem, said plunger having axial movement in the opposite direction relative to said actuating pin when the armature is held in attracted position and the plunger is released, and first and second contact means on the opposite side of the end wall of the plunger, said second contact means being maintained in open circuit relation separated from said first contact means upon movement of said actuating pin with said plunger in moving said armature to attracted position and moved into closed circuit relation engaging said first contact means by movement of said plunger in the opposite direction relative to said actuating pin with said armature held in attracted position by said electromagnet.

2,458,015
EYEGLASS WIPING DEVICE
Gordon S. McDonald, Itasca, Tex.
Application June 30, 1944, Serial No. 542,963
1 Claim. (Cl. 15—214)



An eyeglass lens wiping device including a hollow case formed by complementary sections and having an elongated opening in one end of said case, a cross-head located in said case and having outwardly opening grooves on opposite edges thereof, with cooperate with and slidingly engage V-shaped ridges formed on the interior of said case and which extend longitudinally of said case, a pair of arms of resilient material adapted to normally spring outwardly from each other when projected from said case and formed by extensions of said cross-head which project longitudinally of said case and of a size to pass through the elongated opening in said case, shoulders at each edge of said elongated opening to limit sliding displacement of said cross-head and retain said cross-head within said case, and a lens wiping pad mounted on the end of each of said arms.

2,458,016
INTEGRATING ACCELEROMETER
Montford Morrison, Upper Montclair, N. J.
Application January 22, 1944, Serial No. 519,403
2 Claims. (Cl. 264—1)

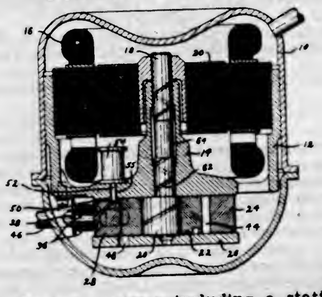


1. An integrating accelerometer comprising a constant-means-speed driving-shaft having a driving-wheel fixed thereto, a driven shaft having a driven-wheel fixed thereto, said shafts being rotatable in bearings all having fixed relations, a roller engaging both said wheels surfaced and rotatable in a bearing in movable relation to said shafts to form a variable ratio friction gear mechanically associating both said shafts, and means to change the ratio of said gear to correspond with the acceleration said accelerometer undergoes under operation.

2,458,017
1-PHENYLETHYLIDENEMALONONITRILE
David T. Mowry, Dayton, Ohio, assignor to Monsanto Chemical Company, a corporation of Delaware
No Drawing. Application August 21, 1943, Serial No. 499,513
3 Claims. (Cl. 167—30)

2. A solution, suitable for insecticidal purposes containing 1-phenylethylidenemalononitrile.

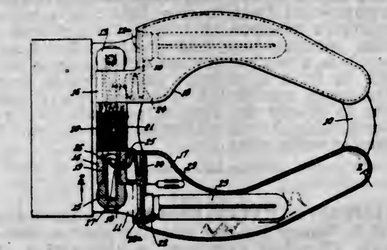
2,458,018
REFRIGERATION COMPRESSOR STARTING UNLOADER
John M. Murphy, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application July 19, 1944, Serial No. 545,642
8 Claims. (Cl. 230—138)



1. A fluid compressor including a stationary member having a compression chamber therein

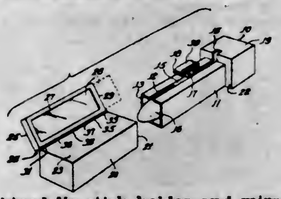
and inlet and outlet ports communicating with said chamber, a rotatable member arranged within said compression chamber, means for driving said rotatable member, means including a blade slidably mounted in one of said members intermediate said inlet and said outlet ports for causing fluid to be compressed between said members during normal running operation of said compressor, means for biasing said blade into sealing engagement with the other of said members, gravity latch means for catching the blade in its retracted position and holding the blade out of sealing engagement with said other member during the starting period of operation of said compressor, and means for releasing said gravity latch means after the compressor has attained its said normal running operation.

2,458,019
METHOD AND MEANS FOR STERILIZING TOILET SEATS
Harold H. Niles, Mount Kisco, N. Y., assignor, by mesne assignments, to Edward Spierer, Brooklyn, N. Y.
Application October 26, 1943, Serial No. 507,699
11 Claims. (Cl. 4—233)



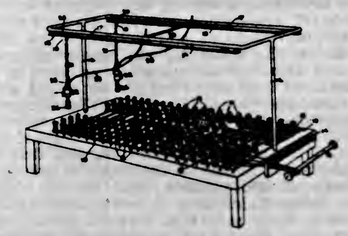
1. A toilet seat formed of material which will transmit germicidal rays, said heat having a cavity between the upper and lower surfaces thereof, and means within said cavity for emitting said germicidal rays.

2,458,020
COMBINED COSMETIC HOLDER AND MIRROR OR THE LIKE
Donald E. Olsen, Chicago, Ill.
Application December 29, 1945, Serial No. 638,217
1 Claim. (Cl. 132—79)



A combined lip-stick holder and mirror comprising a casing-like support, a slidable mount for a lip-stick in said support, an elongated container receiving telescopically the support and mount, a mirror frame hinged along one edge of said container for carrying a mirror on the inner face of said frame, said hinge including intercalated aligned hinge sleeves extending along one of the longer adjacent longitudinal edges of each of said mirror frame and container and including a relatively strong spring urging the mirror frame to open position, said spring comprising a torsion strip extending the greater part of the length of said longitudinal edge, and a button on said mount projecting outwardly thereof and adapted to overlie the mirror frame to retain it in closed position against the action of the torsion strip spring when the support and mount are telescoped into the container, said spring exerting a frictional force on the button tending to prevent separation of the support and container, and whereby the spring passes through intermediate ones of said hinge sleeves and is concealed thereby.

2,458,021
REWINDING GEAR FOR BOBBINS AND OTHER YARN CARRIERS
Frederick Saville Perry, Clifton Gardens, Sydney, New South Wales, Australia, and Joseph Arthur Huskinson, Kidderminster, England, assignors of one-third to Woodward Grosvenor & Company Limited, Kidderminster, England, a British company
Application June 27, 1945, Serial No. 601,888
In Great Britain March 31, 1944
6 Claims. (Cl. 28—55.5)

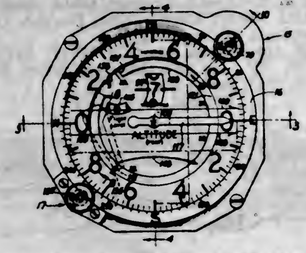


3. A rewinder for rotary yarn carriers each rotatably mounted on a peg comprising a body, a power driven driving shaft in the body and protruding therefrom, a driving member on said driving shaft consisting of a sleeve on which is fitted a tube of soft elastic material, the edge of which is disposed below the end of the sleeve and is adapted to engage an end of the yarn carrier, said sleeve having an external shoulder against which one end of said tube engages, a bearing in the sleeve and a centralising member in the bearing, said centralising member having a tapering mouth for engaging over the peg on which the yarn carrier is mounted.

2,458,022
ALTIMETER
James O. Phelps, Richmond Heights, and George W. Cottrill, University City, Mo., assignors to Airpath Instrument Company, St. Louis, Mo., a corporation of Missouri
Application August 9, 1944, Serial No. 548,780
19 Claims. (Cl. 73—387)

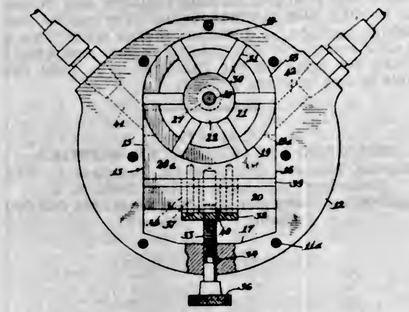
5. An altimeter comprising an atmospheric pressure responsive means, a compass dial, a gross-unit altitude indicator and a flight level indicator driven by said pressure responsive means, a pointer traversing the compass dial and driven by the pressure responsive means at a predetermined ratio with respect to said indicators, an altitude dial laid off adjacent to the compass dial with units interpolating said gross units, said pointer also traversing the last-named dial, adjustable means for changing the reading of the gross-unit altitude indicator and the pointer in accordance with barometric pressure changes

to bring about true indication of elevation, a shield adapted to cover and uncover said flight level indicator, and cooperating means between



the adjustable means and the shield whereby the latter shields from sight the flight level indicator except at a predetermined setting of the adjustable means.

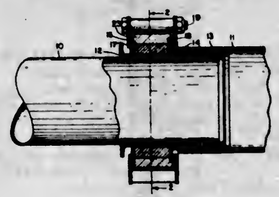
2,458,023
VARIABLE STROKE PUMP
Wilson C. Pike, New York, N. Y.
Application March 2, 1944, Serial No. 524,730
2 Claims. (Cl. 103—120)



1. In a variable stroke hydraulic pump or motor, a rotor and radial slots therein, a semicircular movable wall having straight side edges tangential with the perimeter of the said rotor and being engageable therewith and forming a pumping chamber of variable capacity when variably displaced therefrom, a plurality of free radially disposed blades reciprocable in said rotor slots, a cylindrically shaped guide member slidable on a rotor face and connected for movement with said wall and engageable with the inner ends of the blades, means to move said wall at various displacement values beyond the rotor to form a pumping chamber of a variable capacity, the guide member following said movement to urge the blades into the pumping chamber and the outer ends thereof into sliding engagement with the movable wall, an inlet for the pumping chamber and an outlet therefor.

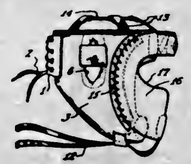
2,458,024
EXPANSION JOINT
John S. Pinaire, Montrose, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application February 12, 1945, Serial No. 577,571
3 Claims. (Cl. 285—183)

1. An axial expansion connection comprising a pair of telescoping conduit elements, a first wearing sleeve applied to the exterior of the inner conduit element, a second wearing sleeve applied to the interior of the outer conduit element, there being a limited clearance between the two sleeves, said second sleeve having a radial flange formed thereon on the end overlying the inner conduit element, a seal ring having a sliding but gas-



tight fit on the first mentioned sleeve, a channel member adapted to clamp said seal ring to the flange of the second sleeve, said channel member forming an annular space surrounding the periphery of said seal ring, and a refractory material filling the annular space in said channel member.

2,458,025
BOXER'S HEADGEAR
De Witt A. Portal, Madison, Wis., assignor to Sport Products, Inc., Cincinnati, Ohio, a corporation of Ohio
Application February 1, 1946, Serial No. 644,905
3 Claims. (Cl. 2—3)

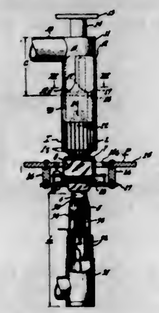


1. A boxer's headgear comprising a padded helmet having an oval opening in front for the face, a stiff panel having a T-shaped unobstructed front opening secured to the helmet adjacent the sides of the face opening, and spaced forwardly thereof, and means forming part of the helmet independently adjustable for holding back the chin of a wearer of the headgear.

2,458,026
SOCKET ASSEMBLY FOR AIR-COOLED TUBES
Elvin H. Potter, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 31, 1948, Serial No. 18,173
7 Claims. (Cl. 250—27.5)

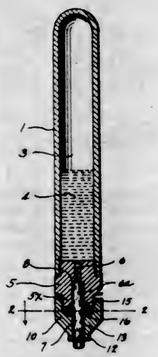
1. A support for an electron tube of the type provided with an anode terminal on one end, an open-ended cooling jacket adjacent to said end and a radially extending flange-like grid-like terminal intermediate said jacket and the other end of said tube, said support comprising a hollow sleeve to which said tube is adapted to be removably secured with the leading end of said sleeve in contact with the periphery of said cooling jacket and the interior of said sleeve in flow communication with the interior of said cooling jacket, a stationary air-supply conduit upon which said sleeve is mounted for axial movement, a station-

ary pedestal mounted in spaced relation with respect to said conduit and sleeve and having an aperture therein through which said other end of



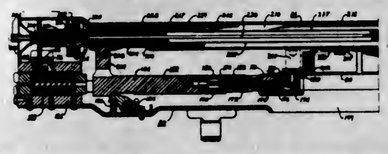
said tube is adapted to be passed when said sleeve is moved inwardly on said conduit and upon which said grid flange is adapted to be seated upon movement of said sleeve in the return direction.

2,458,027
FOUNTAIN BRUSH
Clifford M. Quist, Port Orchard, Wash.
Application May 5, 1945, Serial No. 592,198
1 Claim. (Cl. 15—138)



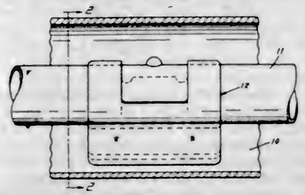
A fountain marking device of the character described comprising a hollow body portion forming a reservoir for a supply of marking liquid and terminating in a threaded nipple, a wick mounting tip adjustably threaded onto one end of the said body, a wick contained axially in the said tip with one end portion extended therefrom as a marking brush, and its other end portion extended into the body portion through said nipple for contact with the liquid in the reservoir to supply the brush end by its flow in the wick, said nipple and tip having opposedly related beveled surfaces surrounding the wick, a wick clamping element of annular form contained in the said tip between the said beveled surfaces and adapted to be acted on by a threaded adjustment of the tip on the nipple, to selectively increase or decrease the clamping action against the wick, and thus to regulate the flow of liquid therethrough to the brush end.

2,458,028
OPERATING MECHANISM FOR MACHINE GUNS
Francis I. Rataiczak, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Original application May 19, 1944, Serial No. 536,229. Divided and this application November 23, 1945, Serial No. 630,199
4 Claims. (Cl. 89—1)



1. In combination, a gun barrel, a receiver, a breech bolt slidably supported by said receiver, a guide tube having a slot in the wall thereof, a spring tube drive element disposed within said guide tube and having a portion projecting through said slot for engagement by said breech bolt, a spring within said spring tube urging said bolt forward, manual means extending into said guide tube for engaging said element to move the breech bolt into gun cocking position, and means for holding said manual means in a partial gun cocking position, said manual means comprising a flexible cable and said holding means comprising means for gripping the cable so as to hold the cable in any position desired.

2,458,029
OPEN FOOT SUPERHEATER SUPPORT
Emanuel Rawson, Chicago, Ill., assignor to The Superheater Company, New York, N. Y.
Application December 20, 1944, Serial No. 568,969
1 Claim. (Cl. 248—49)

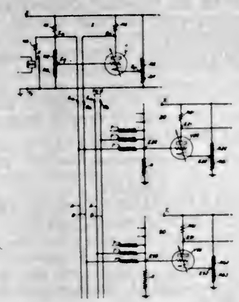


A support for a superheater tube or the like mounted in a flue comprising; a strip of material shaped to form a tube embracing loop with a pair of substantially co-extensive parts extending generally radially from the tube in contacting relation and having both extreme end portions of said parts lying against each other and bent at substantially right angles to the body portions of said radial parts to form a double-ply foot engaging the flue.

2,458,030
SELECTIVE SIGNALING APPARATUS AND SYSTEM
Wilton T. Rea, Manhasset, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 29, 1944, Serial No. 551,674
15 Claims. (Cl. 177—353)

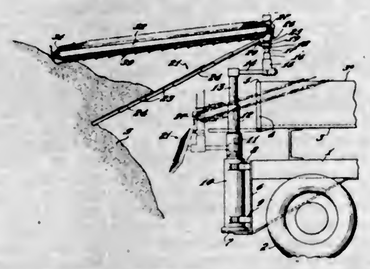
1. A circuit selecting system comprising a source of potential, a plurality of receiving circuits, one for each code unit, each comprising a

first potentiometer circuit connected across said source, a second potentiometer circuit connected across said source, current control means responsive to impressed alternate characteristics of the assigned code unit for changing the potential gradient in said first potentiometer circuit between alternate conditions and potential responsive means included in said second potentiometer circuit for changing the potential gradient in said second potentiometer circuit between alternate conditions in response to the alternate potential conditions in said first potentiometer circuit, said decoding system further comprising a plurality of code discriminating circuits each including a



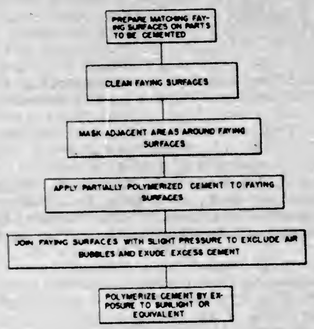
third potentiomter circuit having a potential gradient section for each unit of the code connected to one or the other of said first and second potentiometer circuits of the corresponding receiving circuit in accordance with an assigned code combination to establish in said third potentiometer circuit an intermediate potential successively changed in accordance with the successively received code combinations and circuit selective means connected to said third circuit and adjustable to be responsive only to a selected one of said intermedate potentials in said third potentiometer circuit for selection of a preassigned circuit.

2,458,031
SAND SPREADING AND LOADING DEVICE
Joseph Rome, Barre, Vt.
Application January 28, 1947, Serial No. 724,915
11 Claims. (Cl. 214—83.14)



1. A sand-handling device for use with a motor truck, said device comprising a collapsible chute, a support for attachment to the rear end of the truck, means pivotally attaching the forward end of the chute to the support, the support being vertically adjustable to an extent such that the forward end of the chute may, at will, be located above the level of the top of the tail gate of the truck or below the level of the floor of the truck, and sand-transfer means also connected to said vertically adjustable support.

2,458,032
METHOD OF CEMENTING METHYL METHACRYLATE PLASTICS
Eli Simon, Los Angeles, and Melvin F. George, Jr., Hollywood, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.
Original application January 26, 1942, Serial No. 428,324. Divided and this application August 22, 1944, Serial No. 550,682
3 Claims. (Cl. 154—140)

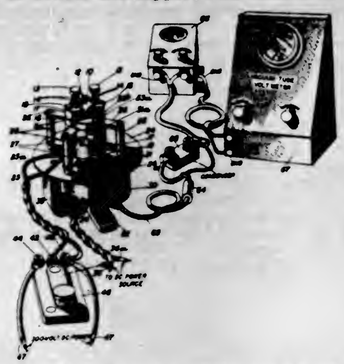


3. The method of repairing a damaged sheet of polymerized methyl methacrylate resin, comprising cutting out the damaged area, fitting a wedge-like plug into the cut-out, said plug being thicker than the damaged sheet whereby to project thereabove on at least one side thereof, applying a partially polymerized liquid monomer fraction containing a suitable amount of polymerization catalyst and corresponding to the material from which the damaged sheet was produced, joining the faying surfaces under barely sufficient pressure to exclude air bubbles and exude excess cement, and polymerizing the cemented joint by exposure to the equivalent of sunlight for a period sufficient to convert the cement into polymerized resin of the same type and properties as the material being cemented, and thereafter removing the excess thickness of said plug as by grinding and polishing the same flush with the surrounding sheet material.

2,458,033
MICROPHONICS TESTER
John E. Sterner, Erie, Pa., assignor to the United States of America as represented by the Secretary of the Navy
Application April 24, 1943, Serial No. 484,457
1 Claim. (Cl. 315—364)

Apparatus for testing a vacuum tube, which comprises a support for the tube, means coacting therewith to clamp the tube firmly thereto, resilient means carrying said support and restricting its motion to a single direction, a coil rigidly secured to said support, means providing a strong magnetic field through said coil, a capacitor, means for charging said capacitor, and means for discharging it through said coil, thereby produc-

ing a sudden powerful force of very short duration to deflect the support and immediately re-

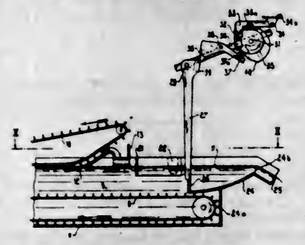


lease it, thus imparting a corresponding mechanical shock to the tube in a known direction.

2,458,034
MINERAL CASTOR OIL
Reuben A. Swenson and Alfred W. Weitkamp, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application November 20, 1946, Serial No. 711,194
12 Claims. (Cl. 252—33.3)

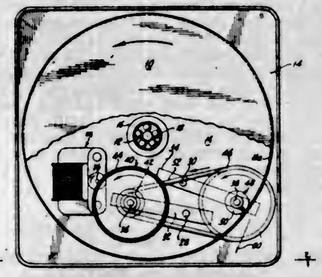
1. A mineral castor oil comprising a major proportion of a hydrocarbon oil, from about 0.5% to about 15% of an aluminum soap, from about 0.05% to about 5% of a polyhydric alcohol, and from about 0.005% to about 2% of a metal soap of a preferentially oil-soluble sulfonic acid.

2,458,035
GRAVITY LIQUID SEPARATOR
Klaas F. Tromp, Kerkrade, Netherlands, assignor of three-fourths to Domaniale Mijn-Maatschappij N. V., Kerkrade, Netherlands
Application September 18, 1945, Serial No. 617,116
In Germany September 5, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 5, 1961
3 Claims. (Cl. 209—173)



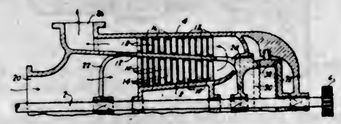
1. Apparatus for separating, by means of a suspension of "sand" in "water," solid materials having different specific gravities, comprising a tank for holding a body of suspension and provided with means for removing material from the bottom thereof, means for removing material from the surface of said body, means for feeding materials to be separated into said tank at one side thereof to permit them to respectively seek zone levels corresponding to their specific gravities, independent means for introducing suspension at the feed side of the tank and for withdrawing suspension therefrom at the opposite side thereof, said suspension introducing and withdrawing means serving to create a slow moving substantially horizontal current in said tank for conveying materials to be separated thereacross, and means at the said opposite side of the tank for removing material from a level intermediate the bottom of the tank and the surface of the body of suspension, wherein the latter means comprise, in addition to an upwardly inclined shoot provided at the discharge end of the tank with its upper end somewhat below the surface of the bath, an impeller element and driving means therefor, said driving means being arranged for imparting cyclic movement to the impeller element in such a manner that said element is first swept in an accelerated movement over said upwardly inclined shoot, thereupon lifted from the body of suspension, and thereupon returned to again be dipped into said body near the lower end of the shoot.

2,458,036
POWER TRANSMISSION AND SPEED REDUCING APPARATUS
Thomas Veitch and Thomas Veitch, Jr., Kew Gardens, N. Y., assignors to Thomas Veitch and Thomas Veitch, Jr., copartners doing business under the firm name of Thomas Veitch Laboratory, Deal, N. J.
Application October 22, 1947, Serial No. 781,384
11 Claims. (Cl. 74—208)



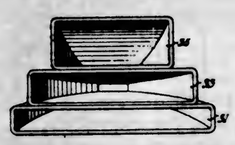
1. A power transmitting and speed controlling apparatus comprising, a base, a plurality of pulley bearing blocks, and pivots supported on said base on which said blocks are respectively pivotally mounted, bearing pins supported on said blocks respectively, and a combination of a large and a small pulley mounted for rotation on each of said pins, a source of power adapted to frictionally engage one of the pulleys of one of said combinations of pulleys, a work piece adapted to be frictionally engaged by one of the pulleys of the other of said combinations of pulleys, and a resilient driving belt interconnecting said combinations of pulleys, one combination of said pulleys being mounted adjacent said source of power and the other of said combinations of pulleys being mounted adjacent said work piece, and said combinations of pulleys being mounted on opposite sides of a line joining the bearing pins for said two sets of pulleys, and said resilient belt tending to rotate the bearing blocks for said combinations of pulleys toward said line and in directions tending to bring a pulley of one of said combinations into contact with said source of power and one of the pulleys of the other of said combinations into contact with the said work piece.

2,458,037
FLUID ENERGY MACHINE
Edward T. Vincent, Ann Arbor, and Carl F. Bachle, Detroit, Mich., assignors to Continental Aviation & Engineering Corporation, Detroit, Mich., a corporation of Virginia
Application August 1, 1946, Serial No. 687,806
3 Claims. (Cl. 230—123)



1. A rotary gaseous multiple stage compressor comprising inner and outer concentrically arranged compressor sections of substantially equal length, a drive shaft, means driving said shaft, an inner drum mounted on said shaft and directly driven thereby and carrying a plurality of equally axially spaced outwardly radially projecting buckets, an intermediate drum rotatably supported on said shaft and driven thereby by gearing in the opposite direction to the crankshaft rotation, said intermediate drum enclosing said inner drum and provided with radially inwardly extending equally axially spaced buckets cooperating with the buckets carried by said inner drum, said intermediate drum further provided with radially outwardly extending equally axially spaced buckets, and an outer casing carrying means supporting said drum shaft and gearing and enclosing both said inner and intermediate drums and cooperating with said intermediate drum to provide a fluid passage, said casing provided with radially inwardly extending equally axially spaced buckets cooperating with the radially outwardly extending buckets carried by said intermediate drum, said casing having gaseous fluid inlet and outlet ports adjacent one end, said inner and outer compressor passages being uniformly progressively converging in the direction of the fluid flow, the buckets at the outlet of said inner compressor section and the buckets at the inlet of said outer compressor section being substantially the same radial dimension.

2,458,038
ACOUSTICAL APPARATUS
John E. Volkmann, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application August 29, 1942, Serial No. 456,627
7 Claims. (Cl. 181—27)

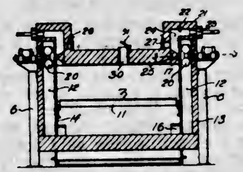


1. In sound reproducing apparatus, a plurality of discrete horns arranged in superposed relation with their axes angularly related to each other in a comon plane, said horns thereby all facing in different directions, said horns each having an angle of distribution from side to side which is of different magnitude than that of any other of said horns, each of said horns expanding radially over its said distribution angle, and said horns all having substantially the same mouth and throat areas and substantially the same rate of flare and being adapted to be fed from a common signal source.

2,458,039
AGGREGATE FOR IMPROVING PORTLAND CEMENT CONCRETES
Bertrand H. Walt, New Rochelle, N. Y.
No Drawing. Application October 5, 1945, Serial No. 620,629
2 Claims. (Cl. 106—288)

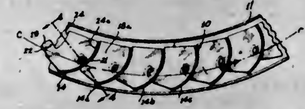
1. A dry aggregate adapted to be substituted for and to replace a portion of the cement in Portland cement concrete; said aggregate consisting substantially of finely pulverized water-cooled slag containing, by weight, at least 32% of silica, less than about 47% of lime, and less than about 6% of magnesia, and having intimately mixed therewith from 0.0033% to about 0.70% of a hydroxy-alkyl amine; said aggregate having the properties of combining with and neutralizing the limy substances released by said Portland cement, as the hydration thereof progresses, to form additional cement in said concrete, and without impairing the strength thereof, endowing said concrete with substantially greater resistance to disintegration by freezing and thawing than it would otherwise have if formed with Portland cement alone, a mixture of Portland cement and said amine alone, or a mixture of Portland cement and slag alone.

2,458,040
LEHR
Harvey C. Weller, Toledo, Ohio, assignor to Surface Combustion Corporation, Toledo, Ohio, a corporation of Ohio
Application March 29, 1946, Serial No. 658,063
3 Claims. (Cl. 49—47)



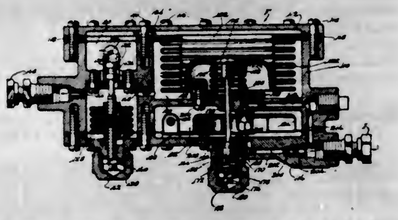
1. Annealing apparatus comprising, in combination, wall means forming a relatively long annealing tunnel, conveyor means for advancing the articles to be treated through the tunnel at a level intermediate the top and bottom thereof so that the tunnel is virtually divided into upper and lower zones by said means, a longitudinally extending series of individual gas ducts interconnecting said upper and lower zones to provide a plurality of paths outside of the tunnel proper through which tunnel atmosphere may be passed from one of said zones to the other, means individual to said ducts for producing downdraft therein, fireboxes individual to and in draft connection with the inlet end of said ducts, whereby said draft producing means may draw firebox gases into the inlet end of the ducts, said fireboxes being mounted along the roof of the tunnel.

2,458,041
ROTOR
John H. Wessel, Los Angeles, Calif., assignor to Utility Appliance Corp., Los Angeles, Calif., a corporation of California
Application July 14, 1945, Serial No. 605,029
9 Claims. (Cl. 230—134)



1. A vane for a rotor, said vane having a flange portion formed integrally therewith adjacent each end thereof, each of said flange portions including a base section adjacent said vane and an end section adjacent said base section, each of said base sections having an opening therethrough and each of said end sections having a locking projection thereon, said locking projections being located in positions complementary to said openings, respectively.

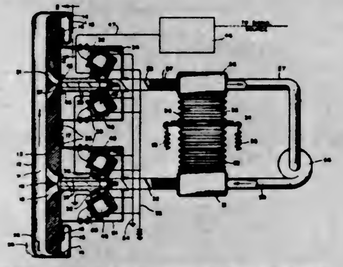
2,458,042
FUEL FEEDING SYSTEM FOR LIQUID FUEL BURNERS HAVING MEANS FOR DISPOSING OF FUEL VAPORS
Lynn A. Williams, Jr., Northfield, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application March 20, 1944, Serial No. 527,229
3 Claims. (Cl. 158—36)



1. In combination with a burner, a fuel feeding system comprising means providing a fuel chamber, means for supplying liquid fuel under pressure to said chamber, said fuel being of a nature to give off vapor, a conduit which conducts said liquid fuel from said chamber to the burner, means forming a vapor passage and a passage for liquid fuel connecting said conduit with the upper and lower portions respectively of said fuel chamber whereby vapor from said chamber is mixed with the liquid fuel conducted to the burner, and a float controlled valve responsive to fuel level in said chamber regulating communication between said chamber and the vapor passage.

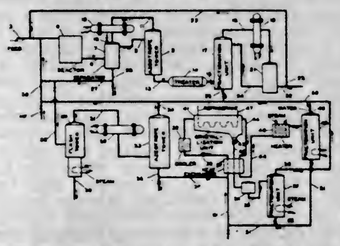
2,458,043
SOUND REPRODUCTION SYSTEM
Walter J. Zenner, Des Plaines, Ill.
Application October 13, 1945, Serial No. 622,178
7 Claims. (Cl. 179—100)

1. In a pneumatic system of sound reproduction, an enclosed air circulating path including a chamber, said chamber having a wall adapted to vibrate at sound frequencies, a blower for producing a flow of air through said path, a first electrically operated air valve associated with said path adjacent the entrance to said chamber, a second electrically operated air valve associated with said path adjacent the exit from said chamber, electrical circuit means connecting said first and second electrically operated air valves,



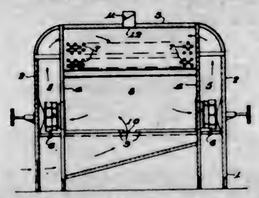
whereby in response to signal impulses said valves are alternately operated in opposition to produce a push-pull effect upon the flow of air through said path.

2,458,044
METHOD OF RECOVERING HYDROGEN FLUORIDE FROM AN AZEOTROPIC MIXTURE BY CRYSTALLIZATION
Cruzan Alexander, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application December 17, 1945, Serial No. 635,593
13 Claims. (Cl. 260—683.4)



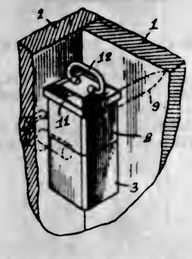
6. The method for recovering hydrogen fluoride from an azeotropic mixture of the same with water, which comprises cooling said azeotropic mixture to form crystals, recovering said crystals thus formed and melting same, passing said melted crystals as a liquid to a fractional distillation, and recovering hydrogen fluoride as overhead product from said fractional distillation.

2,458,045
BLOWER UNIT AND ASSEMBLY
Everett N. Angus, Oaklyn, N. J.
Application January 23, 1945, Serial No. 574,133
3 Claims. (Cl. 34—222)



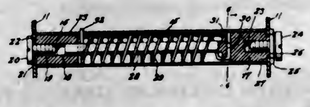
1. A processing machine, comprising a housing having an inner wall having an air inlet aperture, an outer wall panel spaced from said inner wall and oscillatably mounted, an intake cone surrounding said aperture, a centrifugal fan comprising radial blades carried by said panel and provided with a substantially symmetrical, reversely curved band forming a continuation of said cone when in operative position and through which said blades extend, a compartment for material being treated upon the opposite side of said inner wall, an air conditioning compartment connected with said first compartment, and both of said compartments and the space between said walls being connected in a closed recirculation circuit.

2,458,046
KEY CONTROLLED LOCK
Esdras Audet, Shawinigan Falls, Quebec, Canada
Application August 26, 1947, Serial No. 770,629
7 Claims. (Cl. 70—77)



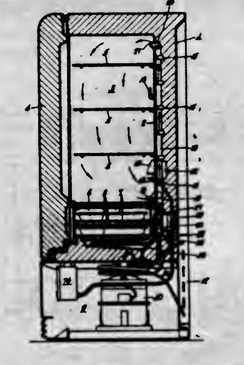
1. A lock comprising a pair of keepers adapted to be carried by relatively movable members and adapted for alinement with each other, a bolt adapted to be passed through said keepers, a rotatable key cylinder in said bolt, a pair of locking pins slidable transversely in said bolt at opposite sides of said cylinder and receivable in opposite sides of one said keeper, and a connection from said cylinder to said pins for actuating the latter in unison.

2,458,047
BACKLASH PREVENTER FOR FISHING REELS
Verner E. Babcock, Oak Harbor, Ohio
Application July 9, 1946, Serial No. 682,345
2 Claims. (Cl. 242—84.5)



1. An attachment for fishing reels comprising in combination, a plate formed with a tubular enclosure at one end thereof, mounting means comprising a pair of bushings rotatably engaging the end portions of said enclosure, one of said bushings being formed with an axial bore, a stem on the remaining of said bushings rotatably engaging said bore, a coil spring positioned in said enclosure and surrounding said stem, one end of said spring being anchored to one of said bushings, the remaining end of said spring engaging said enclosure, said bushing associated with said spring being rotatably adjustable with respect to said enclosure, and a roller rotatably mounted at the remaining end of said plate, said roller engaging the wound fishing line.

2,458,048
HUMIDITY CONTROL SYSTEM
John J. Bauman, Abington, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application May 27, 1944, Serial No. 537,701
11 Claims. (Cl. 62—6)



1. In a humidity control apparatus, an enclosure, a refrigerating system for controlling the temperature of said enclosure, means for detecting the moisture content of the air within said enclosure, means controlled by said detecting means for maintaining the moisture content of said air below a predetermined maximum, said last-named means including an electron tube having a heatable cathode, and means responsive to operation of said refrigerating system for rendering said detecting means operable, and for heating said cathode to render said tube operable, only during the cooling cycle.

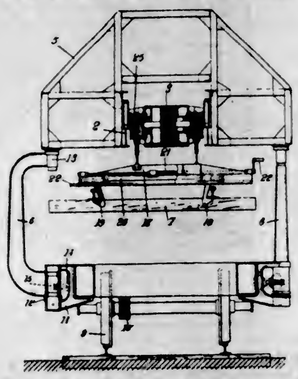
2,458,049
TREATMENT OF HYDROCARBONS CONTAINING NEUTRAL ORGANIC SULFATE
Herman S. Bloch, Chicago, and George L. Hervert, Berwyn, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application October 31, 1946, Serial No. 707,028
13 Claims. (Cl. 202—57)

1. In the heating of hydrocarbons containing a neutral organic sulfate, the improvement which comprises heating the hydrocarbons in the presence of a solid, substantially anhydrous, basic substance.

2,458,050
SYSTEM FOR LAYING OR REMOVING RAILWAY TRACKS
Abel Léo Charles Blondelle, Sartrouville, France, assignor to Society Entreprises Metropolitaines & Coloniales, S. A., Paris, France, a society of France
Application August 5, 1947, Serial No. 766,351
In France April 5, 1946
Section 1, Public Law 690, August 8, 1946
6 Claims. (Cl. 104—5)

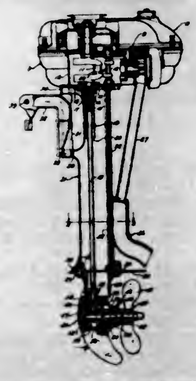
5. A device for laying and removing railway track elements which comprises, in combination, a rolling platform for use on a railway track, a runway above said platform extending symmetrically to the longitudinal middle plane there-

of, a conveyor carriage adapted to cooperate with said runway for displacement therealong, two rows of posts, one along each longitudinal side of said platform, for supporting said runway thereon, at least all the posts located along one side of said platform being pivotally mounted thereon about at least substantially vertical respective axes and being pivotally mounted in said runway each about the same pivot axis as that about which it is pivoted to said platform, said pivotally



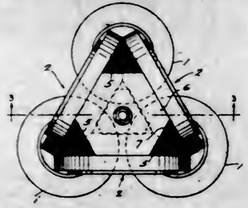
mounted posts being of bent shape in respective planes passing through said axes with their concave portions turned toward said respective axes, two horizontal transverse bars supported by said carriage, one at each end of a track element conveyed by said carriage, means carried by said transverse bars for holding said track element suspended in horizontal position under said carriage between said two rows of posts, and means for independently adjusting said transverse bars transversely to the axis of said carriage.

2,458,051
OUTBOARD MOTOR LUBRICATING SYSTEM
Alfred S. Bosma, New Holstein, Wis., assignor to Hart-Carter Company, Peoria, Ill., a corporation of Delaware
Application February 6, 1946, Serial No. 645,846
3 Claims. (Cl. 123—196)



1. In an outboard motor having a top power head and including a combustion engine having a crank case in said power head, a vertical drive shaft depending from said head and driven by said engine, a horizontal propeller shaft adjacent the lower end of said vertical drive shaft, means between said vertical drive shaft and said horizontal propeller shaft for driving the latter, an elongated vertical housing including a top section surrounding all but the lower portion of the vertical drive shaft and a bottom section enclosing said lower portion and also the propeller shaft, there being a joint between said top and bottom sections, said bottom section forming a reservoir for motor oil, a pump in said bottom housing section driven by said horizontal propeller shaft, an oil duct in the wall of said bottom housing section, an oil duct formed at the joint between said top and bottom housing sections with which said first duct communicates, and means including an oil tube in said top section which communicates with said joint duct for delivering oil to said crank case.

2,458,052
THREE-PHASE TRANSFORMER CONSTRUCTION
Chester W. Brown, Milwaukee, Wis., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application March 6, 1947, Serial No. 732,873
6 Claims. (Cl. 175—356)



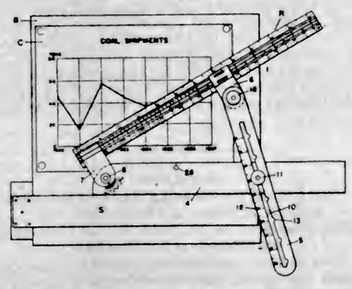
1. A three phase transformer comprising three conducting winding assemblies, three closed cores formed of continuous magnetic ribbon having leg portions passing through the conducting winding assemblies and having yoke portions provided with slanting inner faces, said yoke portions forming the sides of an approximate triangle at each end of the transformer, and laminated magnetic filler members at each end of the transformer located between the yoke portions of the core sections and having slanting outer faces arranged adjacent the slanting inner faces of the yoke portions.

2,458,053
APPARATUS FOR RAISING NATURAL OILS AND OTHER LIQUIDS BY GASEOUS PRESSURE
Norman Fraser Brown, Stow, Scotland, assignor of one-half to Indo-Burma Petroleum Company Limited, Calcutta, India, a British-Indian company
Application September 13, 1945, Serial No. 616,111
In Great Britain October 26, 1944
4 Claims. (Cl. 103—234)

1. Apparatus for raising liquids in wells by gaseous pressure comprising a displacement chamber adapted to be disposed below liquid level in a well; an auxiliary chamber extending from the upper end of said displacement chamber; gas inlet ports in the lower end of said auxiliary chamber opening into the upper end of said displacement chamber; gas outlet ports in said auxiliary chamber spaced upwardly of the upper end of the displacement chamber and opening into the well; a gas pipe opening to said displacement chamber; a source of gaseous pressure, means connecting said source to said gas pipe; an eduction pipe vertically reciprocable in said displacement chamber; a plurality of valve means actuable by said eduction pipe upon reciprocation thereof to one position for admitting liquid to the displacement chamber from a space around the displacement chamber, uncovering the gas inlet ports connecting the upper part of the displacement chamber with the auxiliary chamber, and closing the eduction pipe from the displacement chamber; and actuable, upon reciprocation of the eduction pipe to another position thereof, for

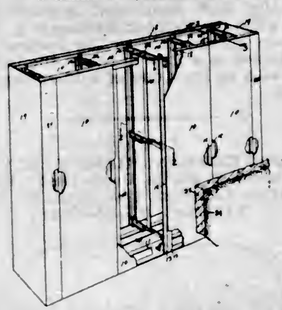
closing said displacement chamber from said space, covering said gas inlet ports, admitting gaseous fluid to the upper part of said displacement chamber, and opening the eduction pipe to the lower part of the displacement chamber; said gas outlet ports in the auxiliary chamber being spaced such distance above the upper part of the displacement chamber that the hydrostatic head of a column of gassy oil in the well casing extending from the oil entry in the lower end of the displacement chamber to the height of the exhaust port or ports in the auxiliary chamber, is greater than the hydrostatic head of settled or non-gassy oil which would fill the displacement chamber.

2,458,054
DRAFTMAN'S DEVICE
Russell M. Brown, Prince George's County, Md.
Application September 9, 1947, Serial No. 773,004
6 Claims. (Cl. 32—75)



1. In an instrument of the kind described, the combination with a holder of an engineer's ruler triangular in cross section and provided with grooves along the sides thereof, the said holder comprising a slide bar, a protractor clip pivoted to the end of said bar and provided with runners engaged in grooves of said ruler, an adjustable arm having a longitudinal slot therein and a clamp pivoted on an end thereof, the said clamp being provided with runners engaging grooves in said ruler, a locking device carried by said arm for locking said clamp to said arm, and an additional locking device carried by said bar for locking the arm to the bar in various positions of adjustment.

2,458,055
CAR PIT FORM
Carl C. Buehke, Portland, Oreg.
Application October 29, 1946, Serial No. 706,315
3 Claims. (Cl. 25—128)



1. A car pit form having in combination a plurality of sections each of which section consists of a pair of opposite side form plates having inwardly turned bottoms, each of said form plates having secured thereto a pair of vertical ribs, one leg of each rib being normal to the side plate, said leg having inclined notches formed therein near the bottom and middle of the length thereof, the upper end of said leg having a slot formed therein between same and its respective form plate, said slot constituting a pocket for one leg of a stiffening angle bar, closures for the space between the ends of the outermost side forms, and braces for said form consisting of a plurality of toggle links disposed between said ribs and having bolts thereon adapted to engage said inclined notches, a vertical tie bar connecting the toggle joint of said toggle links and a brace bar mounted across the upper end of said tie bar having means for attaching same to the upper end of the ribs, together with stiffening bars along the upper and lower ends of said ribs adapted to hold the panels in longitudinal alignment.

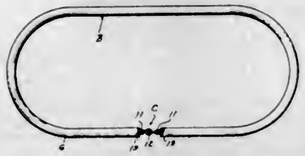
2,458,056
ELECTRIC SWITCH
Luis Bulgarini, Buenos Aires, Argentina, assignor of thirty-two and one-half per cent to Sara Maria Iribarren de Olariaga and thirty-two and one-half per cent to Percy Forster
Application September 24, 1945, Serial No. 618,080
3 Claims. (Cl. 200—77)

3. In a switch, a casing, spring contact members, a seat in at least one of said members, an electric conducting contact element freely movable in a limited path defined in said casing between the rear and front walls of said casing, the inner face of a ring shaped rotating member, and a guard member projecting from one of the end

walls of said casing and arranged to complete a closure within which said contact element is displaced, said ball being engaged and retained in said seat by the tension of said spring members, and the ring shaped rotating member being provided with one inner projection for displacing said contact ball relative to said spring members to act to sharply eject the ball out of engagement

therewith to open the switch and another inner projection for forcibly returning said ball into engagement with said spring members to close the switch, the first mentioned projection being adapted when the rotating member is in the position which corresponds to the opening of the switch, to act as a stop to retain the ball out of contact with at least one of said spring contact members.

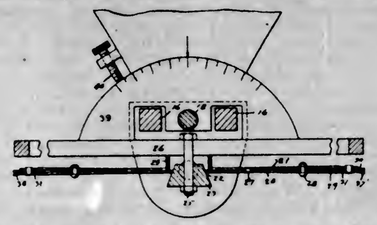
2,458,057
POWER TRANSMISSION BELT
William R. Burtle, Upper Darby, Pa.
Application August 22, 1945, Serial No. 611,994
2 Claims. (Cl. 74—238)



1. A power transmission belt of the round type comprising a belt member embodying a metallic twisted-strand core and a rubber-like covering of uniform diameter disposed on and bonded to the core, the ends of said core projecting beyond the ends of the covering, caps secured on the projecting ends of the core to prevent unlaying of the strands thereof and including heads of lesser diameter than and abutting the ends of the covering to prevent stripping of the covering from the core, and coupling members for the ends of the belt anchored to the ends of the covering and free of connection with the core, each coupling member consisting of a spring having convolutions at one end of smaller diameter than the core and surrounding the adjacent projecting end of the core and the associated cap and other convolutions surrounding and imbedded in the covering to anchor the spring member to the belt member.

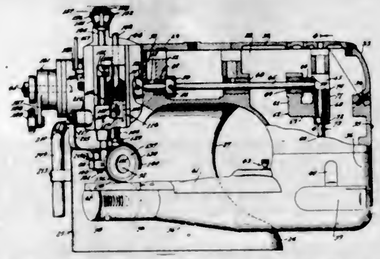
2,458,058
HOLDER FOR CHAIN SAW SHARPENERS
Raleigh S. Carroll, Lebanon, Oreg.
Application January 27, 1947, Serial No. 724,652
1 Claim. (Cl. 76—37)

A saw holding device, having in combination a sheave, consisting of a pair of dished disks having their outer rims spaced and having their central portions united and provided with a central opening, a tapering collar fitting into said opening, a head forming a support for said holder, a bolt passing through said collar and head, a sleeve between said head and disks surrounding the small end of said collar, a bolt forming the pivot for said collar and attaching same to said head, means for controlling the spacing of



the rims of said disks and means for indexing the chain on the holder.

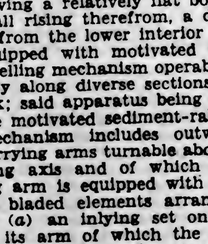
2,458,059
ELECTRICAL SEAMING APPARATUS
Norman V. Christensen, Chicago, Ill., Harold J. Le Vesconte, Glendale, Calif., and Albert M. Schweda, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application September 15, 1944, Serial No. 554,306
9 Claims. (Cl. 154—42)



1. In apparatus for bonding a plurality of layers of material, at least one of which is thermoplastic, a lower member comprising a tubular arm having a slot formed in the upper portion thereof, an upper member secured to the lower member and disposed above and spaced from the arm, a wheel having its major portion within the peripheral confines of the arm and a marginal portion in registration with the slot and projecting thereabove, a wheel carried by the upper member in cooperative relation to the first-mentioned wheel, said wheels being arranged for rotation on substantially horizontal and parallel axes lying in a substantially vertical plane that is generally normal to the arm and cooperating to feed material placed therebetween, at least the peripheral portion of each wheel being electrically conductive, and means adapted to be connected to a source of high frequency current for creating a high frequency electric field between the peripheral portions of the wheels, said means including said wheels.

2,458,060
ICE-CREAM RECEPTACLE HOLDING DEVICE
Joseph B. Clower, Woodstock, Va.
Application August 16, 1944, Serial No. 549,781
4 Claims. (Cl. 220—14)

4. In a device for securing an open receptacle for bulk ice cream and the like in the well of a storage cabinet, an outer member adapted to be fastened in the upper part of the well and to extend down into the well below the level of the top of the receptacle, an inner member adapted to be mounted on the rim of the receptacle and to project upwardly therefrom in parallel engagement with the outer member, a downwardly facing channel formed on the bottom of the inner member for engaging the inner and outer sides

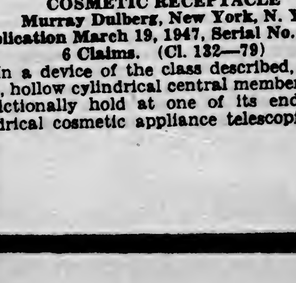


of the rim of the receptacle and preventing lateral displacement thereof, prong means formed on the outer member for interlocking with the outer side of the receptacle below the rim and preventing rotation thereof, and pin and slot means for adjustably securing the members together in lengthwise telescoping relation with the channel pressed down on the rim.

2,458,061
SLURRY MIXER
Harold B. Coulter, Larchmont, N. Y., assignor to The Dorr Company, New York, N. Y., a corporation of Delaware
Application July 12, 1947, Serial No. 760,684
7 Claims. (Cl. 261—93)

1. Apparatus of the class described, comprising in combination a slurry mixing and holding tank having a relatively flat bottom with marginal wall rising therefrom, a draw-off conduit leading from the lower interior portion thereof, and equipped with motivated sediment-raking and impelling mechanism operable over and progressively along diverse sections of the floor of the tank; said apparatus being characterized in that the motivated sediment-raking and impelling mechanism includes outwardly-extending rake-carrying arms turnable about a vertically-extending axis and of which (1) each rake-carrying arm is equipped with downwardly-extending bladed elements arranged in sets including (a) an inlying set on the inner portion of its arm of which the bladed elements extend rearwardly and outwardly and function to impel sediment engaged thereby progressively forwardly and outwardly towards and into an annular medial band section on and above the floor of the tank, and (b) an outlying set on the outer portion of the arm of which the bladed elements extend forwardly and outwardly and function to impel sediment engaged thereby forwardly and inwardly towards and into said annular medial-band section; (2) each rake-carrying arm has a vertically-extending lift pipe carried thereby and rising from the general region where the outer end portion of the inlying set and the inner end portion of the outlying set of raking blades approach each other; and (3) each rake-carrying arm has movable therewith an air supply pipe connected for receiving pressure air received thereinto and for delivering air therefrom into the interior of the corresponding lift pipe.

2,458,062
GARMENT STRUCTURE
Gertrude Davenport, New York, N. Y.
Application March 22, 1947, Serial No. 736,505
1 Claim. (Cl. 2—73)



A one-piece sleeveless strapless garment of soft flexible cloth comprised of a panel having an upper bust-covering section adapted to fit over the breast and under the arms of the wearer with self-supporting snugness and waist and skirt sections below said bust section, top and bottom edges on said panel formed substantially straight and joined by vertical overlapped and overlapping side edges, the bust portion of the overlapping side edge extending angularly downward with increasing fullness and the waist and skirt portions of said overlapping edge extending substantially vertically downward from said bust portion while said overlapped side edge at the bust portion extends vertically downward to the waist section and curves outward and downward to greater fullness at the skirt section, rear gatherings extending substantially vertically through the bust and waist sections and into the skirt section, fastening means comprising a top pair of fasteners, one positioned at the upper end of the overlapping side edge and the other at the top edge inward from the overlapped side edge and a second pair of fasteners at the waist section, one positioned at the said overlapping edge and the other spaced inward from said overlapped edge, said gatherings and fastenings cooperating to provide form-clinging lines at the waist and bust with the skirt edges freely draped and overlapped and the overlapping side edge at the side of the wearer.

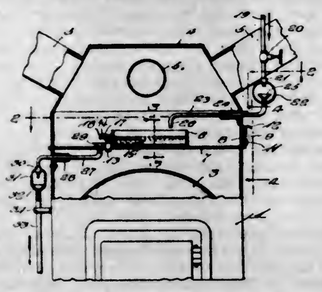
2,458,063
COSMETIC RECEPTACLE
Murray Dulberg, New York, N. Y.
Application March 19, 1947, Serial No. 735,744
6 Claims. (Cl. 132—79)

1. In a device of the class described, an elongated, hollow cylindrical central member adapted to frictionally hold at one of its ends a first cylindrical cosmetic appliance telescopically fit-

ting into said cylindrical member, while the other end of the latter is provided with a cylindrical opening of reduced diameter, adapted to receive and frictionally hold a second cosmetic appliance which is connected with a third cylindrical appliance, said first appliance being provided with a cylindrical extension adapted to house a

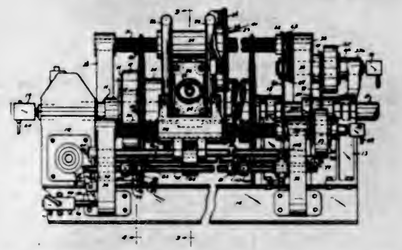
cylinder holding a container for liquid, this cylinder being adapted to receive at its end a first cap provided with an applicator for the liquid, said third appliance being adapted to receive a closure cap, the device comprising said first, second and third appliance, the central member and said first cap having a substantially flush surface in assembled condition.

2,458,064
HUMIDIFIER FOR AIR-HEATING FURNACES
Angelo Raffaele Di Petta, Lakewood, Ohio
Application October 13, 1944, Serial No. 558,512
6 Claims. (Cl. 126—113)



1. A humidifying apparatus for a furnace including a jacket, a fire pot in said jacket, and a bonnet carried by said jacket and having outlets for air heated by the furnace, said apparatus comprising horizontal supporting rods extending transversely through the furnace in a common plane and disposed in transversely spaced parallel spaced relation to each other above the fire pot with their ends supported by the jacket, said jacket being formed with an opening above said rods, a door movable into and out of closing relation to said opening, sleeves upon said rods, a cross rod extending transversely of the supporting rods above said supporting rods and carried by said sleeves, said cross rods having portions bent to form a pair of arms extending longitudinally of the supporting rods and located outwardly therefrom in parallel relation thereto, the free ends of said arms being bent to form terminal portions extending outwardly from the supporting rods in diverging relation thereto, a water pan inserted into the furnace through said opening and resting upon said rods, said pan being freely movable along said supporting rods and limited in its inward movement beyond its normal position by engagement with the rod between the arms thereof and held against transverse movement by the said arms, a water pipe having a valve, an inlet pipe extending through said jacket with its outer end disposed in position to receive water from the water pipe and its inner end terminating over said pan, an overflow pipe for said pan, an outlet pipe extending through said jacket with its inner end disposed in position for receiving water from said overflowing pipe, and a drain pipe for receiving water from the outer end of the outlet pipe.

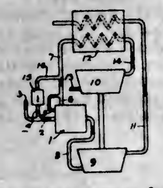
2,458,065
LEVEL WINDING DEVICE
Alvin J. Farrar, Cleveland, Ohio, assignor to The American Coach & Body Company, Cleveland, Ohio, a corporation of Ohio
Application June 22, 1944, Serial No. 541,591
11 Claims. (Cl. 242—158)



4. A level winding device for a cable receiving drum including a cable guide mounted for traversing movement along the drum, means for effecting the traversing movement and including two clutches, one of said clutches operating to drive the guide in one direction and the other operating to drive it in the opposite direction, a pair of shiftable bars each having abutment means thereon operable to effect engagement of one of said clutches and disengagement of the other, a member carried by the guide and shiftable into coacting engagement with either of said bars, and means including a part carried by the drum for shifting said member to coact with one of said bars to the exclusion of the other dependent upon the direction of rotation of said drum.

2,458,066
COMBUSTION CHAMBER
George B. Farkas, Jackson Heights, and Addison Y. Gunter, Larchmont, N. Y., assignors to American Locomotive Company, New York, N. Y., a corporation of New York
Application July 20, 1944, Serial No. 545,831
5 Claims. (Cl. 262—19)

1. A combustion chamber for producing a hot mixture of products of combustion and air comprising a casing; a hollow structure providing a combustion space, disposed within said casing having a closure and an inlet for air at its forward end, an outlet at its rear end, a wall secured at its forward end to said casing and extending rearwardly therefrom, converging from said inlet toward said outlet providing a contracted throat and extending rearwardly therebeyond, and another wall extending rearwardly from said throat-containing wall, said walls being adapted to expand and contract relative to said casing and pro-

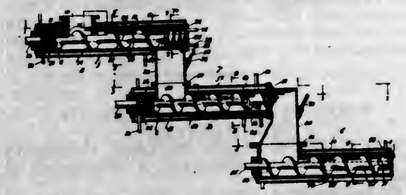


viding with said casing a space forming a passage having an inlet for air at its forward end and an outlet at its rear end, said walls at their juncture having a row of ports providing another outlet for said passage, both said passage outlets opening into said combustion space; and a fuel burner having an outlet in front of and facing said throat.

2,458,067
PROCESS FOR SEPARATING OLEFINS FROM PARAFFINS
Bernard S. Friedman, Chicago, and Russell F. Stedman, Crete, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application May 2, 1945, Serial No. 591,628
7 Claims. (Cl. 260—677)

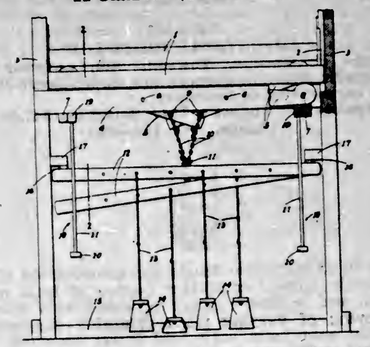
1. A process for separating olefins from paraffins which comprises contacting a mixture containing olefinic and paraffinic hydrocarbons with a solution of a silver salt in acetonitrile.

2,458,068
SYSTEM FOR THE TREATMENT OF MATERIAL
Lawrence J. Fuller, Philadelphia, Pa., assignor to Welding Engineers Incorporated, Norristown, Pa., a corporation of Delaware
Application November 25, 1943, Serial No. 511,723
16 Claims. (Cl. 100—48)



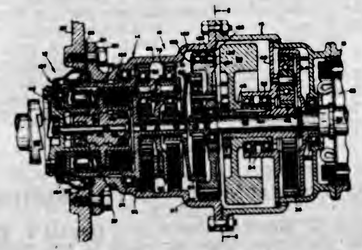
1. A system for the treatment of material containing removal fluid comprising a plurality of feed worms in screw form positioned close together side by side and being of opposite pitch and rotating in opposite directions so that central adjacent peripheral portions move in the same direction, a casing for said feed worms provided with an opening for supply of said material to said worms and with a subsequent discharge area, means at said discharge area developing back pressure against the material and providing an adjacent area of lower pressure, a discharge orifice receiving outflow of said material under said back pressure, and venting means at said area of lower pressure releasing fluid separated from said material.

2,458,069
LAM MOUNTING FOR LOOMS
Edward E. Gilmore, Stockton, Calif.
Application December 7, 1946, Serial No. 714,881
11 Claims. (Cl. 139—30)



1. Selective operating mechanism for a plurality of parallel, independently vertically swingable, harness frame actuating jack units of a loom, said mechanism comprising, in sets with the jack units, a lam disposed below each jack unit, an actuating element connected between each lam at a point intermediate its ends and the corresponding jack unit, each actuating element suspending the corresponding lam for downward vertical swinging motion at either end from a normally substantially horizontal position, a pull element depending from each lam, and a treadle attached to the lower end of each pull element.

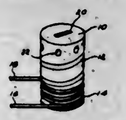
2,458,070
TRANSMISSION MECHANISM FOR ENGINE STARTERS AND THE LIKE
Samuel Gilbert, Cedar Grove, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application July 30, 1947, Serial No. 764,761
4 Claims. (Cl. 123—179)



1. An engine starter transmission mechanism comprising a motor, a flywheel, an engine-engaging member, means responsive to rotation of said motor to move said member while substantially torque free to engine-engaging position, including a planetary gear train having an orbital element which because of said torque free condition is brought to a stop by said member when the latter reaches said position and a planet carrier which continues to rotate with said motor, means drivably connecting said motor and flywheel, and means responsive to a predetermined speed of said flywheel after said member reaches said engine-engaging position for stopping rotation of

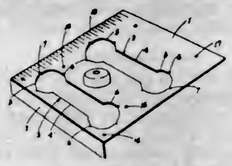
said carrier to cause the rotation of said motor and flywheel to be transmitted to said engine-engaging member through the intermediary of said orbital element.

2,458,071
ADJUSTABLE INDUCTOR
James F. Gordon, Towson, Md., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application August 1, 1944, Serial No. 547,650
6 Claims. (Cl. 171—242)



5. In an inductive device, the combination of a helically formed conductor having at least one turn, and a core member provided with spiral grooving of varying pitch rotatably supported within said helix with said spiral grooving in sliding engagement with the turns of said conductor helix, said core member moving axially within said conductor helix upon relative rotation between said helix and said core member.

2,458,072
WINDOW PULLEY GAUGE
William M. Hall, Stockton, Calif.
Application April 6, 1946, Serial No. 660,157
1 Claim. (Cl. 33—174)

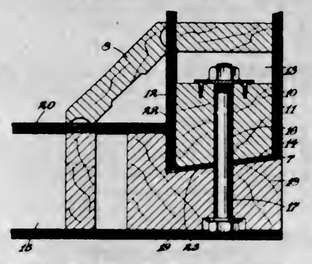


A gage comprising a flat plate, a flange projecting at right angles to one edge of the plate, the plate being provided with a slot which comprises a substantially rectangular portion terminating at each end in a substantially circular orifice, the plate being provided with a pair of notches disposed in opposed relation diametrically of each orifice, and such plate being also provided with a pair of notches disposed in opposed relation substantially in line with the longitudinal center of the slot.

2,458,073
COATING MAGNESIUM AND MAGNESIUM ALLOYS
Herman W. Hemker, Euclid, and Donald L. Eppink, Cleveland, Ohio, assignors to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application January 6, 1944, Serial No. 517,262
4 Claims. (Cl. 148—6.20)

1. The method of providing a corrosion-resistant coating upon surfaces of magnesium and high-magnesium-content alloys, which comprises contacting the surface at a temperature of 120 to 170 degrees C. for substantially 15 to 60 minutes with an aqueous solution prepared by dissolving in water, as the predominant constituents, 62.5 to 187.5 parts of alkali metal hydroxide, substantially 24 to 72 parts of alkali metal bichromate, and substantially 20 to 60 parts of alkali metal nitrate, the proportion of water in the solution being between 20 and 55 per cent, and the solution having a pH value in excess of 13.

2,458,074
BUILDING UNIT JOINT CONSTRUCTION
Harry Hill, Hampshire, England, assignor of one-half to The British Power Boat Company Limited, Hampshire, England, a British company
Application August 21, 1945, Serial No. 611,772
In Great Britain February 22, 1944
3 Claims. (Cl. 20—4)



1. A joint structure between two prefabricated building units extending substantially at right angles to one another, each of said units having parallel face-forming panels, one of said units having a first panel extending beyond the edge of a second panel, a junction element secured to and extending between said panels, said element having an oblique face overlying the extended portion of said first panel and sloping toward this panel as it extends inwardly of the unit and a shoulder extending from the inner end of said face to the edge of said second panel substantially at right angles thereto, the other of said units being provided at the point of connection between units with a second junction element having a face of complementary slope to said oblique face, the first mentioned junction element having a hole at right angles to the panels of its unit and the said second junction element having a hole parallel to the panels of its unit, and a bolt of smaller diameter than said holes passing therethrough, whereby tightening of said bolt draws said junction elements together and draws the said other of said units into engagement with said right angle shoulder.

2,458,075
PROCESS FOR PREPARATION OF THIOLESTERS
Chester M. Himel, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application January 10, 1946, Serial No. 640,385
12 Claims. (Cl. 260—455)

1. A process which comprises reacting in the presence of an acid a compound of the general formula

$$R{-}C{\equiv}N$$

where R is an unsubstituted hydrocarbon radical selected from the group consisting of alkyl, aralkyl, and aryl radicals, with a compound of the general formula

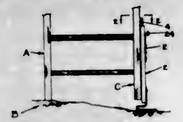
$$R''{-}\underset{\displaystyle R'''}{\overset{\displaystyle R'}{C}}{-}S{-}H$$

where R', R'', and R''' each is an alkyl radical

and the total number of carbon atoms in the molecule does not exceed twenty, treating the resulting material with water, and recovering a so-produced thiolester of the general formula

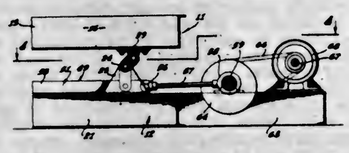
$$R{-}\overset{\displaystyle O}{\overset{\|}{C}}{-}S{-}\underset{\displaystyle R'''}{\overset{\displaystyle R'}{C}}{-}R''$$

2,458,076
LADDER EXTENSION
Charles O. Houston, Washington County, Pa.
Application March 12, 1947, Serial No. 734,121
3 Claims. (Cl. 228—63)



1. In a pawl and rack construction for an extensible ladder leg, said rack comprising a channel shaped member having a web with downwardly facing teeth and outwardly turned flanges, said teeth lying within the channel formed between said flanges, said pawl member comprising a channel shaped plate member having inwardly turned flanges slidably engaging said outwardly turned flanges on said rack, a tongue secured to said plate member and normally in spring engagement with the teeth of said rack, and a foot pivotally secured to said plate member and extending from a point beneath to a point outwardly of said ladder to form a tread portion.

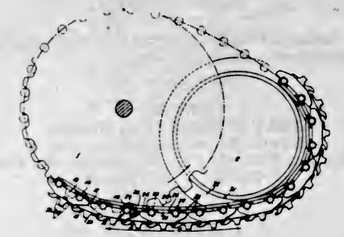
2,458,077
CONVEYER
Richard S. Jacobsen, Los Angeles, Calif.
Application March 5, 1945, Serial No. 580,972
8 Claims. (Cl. 198—220)



1. In conveyer apparatus, a trough comprising a plurality of trough sections arranged in overlapping relation, and oscillating means supporting the inlet end of each of said sections, the outlet end of each of said sections being supported by the inlet end of the next successive section in the direction of movement of material carried by said section whereby the outlet end of each of said sections is caused to partake of the vertical movement of the inlet end upon which it is supported.

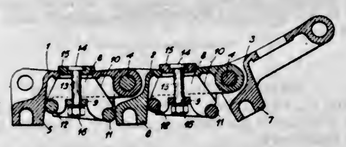
2,458,078
SELF-PROPELLED TRACK-LAYING VEHICLE
Philip Henry Johnson and Leonard William Tripp, Hounslow, England, assignors to Roadless Traction Limited, Hounslow, England, a company of Great Britain
Application June 14, 1945, Serial No. 599,470
In Great Britain December 17, 1943
3 Claims. (Cl. 305—8)

1. A tracklaying vehicle comprising an endless track of the locked girder type composed of links having abutments which inter-engage to limit the extent of articulation in one direction whereby the laid portion of the track cannot assume a reverse curvature, a driving wheel around which the track in front, relative to the normal direction of travel of the vehicle, of the laid portion is entrained, and an idler around which the track in rear of the laid portion is entrained, the driving wheel and idler each transmitting a part of the weight of the vehicle upon the track so as



to load the laid portion of the track at its ends and thus ensure that it is securely locked, track-engaging means on the driving wheel, and wheel-engaging means on the track so that the laid portion of the track takes the driving force in compression, the pitch of the track-engaging means being greater than the pitch of the wheel-engaging means, whereby it is ensured that under normal circumstances the wheel exerts no pull on the track.

2,458,079
RIGIDIFYING MEANS FOR FLEXIBLE ENDLESS TRACKS
Philip Henry Johnson and Leonard William Tripp, Hounslow, England, assignors to Roadless Traction Limited, Hounslow, Middlesex, England
Application March 4, 1946, Serial No. 651,791
In Great Britain December 12, 1944
10 Claims. (Cl. 305—10)

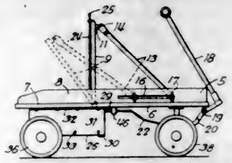


1. In a flexible endless track including a plurality of links, means converting said track at least partly into an endless track of the locked girder type, comprising a wedge member secured to each of said track links and so formed and located between adjacent links as to provide an abutment preventing these links from hinging into reversed curvature.

2,458,080
CONVERTIBLE COASTER WAGON
Agnar Johnson, Rockford, Ill.
Application January 17, 1946, Serial No. 641,740
16 Claims. (Cl. 280—87.01)

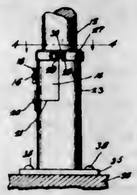
3. A wagon as set forth in claim 1 including a cross-piece on the rear end portion of the rear section, the opposite ends of which are arranged to overlie the rearwardly extending side portions

of the main section for support of the rear section on the main section in lowered position, the



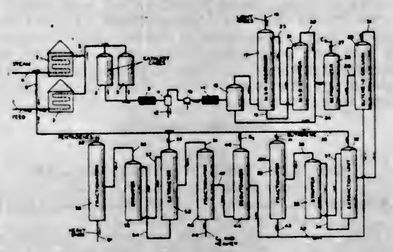
arms being pivotally connected at their rear ends to the ends of said cross-piece.

2,458,081
POLE SUPPORTING HINGE
Edwin M. Jordan, Miami, Fla.
Application November 17, 1945, Serial No. 629,279
2 Claims. (Cl. 189—28)



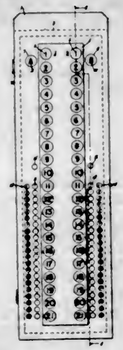
1. A pole and a supporting device therefor comprising a vertically disposed tubular base member having means on its lower end for securing the same upon a suitable support, the upper end of said tubular base member being vertically split to form arcuate clamping segments of a similar size, one of said segments being cut from said tubular base member and hinged at its bottom thereto, means for detachably securing the base of the pole to said hinged segment for pivotally moving the pole to either horizontal or vertical position, arcuate pole encircling clamping arms hinged to the fixed arcuate clamping segment for disposing about the pole and hinged segment when in vertical position, and locking means for the free ends of said locking arms.

2,458,082
PRODUCTION OF DIOLEFINS
Myron O. Kilpatrick, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 6, 1946, Serial No. 688,623
10 Claims. (Cl. 260—680)



1. A process for the production of diolefins which comprises contacting a mixture of butenes and about 5 to about 10 volume per cent of 5 carbon atom hydrocarbons more saturated than diolefins at a temperature within the range of from about 1000 to about 1300° F. with a dehydrogenation catalyst in the presence of from about 8 to about 15 volumes of steam per volume of hydrocarbon.

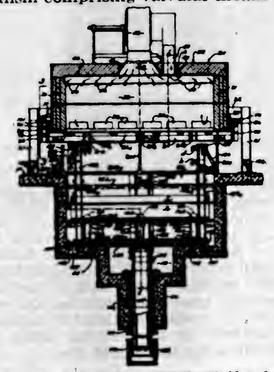
2,458,083
GAME SCORING DEVICE WITH SCORE INDICATING LIGHTS
George E. Kochem, Schenectady, N. Y.
Application July 22, 1946, Serial No. 685,305
2 Claims. (Cl. 177—337)



1. A game scoring device comprising a body member having two adjacent parallel rows of recesses therein, a respective light source positioned in each of said recesses, an opaque cover enclosing said body member, said cover having translucent portions closing the entrances to said recesses, said portions forming the sole outlet for light from said sources, a pair of metallic members arranged respectively on opposite sides of said body member, two parallel rows of contacts insulatingly supported on said metallic members and arranged on opposite sides of said recesses, the contacts in each row being connected with the lights in the adjacent row of recesses, each of said contacts being connected in series with the correspondingly positioned light source, a source of electrical energy connected in series with said lights and said metallic members, indicia corresponding to successive scores of a game to be scored supported on adjacent ones of said portions, corresponding indicia positioned adjacent corresponding ones of said contacts, said metallic members having apertures aligned with said contacts, and a movable contact making member for connecting a desired one of said contacts with its associated metallic member to energize the corresponding light source and illuminate the corresponding indicium associated with said light source.

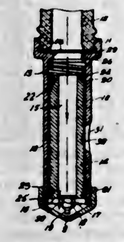
2,458,084
HEAT-TREATING SYSTEM
Jess Max Lee, Los Angeles, Calif.
Original application December 9, 1941, Serial No. 422,214. Divided and this application August 17, 1945, Serial No. 610,917
6 Claims. (Cl. 266—4)

1. In a system for heat treating metal articles including in combination a heating furnace having a closure at its lower side, means for opening and closing said closure, a quenching bath spaced below said furnace, a fluid pressure cylinder located below the quenching bath, a lift plunger extending upwardly from the cylinder through the quenching bath, a load receiving platform carried by the upper end of the plunger, plunger operating means including a valve control mechanism for admitting and exhausting pressure gas into and from said cylinder, said mechanism comprising valvular means automati-



cally actuated by movement of the load receiving platform for restricting the exhaust from the cylinder during downward movement of the plunger when the load receiving platform is at a predetermined point of its downward travel in the quenching bath so as to form a gaseous cushion upon which the plunger and load receiving platform oscillate in the bath.

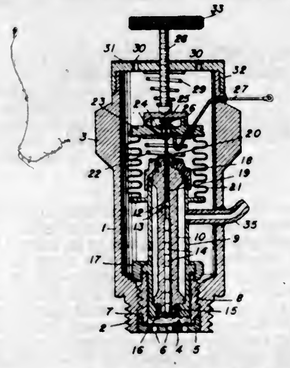
2,458,085
PLUNGER FED DROPPER
Carl L. Ludwig, Los Angeles, Calif.
Application January 22, 1944, Serial No. 519,289
2 Claims. (Cl. 222—386)



1. A dispenser as described comprising a casing for a quantity of fluid having a dispensing aperture, a tube within said casing having a teat at one end adjacent said aperture, and means to reciprocate said tube whereby to force fluid from the interior of said casing through said tube and through said dispensing aperture, said means including an opening in said casing and a knurled surface on said tube registering with said opening.

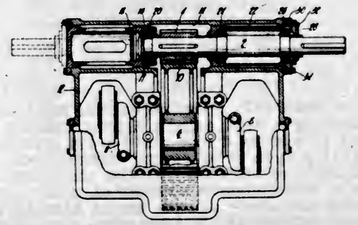
2,458,086
ENGINE COMBUSTION REGULATING DEVICE
Charles W. MacMillan, Alexandria, Va.
Application May 9, 1946, Serial No. 668,615
5 Claims. (Cl. 123—117)

1. An electrical contact device comprising a diaphragm and an electrical conducting liquid, means for supporting said diaphragm for exposure of one side to combustion chamber gas pressure of an internal combustion engine, the other side of said diaphragm being in contact with said liquid, said diaphragm being supported to permit flexure under combustion gas pressure,



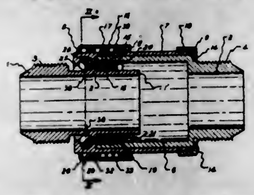
said electrical conducting liquid being disposed to rise thru a plurality of orifices as a result of said flexure of said diaphragm, and an adjustable electrode disposed for contact with said liquid rise, connecting circuits and a battery current source for electromechanical control of selected engine regulating accessories and devices.

2,458,087
DRIVE SHAFT ASSEMBLY
August R. Maier, Oil City, Pa., assignor to Oil Well Supply Company, a corporation of New Jersey
Application October 25, 1945, Serial No. 624,370
2 Claims. (Cl. 308—207)



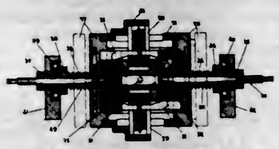
1. In a reversible drive shaft assembly including a housing having opposed openings for a drive, a drive shaft having a pinion which is wider than the gear driven thereby adjacent its inner end, said drive shaft being shorter than the distance between said openings and having its inner end supported in a bearing at the inner end of a sleeve projected through one of said openings, said drive shaft having a bearing surface on its inner end which is longer than the bearing surface of said bearing, said drive shaft being rotatively mounted in a pair of bearings internally disposed adjacent the ends of a sleeve to form a unitary assembly which is projected through the other of said openings whereby said assembly may be reversed by interchanging said sleeves without adjusting said bearings.

2,458,088
COUPLING
Donald W. Main, Jackson, Mich., assignor, by mesne assignments, to Aeroquip Corporation, Jackson, Mich., a corporation of Michigan
Application December 29, 1945, Serial No. 637,807
5 Claims. (Cl. 285—169)



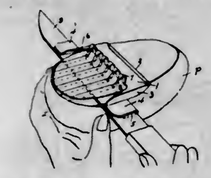
1. A coupling of the character described comprising a receiving portion and an entering portion, said portions being adapted to be moved into telescoping relation, a latch on the outer surface of said entering portion, a yieldable catch on said receiving portion in the path of said latch upon the telescoping of said portions, said catch yielding to the passage of said latch upon telescoping movement of said portions in a coupling direction but positively resisting movement of said latch in a return direction, said catch comprising a bar having a locking shoulder and mounted for axial rotation, and spring means for resiliently biasing said bar rotationally to dispose said shoulder in a predetermined latch locking position.

2,458,089
SOLID AXLE DRIVE MECHANISM FOR VEHICLES
Gordon Earl McFarlane, Ville Emard, Quebec, Canada
Application June 29, 1945, Serial No. 602,381
2 Claims. (Cl. 74—389.5)



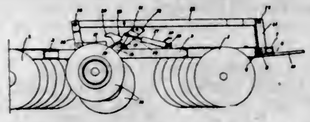
1. A solid axle drive mechanism for vehicles comprising a solid axle, a driving cylinder secured to said solid axle and having a plurality of driving teeth at its circumferential ends, and a plurality of projecting lugs on the circumference of said cylinder a plurality of catch carriers having projecting catches spring-held in said driving cylinder and forming a reversing mechanism, an operating collar having a plurality of slots engaging with the lugs on said driving cylinder, the inner circumference of said collar being formed in a cam shape adapted to engage and drive the said catch carriers for reverse motion, sleeve members freely rotatable on said solid axle, driven plates slidably secured to said sleeve members and having a plurality of teeth adapted to detachably mesh with the teeth of said driving cylinder for drive in the forward direction, spring means mounted on said sleeve members for constantly urging said driven plates toward said driving cylinder, cams engaged with said driven plates and adapted to engage with the catch carriers of said driving cylinder for the reverse motion, vehicle wheels secured to said sleeve members, and means for rotating said operating collar.

2,458,090
SLICER
Frederick H. Miller, Portland, Oreg., assignor of one-half to S. O. Pearson, Portland, Oreg.
Application July 1, 1946, Serial No. 680,622
2 Claims. (Cl. 30—279)



1. A slicer wherein a device is attached to a knife blade to cut the article being sliced into parallel strips, the improvement which comprises: a device composed of a single piece of material and embodying a body portion having down turned sides, knife clips at the bottoms of said sides and a series of fingers each including an upwardly extended loop and a downwardly extended cutting blade, said cutting blades being spaced apart in parallel relation for making cuts in planes normal to the cutting plane of the knife blade when the device is in use.

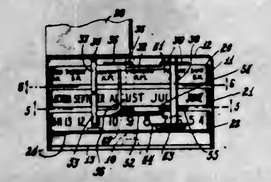
2,458,091
DISK HARROW HITCH LOCKING MEANS
John S. Moore, Modesto, Calif.
Application July 6, 1945, Serial No. 603,553
7 Claims. (Cl. 55—73)



1. A holding mechanism for a normally vertically swingable hitch assembly of a ground working implement which includes a frame and a lift assembly mounted in connection with said frame; said mechanism including a rigid member upstanding from the hitch assembly, a link pivoted on a transverse axis in connection with the member and extending rearwardly therefrom, normally released means to hold said link against longitudinal movement, and means to place said holding means in operation upon actuation of the lift assembly; said holding means including a bellcrank pivoted in connection with the frame for swinging in a vertical plane, one leg of the bellcrank being upstanding and the link being pivoted thereto, the other leg of the bellcrank extending forwardly lengthwise of the implement, and said last named means including a latch movable to a hold-down position in engagement with said other leg of the bellcrank.

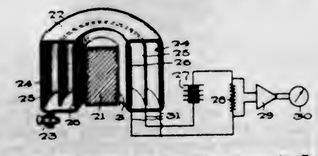
2,458,092
INTERMITTENTLY AND PAWL DRIVEN, SINGLE AXIS, MULTIPLE DRUM CALENDAR
Joseph C. Morris, Chicago, Ill.
Application February 22, 1945, Serial No. 579,184
1 Claim. (Cl. 40—112)

In a calendar mechanism, a spindle, a series of drums carrying day of the month, month, and day of the week designations respectively loosely mounted on said spindle, a ratchet on each drum, pawls one operatively associated with each of the ratchets on the day of the month drum and on the day of the week drum, trip levers one operatively connected with each pawl, a shaft adapted for intermittent step-by-step rotation, means operable to rotate said shaft, and means on said



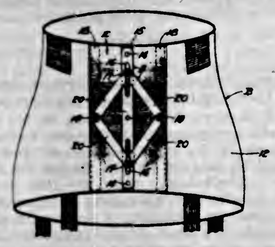
shaft effective to trip the lever operatively associated with the pawl on the day of the week drum twice as frequent as the lever operatively associated with the pawl on the day of the month drum.

2,458,093
METHOD OF DETERMINING THE FLUID CONTENT OF WELL CORES
Morris Muskat, Oakmont, and Norman D. Coggeshall, O'Hara Township, Allegheny County, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application February 19, 1945, Serial No. 578,748
1 Claim. (Cl. 250—83)



A method of determining the connate fluid content of a well core sample comprising adding to the drilling fluid a known concentration of artificially radioactivated material soluble in the drilling fluid, cutting and removing the core sample from the well, measuring the radioactivity of a known quantity of core sample to determine the amount of drilling fluid absorbed in the sample, determining the nature and quantity of total fluids in the core sample and subtracting therefrom the said determined amount of drilling fluid absorbed.

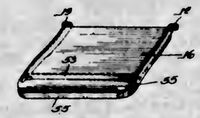
2,458,094
FOUNDATION GARMENT
Matthew A. Nathanson, Brookline, Mass.
Application September 10, 1946, Serial No. 695,961
3 Claims. (Cl. 2—36)



1. A girdle including a body-encircling member composed, at least in part, of elastic fabric; two

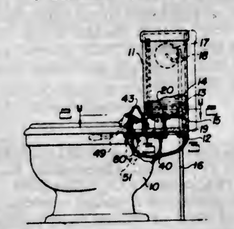
laterally spaced pivots having between them at least a portion of the elastic fabric; and an auxiliary support including a central element which is secured to the elastic fabric between said pivots and links which are connected with said pivots and pivotally and slidably connected with said central element at either side of the level of said pivots.

2,458,095
SEAT CONSTRUCTION FOR CHAIRS
John B. O'Connor, Aurora, Ill., assignor to Lyon Metal Products, Incorporated, Aurora, Ill., a corporation of Illinois
Original application October 7, 1941, Serial No. 413,990. Divided and this application July 22, 1946, Serial No. 685,427
10 Claims. (Cl. 155—194)



1. A metal chair construction comprising a metal seat, said seat comprising a seat frame and a sheet metal seat member adapted to overlie and bridge said frame, said sheet metal seat member having downwardly turning flanges extending about peripheral portions thereof and said seat member being of somewhat S-shape from the front to the rear, said seat frame comprising a pair of parallel, spaced apart side frame members lying generally within the depending flanges of the sheet metal seat member and extending substantially from the rear of said sheet metal seat member and terminating short of the front of said sheet metal seat member, and a metal cross brace extending between said side frame members adjacent but spaced rearwardly of the forward ends thereof, each of said side members having portions extending forwardly of said cross brace to provide a forwardly projecting extension having a portion underlying to support the underside of the sheet metal seat member beyond said cross member on each side of said seat, and each of said side frame members adjacent its junction with the cross brace including a second metal extension bent normally to said first metal extension and attached to said cross brace.

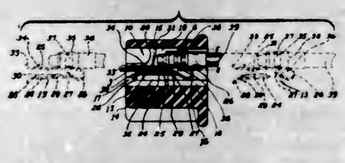
2,458,096
WATER CLOSET
Ross A. Park, Detroit, Mich.
Application March 27, 1946, Serial No. 657,480
5 Claims. (Cl. 4—40)



1. In a water closet including a bowl and a tank with water for flushing said bowl, said tank hav-

ing an upper and a lower chamber, means to admit water from a source of supply to the upper chamber, a float valve to control admission of water to said chamber, a cylindrical member seated in the bottom of the upper chamber and including a flush valve therein, a cable adapted to be operated by a handle to open said flush valve, baffle means within the cylinder and aperatures in the wall thereof and above said baffles to divert a part of the volume of water into the lower chamber on opening of said flush valve, automatic means responsive to the operation of the handle to close the flush valve suddenly after a lapse of time and outlet means from the lower part of the cylinder to allow outflow of water from the lower chamber into the bowl after the closing of the flush valve.

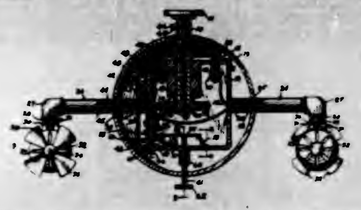
2,458,097
ELECTRICAL CONNECTION MEANS
Charles S. Penfold, Bronson, Mich., assignor to H. A. Douglas Mfg. Co., Bronson, Mich., a corporation of Michigan
Original application April 1, 1940, Serial No. 327,143, now Patent No. 2,318,650, dated May 11, 1943. Divided and this application February 24, 1943, Serial No. 476,986
8 Claims. (Cl. 173—328)



1. In a device of the class described, the combination of an insulating body having a pocket therein, and a contact received in said pocket, said contact having conductor holding and terminal receiving portions arranged side by side in said pocket in offset overlapped relation, said conductor holding portion being arranged to receive an end of a conductor projecting into said pocket so that said conductor end lies wholly within and is substantially concealed by said pocket, and said terminal portion being constituted by spreadable blade-like legs adapted to receive between them and yieldingly grip a blade-like terminal projected into said pocket, at least one of said legs constituting an abutment means to interlock with the pocket and limit movement of the contact relative to the pocket in one direction, and additional means on the other leg adjacent said abutment means for interlocking with the body for limiting movement of the contact relative to the body in an opposite direction, at least certain of said means being yieldable so as to permit the same to yield during insertion of the contact into the body and snap into the said interlocking relation.

2,458,098
REVOLVING FAN SPEED CONTROL
Ely Primeaux, Alexandria, La.
10 Claims. (Cl. 236—270)

1. In a revolving fan speed control, a hanger, a plurality of fans arranged to revolve about the hanger, a governor including a staff mounted to revolve with the fans around the hanger and having drive connection with the hanger, governor means on the staff, a brake disc slidable with the governor according to the speed of rotation thereof and a brake shoe engageable with the disc to



control the speed with which the fans revolve about the hanger.

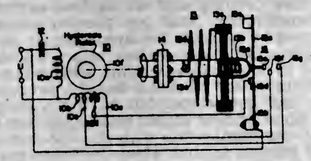
2,458,099
IONIZATION CHAMBER
Harold D. Roop, Los Angeles, Calif.
Application October 19, 1945, Serial No. 623,334
10 Claims. (Cl. 250—83.6)

9. An ionization chamber for the measurement of intensity of an ionizing radiation, said ionization chamber including: a housing providing an axis and including means for confining a gaseous substance therein, said housing including a thin window traversing said axis for transmitting the ionizing radiation to the interior of said housing and to the gaseous substance therein; two electrode sets in said housing, each set comprising a plurality of tubular electrodes concentric with said axis, the tubular electrodes of one set bisecting the spaces between the tubular electrodes of the other set to provide a plurality of small-width inter-electrode spaces; means for insulating the electrode sets from each other whereby a high potential difference can be maintained therebetween to establish electric fields in said inter-electrode spaces; and a coating of a phosphor on at least some of said tubular electrodes to receive incident radiation transmitted through said window, said phosphor being excitable by such radiation to produce ultra violet radiation and thus produce a supplementary ionizing radiation for ionizing said gaseous substance.

2,458,100
HYSTERESIS MOTOR CONTROL SYSTEM AND METHOD OF OPERATION
Herbert C. Roters, Kew Gardens, N. Y., assignor, by mesne assignments, to Casner Patents, Inc., New York, N. Y., a corporation of New York
Application August 9, 1946, Serial No. 689,386
22 Claims. (Cl. 318—166)

1. The method of operating a hysteresis synchronous motor including a magnetic armature of material having a high hysteretic constant which comprises, operating the motor at an abnormally high magnetomotive force whenever the acceleration of said motor is above a given

value, and reducing the magnetomotive force of the motor whenever the acceleration of said motor is less than said value, thereby to reduce the normal magnetising current required by the motor.



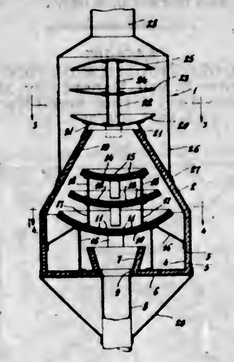
11. An electric control system for a hysteresis synchronous motor including a magnetic armature of material having a high hysteretic constant comprising, an acceleration-responsive device adapted to be driven by the motor, circuit-controlling means disposed to be actuated by said device, and an energizing circuit for the motor including said circuit-controlling means for developing in said motor an abnormally high magnetomotive force.

2,458,101
LEAK DETECTOR
Truman C. Rethfus, Des Moines, Iowa
Application January 4, 1946, Serial No. 638,971
5 Claims. (Cl. 73—40)

1. A leak detector comprising a body of rigid formation including parallel portions one relatively elongated and the other substantially shorter connected by an easy bend and having a continuous internal passage, a drop of mercury in said passage capable of being displaced by air or gas under pressure, and means at the free end of the elongated portion to have sealing contact with the device to be tested.

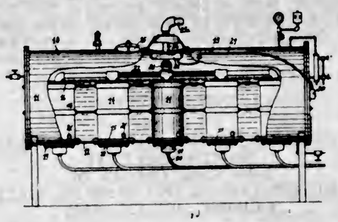
2,458,102
SILENCING MUFFLER
Abel Schott and Gustave A. Ebelshauser, Astoria, Long Island, N. Y.
Application July 25, 1946, Serial No. 686,199
2 Claims. (Cl. 181—49)

1. A silencing muffler comprising a casing whose front portion is cylindrical and connected to the exhaust pipe of an internal-combustion engine while its main portion has the form of a blunt cone, a plurality of perforated diverging concavo-convex plates being coaxially arranged within said casing and being in spaced relation to each other as well as to the inner sides of said casing, a tubular member having a reduced end portion and being with its front extremity secured to the outer side of the main portion of said casing, in such a manner that the latter is partially extended into said tubular member, and a plurality of concave disks being coaxially arranged within said tubular member and being in spaced relation to each other as well as the inner sides of said tubular member and to the main portion of said casing, each of said concavo-convex plates as well as the walls of said casing consisting of two layers of metal with a layer of fireproof material therebetween, and the perforations in those of said



plates which are close to the front of said casing being larger and less spaced apart from one another than are the perforations in the plates which are farther away from said front, all substantially as set forth.

2,458,103
ELECTRIC BOILER
Emanuel Schwartz, New York, N. Y.
Application February 14, 1946, Serial No. 647,459
10 Claims. (Cl. 219—38)



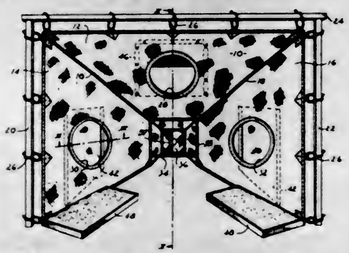
1. In a boiler, a plurality of vertical steam generating cylinders secured to the bottom of the boiler, each cylinder having a water inlet opening in its side near the lower end, an electric heater tube inside the cylinder, an outlet pipe at the top of each cylinder, said outlet pipes all connected to a steam pipe leading to a perforated ball-shaped nozzle in the center of the steam space, said nozzle being detachable.

2,458,104
FLUORESCENT MATERIALS
Ernest Schweizer, East Orange, N. J., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application March 1, 1945, Serial No. 580,488
1 Claim. (Cl. 154—40)

In a process for the production of orange colored materials capable of fluorescing brightly under the influence of ultra-violet light in substantially the same orange color, the step which comprises laminating a sheet of a colored, transparent cellulose acetate material having diethyl-

M-amino-phenolphthalein incorporated therein to a non-fluorescent, opaque, colored cellulose acetate base material pigmented with lead chromate, the resulting laminated material exhibiting an orange color substantially identical under both visible light and ultra-violet light.

2,458,105
GOLF PRACTICE DEVICE
Vernon D. Sell, Kansas City, Mo.
Application April 8, 1946, Serial No. 660,391
1 Claim. (Cl. 273—35)



A device for practicing the game of golf comprising a pyramidal backstop disposed with its axis substantially horizontal and having a plurality of apertured walls of flexible material and an opening formed at the vertex thereof; framework for supporting the walls in taut condition; an open-bottom deflector for each aperture respectively carried by said walls and extending outwardly from one face thereof for changing the path of travel of golf balls passing through said apertures; and a target mounted within said opening, the area of said target being smaller than the area of said opening, said target having an aperture therethrough appreciably smaller than the apertures in said walls.

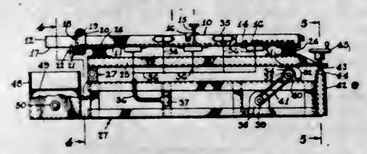
2,458,106
COMBINATION SEAL, DRIP TUBE, AND DISPENSING UNIT
John Shaw, Chicago, Ill.
Application June 3, 1947, Serial No. 752,114
4 Claims. (Cl. 128—214)

1. In combination with a container having a hollow interior with liquid therein, a transparent neck and an inwardly curved gradually reduced portion connecting the interior with the neck, a body member having spaced top and bottom portions and a stretchable connecting portion therebetween, said connecting portion substantially smaller in diameter than said top and bottom portions leaving a space therebetween to form with the transparent neck a liquid flow chamber, the bottom portion of said body member being slightly larger in diameter than the diameter of the upper part of the curved portion of the container, and adapted to seal therewith, the connecting portion of said body member being normally slightly less than the distance between the top of the neck of the container and the inwardly curved portion, said connecting portion stretchable so that said top portion engages the top of the neck of the container, said bottom portion having a liquid flow opening and an air hole corresponding therethrough, said top portion adapted to be pierced by a needle for supplying air from the atmosphere, said top portion also adapted to be pierced by a needle extending within the liquid flow chamber for receiving liquid from said container, said bottom portion having a hollow integral tip extending within said liquid flow chamber and communicating with the opening in said bottom portion so that when the container is inverted the flow of liquid from said tip is visible through the transparent wall of the neck of said container.

2,458,107
PROCESS FOR THE PREPARATION OF CARBON
Joseph H. Simons, State College, Pa., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application December 23, 1941, Serial No. 424,214
15 Claims. (Cl. 23—209.1)

1. A process for oxidizing a non-aromatic compound selected from the group consisting of non-aromatic hydrocarbons and alcohols which comprises oxidizing the same in the presence of an oxidizing agent under super-atmospheric pressure at a temperature within the range of 50 to 200° C. in a reaction mixture containing liquid hydrogen fluoride in substantial amounts as an essential constituent, and recovering carbon as a product of the reaction.

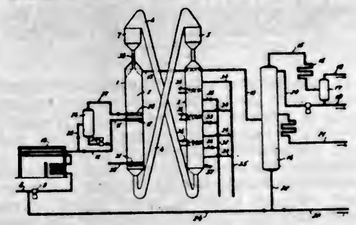
2,458,108
GRAINING APPARATUS
John M. Simpson, Brooklyn, N. Y.
Application March 25, 1946, Serial No. 657,030
6 Claims. (Cl. 51—6)



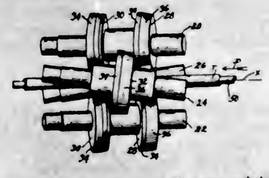
1. A grinding apparatus or the like comprising a main supporting frame, a sub-frame hinged at one end to said main frame, means carried by said main frame for movably supporting the opposite end of said sub-frame and for imparting thereto an up and down movement, a graining container, flexible means fixed on said sub-frame supporting said graining container on said sub-frame and means for reciprocatingly vibrating said graining container in a horizontal plane on said supporting means with respect to said sub-frame.

2,458,109
CONVERSION OF HYDROCARBONS
Thomas P. Simpson, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application July 27, 1945, Serial No. 607,457
4 Claims. (Cl. 196—52)

1. The method of converting a heavy, high boiling hydrocarbon oil into high quality gasoline by catalytic cracking in the presence of a particle-form solid catalytic contact mass which comprises circulating said contact mass in a closed cyclic path through an enclosed conversion zone and an enclosed regenerating zone, moving said contact mass through said conversion zone in the form of a substantially compact column, heating a charge oil containing a substantial fraction boiling above the desired reaction temperature to a temperature not higher than said reaction temperature, discharging said oil in said heated condition into said column at a point intermediate the ends thereof to be converted therein, removing vaporous products of conversion from the upper end of said column, passing hydrocarbon vapors liberated at and below the oil feed point upwardly through that portion of the column above said feed point, removing contaminated contact mass from the bottom of said conversion zone while substantially preventing escape of vaporous hydrocarbon material therewith, subjecting the contaminated contact mass to a combustion regeneration at high temperature, removing the contact mass from regeneration and introducing it in heated condition into said conversion zone while substantially preventing the escape of combustion gases into said conversion zone, the heat in the said contact mass and the temperature of the charge oil being proportioned to maintain the conversion zone at a desired reaction temperature between about 800° F. and about 1000° F. and not above the boiling point of said substantial fraction of the charge oil.

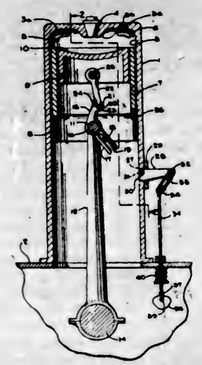


2,458,110
APPARATUS FOR PRODUCING SEAMLESS TUBES
Earl C. Sleeman, Detroit, Mich., assignor to Detroit Seamless Steel Tubes Company, Detroit, Mich., a corporation of Michigan
Application November 7, 1944, Serial No. 562,309
1 Claim. (Cl. 80—13)



A seamless tube rolling mill comprising, a pair of driven shafts arranged with their axes diametrically opposed with respect to a pass line, a second pair of driven shafts arranged with their axes diametrically opposed with respect to said pass line and circumferentially spaced 90° around said pass line from said first-named shafts, all said shaft axes being fixed against rotation about said pass line, the axes of said shafts being askew to each other and to the said pass line, two pairs of opposed rolls axially spaced and fixed on said first pair of shafts, and a pair of opposed rolls fixed to said second pair of shafts and disposed axially intermediate the said two pairs of rolls on said first shaft.

2,458,111
MULTIPLE PISTON FOR INTERNAL-COMBUSTION ENGINES
Rudolph Soltesz, Wheeling, W. Va.
Application February 11, 1947, Serial No. 727,903
5 Claims. (Cl. 123—78)

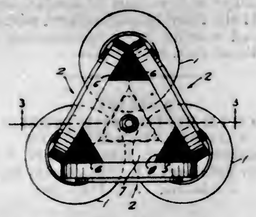


5. An internal combustion engine comprising a working cylinder, a crank case attached to said cylinder, a crank shaft journaled in said crank case, a main sleeve piston reciprocating in said cylinder, a wrist pin mounted in said sleeve piston, a connecting rod journaled at opposite ends to said crank shaft and said wrist pin, an inner piston reciprocating within said sleeve piston, a rocker arm pivotally supported by said wrist pin, said rocker arm having a vertical extension and a downwardly depending bifurcated extension, a connecting rod journaled at opposite ends to said inner piston and said vertical extension of said rocker arm, said last named connecting rod having a stop adapted to engage said vertical extension, a reciprocating catch supported by said cylinder and adapted to engage said bifurcated extension of said rocker arm, and cam controlled means to move said catch whereby the inner piston has a greater intake and compression stroke than that of the main sleeve piston.

2,458,112
THREE-PHASE TRANSFORMER CONSTRUCTION
Alwin G. Steinmayer, Milwaukee, Wis., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application January 20, 1947, Serial No. 723,060
4 Claims. (Cl. 175—356)

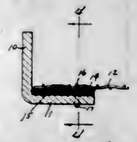
1. A three phase transformer comprising three conducting winding assemblies, three closed cores formed of wound magnetic ribbon having leg portions passing through the conducting winding assemblies and having yoke portions provided with slanting inner faces, initially bowed laminated magnetic filler members at each end of the transformer located between the yoke portions and having slanting outer faces arranged adjacent the slanting inner faces of the yoke portions,

and means arranged to force the slanting faces of the filler members outwardly to secure binding



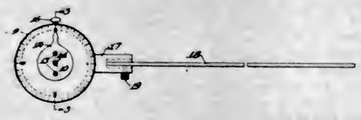
engagement between the slanting faces of the yoke portions and the filler members.

2,458,113
FREEZING AND DEHYDRATING TRAY
Glenn W. Stevens, Salem, Oreg.
Application August 27, 1946, Serial No. 693,263
1 Claim. (Cl. 220—19)



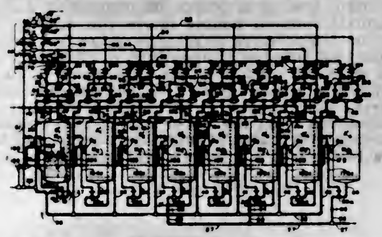
A tray of the class described, consisting of an angle bar having a layer of plastic disposed upon one leg thereof on the inner side of said bar, in combination with a screen having an inturned edge adapted to rest upon said bar and a binding strip within said inturned edge, together with staples extending through said screen binding strips and angle bar support.

2,458,114
LAYOUT PROTRACTOR
Reuben H. Storch, Minneapolis, Minn.
Application May 16, 1947, Serial No. 748,404
2 Claims. (Cl. 33—75)



1. A layout protractor particularly adapted for laying off angles on a flat surface, comprising a stationary member with an enlarged base portion and a diminished upstanding spindle portion, said spindle portion having a peripheral groove formed therein, a locating and securing pin extending longitudinally through said spindle and said base portion and adapted to secure said member at a predetermined point on the flat surface, a rotatable member journaled on said spindle and riding on said enlarged base portion, a locking and retaining element connected with said rotatable member and adapted to be projected into said groove to retain said rotatable member on said spindle and to selectively hold said rotatable member against rotation on said spindle, means for attaching an arm to said rotatable member whereby any desired angle may be laid off, and means on said spindle and rotatable member for indicating the angle laid off.

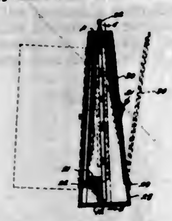
2,458,115
CONTROL OF ION EXCHANGE SYSTEMS
Walter R. Swensen, Flushing, N. Y., assignor to The Dorr Company (Inc.), New York, N. Y., a corporation of Delaware
Application August 2, 1947, Serial No. 765,683
4 Claims. (Cl. 210—24)



1. In combination with a plurality of closed ion exchange cells containing beds of ion exchange material in submergence and which are operable in selectively changeable sequence through which a liquid is sequentially passed, each of which cells has feeding means for supplying liquid to the bed and discharge means for discharging liquid from the bed whereby liquid is being passed through the bed, and also has automatic control means for maintaining the liquid level substantially constant at the top of said bed, a control system for maintaining the liquid level in each cell substantially at the top level of the bed, comprising a compressed air supply header having a supply branch for each cell leading to and into the respective top portion thereof to supply air pressure to the liquid level in the cell, each supply branch comprising an exhaust portion, a reverse-acting diaphragm-controlled valve in which gas pressure from the cell acts upon the inner side of the diaphragm in a valve-closing sense disposed in each said supply branch between said supply header and said exhaust portion, a right-acting diaphragm-controlled valve in which gas pressure from the cell acts upon the inner side of the diaphragm in a valve-opening sense disposed in said exhaust portion, the inner sides of the diaphragms of said valves being simultaneously and directly under the air pressure in the cell, an interconnecting pressure-equalizing conduit between the outer pressure chambers of the diaphragm-controlled valves of each cell, a plurality of auxiliary pressure fluid supply headers, a pressure reduction device disposed in each auxiliary header adapted to be pre-set for admitting a different predetermined fluid pressure into each auxiliary header, parallel branch connections between each of said auxiliary headers and each of said interconnecting conduits, and selectively operable shut-off means in each of said parallel branch connections.

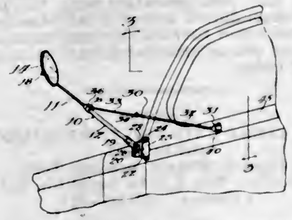
2,458,116
GARMENT CASE FOR CONTAINING A COAT HANGER, SHOE BOX, AND SUPPORTS FOR SMALL PERSONAL ARTICLES
Bert C. Titus, Dubois, Pa.
Application October 11, 1946, Serial No. 702,815
1 Claim. (Cl. 190—19)

A garment case comprising a narrow vertically elongated box-like structure having upwardly converging front and rear walls, each provided with a closure therein, said closures extending downwardly to a point above the bottom of the box-like structure, to define a well in the box-like structure for containing loose articles, a handle on the top of the box-like structure, a hanger element on the bottom side of the top of the box-like structure, a garment hanger in the box-like structure suspended from said hanger element



and provided with side leg portions depending into said well, one of said closures being provided with a handle whereby the box-like structure can be lifted in cooperation with the handle on the top of the box-like structure.

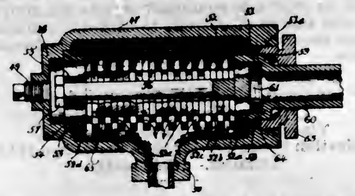
2,458,117
REARVIEW MIRROR SUPPORT
William P. Tolbert, Fort Madison, Iowa, assignor to Anthes Force Oiler Company, Fort Madison, Iowa, a corporation of Iowa
Application March 22, 1945, Serial No. 584,051
3 Claims. (Cl. 248—279)



1. Mounting means for applying rear view mirrors and the like to vehicles comprising in combination a main mirror supporting arm, a bracket carrying said arm and adapted to be mounted on the vehicle the mirror supporting arm being mounted for vertical swinging movement in the bracket, a strut arm having one end pivoted to the mirror arm at a distance from the bracket end thereof and on an axis at right angles to the pivotal axis of the main arm, and a bracket supporting the other end of said strut arm and spaced horizontally from the bracket carrying the mirror supporting arm and adapted to be mounted on the vehicle in spaced relation to the first named bracket, said last named bracket being connected with the strut arm by a universal joint.

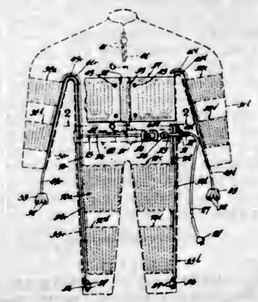
2,458,118
ADJUSTABLE STRAINER
Charles M. Tursky, Long Island City, N. Y.
Application February 8, 1945, Serial No. 576,877
3 Claims. (Cl. 210—169)

1. In a filtering apparatus, a body provided with a fuel chamber, a torsionally settable coil communicating with said chamber and supported on said body, means to releasably lock said coil in any torsionally preset position against said body, the said coil having adjacent polygonal convolutions at all times contacting each other and having openings between adjacent convolutions which are controlled in size by the torsional presetting of the coil, the said openings being formed between the straight arm portions of each convolution intersecting two adjacent straight arm portions of overlying and underlying convolutions in the region spaced inwardly of the bend and crossing bends formed by the straight arm portions of the adjacent convolutions, said openings serving as the filtering means for the feeding liquid, an inlet and an outlet in the body for the flow of liquid through the said coil, the flow of liquid being between the sides of the coil and through the filtering openings.



3. In filtering apparatus having mounting and locking means for a straining and vaporizing element, a torsionally settable straining coil forming a plurality of adjustably controlled openings for filtering in proportion to the torsion exercised, said coil having a plurality of adjacent and at all times contacting polygonal convolutions, the straight arm portions of each convolution intersecting two adjacent straight arm portions of overlying and underlying convolutions in the region spaced inwardly of the bend and crossing bends formed by the straight arm portions of the adjacent convolutions thereby affording variable openings therebetween controlled by the presetting of the coil, said coil being removably secured to said mounting means and being adapted to be releasably locked thereagainst in any torsionally preset position, an inlet and an outlet in the body for the flow of fuel through the said coil.

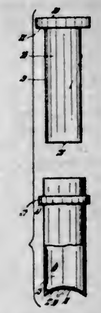
2,458,119
ELECTRICALLY HEATED WEARING APPAREL
Gerrit Van Daam, Buffalo, N. Y.
Application February 20, 1943, Serial No. 476,553
5 Claims. (Cl. 219—46)



1. In combination: a garment; a plurality of individual electric heating means for heating different parts of the body of a wearer of said garment; individual conductor means for separately supplying each of said electric heaters with electric current; belt means, permanently fastened to said garment about the waist portion thereof,

so constructed and arranged as to provide conduit means between the inside surface of said belt means and the outside surface of said waist portion; bus conductor means disposed in said conduit means; electrical connection means, electrically connected to said bus conductor means, constructed and arranged for connection to a source of electric current, to connect said source to said bus conductor means; said individual conductor means being electrically fixedly connected to said bus conductor means; and switch means carried by said belt means and electrically interposed in said bus conductor means for controlling the supply of current to said bus conductor means separately from said electrical connection means.

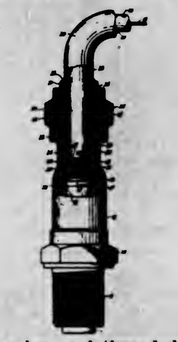
2,458,120
CORN BUTTERING DEVICE
Vincent Volpini, Springfield, Mass.
Application December 13, 1947, Serial No. 791,567
2 Claims. (Cl. 65—12)



1. A two part device for applying butter to a cylindrical elongated ear of corn comprising in combination, an elongated tubular body having a transverse lower wall and an imperforated side wall providing a cylindrical axial bore of uniform diameter for butter extending downwardly therein from the upper end thereof to said lower wall and being open at the said upper end of said body, said lower wall having an arcuate lower face complemental to the curvature of an ear of corn and provided with a plurality of spaced openings therethrough for the discharge of butter therethrough, and an elongated plunger of uniform diameter having sides closely corresponding to the sides of the bore of said body so as to fill the same and being receivable in the upper end of said bore and reciprocable therein and provided with a substantially flat transverse lower end face for acting on butter in said bore, said plunger being of greater length than said bore whereby an upper end portion thereof extends beyond the upper end of the body when it is in lowermost position in said bore.

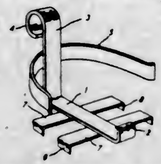
2,458,121
RADIO SHIELDED IGNITION MEANS
Claude F. Waldron, Unadilla, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application June 23, 1945, Serial No. 601,085
4 Claims. (Cl. 315—85)

1. In apparatus of the class described, a radio-shielded spark plug comprising a tubular metallic shielding barrel, an insulating sleeve lining said barrel, an insulated conductor extending loosely into said barrel a shielding conduit surrounding said conductor exteriorly of said barrel, a non-hardening plastic insulating material completely filling the space between said sleeve and the portion of said conductor disposed within said barrel, a flanged member connected with said shielding conduit and adapted to engage the upper surface of said barrel, and nut means engaged



with said member and threaded on said barrel for securing said member to said barrel, said nut means having an opening extending therethrough and communicating with the interior of said barrel during assembly before said member engages said barrel to provide an outlet for any excess plastic material during tightening of said nut means.

2,458,122
ICE CLEAT UNIT FOR ENGAGEMENT ON SHOES
Esper L. Walker, Decatur, Tex.
Application May 3, 1948, Serial No. 24,842
4 Claims. (Cl. 36—62)

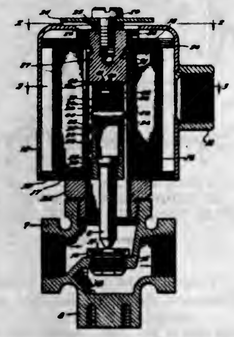


1. An ice cleat unit for engagement on a shoe comprising a primary strap having a hook at one end thereof for engaging the forward edge of the shoe heel, transverse straps secured to the said primary strap, depending cleats at the ends of the said transverse straps, a vertical support at the end of the said primary strap opposite the said hook, and a spring clevis secured to the said vertical support for engaging the heel portion of a shoe.

2,458,123
SOLENOID ACTUATED VALVE
Henry G. Wasserlein, Joliet, Ill., assignor to Phillips Control Corp., Chicago, Ill., a corporation of Illinois
Application July 13, 1946, Serial No. 683,565
5 Claims. (Cl. 175—338)

3. In a solenoid, a plunger, a guide tube for said plunger, and a plunger stop at one end of the tube, said plunger having a tubular end facing said stop, a plug extending into said tubular end and having a head thereon for engaging the stop,

opposed tapered shoulders on said head and in the tubular end of said plunger, a shading ring surrounding the plug and wedged between the



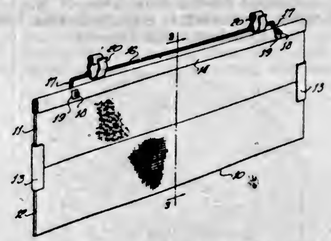
tapered shoulders, and means holding the plug in the tubular end of the plunger and wedging the shading ring between said shoulders.

2,458,124
SYNCHRONOUS FREQUENCY BROADCASTING
Raymond M. Wilmotte, Washington, D. C.
Application November 14, 1944, Serial No. 563,391
11 Claims. (Cl. 250—6)

1. A synchronous frequency broadcasting system including a primary radio broadcasting station having a source of signals, a source of radio frequency oscillations, a modulator for modulating said radio frequency oscillations in response to said signals to provide modulated radio frequency energy, means for radiating said modulated radio frequency energy, a source of further radio frequency oscillations, means responsive to said modulated radio frequency energy for modulating said further radio frequency oscillations with said modulated radio frequency energy to provide doubly modulated radio frequency oscillations, and means for radiating said doubly modulated radio frequency oscillations.

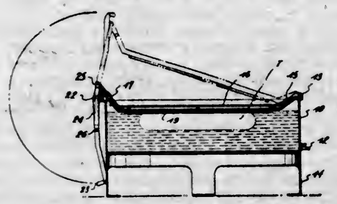
2,458,125
AUTO GLARE SHIELD
James Samuel Winkler, Los Angeles, Calif., assignor to Max Shayne, Los Angeles, Calif.
Application July 10, 1947, Serial No. 759,939
2 Claims. (Cl. 296—97)

1. A glare shield in two transparent and parallel sections of different color secured together at their ends, the upper of said sections having a mounting strip affixed to its upper edge, a rod parallel with said mounting strip whose ends are formed to provide projections below and at right angles thereto and entering apertures in and adjacent the ends of said mounting strip, clips frictionally embracing the projections of said rod and holding said mounting strip thereon and clamping means in spaced relationship on said



rod for attaching said shield to the visor of an automobile.

2,458,126
TIRE TUBE TESTER
Willard Abner, Burbank, Calif.
Application January 26, 1946, Serial No. 643,655
4 Claims. (Cl. 73—49)

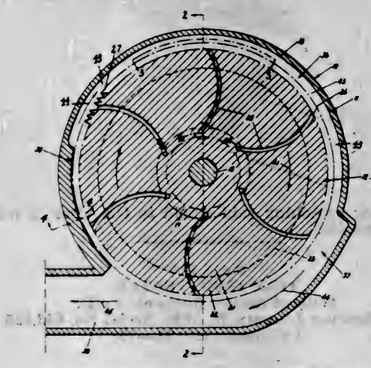


1. A tire tube tester comprising a tank, a cover hingedly mounted thereon, a pair of levers pivotally mounted upon the tank diametrically opposite the hinges for the cover, a handle connecting the levers and links connecting the cover to the levers intermediate their ends.

2,458,127
CONVERTIBLE VEHICLE
Charles R. Ahrens, Glendale, Calif.
Application February 25, 1947, Serial No. 730,696
3 Claims. (Cl. 280—7.10)

1. In a vehicle having a saddle-supporting frame, a wheel rotatably mounted at the front end of said frame and a fork formed of tubular legs at the rear end thereof, an interchangeable rear wheel connection comprising an axle, a pair of spaced wheels rotatable on said axle, a pair of lugs, each lug having a projecting post received by a leg, a plate secured to the axle and having openings through which the lugs project, each leg and post being provided with transversely disposed and alined passages and a pin inserted through the alined passages in a post and associated leg for connecting the posts to the respective legs.

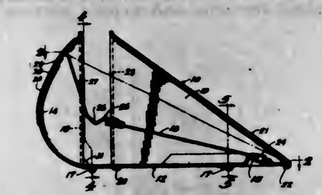
2,458,128
ROTARY ENGINE
Eugene Alterio, New York, N. Y.
Application December 1, 1944, Serial No. 566,100
4 Claims. (Cl. 253—79)



1. In a rotary engine, having a fluid operating medium, like steam, a cylindrical housing with flat end walls, a shaft journalled in said end walls in a substantially fluid tight manner, a disk shaped rotor secured on said shaft, its side walls being close to the flat end surfaces of the housing to prevent the escape of the fluid medium therebetween, and a fluid inlet provided through the front flat end wall of said housing, the combination, of a ring shaped fluid receiving channel provided in the side of the rotor, facing, and open towards, said fluid inlet and in registering relation therewith, and a plurality of curved fluid exit operating channels in said rotor from said receiving channel to the circumference of the rotor, a first portion of the cylindrical outer wall of the housing, towards which the exits of all of said operating channels are directed, being slidably but sealingly closed on the outer circumference of the rotor to impede the exit of the working fluid in that direction, the rest of said cylindrical wall being set wider apart from said rotor to permit the impact of the increasing fluid thereon for a reaction therefrom on the rotor, and to ease and accelerate the exit of the fluid in a direction away from said closed portion, the last portion of said space between the rotor and the cylindrical wall being made the widest and having a fluid exit communicating therewith, teeth around the outer marginal portion of the rotor, said teeth being triangular in cross section and having generally radial flat front surfaces facing towards said closed portion of the housing and rearwardly and inwardly inclined rear surfaces.

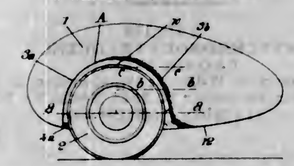
2,458,129
LETTER SCALE AND THE LIKE
Walter R. Amstutz, Forest Park, Ill., assignor to Metal Specialties Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application January 13, 1947, Serial No. 721,813
4 Claims. (Cl. 265—68)

1. In a letter scale device, a hollow casing having a forwardly-curved face provided with a vertical slot, a scale sheet secured to said arcuate face and having a slot registering with the slot of said casing, said casing providing also a transverse slot open at its top and adjacent the front of said casing, a spring having its rear end anchored to said casing and a forward free end adjacent said transverse slot, said spring being adapted to receive letters placed into said vertical



slot, and an indicator arm associated with said spring and extending forwardly into alignment with said slot in the front wall of said casing.

2,458,130
FAIRING FOR AUTOMOBILE VEHICLES
Jean Edouard Andreau, Daurat, near Leognan, France
Application April 16, 1945, Serial No. 588,480
In France March 30, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 30, 1962
5 Claims. (Cl. 280—152)

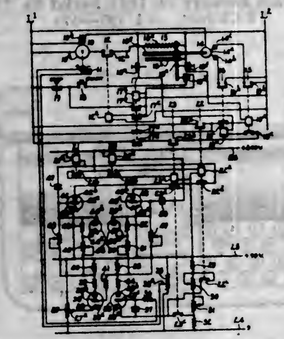


3. For use on a vehicle, a wheel fairing constituted by a streamlined structure provided with a recess adapted to accommodate a portion of a wheel of said vehicle, this recess opening to the outside through a bottom aperture and a lateral aperture in the outer wall of said structure, the edges of said apertures forming sharp ridges along the portions thereof that constitute trailing edges with respect to the relative wind resulting from the movement of said vehicle, and convex rounded surfaces along the portions thereof that constitute leading edges.

2,458,131
CONTROL OF ENERGY SUPPLIED TO TRANSLATING DEVICES
Mark Audier, Milwaukee, and William H. Elliot, Shorewood, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application October 20, 1945, Serial No. 623,590
8 Claims. (Cl. 318—327)

1. In a controller, in combination, a translating device subject to varying operating conditions, a source of electrical energy, means to produce a voltage varying in accordance with an operating characteristic of said device, a first and a second electron tube each having a cathode, an anode and a control electrode and having their main discharge paths connected in series with each other and to said source, means to impress an effect of said voltage upon the control electrode of said first tube, an adjustable resistor between the anode of said first and said control electrode of said second tube tending to impress upon said control electrode a potential which varies with the current of said first tube, an adjustable unidirectional conducting path connected in parallel with said adjustable resistor for modifying the

effect of the latter in response to the rate of and the direction of change of said potential, and electroresponsive means connected to said device and



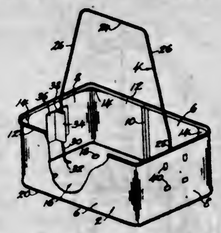
responsive to the current of said second tube to afford control of said device in accordance with said variations of said operating characteristic.

2,458,132
SCHMIDT IMAGE FORMER WITH SPHERICAL ABERRATION CORRECTOR
James G. Baker, Waban, Mass., assignor to The Perkin-Elmer Corporation, Glenbrook, Conn., a corporation of New York
Application June 19, 1945, Serial No. 600,256
9 Claims. (Cl. 88—57)

1. An optical system for use in cameras, projectors, and other instruments which comprises, as essential elements, a spherical reflector, a spherical shell substantially concentric with the reflector and lying on one side of the center of curvature thereof, the shell adding such an amount of negative spherical aberration to the system as to effect a substantial reduction in the positive spherical aberration produced by the reflector, and an aspheric correcting plate located substantially at the center of curvature of the reflector and figured to correct for the residual spherical aberration of the combination of the reflector and shell.

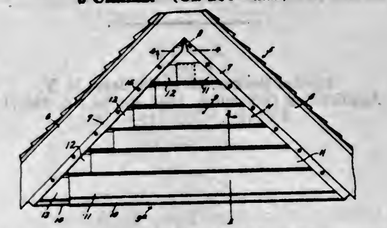
2,458,133
BOTTLE CARRIER
Walter A. Behrens, Jamaica, N. Y., assignor to The Canister Company, Inc., Phillipsburg, N. J., a corporation of New Jersey
Application January 2, 1948, Serial No. 217
1 Claim. (Cl. 224—45)

In a bottle carrier having side and end walls and a bottom secured thereto, a handle member extending between said end walls, said handle member being formed from a length of resilient wire and having a central gripping portion with legs extending downwardly therefrom, said legs having portions inclined outwardly from said central portion, sections formed at an angle to said outwardly inclined portions and extending generally parallel to said end walls, and other portions inwardly inclined to said parallel sections having lugs formed on the extremities thereof at substantially right angles thereto, and means for receiving and retaining said handle secured to said end walls comprising sheets of metal having central grooves therein cooperating with said end walls to form conduits for receiving the legs of



said handle member, said grooves being of sufficient width to receive the above mentioned lugs when the resilient handle member is expanded outwardly and said lugs adapted to engage the lower edges of said grooves when said handle means is in normal unexpanded position in said carrier.

2,458,134
ADJUSTABLE VENTILATOR
Clark D. Belden, Minneapolis, Minn.
Application May 4, 1946, Serial No. 667,312
3 Claims. (Cl. 160—223)

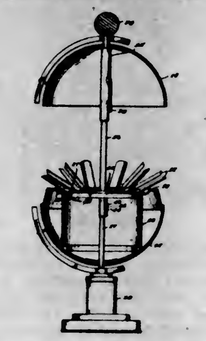


1. A ventilator of the class described comprising an inverted V-frame made up of a pair of complemental channel-shaped members, corresponding ends of said members at one end of said V-frame being hingedly connected together, a plurality of ventilating louvers assembled between said frame members, said louvers being individually extensible and contractible and hingedly connected at their outer ends to the frame members.

2,458,135
CIGARETTE HUMIDOR
Emmett C. Bentley and Wyllis L. Reese, Abilene, Tex.
Application July 1, 1947, Serial No. 758,260
1 Claim. (Cl. 312—78)

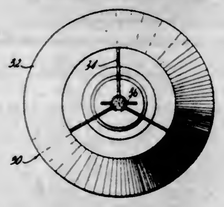
1. A cigarette humidor, comprising a container open at the top, a rod fixed to said container and extending axially upwardly thereof, a sleeve telescopically slidable upwardly and downwardly on said rod, a cigarette carriage fixed to said sleeve and movable therewith to and from an upwardly extended cigarette dispensing position and a retracted cigarette storing position inwardly of said container, a spring loaded latch carried by one of said sleeves and rod to limit telescopic movement of said sleeve in an upward direction, a second sleeve telescopically slidable upwardly and

downwardly on said first-mentioned sleeve, a closure for said container fixed to said second sleeve and movable therewith to and from open and closed positions relative to said container, a second spring loaded latch carried by one of said sleeves to limit movement of said second sleeve in an upward container opening direction, said



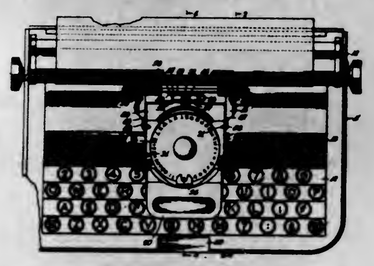
latches being releasable upon downward pressure on said cover when the same is in said open position, and said first-named latch being formed to release prior to said second latch whereby said carriage is retracted into said container prior to downward movement of said second sleeve relative to said first mentioned sleeve.

2,458,136
LAMP
Kornel Berger, Kew Gardens, N. Y.
Application October 2, 1946, Serial No. 700,713
1 Claim. (Cl. 240—148)



In combination in a lamp, an upwardly facing light socket adapted to support an electric light bulb with the axis of symmetry thereof vertically arranged, a lamp harp extending vertically from below said socket to a point substantially above said socket, a threaded post, means to secure said post to the top of said lamp harp, a washer having a central aperture with a radial slot extending from said aperture to the outer circumference of the washer, said slot being wider than the diameter of the post and said post being higher than the washer, a finial screwed on said post and adapted to be turned down to frictionally engage said washer, said washer being detachable from said post by slightly backing off the finial without removing the same thereby to permit the slotted portion of the washer to be slid past the post, a lamp shade including a frame having a decorative cover, said frame comprising a set of spider arms extending outwardly from said washer whereby the shade is secured to the post by and is removable from the post with said washer.

2,458,137
TOY TYPEWRITER
Samuel I. Berger, Newark, N. J.
Application January 24, 1947, Serial No. 724,643
9 Claims. (Cl. 197—47)

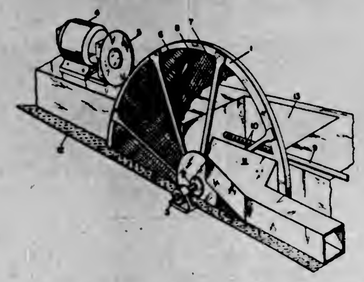


1. In a typewriting mechanism, the combination of a base, a platen structure at the rear part thereof, a carriage pivoted on said base, a type wheel having a substantially upright axle bearing in said carriage, a rotatable dial knob affixed to the upper end of said axle, a ratchet wheel on said axle coaxial and rigid with said type wheel and said knob, a spring pressed pawl lever pivoted to said carriage and coacting with said ratchet wheel for resiliently retaining the type wheel in set position, and a pointer on said carriage coacting with said knob to indicate the setting thereof.

2,458,138
ELECTROMAGNETIC RECEPTACLE FOR LAMPS
Benjamin Waite Blanchard, Jr., Pine Hill, N. J.
Application June 25, 1945, Serial No. 601,362
2 Claims. (Cl. 240—52.15)

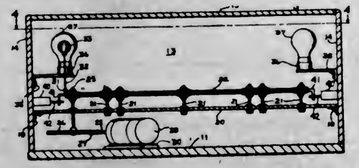
1. In an electro-magnetic receptacle for lamps, a casing fashioned to provide a body of one diameter and a waist of smaller diameter with an annular shoulder between them and a neck of still smaller diameter with an annular ledge between said waist and neck, an inside unit comprising an electro-magnet including an enameled wire coil and a hanger and a pair of spring contacts insulated from each other and electrically connected to opposite ends of the coil of the electro-magnet, means engaging the ledge of the casing and the hanger of the inside unit to draw the latter against the shoulder of the casing and hold said inside unit within the casing so that the spring contacts are in alignment with the neck to permit the terminal contacts of a lamp to engage said spring contacts when the lamp is mounted in the neck, and conductors to supply current directly to the spring contacts and through them to the coil of the electro-magnet.

2,458,139
FILTER OR STRAINER FOR LIQUIDS
Percival Lionel Beecher, Troon, Scotland, assignor to Glenfield and Kennedy Limited, Kilmarnock, Scotland, a corporation of Great Britain and Northern Ireland
Application October 11, 1947, Serial No. 779,274
In Great Britain October 15, 1946
3 Claims. (Cl. 210—169)



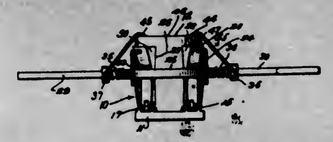
1. A filtering medium comprising an inner woven wire fabric sheet having interstices of microscopic size with the inherent property of preventing the passage of a liquid except when immersed therein, and an outer woven wire fabric sheet at each side of said inner sheet, the interstices of the outer sheet being relatively larger than the interstices of the inner sheet but sufficiently small that surface tension normally will maintain liquid in them, the outer sheet being sufficiently close to the inner sheet that when the outer sheets are wetted, surface tension of the wetting liquid will cause a body of the liquid to be maintained between the outer sheets so that the inner sheet will be maintained immersed in said body of liquid, whereby the microscopic interstices of the inner sheet are in fluid communication with the body of liquid on each side of the inner sheet and surface tension of the liquid will be ineffective to prevent passage of a cleaning liquid through said sheets.

2,458,140
EYE EXERCISER
Henry Breitbarth, Chicago, Ill.
Application November 21, 1946, Serial No. 711,407
3 Claims. (Cl. 128—76.5)



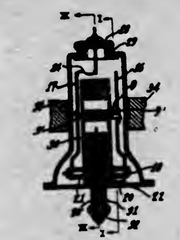
1. An eye exercising device comprising a target, means for moving said target along an irregular path, said path comprising a medial portion of substantially triangular formation in plan view, with the apex of the triangular path nearest the position of the user of the device, means for controlling the movement of said target moving means, illuminating means at certain points of travel of said target along said path, and means for momentarily deenergizing said illuminating means as said target is moved by said target moving means past said illuminating means.

2,458,141
CRUCIBLE HANDLING DEVICE
Frank D. Bromley, Portsmouth, R. I.
Application December 7, 1945, Serial No. 633,401
2 Claims. (Cl. 22—82)



1. A handling device for containers comprising a base for a container, arms hinged to the base for pivotal movement relative to the containers on said base, a hoop surrounding said arms for retaining said arms in a raised position against the container, handles carried by said hoop for raising the same, collars carried by said handles, hold back clamps pivoted on said collars for engaging the upper edge of the container on said base, and resilient means between said hoop and said collars for normally holding said collars outwardly from said hoop.

2,458,142
ELECTRODE ASSEMBLY FOR ELECTRON DISCHARGE DEVICES
Barremore B. Brown, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 8, 1944, Serial No. 525,516
9 Claims. (Cl. 250—27.5)



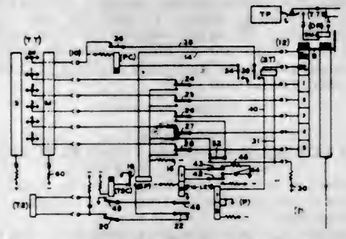
1. An electron discharge device having an envelope including a header member, an electrode assembly mounted on said header member including an elongated anode block mounted in a direction normal to said header member and having anode elements surrounding a central space, a cathode for supplying electrons within said space, and a sheet metal member of conducting non-magnetic material extending parallel to one surface of said anode block and insulatingly supported on said anode block and supporting said cathode.

2,458,143
FIRE RESISTANT ASPHALT ROOFING
Frank B. Burns, Chicago, Ill., Millard S. Larrison, Frankford, Pa., and Morton C. Higgs, North Riverside, Ill., assignors to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application August 7, 1943, Serial No. 497,870
2 Claims. (Cl. 117—30)

1. An improved, fire-resistant, asphalt roof covering comprising an asphalt-saturated felt

base containing between from about 30 percent to about 55 percent of inorganic fibers and from about 45 percent to about 70 percent of organic fibers, said felt base having applied thereto a coating composition which comprises a vehicle of bituminous thermoplastic material having dispersed therein comminuted unexpanded vermiculite in sufficient quantity to decrease the flowability of said coating composition when the latter is exposed to flame conditions, and mineral granules embedded in said coating.

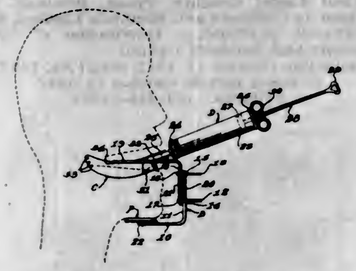
2,458,144
TELEGRAPH CODE CONVERTER
George L. Bush, Flushing, N. Y., assignor to The Teleregister Corporation, New York, N. Y., a corporation of Delaware
Application April 19, 1946, Serial No. 663,367
7 Claims. (Cl. 178—3)



1. In a printing telegraph system having an automatic transmitter and a distributor with a segmented ring having a start segment, a stop segment and intervening code segments for transmitting start-stop permutation code signals to a receiver, and in which the code representation controlling the transmitter differs in certain characters from the normal operating code of the receiver; means for converting the code representations of certain characters involving a change in case, comprising a case-shift relay, circuit means controlled by said relay for marking said code segments of said transmitting ring to interpolate case-shift signals whenever the next character to be transmitted involves a change in case, means including another relay controlled jointly by said automatic transmitter and the start segment of said transmitting ring for operating said case-shift relay, and means controlled jointly by one of said relays and said stop segment of the transmitting ring for stopping said transmitter during transmission by said distributor of a case-shift signal.

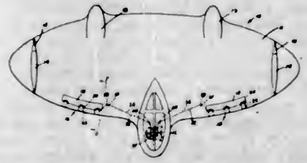
2,458,145
IMPRESSION TAKING MEANS
Earl G. Coffey, Sioux City, Iowa
Original application February 18, 1946, Serial No. 648,220. Divided and this application February 21, 1946, Serial No. 649,200
2 Claims. (Cl. 32—17)

1. In an impression taking device, means for securing an impression tray in the mouth and yieldingly pressing said tray against the gums, said means including a spring clamp comprising upper and lower jaws, each having legs extended therefrom substantially at a right angle thereto, the legs of each jaw extending toward and being in overlapped relation to those of the other jaw, a finger-piece attached to the legs of each jaw and having the legs of the other jaw slidable therethrough, means to limit separation of the finger-pieces and movement of the jaws toward each other, and springs interposed between said



finger-pieces and urging the finger-pieces apart and the jaws toward each other.

2,458,146
CONTROL MEANS FOR AIRCRAFT
Edward D. Colburn, South Glens Falls, N. Y.
Application January 22, 1946, Serial No. 642,653
3 Claims. (Cl. 244—83)

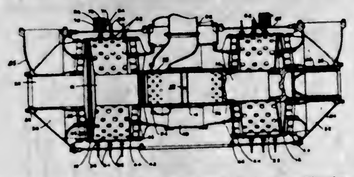


1. In an aircraft having independent upper and lower elevator members, means for independently moving each member into and out of an operative position, comprising a rigid support, a control column, means pivotally connecting said column intermediate its ends to said support, a triangular member, means pivotally connecting one corner of said triangular member to one end of said column, a pair of elongated flexible connectors, each being connected to one of the remaining corners of said triangular member and adapted to operatively connect the same to one of said members, means comprising separate slidable connections connecting said last named corners of said triangular member to said support whereby tilting said column in one direction is adapted to actuate one elevator member and tilting said column in an opposite direction is adapted to activate said other member.

2,458,147
CONTROL FOR FREE-PISTON UNITS
Kenneth C. Cooper, Portland, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application April 15, 1944, Serial No. 531,301
3 Claims. (Cl. 230—56)

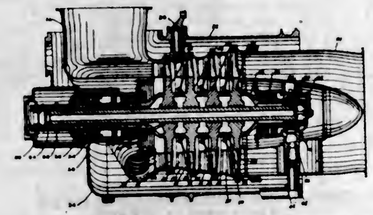
1. A free-piston engine and compressor unit including an engine cylinder and piston, said cylinder having scavenge ports therein adapted to be uncovered by the piston on each stroke for the admission of air to the cylinder, a compressor cylinder and piston, said compressor cylinder having inlet and discharge valves, said pistons being connected together and having a variable length stroke, the length of stroke being a function of the pressures in said cylinders and the work done in the compressor cylinder, and means

for maintaining a length of stroke such that the engine piston will move far enough to uncover the scavenge ports on each stroke, said means including a number of vents axially spaced from each other in the wall of the compressor cylinder, each vent including a number of radially extend-



ing openings extending through the cylinder wall and arranged circumferentially of the cylinder and means for closing all of the openings for each vent simultaneously thereby providing for adjustment of the work done on each stroke in the event of pressure changes in the compressor intake pressure.

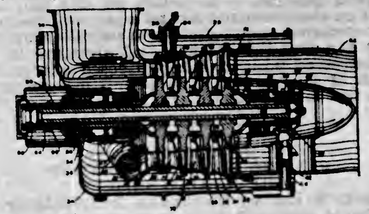
2,458,148
ROTOR CONSTRUCTION FOR TURBINES
Val Cronstedt, Marlboro, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,880
9 Claims. (Cl. 253—39)



1. A rotor construction including a number of discs, each having a central opening, said discs having cylindrical flanges on opposite sides engaging with flanges on adjacent discs and interengaging axially extending teeth on said flanges to align the discs, said flanges being spaced from the central openings in the discs, and a through bolt holding said discs together with said interengaging teeth in engagement said through bolt being smaller in diameter than the central openings in the discs and extending therethrough.

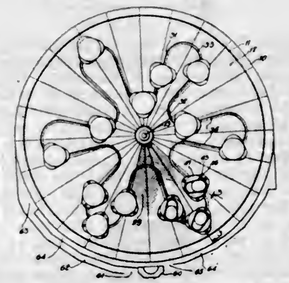
2,458,149
ROTOR CONSTRUCTION FOR TURBINES
Val Cronstedt, Marlboro, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,881
5 Claims. (Cl. 253—39)

1. A turbine rotor construction including a number of discs each having a central opening, each of said discs having a row of blades on its periphery extending radially therefrom, said discs having annular flanges on opposite sides thereof concentric to and spaced from the opening, and interengaging teeth on the ends of the flanges, said teeth extending axially and having opposite side surfaces converging in an axial direction, the converging surfaces being curved betweeen inner and outer ends on the same radius to provide contact between the teeth substantially over the entire length of the side surfaces to prevent relative radial motion between adjoining discs, and means for holding said discs



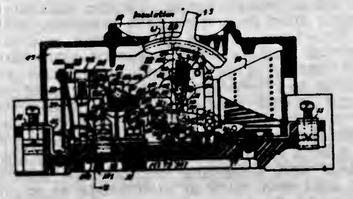
together with said teeth in interengagement, said means having contact with said discs only through the teeth on the flanges on the outer sides of the end discs.

2,458,150
ROUNDABOUT
John D'Errico, Brooklyn, N. Y.
Application May 20, 1947, Serial No. 749,217
11 Claims. (Cl. 272—51)



1. An amusement device comprising an inclined rotating platform; an endless sinuous track rail on said rotating platform comprising inner and outer loops arranged around the axis of the rotating platform; carriages on said rail; and cars on each carriage.

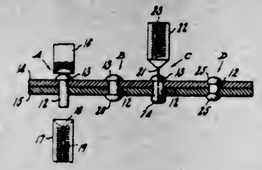
2,458,151
CIRCUIT BREAKER
Hiller D. Dorfman, Forest Hills, and Gerald J. Freese, East McKeesport, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Original application June 24, 1941, Serial No. 399,457, now Patent No. 2,419,125, dated April 15, 1947. Divided and this application May 18, 1944, Serial No. 536,138
11 Claims. (Cl. 200—88)



1. A trip device for a circuit breaker comprising a trip bar movable from a normal position in

one direction to trip the breaker and in another direction from said normal position to reset the trip device, means biasing said trip bar to said normal position, a projection on said trip bar, and an electromagnet having a pivoted armature for engaging the projection to operate said trip bar and trip the breaker, said armature in its unattracted position being disposed out of the path of said projection to permit movement of the trip bar to reset the trip device.

2,458,152
PLASTIC RIVET AND METHOD OF MAKING SAME
Everett A. Eakins, Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application April 3, 1945, Serial No. 586,331
3 Claims. (Cl. 18—59)

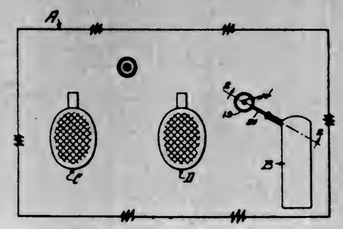


2. The method of riveting parts together which consists in providing a normally rigid rivet formed of a mixture of rubber and resin the latter being thermoplastic and compatible with rubber and rigid at room temperature and the rubber being vulcanized and elastic and under tension longitudinally of the rivet and held in this condition by the rigid condition of the resin so that the rivet has a pronounced elastic memory, inserting the rivet through confining holes in said parts to protrude therefrom, and then heating the rivet to cause its protruding end to expand laterally as the resin softens to form a rivet head and contract longitudinally to draw said head firmly against one of said parts.

2,458,153
SAFETY DEVICE FOR ELECTRIC PLUGS
Charles Festge, Milwaukee, Wis.
Application June 7, 1946, Serial No. 674,946
4 Claims. (Cl. 173—361)

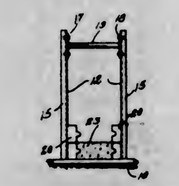
2. An accessory for an electric current conducting plug having contact members projecting therefrom adapted for insertion in a slotted receiving member, said accessory comprising, a body having a permanent pre-formed recess adapted to receive the electric plug, said recess having an apertured bottom wall through which the contact members of said plug are adapted to protrude, and a flexible skirt projecting from the side of said body adjacent the lower portion thereof and extending beyond said apertured wall, said skirt being of such length as to terminate short of the free ends of said contact members when the accessory is applied to said plug.

2,458,154
BACKUP LIGHT SWITCH
Adam E. Fernelt, Chico, Calif.
Application May 21, 1945, Serial No. 595,049
1 Claim. (Cl. 200—59)



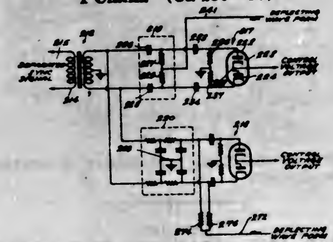
In a rear light switch actuator for simultaneously actuating a back-up light and the accelerator pedal of motor vehicles having a floor board with a light switch suspended therefrom and an accelerator pedal spaced from the upper surface thereof, the combination, which comprises, a plunger having a button on the upper end slidably mounted in said floor board and with the lower end in operative engagement with the switch, said accelerator pedal having a horizontally disposed arm extending from one side with an upwardly extending end having a threaded socket therein, a horizontally disposed bar with an open ring at one end freely positioned around the said plunger and having a threaded downwardly extending end threaded in the threaded socket of the arm of the pedal, and a lock nut securing the bar in the socket of the arm.

2,458,155
MOLD FOR MOLDING CONCRETE STRUCTURAL UNITS
James B. Fraser, Fort Lauderdale, Fla.
Application September 13, 1945, Serial No. 616,098
3 Claims. (Cl. 25—121)



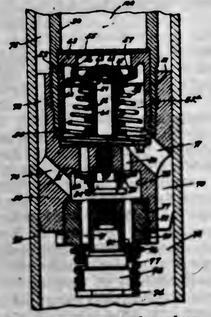
1. A structure of the kind described comprising a base sill, a pair of upright posts having a plurality of apertures therein and having separable interlocking engagement with the base sill, a vertically adjustable cross strut secured to the posts and located entirely between the same, shaper pieces having tongue and groove work contacting surfaces and studs opposite said surfaces for protrusion through said apertures, said shaper pieces held by said posts between the same for concrete molding thereby, fasteners detachably connecting said cross strut to said posts, and fasteners detachably connecting said studs to said posts in molding disposition to each other.

2,458,156
AUTOMATIC FREQUENCY CONTROL SYSTEM
Gordon L. Fredendall, Feasterville, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application July 29, 1944, Serial No. 547,230
1 Claim. (Cl. 250—36)



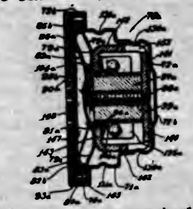
An automatic frequency control system comprising a pair of peak rectifiers, a source of signals of sawtooth wave form, a source of separated pulses providing high and low frequency pulses, a transformer connected to said source of separated pulses, means for applying sawtooth wave form signals to said rectifiers with like polarity at each rectifier, means including a high pass filter for applying pulses of high frequency to said rectifiers from said transformer with opposite polarity at each rectifier, means for utilizing the output of said pair of peak rectifiers for controlling said means for applying sawtooth wave form signals, a second pair of peak rectifiers, means for applying low frequency sawtooth wave form signals to said second pair of peak rectifiers with like polarity at each rectifier, means including a low pass filter for applying low frequency pulse signals to said second pair of rectifiers from said transformer with opposite polarity at each rectifier, and means for utilizing the output of said second pair of rectifiers for controlling said means for applying low frequency sawtooth wave form signals.

2,458,157
SHOCK ABSORBER
Mearick Funkhouser, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 3, 1946, Serial No. 659,335
10 Claims. (Cl. 188—88)



1. An hydraulic shock absorber comprising a fluid containing cylinder having a closed and an open end and a bearing bushing in its open end; a piston in the cylinder having fluid passages and forming upper and lower working chambers in the cylinder; a tube slidably supported in the bearing bushing and having its one end attached to the piston; a valve cage in the tube and held between the tube and piston said valve-cage providing a fluid receiving chamber in the piston and having an annular valve-seat extending into the fluid receiving chamber; a valve yieldably urged against the annular valve-seat and movable to establish a fluid flow from the tube through the fluid receiving chamber and into the lower working chamber; said valve having a tubular extension; a valve slidably supported in the tubular extension of the first mentioned valve and movable relatively thereto to establish a fluid flow from the lower working chamber through the fluid receiving chamber and into the tube; a valve yieldably urged against the piston and movable relative thereto to open certain piston passages for establishing a fluid flow from the lower working chamber through the fluid receiving chamber into the upper working chamber; and another valve normally urged to close certain fluid passages in the piston and operable by fluid pressure from the upper working chamber to establish a flow into the lower working chamber.

2,458,158
MAGNETICALLY SHIELDED ELECTRO-DYNAMIC SOUND REPRODUCER
Webster E. Gilman, Maywood, Ill., assignor to Permoflux Corporation, Chicago, Ill., a corporation of Illinois
Application November 25, 1942, Serial No. 466,903
5 Claims. (Cl. 179—115.5)

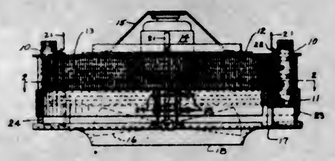


1. In a transducer, means including a permanent magnet and an outer pole piece of magnetically permeable material arranged to cooperate to define an annular magnetic gap adjacent to one end of the magnet, a diaphragm having a voice coil structure disposed in said magnetic gap, a cup-like housing formed from magnetically permeable material and disposed about said magnet in such a relation that said annular magnetic gap is located inwardly of the open end of said cup-like housing, said pole piece being secured to said cup-like housing to afford a magnetic path between the pole piece and the housing, and means completing a magnetic circuit from the other end of said magnet to said outer pole piece to enable at least a portion of the magnetic flux to flow through said housing to said pole piece.

2,458,159
HEAT EXCHANGER
George R. Goldthwaite, North Easton, Mass., assignor, by mesne assignments, to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application November 26, 1946, Serial No. 712,355
5 Claims. (Cl. 257—127)

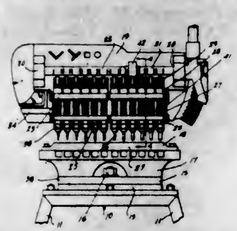
1. In a heat exchanger having a propeller fan and heat exchange tubes extending in a circular

path centrally around the axis of the fan on the air inlet side thereof, said tubes having radially extending fins thereon the outer ends of which lie on the surface of a cylinder coaxial with said tubes, said exchanger having a wall spaced from said fins and providing a circumferentially extending inlet passage into the inlet



of said fan, said fan being arranged to draw air between said fins and through said passage, the combination of a cylindrical damper constricted on said outer ends of said fins and slidable thereon across said passage, and means for varying the diameter of said damper for varying its contact pressure against said outer ends of said fins.

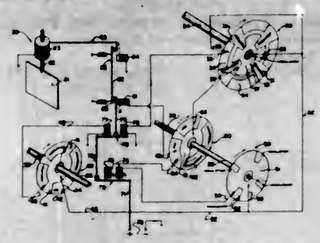
2,458,160
PUNCH MACHINE
Marcellin L. Grappe, Fairlawn, N. J.
Application October 15, 1946, Serial No. 703,410
8 Claims. (Cl. 164—96)



1. A machine of the character described comprising a frame having a bed, an upstanding head on said frame above the bed, a plunger rack comprising spaced pairs of stationary parallel bars above said head, plungers carried by said rack, a shaft rotatably mounted on said head above the plungers, an actuating eccentric slidably keyed to said shaft, means for rotating said shaft, said shaft having spaced aligned slotted apertures therein, and means carried by said cam selectively engageable in said slotted apertures for positioning said eccentric in operative relation to one of said plungers.

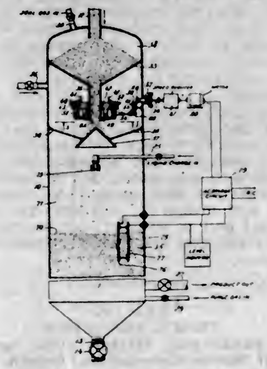
2,458,161
SYSTEM FOR PREVENTING FILM FIRE IN MOTION-PICTURE PROJECTORS
Francis B. Gross, Sr., New Orleans, La.
Application February 17, 1948, Serial No. 8,886
5 Claims. (Cl. 88—17)

1. In a motion picture projector having a solenoid-operated change-over dowser, a control circuit for preventing film fire comprising a rotary switch driven by the idling film sprocket of the projector, a second rotary switch driven by a constant speed film sprocket of the projector, a source of electricity for energizing the solenoid-operated dowser, and relay means responsive to the relative rotation of said rotary switches and



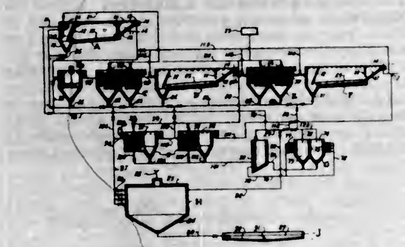
operative to interrupt said source of electricity for the dowser.

2,458,162
METHOD AND APPARATUS FOR CONVERSION OF LIQUID HYDROCARBONS WITH A MOVING CATALYST
William A. Hagerbaumer, Westfield, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application November 14, 1946, Serial No. 709,874
11 Claims. (Cl. 196—52)



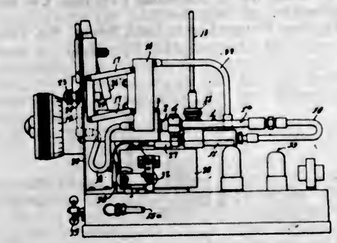
1. A method for conversion of high boiling liquid hydrocarbons to lower boiling hydrocarbons in the presence of a moving contact material which method comprises: introducing particle-form contact material at a suitable temperature for said hydrocarbon conversion into the upper section of a confined, elongated, substantially vertical conversion zone as a substantially compact supply stream of solid particles, passing the contact material from said stream downwardly through an upper section of said conversion zone as a shower of dispersed freely falling particles onto the surface of a substantially compact bed of said contact material therebelow within said conversion zone, withdrawing used contact material from the bottom of said bed, controlling the surface level of said bed substantially constant by adjusting the rate of flow of contact material from said compact supply stream, introducing a spray of high boiling liquid hydrocarbon charge into said shower of particles in said upper section of said conversion zone to contact said particles before reaching the surface of said bed, and withdrawing gaseous hydrocarbon products from the lower section of said bed substantially separately of said contact material.

2,458,163
SEWAGE TREATING PROCESS
Clyde C. Hays, Waco, Tex.
Application April 6, 1944, Serial No. 529,733
3 Claims. (Cl. 210—2)



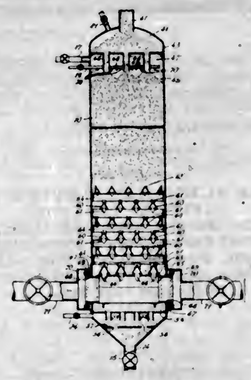
3. A sewage treating process which includes, producing a biologically active sludge from separated solids coagulated and precipitated from the sewage by passing said sewage successively through a plurality of settling and contact chambers, removing the sludge from each chamber and concentrating the same in a reconcentration unit, reducing the concentrated sludge to gases, solids and liquids in a septic digestion unit, and admixing alkaline material with the liquid from the septic digestion unit and contacting said liquid with biological organisms activated by artificial aeration so as to render said liquid aerobic whereby the same may be returned to the sewage without detrimental effect.

2,458,164
GRAVITOMETER
Donald C. Hill, Los Angeles, and William A. McGlashen, Huntington Park, Calif.
Application October 25, 1943, Serial No. 507,500
11 Claims. (Cl. 73—24)



7. In an apparatus for determining the density of the gas, a whistle, means for conducting the gas through the whistle, a constant frequency resonator positioned parallel with the whistle in the range of sound waves emitted from said whistle, means for varying the effective length of the whistle to thereby produce a sound wave corresponding in wave length to that of the constant frequency resonator, and means for measuring the amplitude of vibration set up in the constant frequency resonator by the sound wave produced by the whistle to determine when the whistle length has been adjusted to produce the sound wave having a wave length corresponding with that of the constant frequency resonator.

2,458,165
METHOD AND APPARATUS FOR CONVERSION OF FLUID HYDROCARBONS
Herbert K. Holm, Chicago, Ill., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application March 18, 1947, Serial No. 735,326
14 Claims. (Cl. 196—52)

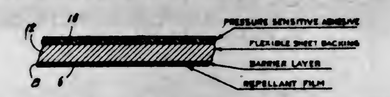


1. A method for conversion of fluid hydrocarbons in the presence of a particle-form contact mass material which comprises: passing said particle-form contact material at suitable temperatures for said conversion downwardly through a confined conversion zone as a substantially compact column of downwardly gravitating solid particles, introducing a fluid hydrocarbon charge into said conversion zone and passing it downwardly within said column to effect conversion of said hydrocarbon charge to gaseous hydrocarbon products, baffling the solid particle flow in the lower portion of said column to form a continuous tortuous solid-free passage for gas-flow through a vertical section of said column, said passage being in free gas-flow communication with said column at a plurality of gas-solid disengaging surfaces at a series of vertical levels within the lower section of said column, collecting said gaseous hydrocarbon products from said column into said passage for gas-flow at all of said disengaging surfaces at said series of vertical levels, causing the gas collected into said passage at any level to flow downwardly to join the gas streams collected at lower levels, subjecting said gas flowing downwardly in said passage for gas-flow to a stepwise decrease in flow restriction as it moves downwardly through said series of vertical levels so as to provide substantially uniform disengagement of gas from said column at all of said disengaging surfaces at said series of vertical levels, and withdrawing the combined stream of gas from all of said disengaging surfaces from said conversion zone.

2,458,166
COMPOSITE PRESSURE-SENSITIVE ADHESIVE SHEET MATERIAL
Henry N. Homeyer, Jr., Elmhurst, Ill., assignor to The Kendall Company, Boston, Mass., a corporation of Massachusetts
Application June 27, 1944, Serial No. 542,299
8 Claims. (Cl. 117—68.5)

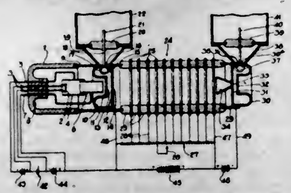
1. A pressure-sensitive adhesive sheet material comprising a flexible sheet backing, a layer of an

exposed pressure-sensitive rubber adhesive adherent to one surface of said backing, a flexible barrier layer comprising a butadiene-acrylic nitrile co-polymer elastomer adherent to the other surface of the backing, and a thin flexible film



of a material repellent to said pressure-sensitive rubber adhesive layer selected from the group consisting of cellulose esters, cellulose ethers, polyvinyl esters, and polyvinyl butyral, adherently superposed on said barrier layer.

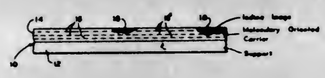
2,458,167
ELECTRICAL DISCHARGE DEVICE HAVING CAVITY RESONATORS
Caperton B. Horsley, Stamford, Conn., assignor to Machlett Laboratories Incorporated, Springdale, Conn., a corporation of Connecticut
Application April 27, 1944, Serial No. 532,946
10 Claims. (Cl. 315—8)



1. An electrical discharge device adapted for ultra-high frequency use, which comprises an evacuated envelope, means within the envelope for producing a beam of charged particles traveling along a rectilinear path within the envelope at relatively low velocity, means within the envelope defining a cavity resonator having aligned openings through which the particles pass, means for maintaining an oscillating field within the resonator which acts on the beam to cause the particles to be formed into groups, means for subjecting the particles traveling through the envelope beyond the resonator to a constant rectilinear field to accelerate the groups of particles without substantially changing their direction, said means including a plurality of electrodes distributed within the envelope along the path of the particles, potential-source means connected to said electrodes for maintaining them at increasing potentials with respect to the beam-producing means, and means within the envelope in the path of travel of the particles beyond the group accelerating means for absorbing energy from the accelerated groups, said absorbing means including a cavity resonator having an opening through which the groups pass into the resonator.

2,458,168
PRODUCTION OF LIGHT-POLARIZING IMAGES
Helen P. Husek, Allston, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application August 27, 1945, Serial No. 612,876
5 Claims. (Cl. 95—83)

1. A method of forming an iodine image of predetermined density from a silver image which is supported by a hydrophilic carrier, comprising treating the silver image to replace the silver thereof with a mixture of water-insoluble metallic ferrocyanides other than silver and comprising a predetermined quantity of at least one metallic ferrocyanide which may be formed into an oxidizing agent having a sufficient oxidization potential to release a predetermined quantity of iodine from an acid solution of an iodide and at least one other metallic ferrocyanide which is incapable of forming an oxidizing agent possessing the ability to release iodine from an acid solution of an iodide by subjecting said silver image to the action of an alkali ferricyanide and a mixture of metallic salts formed of a predetermined quantity of at least one metallic salt selected from



the class consisting of cupric salts and ferric salts and at least one other metallic salt from the class consisting of zinc salts and cadmium salts and of salts of nickel, uranium, vanadium and cobalt in which the metallic element is in lower valent form, transforming water-insoluble metallic ferrocyanide having a metallic element from said first-named class into the desired oxidizing agent for effecting the release of iodine by subjecting said mixture of water-insoluble metallic ferrocyanides to the action of a base, and reacting said oxidizing agent so formed with said acid iodide solution whereby iodine in accordance with the quantity of oxidizing agent present is released and replaces the oxidizing agent to form an iodine image of desired density.

2,458,169
INFUSION PACKAGE WITH NONTANGLING STRING HANDLE
Hans O. Irmscher, East Hempstead, Long Island, N. Y., assignor to National Urn Bag Co. Inc., a corporation of New York
Application November 6, 1945, Serial No. 626,994
14 Claims. (Cl. 99—77.1)

1. A package completely enclosing an infusion product in a bag formed with a top closure seam having a heat-sealing joint material, an unsealed edge border portion of unbroken length extending from side edge to side edge of said bag and extending beyond said top closure seam a sufficient distance so constructed and arranged to retain a flow of said heat-sealing joint material from passing beyond said border portion during fusion of said joint material when forming said top closure seam, said unsealed edge border portion being free from said heat sealing joint material and serving as means for receiving and temporarily retaining portions of a detachable tag.

2,458,170
CONTINUOUS FAT SPLITTING
Martin Hill Ittner, Jersey City, N. J., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware
Application October 27, 1944, Serial No. 560,640
19 Claims. (Cl. 260—415)

2. The method of hydrolyzing fats and fatty oils with water to fatty acids and glycerine, with the aid of heat and pressure, which comprises intimately contacting such fatty material with water by countercurrent flow, subjecting the fatty acids resulting therefrom to partial cooling by direct contact and mixing with water whereby the water is heated, applying additional heat to the water while mixed with a portion of said fatty acids, and passing the water thus heated into intimate countercurrent contact with the fatty material undergoing hydrolysis, while maintaining two liquid phases, a fatty phase and an aqueous phase, whereby the fatty material undergoes substantial hydrolysis with the formation of fatty acids and glycerine.

5. In the process of hydrolyzing fats with water to fatty acids and glycerine with the aid of heat and pressure and countercurrent washing of glycerine from the resulting fatty matter with the aid of hot water, the method of finely dividing said water to facilitate said washing, which comprises mixing the water with a portion of said fatty acids and forcing the mixture of fatty acids and water under pressure, into said fatty matter, with sufficient velocity to effect a fine state of division of said water.

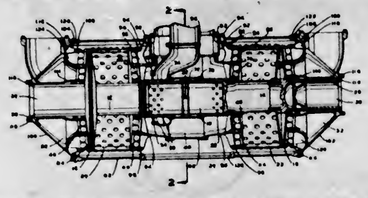
11. In a countercurrent process for hydrolyzing fats with the aid of water in liquid condition at temperatures above 185° C., the method which comprises the steps of rapidly applying heat to said fats while in direct contact with water to bring the fats to about the temperature employed in said hydrolysis without effecting a substantial degree of hydrolysis of said fats during said rapid heating, and directly submitting the fats thus heated to said countercurrent hydrolysis.

2,458,171
ISOLATION OF ACETYLESTERASE FROM CITRUS WASTE
Eugene F. Jansen, Berkeley, Rosie Jang, San Francisco, and Leonard R. MacDonnell, Oakland, Calif., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application December 12, 1947, Serial No. 791,442
14 Claims. (Cl. 195—66)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The process of isolating acetylesterase which comprises pressing citrus peel to separate the juice from the solid material, stabilizing the juice by dissolving an inorganic oxalate therein, precipitating the acetylesterase from the stabilized solution by salting-out with inorganic salt and separating the precipitated acetylesterase.

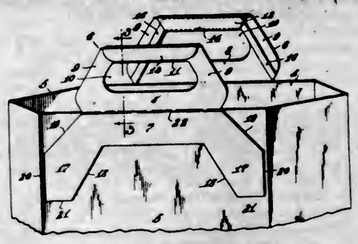
2,458,172
ASSEMBLY OF FREE-PISTON UNITS
Andrew Kalitinsky, Eagleville, and Walter A. Ledwith, Hartford, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application April 15, 1944, Serial No. 531,305
3 Claims. (Cl. 230—56)

1. A free-piston engine and compressor assembly including a housing, an engine cylinder, a supporting element around said engine cylinder and forming a scavenge manifold for the engine, said housing having centrally positioned locating means in the housing that locate the element axially and laterally and said element engaging said locating means, said element having means for endwise adjustment of the engine cylinder within the element, said element also having means engaging the ends of the engine



cylinder, said housing having locating means engaging said element adjacent its ends for aligning the ends of said element with the housing, compressor cylinders at opposite ends of the engine cylinder, the inner ends of the compressor cylinder engaging said element to be aligned with the engine cylinder, and end caps mounted on and engaging locating surfaces on the housing, said caps having locating means for the outer ends of the compressor cylinder.

2,458,173
SHOPPING BAG HANDLE
Emanuel S. Kardon, Melrose Park, Pa., assignor to American Bag & Paper Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 18, 1945, Serial No. 635,745
5 Claims. (Cl. 229—54)

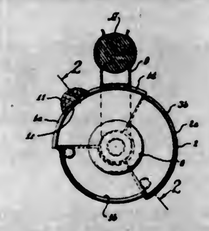


1. A handle member for shopping bags and the like comprising a member blanked out of sheet material having a main body portion secured to the bag and a handle portion extending upwardly therefrom, the handle portion having a hand hole cut therein to provide a top horizontal hand engaging part, the body portion having flaring tab portions extending downwardly and outwardly and secured to the bag, the upper outer edges of said tab portions being inclined at a substantial angle to the vertical, and the inner lower edges of said tab being shaped complemental to the top portion of the handle member.

2,458,174
BED LAMP
Vivian N. Kincaid, San Diego, Calif.
Application July 15, 1946, Serial No. 683,805
2 Claims. (Cl. 240—4)

1. In a bed lamp of the class described, the combination of a main casing member having an

arcuate side wall and integral end portions, bearing concentrically of said arcuate side wall engaging said end portions, segment shutters journaled in connection with said bearings and arcuately telescopic relatively to said main casing member, said segment shutters being freely pivotal relatively to each other and separated substantially at the middle portion of said lamp



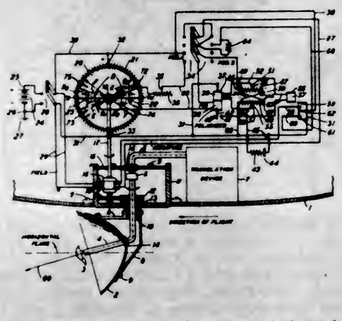
intermediate said bearings, second segment shutters pivotally connected with said bearings and having arcuate side wall portions concentric with the side wall portions of said main casing member, said second segment shutters being separated intermediate said bearings and independently movable relatively to each other, and handles secured to said segment shutters at opposite ends of said bed lamp.

2,458,175

DIRECTIVE ANTENNA CONTROL SYSTEM

Aaron Robert Kolding, Elmhurst, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 27, 1944, Serial No. 546,828
5 Claims. (Cl. 250—33.65)



1. In combination, a direct current motor, a source of direct current connected thereto, a relay controlled by said motor for reversing the direction of rotation of said motor, and an adjustable resistance included between said relay and said source for controlling said relay and changing the amount of rotation of said motor in each direction.

2. In combination, a directive antenna comprising a rotatable concave reflector, a first potentiometer comprising a circular resistance and a pair of rotatable wipers therefor, a direct current motor for oscillating said reflector and rotatable wipers over an angle not greater than 180 degrees, an adjustable resistance for changing the magnitude of said angle, a second potentiometer for changing the orientation of the bisector of said angle, said last mentioned potentiometer comprising a pair of parallel resistances and a pair of slidable wipers, a source of direct current connected to said circular resistance and to said parallel resistances, and a polarized relay having a contact for reversing said motor, an operating winding connected through said adjustable resistance to said rotatable wipers, and a bias winding connected to said slidable wipers.

2,458,176

ANIMAL TRAP

Claude Jones, Jefferson City, Mo., assignor of one-sixth to Erl E. Varble, Jefferson City, Mo.

Application November 22, 1944, Serial No. 564,634
5 Claims. (Cl. 43—67)

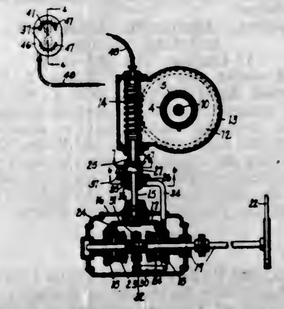
3. An animal trap comprising a base, an upstanding support arranged contiguous to an end of said base and carried thereby, a longitudinally extending arm pivotally mounted on said support, spring means interconnecting the rear end of said arm to said base for yieldably urging the front end thereof upwards, a trigger mechanism including a bait supporting holder arranged along said base and spaced from said support, a reticulated frame positioned on said base contiguous to said mechanism and enclosing said bait holder, said frame having front and side openings affording access to the bait on said holder, means for operatively connecting said trigger mechanism to said arm, and a noose carried by the rearward end of said arm extending around each of said openings in embracing relation therewith for constricting each noose upon upward movement of said arm.

2,458,177

POWER STEERING AND PROPELLING MECHANISM

John Frank Johnson, Ludington, Mich.

Application February 28, 1945, Serial No. 580,247
17 Claims. (Cl. 115—35)



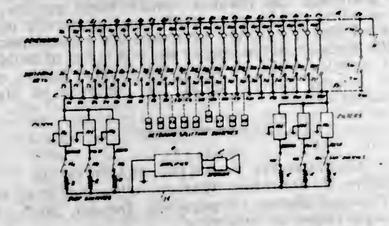
1. The combination of a propeller provided with a support rotatable through 360° on an axis perpendicular to the axis of the propeller, a worm gear on said propeller support, a driving worm coacting therewith, a shaft for said worm provided with a beveled driven gear, a pair of beveled driving gears disposed in opposed coacting relation with said beveled driven gears and provided with opposed cone clutch elements, a driving shaft for said driving gears, a driving cone clutch element mounted on said driving shaft between said driven clutch elements for neutral positioning or selective engagement therewith, a bearing mounted on said worm shaft provided with a projecting pin, a pulley provided with a hub rotatable on said bearing and having a cam slot coacting with said pin whereby rotation of the pulley imparts axial movement thereto, a shifting lever for said driving clutch member, a link connecting said pulley hub to said shifting lever, a steering wheel having cable connection to said pulley, and an indicator comprising a casing having curved segmental oppositely disposed windows having indicia associated therewith, spindles mounted on said casing and each provided with a pointer disposed in the same relation thereon, each pointer being associated with one of the windows, meshing gears connecting said spindles whereby the points are driven in opposite direction, and a driving connection for said worm shaft to one of said spindle gears whereby the forward position of the propeller is indicated by one pointer throughout a range of 180° and the other pointer indicates its reversing positions throughout a range of 180°.

2,458,178

ELECTRICAL MUSICAL INSTRUMENT WITH SPLIT KEYBOARD

Nicholas Langer, New York, N. Y., assignor to Central Commercial Company, Chicago, Ill., a corporation of Illinois

Application January 31, 1948, Serial No. 5,573
8 Claims. (Cl. 84—1.17)



3. An electrical musical instrument comprising in combination a system of generators for producing note frequency oscillations corresponding to notes of a musical scale, an output terminal for each of said generators, a manually operable switching key interposed between each of said generators and its output terminal adapted when actuated to render output signal from the generator effective at its terminal, a low range output network connected to all output terminals up to a predetermined note, a high range output network connected to all output terminals above another predetermined note, a range-splitting switch interposed between each pair of adjoining terminals in the intermediate range between and including the said predetermined notes, said switches being normally closed to sequentially connect the terminals in the intermediate range to each other and to the said output networks and being capable of selective actuation to disconnect the said networks from each other at any desired point in the said intermediate range, and means responsive to the actuation of any one of said range-splitting switches to render the rest of said switches inoperative.

2,458,179

ANTIGLARE SYSTEM FOR AUTOMOTIVE VEHICLES EMPLOYING POLARIZED LIGHT

Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

Application July 8, 1946, Serial No. 681,922
4 Claims. (Cl. 88—1)

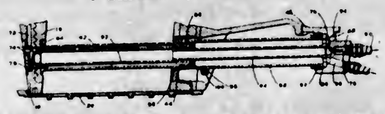
3. In a headlight system for automotive vehicles and the like wherein the vehicle is provided with a light source including a light-polarizing element for illuminating the pathway of the vehicle with polarized light and with a light-polarizing analyzer for viewing the illuminated pathway of the vehicle, means for positioning the analyzer so that its transmission axis makes an acute angle with the vertical of at least 22½° and not more than 35°, and means for positioning the polarizer associated with the source of illumination so that its transmission axis makes with the horizontal an angle substantially equal to the angle made by the transmission axis of the analyzer with the vertical, said transmission axes making with each other an angle of at least 20° and not more than 45°, whereby said analyzer transmits a substantial percentage, of the order of at least 50%, of the reflected, polarized radiation emitted by the headlights of said vehicle and effectively suppresses ghost images of the headlights of a similarly equipped, approaching vehicle.

2,458,180

AUXILIARY PUMP FOR FREE-PISTON UNITS

Walter A. Ledwith, Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware

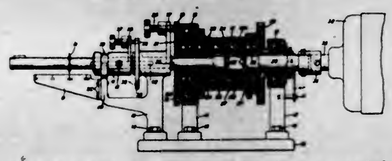
Application August 23, 1944, Serial No. 550,889
7 Claims. (Cl. 230—56)



1. A free-piston unit including an engine cylinder and piston, a compressor cylinder and piston, the compressor and engine piston forming a free-moving piston assembly, an air spring cylinder and piston one of which is movable with the piston assembly and the other of which is connected to the engine and compressor cylinder, and an auxiliary cylinder and piston, one of

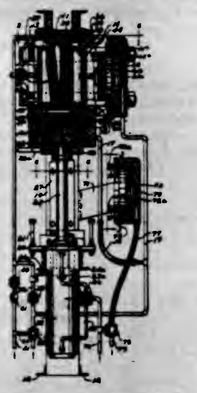
which is connected to the piston assembly and the other of which is connected to one of said engine and compressor cylinders, and means for admitting fluid under pressure to one end of the auxiliary cylinder for moving the piston assembly with respect to the engine and compressor cylinders.

2,458,181
SPEED REDUCTION MECHANISM
John B. Little, Summit, and Wilden A. Munson, Chatham, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 20, 1944, Serial No. 554,894
3 Claims. (Cl. 74—263)



1. In a speed reduction mechanism, a rotatable drum, a plurality of pairs of concentrically disposed rings in said drum, a plurality of balls disposed between said rings in each of said pairs, rings having means for holding said balls in the annular spaces between said concentric rings, a plurality of coupling means for successively operatively connecting the ball retaining rings of said bearings to similar successive rings in said pairs of concentric rings, a driven shaft movable longitudinally for individually engaging said similar rings, a locking mechanism for holding said shaft from rotation to cause the movement of said drum in one direction, and a locking mechanism for locking said drum to cause the operation of said shaft in another direction upon the unlocking of the latter by the first-mentioned locking mechanism.

2,458,182
MOLDING APPARATUS
Frank J. MacDonald, Brookline, Mass., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application August 18, 1945, Serial No. 611,366
15 Claims. (Cl. 18—19)

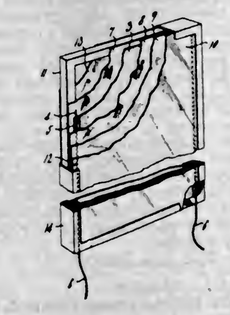


1. Apparatus for molding deeply contoured hollow concavo-convex articles such as helmet liners, binocular carrying cases and the like, said apparatus comprising a frame having a pair of upstanding columns, a male mold member of metallic material depending between said columns, said member being cored for heating and having communicating means for supplying heating fluid thereto, a flexible diaphragm of extensible material associated with and separate from said male member so as to define a fluid-tight chamber therewith, communicating means connecting with said fluid-tight chamber for supplying fluid under pressure thereto, communicating means connecting with said fluid-tight chamber for exhausting fluid therefrom, means in said exhaust means for restricting the return of fluid thereto, a deeply contoured female mold member mounted for vertical movement toward and away from said male mold member, said female mold member being vertically divided and one of the divided parts being hinged so as to swing open, the divided parts of said female mold member being cored for heating and having communicating means for supplying heating fluid thereto, a low-pressure air cylinder and piston assembly mounted between said uprights so as to raise and lower said female mold, opposed locking seats on said columns, a rotary latch casting adapted to support said air piston at an approximate molding position, said latch casting being carried by said air piston and being adapted for manual rotation about said air piston into and out of engagement with said locking seats, a short-stroke high pressure hydraulic cylinder mounted on said air piston, said hydraulic cylinder being adapted to move said female mold member from said approximate molding position to final molding relationship with said male mold member, a second short-stroke high pressure hydraulic cylinder mounted to act in a direction to maintain the divided female mold members in molding relationship, and a pneumatically operated kicker cylinder arranged for engagement with female mold assembly while it is out of molding position to break apart the divided halves of the hinged female mold for removal of the finished article.

2,458,183
METHOD OF FORMING MANIFOLDS
Charles E. Manning, Warren, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 14, 1945, Serial No. 593,573
2 Claims. (Cl. 113—116)

2. The method of making a cable manifold for internal combustion engines comprising the steps which include, providing a composite aluminum alloy sheet having a relatively thick layer having a melting point above a certain temperature and a relatively thin layer of aluminum alloy having a melting point lower than the thick layer forming two complementary half-shell members with a main channel and a plurality of spaced branch channels extending parallel to the main channel and in closely spaced relation therewith so that one end of each branch channel is in direct communication with the main channel and the other end provides an outlet spaced from the main channel and having the edges of channels flanged outwardly to form contacting surfaces and spaced tabs on each member the thin layer forming the inner surfaces of the channels; placing one end of a preformed bushing having a melting point above the thin layer in each outlet of the branch chanels of one of the half shell members; placing the other half-shell member over the first half-shell member so that the flanges and tabs of both members are adjacent each other; riveting the tabs together to hold the shell members together and the bushing in position subjecting the members to heat to render only the thin layer in a fluid state for integrally bonding the contacting surfaces to provide an integral manifold and then removing the tabs.

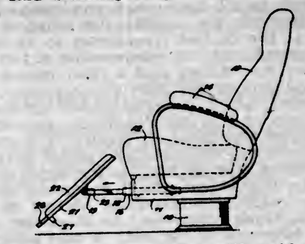
2,458,184
ELECTRICALLY CONDUCTING PANEL
Louis Marick, Grosse Pointe Farms, Mich., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application January 15, 1944, Serial No. 518,395
2 Claims. (Cl. 219—34)



1. A laminated heating unit comprising, a sheet of flexible material having applied thereon a synthetic resin compound containing electrically conducting carbon black in amount sufficient to impart current conducting and heating properties to the sheet, electrical conductor wires secured along two edges of the sheet in parallel relation to each other, a pair of layers of flexible protective material coated with a film of synthetic resin enclosing said sheet of flexible material, a flexible sheet of decorative material adjacent at least one of the layers of flexible protective material, and a flexible sheet of transparent synthetic resin adjacent to the decorative material, the whole being bonded together throughout the overlapping areas of the respective layers of material to form an integral stiff panel.

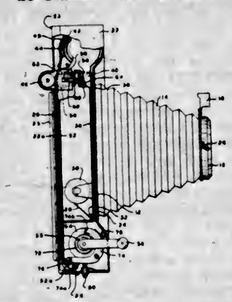
2,458,185
SEAT
Sterling B. McDonald, Grayslake, Ill., assignor to S. Karpen & Bros., Chicago, Ill., a corporation of Illinois
Application January 17, 1945, Serial No. 573,207
6 Claims. (Cl. 155—170)

1. A seat comprising a hollow base open at its forward end, supporting means slidably mounted in the base and adapted to project forward through the open end thereof, a leg rest pivoted on the supporting means, and a blocking strip pivotally carried by the leg rest and adapted to fit into the open end of the base to lie substantially flush with the outer surface of the base, said blocking strip being movable on its



pivot to a position parallel with said rest and providing an extension thereof.

2,458,186
DEVELOPING CAMERA
Rosario J. Messina, West Roxbury, and Otto E. Wolff, Cambridge, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application July 2, 1947, Serial No. 758,652
13 Claims. (Cl. 95—13)

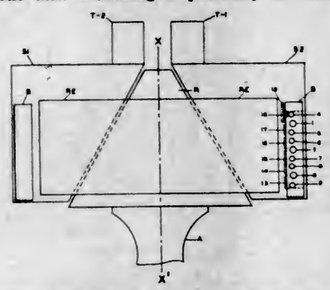


1. Apparatus for subjecting a plurality of photographically exposed areas of a light-sensitive film material to a predetermined processing comprising, in combination, means for mounting a roll of said film material, means for separately mounting a roll of a sheet material, means providing a pair of compressing members adapted to have said film material and said sheet material advanced in superposed relation and compressed therebetween, said materials having a fluid container positioned therebetween, as the same are advanced between said compressing members, and means spaced from said compressing members along the path of travel of said superposed materials for engaging said materials to pull the same between said compressing members, said members acting in cooperation with said film and said sheet material to spread the contents of said container to a predetermined area of said film.

2,458,187
VARIABLE CONDENSER WITH TRIMMER
Surrius Rector Montcalm, Boonton, N. J., assignor to Ferris Instrument Laboratories, Boonton, N. J., a corporation of New Jersey
Application January 25, 1945, Serial No. 574,533
2 Claims. (Cl. 175—41.5)

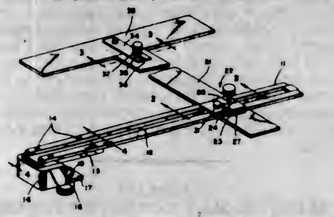
1. In an electrical variable capacitance device adapted for creating the major parts of the variable capacitive reactances in electrical circuits

designed to selectively resonate to electrical alternating currents of variable frequencies ranging as high as 250 megacycles and means associated therewith for causing the selective resonating at the desired frequencies to be effectively accomplished: the combination of two single sloping side stators and a rotor having two correspondingly sloping sides variably interposed therebetween, all of material highly conductive of electricity and so massive in all relevant directions that the inherent reactive inductance set up thereby to electrical alternating currents of frequencies even as high as the order of 250 megacycles is still low enough to permit of using some inductance externally thereof in the circuits in which connected; an otherwise nonessential extension of the body of said rotor beyond and partially overlapping of said stators in maintained massive form; and means for causing any circuit in which said variable capacitance device is located to effectively resonate at all of the great many frequencies involved at predetermined settings of said rotor irrespective of said circuit per se not being otherwise adapted for so resonating, comprising a separate base member mounted on a portion of each of said stators nonoverlapped by said extension, said base member having a flat side facing said extension and a flat base substantially at a right angle to said flat side and including a plurality of threaded



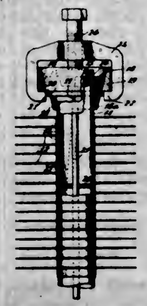
holes therein; separate holes leading from said flat side to each of said threaded holes at a material distance from said flat base in each case; separate leaf like elements extending from said base and preferably of a material highly conductive of electricity and having good electrical contact with said base, in each case in front of a one of said holes and extending from said side to a material distance therebeyond; a separate taperpointed screw member in each of said threaded holes, and a separate durable material ball in each of said side holes, in each case of diameter sufficiently greater than its hole's depth that in response to a downward movement of the tapered point of its corresponding screw member it causes its corresponding leaf-like element to alter its position with respect to its neutral position; whereby the different positions given such of said leaf-like elements as may be required will change the capacitance of said capacitance device enough in each case to cause the desired effective resonating of the circuit involved without increasing the overall inherent inductance consequently encountered in operations at frequencies of the order of 250 megacycles enough to render continued resonating at such frequencies impossible of attainment due to the overall inductances involved being raised too much for supporting resonance with the consequently raised overall capacitances involved, respectively.

2,458,188
DRAFTING INSTRUMENT
Joseph Meran, Chicago, Ill.
Application May 12, 1946, Serial No. 669,303
2 Claims. (Cl. 33—76)



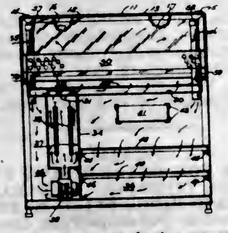
2. A drafting instrument comprising a member having a longitudinally extending central slot, means secured to said member for securing said member to a drafting table, a straight-edge, a block positioned in the slot in said member, an upper plate secured to said block and extending over the slot and said member, a bolt passing through said upper plate and threadably engaging said block, said bolt being provided with a tapped central opening, a screw threadably engaging said straight-edge and the opening in said bolt, and a lower plate positioned between said block and said straight-edge, whereby the recited elements operate to permit said straight-edge to be positioned as an angle with respect to said member, a second upper plate extending over the slot and said member, and a bolt passing through said second upper plate and threadably engaging said block, whereby said second upper plate and said bolt operate to permit said straight-edge to be positioned at any point in the slot in said member.

2,458,189
METHOD OF EXPANDING TUBING BY FREEZING LIQUID THEREIN
David E. Morgan, Philadelphia, Pa., assignor to Warren Webster & Company, Camden, N. J., a corporation of New Jersey
Application July 18, 1945, Serial No. 605,698
4 Claims. (Cl. 113—118)



1. Method for securing annular fins in positions surrounding a metal tube, which comprises confining within the tube a predetermined volume of a liquid medium partially and substantially to the same extent filling each cross-sectional portion of the tube, said medium being capable of expanding on solidifying, limiting the amount of said liquid medium by substantially filling the remainder of the space of each said cross-sectional portion within the tube by inserting a substantially non-compressible material which is not subject to a change in state at the temperature of solidification of said liquid medium, then subjecting said liquid medium to a temperature causing such solidification thereof, the volume of said liquid medium being made sufficient to cause upon such solidification permanent expansive deformation of the tube into firm contact with the surrounding fins, and the volume of said material being sufficient to so limit the volume of said medium upon solidifying that no rupture of the tube occurs.

2,458,190
POPCORN WARMING DEVICE
Samuel Newburger, Chicago, Ill.
Application December 20, 1947, Serial No. 792,949
2 Claims. (Cl. 219—19)



2. A popcorn warming device comprising a cabinet having an upper display portion composed of transparent materials and adapted to hold and display popcorn therein, a tray positioned within said cabinet adjacent said upper display portion and adapted to hold loose popcorn, said tray having perforations sufficiently large to permit the passage of air through said tray and sufficiently small to prevent the passage of popcorn through said tray, the upper display portion of said cabinet having an opening adapted to permit access to said tray, a blower shaft positioned beneath said tray, a pair of electrical strip heaters mounted within said blower shaft, a blower fan positioned beneath said blower shaft and connected thereto, said cabinet adapted to hold in its lower portion beneath said tray filled boxes of popcorn, duct means extending from the upper part of the upper portion into the lower portion of said cabinet for the circulation of air therebetween, said blower fan adapted to blow air through said blower shaft past said heaters, where said air is heated, and to blow the heated air beneath said tray, through said tray and the popcorn on said tray, then from the upper portion of said cabinet through said duct means into the lower portion of said cabinet past the filled boxes of popcorn through said blower fan to complete the cycle, and means for connecting said blower fan and heaters to a suitable source of electrical supply.

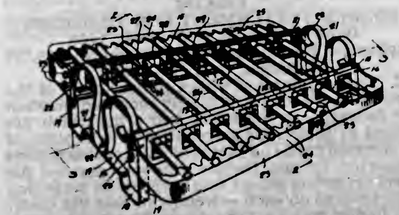
2,458,191
RESINOUS COMPOSITIONS OF STARCH ETHERS WITH OTHER RESINS
Peter L. Nichols, Jr., and Lee T. Smith, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application January 26, 1945, Serial No. 574,668
4 Claims. (Cl. 260—17.4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process of improving the physical properties of a resin of the group consisting of lower alkyl acrylate and lower alkyl methacrylate polymers, polystyrene, and polyvinyl acetate; comprising mixing the resin with an allyl starch ether having about 1.4 to 2.4 ether groups per glucose unit.

2,458,192
AUTOMATIC SIGNAL DEVICE FOR AUTOMOBILES
William R. Niles, Herington, Kans.
Substituted for abandoned application Serial No. 265,040, March 30, 1939. This application March 11, 1947, Serial No. 733,975
1 Claim. (Cl. 200—86)

In a signal device for preventing of surreptitious removal of an automobile, comprising the combination of a support for an automobile, an opening in said support adapted to receive a portion of one of the tires of the automobile ground wheels, a trip plate forming a closure for said opening and hinged at one end to said support to be rocked downward out of said opening by the pressure of a tire on the top face of the plate, a switch carried by the support, a lever carried by the free end of the trip plate and connected to the switch for closing the switch when the plate is swung upward to close the opening after removal of the tire from the opening, a U-shaped spring secured at the transverse member thereof to the support at that end of the plate which is hinged, the legs of the spring extending along the underneath face of the plate, a transversely disposed bar of wedge shape in cross section engaged between the legs of the spring and the underneath face of the plate, the ends of the bar projecting beyond the plate and engaging the support to limit upward swinging movement of the plate under pressure of said spring, said spring normally holding the trip plate in position to seal the opening and normally holding said switch in circuit closing position, and a pair of angular stop lugs carried by the underneath face of the support disposed to overlap the underneath face of the trip plate at the free end of the plate to limit downward movement of the trip plate when the tire forces the trip plate downward.

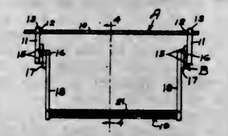
2,458,193
XYLOPHONE
Joseph A. Packheiser, Chicago, Ill.
Application August 11, 1945, Serial No. 610,239
1 Claim. (Cl. 84—403)



A musical instrument comprising oppositely disposed supporting members spaced substan-

tially from each other and having struck-out portions providing spaced openings extending in the direction of the length of said members with the openings of one of said members in alignment with the openings of the other of the members, said struck-out portions extending substantially at right angles with respect to the vertical sides of said members and in parallel relation with respect to each other to provide pairs of spaced supporting flanges, musical bars extending transversely between said supporting members through said openings, suspension cords for said bars, said suspension cords being arranged in pairs with respect to each supporting member and having portions providing loops substantially in alignment with and located centrally with respect to said openings, the end portions of said bars extending through said loops, the portions of said cords between said loops extending through perforations formed in said flanges and disposed parallel with respect to each other, and means for connecting said supporting members in said spaced relation with respect to each other.

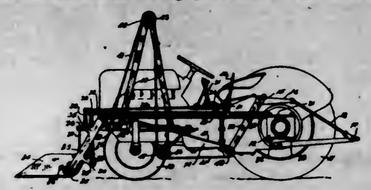
2,458,194
SLIDING SHOE RACK
Carl M. Panosh, Berwyn, Ill.
Application July 2, 1945, Serial No. 602,850
1 Claim. (Cl. 211—114)



In combination with a bed spring, a pair of spaced hanger sections, separate means parallel to and detachably securing said hanger sections, respectively, to and beneath said bed spring parallel to each other and perpendicular to the plane of the bed spring, channeled guide means on said hanger sections having guideways substantially parallel to the plane of the bed spring, runners slidably mounted in said guideways and a rack frame between said sections and suspended from said runners whereby said rack frame may be moved from a forward position near the edge of said bed spring to a rearward position at a substantial distance away from the edge of said bed spring, said rack frame consisting of side members attached to and depending from said runners and a rail-like bottom inclined upwardly relative to the guideways and secured to said side members, said bottom being adapted to support various articles.

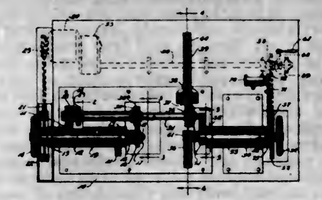
2,458,195
LOADER ATTACHMENT FOR TRACTORS
Daniel S. Pearse, Wild Horse, Colo.
Application November 20, 1945, Serial No. 629,790
2 Claims. (Cl. 214—140)

1. The combination with a power shovel of the type having a shovel pivotally mounted between the forward extremities of two arms which are hinged at their rear extremities to a vehicle, of an elevated frame on said vehicle; elevated pulleys supported by said frame; a power-operated lift shaft extending across said vehicle; an actuating lever secured on each extremity of said lift shaft; a swinging pulley on the extremity of each lever; an idler pulley at each side of said vehicle; and a pair of flexible cables each being secured at its outer extremity to one of said arms and extending to a fixed connection with said vehicle at its inner extremity, each cable extending over one of said elevated pulleys, round one of said idler pulleys, and round one of said swinging pulleys intermediate its extremities, said idler pulleys and said fixed connections being positioned to place the



reaches of the cables extending to the swinging pulleys in planes substantially tangent to the arc of movement of said swinging pulleys so that the outer extremities of said cables will move substantially twice the distance covered by the swinging movement of said actuating levers.

2,458,196
APPARATUS FOR DETERMINING THE CUTTING AND CHIPPING RESISTANCE OF PLASTIC AND RUBBERLIKE MATERIALS
Warren E. Phillips, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application August 30, 1945, Serial No. 613,676
8 Claims. (Cl. 73—12)



1. Testing apparatus comprising, in combination, means for rotatably mounting a disc-like sample member of the material to be tested, a rotatable toothed gear-like member mounted for peripheral contact with said sample member, and means for intermittently interrupting the contact between the two rotating members and causing one of said members to strike the other member with impact.

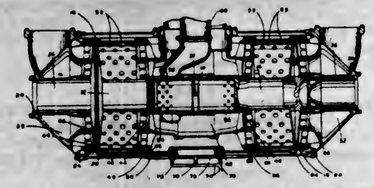
2,458,197
BILGE PUMP
Albert R. Pierce, Jr., South Dartmouth, Mass.
Application October 18, 1945, Serial No. 623,141
5 Claims. (Cl. 103—59)

1. A portable bilge pump comprising a tubular body of uniform diameter from its lower end upwardly throughout its length to its head, said lower end being adapted to be placed in the bilge of a boat, a piston reciprocably guided in said body having a valve therein, a casing at the upper end of the body having a rotatably mounted shaft at right angles to the axis of the body, a wind actuated propeller for rotating said shaft, an eccentric rotatable with said shaft, a head guided in said casing and reciprocated by said eccentric, and a rod connecting said head

to said piston, a discharge opening from said body, a long spring surrounding and loading the rod and parts moving therewith to counterbalance

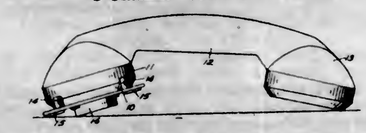
the same in an amount to include the weight of the column of water in the body up to said discharge opening.

2,458,198
CONTROL FOR SPILL PORTS FOR FREE-PISTON UNITS
David M. Poole, Summit, N. J., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application April 15, 1944, Serial No. 531,308
8 Claims. (Cl. 230—56)



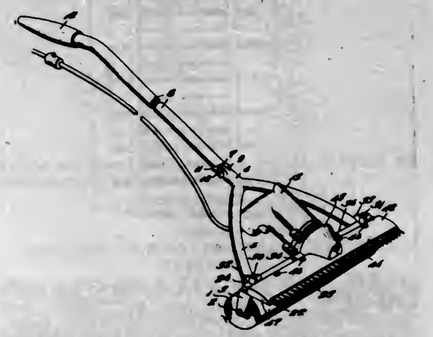
1. A free-piston unit including a compressor cylinder and a piston therein, said cylinder having a cylindrical wall with at least one row of circumferentially arranged ports extending therethrough, and a band surrounding, engageable with, and movable on the outer surface of said cylindrical wall to close or open said ports.

2,458,199
TELEPHONE TRANSMITTER SUPPORT AND SILENCER
Albert C. Reinhold, Marietta, Pa.
Application April 15, 1947, Serial No. 741,614
5 Claims. (Cl. 179—180)



3. A silencer holder for telephone instruments having a receiver at one end and a transmitter mouthpiece at the other end, comprising a disc valve to rest upon a horizontal surface and be fitted against said mouthpiece to shut off ambient sound, means adapted to tilt said valve under the weight of said mouthpiece to seal said mouthpiece, and means coacting with said tilting means to form a stable support for said valve in tilted position while said receiver rests upon the same horizontal surface.

2,458,200
ELECTRIC LAWN MOWER AND HEDGE CLIPPER
Lester C. Renfroe and Charles C. Renfroe, Jacksonville, Fla.
Application May 3, 1946, Serial No. 666,892
2 Claims. (Cl. 56—26.5)

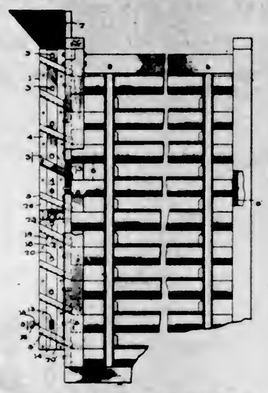


1. A combined electrically operated power lawn mower and hedge clipper including a handle having a forked inner end formed with depending arms and integral inwardly directed supporting surfaces, positioning bolts extending upwardly from said supporting surfaces, a roller support mounted between said depending arms, a transversely extending base having notches formed in its rear edge adjacent its opposite ends engageable with said bolts for securing said base upon said supporting surfaces, upwardly extending guide lugs on said base adjacent its opposite ends, upper and lower cutter blades formed with elongated guide slots adjacent their opposite ends disposed over said guide lugs supported for reciprocable movement upon said base, a longitudinally extending bearing strip disposed in contact with the lower surface of each of said cutter blades, upwardly extending spaced yoke arms on the rear edges of said cutter blades with the yoke arms on said upper blade being disposed forwardly of the yoke arms on said lower blade, an integrally formed attaching collar on said base, an electric motor detachably supported by said attaching collar, and double acting opposed cams supported and driven by said motor for actuating said upwardly extending spaced yoke arms on said cutter blades for driving the same.

2,458,201
FEEDING MECHANISM FOR SEED SEPARATORS
William A. Rice, Jerseyville, Ill.
Application January 7, 1946, Serial No. 639,618
4 Claims. (Cl. 209—73)

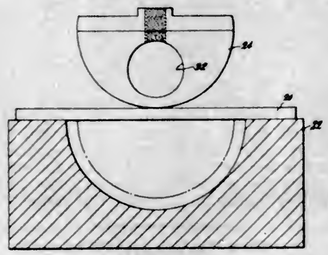
2. A feed device for a seed separating machine of the type that includes a vertical series of substantially horizontal disposed seed separating devices, said feed device comprising an upright chute arranged to be positioned at one end of the ma-

chine and adapted to pass seed therethrough, a plurality of ports in one upright wall of said chute for permitting the escape of seed therethrough, said ports being positioned in a series longitudinally of said wall, a plurality of spouts associated with said ports to receive the seed passed by said ports and to direct said seed onto said seed separating devices, respectively, an operable toothed wheel rotatably mounted in the lower end



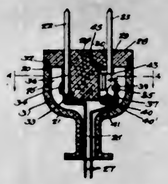
of said chute on an axis transverse of the chute adjacent to the bottom port for feeding seed through the bottom port into the bottom spout, the passageway of said chute being otherwise free from restrictions or obstructions, whereby overlying seed in said chute are forcibly fed through the bottom port and caused to move downwardly in the chute and further caused to feed through the upper ports as result of said downward movement.

2,458,202
APPARATUS FOR FORMING COMPOSITE BEARINGS
John M. Robertson, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 16, 1944, Serial No. 540,559
1 Claim. (Cl. 153—48)



Apparatus for circle forming strip stock comprising in combination; a die member having a semi-cylindrical cavity therein, a punch of a shape complementary to said cavity but of less diameter whereby clearance is obtained between the punch and the die substantially equal to the thickness of the strip to be circle formed, said punch being formed from a single piece of steel and having a continuous working face and including a lateral aperture drilled therethrough and having the axis thereof in exact parallelism to the surface of the punch whereby a relatively thin portion of metal extends between the aperture and the surface of the punch which portion is compressible upon pressure applied thereto.

2,458,203
FUSED PLUG CONNECTOR
Henry C. Rohrman, Philadelphia, Pa., assignor of one-half to Frank P. Murphy, Philadelphia, Pa.
Application July 20, 1946, Serial No. 685,232
2 Claims. (Cl. 200—115.5)



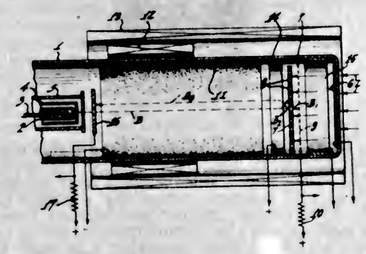
1. In an electrical plug connector, a plug front of insulating material, a pair of plug contacts mounted in parallel spaced relation on and extending through and beyond the front, a first terminal on the rear of one of the contacts, a first fuse socket on the rear of the other contact, an extension of insulating material rearward from the plug front having a side recess which includes and extends behind said first fuse socket and forms with the extension a rib of insulating material at the back of the recess, a second terminal having a reverse bend U portion extending on both sides of and secured to the rib and a second fuse socket in line with and properly spaced from the first fuse socket to receive a fuse and mounted on the second terminal in the recess.

2,458,204
MOVABLE MULTIPLE MAGAZINE UNIT FOR TYPESETTING MACHINES
Charles J. Romyns, Lynbrook, N. Y.
Application March 14, 1947, Serial No. 734,696
2 Claims. (Cl. 199—45)

1. In a typographical machine, the combination of a base support, an arm extending upwardly therefrom, a bearing portion on said arm having a bearing surface lying in a plane at an angle to the vertical axis of said arm, a bearing opening in said bearing portion normal to said bearing surface, a shaft journalled in said opening and having one end extending beyond said bearing

portion, a hand crank fixed on said extending portion of said shaft, a first and second disc on said shaft, a spacing member on said shaft and between said discs for spacing the same, a journal adjacent said second disc for supporting an end of said shaft, means extending axially of said shaft securing said discs against said spacing member, thrust bearings between said first disc and the bearing surface of said bearing portion, locking means between said bearing arm and said first disc for indexing and locking the same in selected positions, a plurality of circumferentially-spaced radially extending slots in said discs, corresponding slots of said discs being in alignment with each other, and a type magazine removably mounted in each pair of corresponding slots of said discs whereby each magazine extends substantially parallel to said shaft.

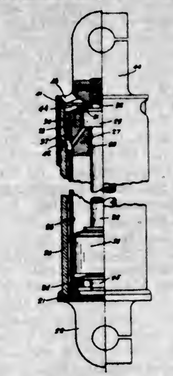
2,458,205
TELEVISION PICKUP TUBE
Albert Rose, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 27, 1946, Serial No. 699,702
2 Claims. (Cl. 250—164)



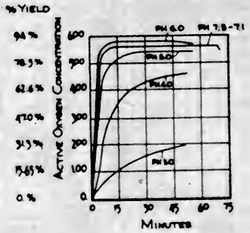
1. A television cathode ray beam pick-up tube comprising a gun, a perforated target of semiconducting material, a signal screen electrode adjacent one side of said target, a photocathode, an anode for producing a charge image on the side of the target adjacent the screen from photoelectrons emitted by said photocathode, field producing means for scanning a cathode ray beam over the other side of the target with part of the beam electrons passing through the perforations to the screen electrode and part landing on the front elemental areas of the target in sufficient quantity to discharge the image charge on the opposite elemental areas by passage through the target within a frame time.

2,458,206
SHOCK ABSORBER
Edwin F. Rossman, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 2, 1946, Serial No. 666,716
1 Claim. (Cl. 188—88)

A hydraulic shock absorber comprising an outer shell provided with a head member through which a piston rod slidably extends; a plate secured to the outer end of said piston rod, said plate having openings adjacent its outer edge and a skirted member which envelopes the said shell for a portion of its length, the adjacent surfaces of the head member and the plate sloping relatively so as to be in closer proximity in the area surrounding the piston rod than at the openings in said plate; and ribs in the head member, said ribs facilitating securing the head member to the shell and forming means to break up mud accumulating under the plate.

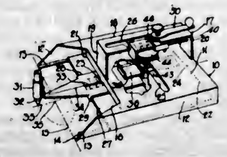


2,458,207
METHOD OF MANUFACTURING ACETYL PEROXIDE
Hans A. Rudolph, Buffalo, and Robert L. McEwen, Williamsville, N. Y., assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y.
Application October 12, 1944, Serial No. 558,448
4 Claims. (Cl. 260—610)



1. The method of preparing acetyl peroxide which comprises blending acetic anhydride and hydrogen peroxide with a liquid ester of phthalic acid and thereafter adding thereto under cooling and in successive increments sufficient of an alkali to maintain the end pH in the range 4.0 to 8.0.

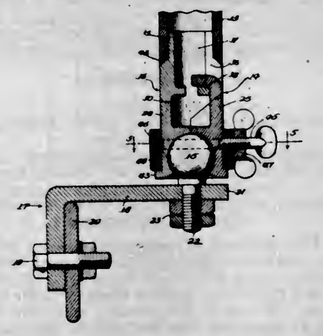
2,458,208
SCRIBING INSTRUMENT
John Ruger, Freeport, N. Y.
Application December 2, 1944, Serial No. 566,314
2 Claims. (Cl. 33—31)



1. An instrument of the class described comprising a frame having spaced upper and lower

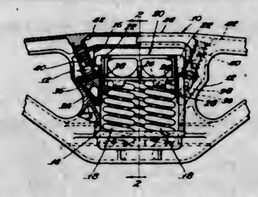
walls, each wall having an elongated aperture, the aperture of one wall being arranged at right angles to the aperture of the other wall, said apertures crossing each other centrally with respect to the length of said apertures, an actuating mechanism comprising a pair of arms, a bushing having a fixed position on one arm and movable in the aperture of the lower wall and adjustable longitudinally of the second arm, means axially of said bushing for adjustably and fixedly coupling the same with the second arm, a second bushing movable in the aperture of the upper wall and adjustable longitudinally of the first arm, means clamping the second bushing on the first arm, a curve generator member on the second arm spaced with respect to said first bushing and movable in a path determined by relative adjustment of said bushings on said arms, manually rotatable means for operating said mechanism to move said member through a complete predetermined path in each revolution thereof, a projector mechanism comprising relatively sliding plates, one plate being slidably mounted in the frame, the other plate being arranged directly upon and slidably engaging the first plate, said member being directly pivoted to the second named plate, and means on the second named plate in wide spaced relationship to the first named plate for supporting a scribing instrument.

2,458,209
COUPLING
Felix C. Sawataki, Coloma, Mich., assignor to Sporting Specialties Company, Coloma, Mich., a corporation of Michigan
Application March 11, 1946, Serial No. 653,614
7 Claims. (Cl. 280—33.17)



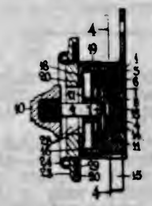
4. A coupling comprising a ball element, a pair of cooperating socket-forming members including a cylindrical mounting member, and a holding member shiftable on the mounting member, between ball-retaining and ball-releasing positions, said mounting member having a central cavity opening at one end thereof and a lateral slot opening through the wall of the mounting member upon said cavity, said slot having an open end at the said end of the said mounting member, said mounting member having a semi-cylindrical socket-forming portion, at its other end, said portion having a flat face extending in a plane substantially diametrally of said cylindrical mounting member, said flat face having a hemispherical cavity therein, said holding member having a semi-cylindrical socket-forming portion providing a flat face formed with a hemispherical cavity, and an integral finger adapted to extend in the lateral slot of said mounting member, said finger having an enlarged head for reception in said central cavity of said mounting member whereby to rockingly mount said holding member thereon, with said finger in said slot, means to mount said cylindrical mounting member on a support in position blocking removal of said finger from said mounting member through the open end of the slot, and latch means comprising a sleeve member sized to embrace said semi-cylindrical socket-forming portions to hold them in ball-retaining position, with the flat faces thereof in facing engagement, said sleeve member being retractable on said members to permit ball-releasing movement thereof.

2,458,210
SNUBBED TRUCK
Walter L. Schlegel, Jr., Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application September 4, 1947, Serial No. 772,152
11 Claims. (Cl. 105—197)



5. A railway car truck comprising a side frame including spaced columns, a bolster spring-supported from said frame between said columns, each of said columns comprising a wedge face fixed with respect thereto and sloping toward said opening and also sloping transversely of said frame, a friction shoe associated with each column in frictional engagement with the wedge face thereof and with a surface thereof extending longitudinally of the frame, and spring means compressed between said shoe and a portion of said frame for urging the same along the associated wedge face and column surface against said bolster.

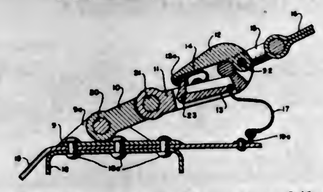
2,458,211
VALVE
Anthony C. Scinta, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application May 25, 1944, Serial No. 537,271
15 Claims. (Cl. 251—125)



1. A valve comprising a body having a seat formed with spaced ports and a valving member engaged with the seat in a manner normally to close both ports, said valving member being rockable on the seat about spaced fulcrumed points each adjacent a respective port whereby to lift the valving member from the remote port to

open the latter, each port closing portion of the valving member operating to maintain its associated port closed when the remote port is opened, and means selectively operable to so rock the valving member for opening the selected one of the ports.

2,458,212
PARACHUTE DEPLOYING MEANS
Prevost F. Smith, San Diego, Calif.
Application December 28, 1945, Serial No. 637,516
4 Claims. (Cl. 244—139)



2. In a parachute deploying means of the class described, the combination of an airplane, a pilot parachute, a first and second cord in connection with said pilot parachute, a cord link in connection with said first cord, and a main parachute in connection with said second cord, pivoted hook means in connection with said airplane engageable with said cord link, a latch member in connection with said pivoted hook means arranged to hold the same in engagement with said cord link and a latch cord interconnecting said latch member and the structure of said airplane for releasing said hook members when forced into a widening diverged relation whereby said latch cord trips said latch member and releases said hook member disengaging the same from said cord link, whereby the pilot parachute is released from the structure of the airplane and exerts tension on said second cord in connection with the main parachute for deploying the same upwardly and rearwardly of the airplane, and a second link interconnecting said pivoted hook means and the structure of said airplane.

2,458,213
CONTROL GRID FOR GAS TUBES
Charles P. Smith, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application December 14, 1946, Serial No. 716,202
7 Claims. (Cl. 250—27.5)

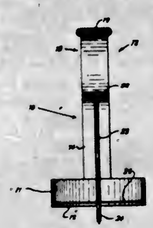
1. An electron discharge device comprising a sealed envelope, a gaseous medium within said

envelope, an anode electrode mounted within said envelope, a cathode electrode spaced within said envelope from said anode electrode, and an apertured control electrode mounted between said anode and cathode electrodes for the passage of a discharge between said anode and cathode electrodes, a sheet metal element fixed to the control electrode for radiating heat therefrom, and finely divided metal particles sintered to said metal element to increase the heat radiating surface thereof.

2,458,214
HYDROGENATION OF NITRO COMPOUNDS
Mott Souders, Jr., Piedmont, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application June 26, 1944, Serial No. 542,248
16 Claims. (Cl. 260—580)

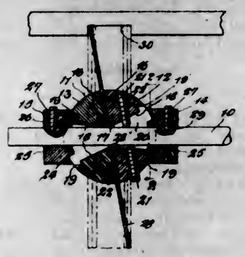
1. A process for the continuous production and recovery of xylidines by the liquid phase catalytic hydrogenation of nitro xylenes which comprises disposing a finely divided nickel catalyst in a reaction zone, continuously introducing nitro xylenes in the liquid state into said zone, maintaining the liquid phase in said zone at a temperature of between about 190° C. and about 200° C., continuously introducing water into said reaction zone in an amount equal to between about 6.5 and about 12 moles of water per mole of the nitro xylene feed, continuously passing hydrogen through the liquid phase at a rate sufficient to maintain in the reaction zone a pressure of about 100 pounds per square inch gage, said rate of hydrogen introduction being sufficient to cause hydrogenation of the nitro xylenes, to maintain the catalyst in suspension in the liquid phase, and to remove in vapor form from the reaction zone substantially all of the formed xylidines and substantially all of the water introduced and produced during the hydrogenation reaction, withdrawing said vapor phase from the sphere of reaction, separately recovering the xylidines and water therefrom and recycling excess hydrogen, together with added hydrogen, through said reaction zone.

2,458,215
TOMATO CORER
Tomme B. Sparks, Denver, Colo.
Application December 7, 1944, Serial No. 566,972
8 Claims. (Cl. 30—302)



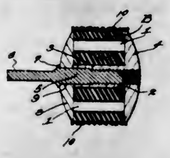
1. A device as described comprising a cylindrical cutter, means for limiting the down movement thereof through a vegetable, a handle to which the cylinder is attached, a support for said means carried by said handle, a transverse cutter carried by said cylinder, consisting of a fine wire, said means, which consists of a pin centrally of the cylindrical cutter serving also as a centering device for said cutter.

2,458,216
ADJUSTING AND HOLDING MEANS FOR ROTARY DISK TOOLS AND THE LIKE
Alvin E. Spindt, Hammond, Ind.
Application May 16, 1945, Serial No. 594,093
1 Claim. (Cl. 144—238)



Means for holding and adjusting a rotary disk tool at an angle with respect to a rotary mounting shaft extended axially therethrough, said means comprising a pair of semi-spherical members each having a planiform flat face adapted to engage respective sides of the disk tool, each semi-spherical member having an interior passage including a bore at said flat face of a diamter to receive said shaft, opposite portions of said passage tapering in an outward direction, the remaining portions of said passage being the same as said bore, the tapered portions of said passage being relieved to form shoulders inwardly of the spherical surface and to form an elongated slot on said spherical surface, holding collars removably securable on the shaft, each collar having a semi-spherical recess complemental to the spherican surface of said semi-spherical members, said collars having lug members disposed within respective elongated slots for holding said semi-spherical members against rotation with respect to the shaft, and set screws threadedly engaged in one of said semi-spherical members extended transversely across the tapered portions of said passage to contact said shaft at diametrically opposite sides and adjustable to move said semi-spherical members and said disk tool at an angle to the shaft.

2,458,217
DRUM SANDER
Francis H. Staggs, Wichita, Kans.
Application April 12, 1946, Serial No. 661,789
3 Claims. (Cl. 51—190)



1. A drum sander comprising an elastic cylindrical body having an axial bore therethrough, end plates, one of said end plates having an axial tubular stem extending through the bore of the body, the second plate having an axial opening, a mandrel extending through the opening of the second plate and extending through and threadably secured in the bore of the stem, said mandrel having a flange for contact with the outer face of the second end plate, and a continuous sander band snugly fitted around the body.

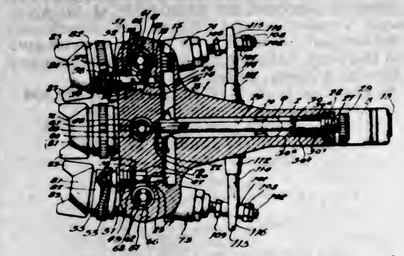
2,458,218
FILAMENT ASSEMBLY STRUCTURE
Joseph W. Skehan, Stamford, Conn., assignor to Machlett Laboratories Incorporated, Springdale, Conn., a corporation of Connecticut
Application February 11, 1947, Serial No. 727,813
11 Claims. (Cl. 250—27.5)

1. A filament structure which comprises a plurality of stationary filament supports disposed in a closed series, a plurality of filaments attached rigidly at one end to the respective supports, the filaments lying side by side and extending in the same general direction, an element, to which the other ends of the filaments are connected, a rod lying within the group of filaments and engaging the element, spring means remote from the filaments pressing on the rod and tending to move the rod and element to apply tension to the filaments, a guide for the rod fixed in position remote from the filaments and beyond the rigidly attached ends thereof, a member fixed in position between the guide and the filaments and having an opening, through which the rod extends, and means connecting the rod and member near the opening, the portion of the member around the opening being unyielding in a direction transverse to the rod and flexible in a direction lengthwise of the rod.

2,458,219
WHEEL LEVER
John G. Staus, El Paso, Tex.
Application March 6, 1946, Serial No. 652,304
7 Claims. (Cl. 254—38)

4. A wheel lever comprising a bar threaded for a portion of its length and having a circumferentially extending abutment shoulder at the front end of its threaded portion, a nut screwed upon said bar and abutting said shoulder, a tube fitting about the threaded portion of said bar with its front end bearing against said nut, a sleeve about said bar engaging the rear end of said tube, a nut screwed upon said bar and engaging the rear end of said sleeve and applying pressure to the tube to control turning movement of the tube about the bar, a bracket having a shank rigidly carried by said tube and an arcuate bill extending from its shank from the tube radially thereof, flanges extending along side edges of the shank and bill, a web midway the width of said bracket cooperating with the flanges to form seats for an axle head at opposite sides of the web, and a reinforcing web between said bill and the front end of the tube.

2,458,220
MULTIPLE SPRAY GUN
Harold L. Striegel, Eric Gustafsson, and John W. Baur, Chicago, Ill., assignors to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application May 7, 1945, Serial No. 592,450
4 Claims. (Cl. 91—45)



1. A multiple spray gun of the character disclosed, comprising, in combination, a body having a hand grip, a trigger movably supported on the body adjacent the hand grip, air passages in the body extending to the forward end thereof, an air valve within the body for controlling the entire flow of air through said air passages, a plurality of spray gun units supported pendently from the forward end of the body, each spray gun unit including a nozzle and having a continuous air flow connection with the air passages in the body, means to conduct material to each spray gun unit, a normally closed needle valve for controlling flow of material from each unit, each unit being movable freely by hand about an axis which is substantially vertical when the spray gun is held in normal horizontal position, and means adjustably coupling the trigger to the needle valves so that the trigger when moved may cause flow of material from the nozzles after flow of air is started and may initiate flow from any one of the nozzles before or after or simultaneously with flow from any other nozzle and irrespective of the positions of the units.

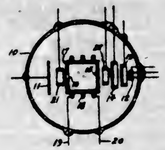
2,458,221
METHOD OF REDUCING ODOR AND SURFACE TACK OF NEOPRENE OBJECTS
Edward C. Svendsen and William J. Clayton, Mishawaka, Ind., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application October 5, 1944, Serial No. 557,380
5 Claims. (Cl. 260—92.7)

1. The method of treating polychloroprene sponge rubber containing zinc oxide to reduce its odor and surface tack, which consists in washing the sponge rubber in an aqueous solution of inorganic chloride that will react with zinc oxide and having a strength of from 1 to 2 percent and selected from the group consisting of ammonium chloride, zinc chloride, ferric chloride, barium chloride, magnesium chloride and calcium chloride, removing the excess solution and drying at elevated temperature.

2,458,222
MANUFACTURE OF ARTIFICIAL AQUEOUS DISPERSIONS OF NATURAL AND SYNTHETIC RUBBERS, RUBBER SUBSTITUTES, AND RUBBERLIKE SUBSTANCES
Naum Talalay, Bedford, England
No Drawing. Application December 29, 1944, Serial No. 570,463. In Great Britain April 20, 1944
5 Claims. (Cl. 260—29.7)

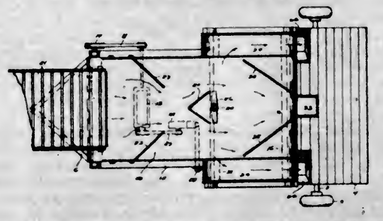
1. In the manufacture of artificial aqueous dispersions of a plasticizable material within the group consisting of natural rubber; rubbery copolymers of butadiene and styrene; rubbery copolymers of iso-butylene and a conjugated diolefin; polychloroprene; olefin polysulphides; factice; and the foregoing materials respectively in vulcanized condition; and reclaims of the respective foregoing materials; the process which comprises masticating such a material in plasticized-solid state in the presence of a small amount of a soap-forming acid saponified in part by an amine base and in part by an inorganic alkali metal compound, and adding sufficient water to produce a dispersion.

2,458,223
ELECTRONIC TUBE
Albert G. Thomas, Lynchburg, Va.
Original application July 3, 1939, Serial No. 282,733. Divided and this application May 15, 1943, Serial No. 487,175
7 Claims. (Cl. 250—27.5)



1. An electron discharge tube comprising, a cathode, an anode, a hollow element intermediate said cathode and anode and having opposed openings therein facing respectively said cathode and said anode, and means within said tube and adjacent said hollow element for heating said hollow element.

2,458,224
MACHINE FOR PNEUMATICALLY SEPARATING POTATOES FROM ROCKS
Albion J. Thompson, Washburn, Maine, assignor of fifty per cent to Abram Crouse, Crouseville, Maine
Application October 11, 1945, Serial No. 621,773
2 Claims. (Cl. 209—470)



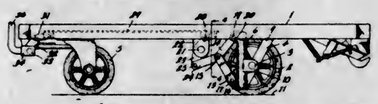
1. A separator for relatively light and heavy objects and comprising an endless moving belt adapted to receive the objects, baffles supported above the belt to guide the objects toward the

center of the belt, a double-ended nozzle supported above the belt and having its discharge openings directed toward opposite sides of the belt, fluid pressure means connected to the nozzle, a baffle in advance of the nozzle and constructed to guide the objects in the path of said discharge openings whereby the light objects will be moved laterally toward opposite sides of the belt without causing lateral movement of the heavy objects, conveyor belts at the sides of said first-named belt arranged for receiving the light objects, hoppers at the delivery ends of said last-named belts, and a chute at the delivery end of the first-named belt.

2,458,225
ELECTRIC HEATING UNIT
David M. Trilling, Merion, and George H. Rich, Philadelphia, Pa., assignors to Trilling and Montague, Philadelphia, Pa., a partnership composed of David M. Trilling and Harry Montague
Application February 8, 1946, Serial No. 646,310
4 Claims. (Cl. 201—63)

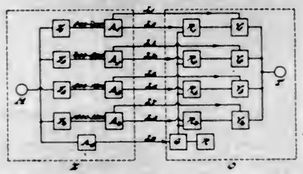
1. An electric resistor unit comprising a hollow cylindrical core having a pair of parallel helical grooves on its exterior, the cylindrical wall of said core having a transverse passage extending therethrough in common registry with said pair of grooves adjacent one end thereof, an anchoring element having an enlarged head disposed internally of said core and a shank extending outwardly through said passage, said shank having an intermediate constriction therein immediately adjoining the external surface of said core, and a coiled resistance wire doubled upon itself to provide a pair of parallel branches, said branches being respectively disposed within said pair of grooves with the portion of said coiled wire intermediate the coiled branches thereof looped about the constricted portion of said anchoring element, whereby said looped portion is anchored to said element simultaneously as it locks said element to the core.

2,458,226
TRUCK ANCHOR
Emery G. Ulrich, Toledo, Ohio
Application September 27, 1945, Serial No. 618,965
14 Claims. (Cl. 188—5)



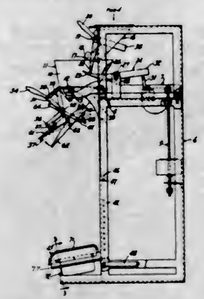
1. The combination with a truck body, carrying wheels and axle, of axle hangers provided with vertical bore-like ways having vertical slots in the lower ends thereof, said ways terminating adjacent the surface on which the carrying wheels are supported, anchor members slidable in said ways to be projected therefrom and provided with ears projecting through said slots and acting to prevent rotative movement of the anchor members in the ways, an actuating toggle for each anchor member, said actuating toggles comprising pivotally connected links, one toggle link being pivotally connected at its upper end to the associated hanger and the other to the ear on the anchor member, an actuating rockshaft common to both toggles and provided with arms, links connecting said arms to the connecting pivots of said toggle links, means for actuating said rockshaft, and means for locking the toggles in actuated position.

2,458,227
DEVICE FOR ARTIFICIALLY GENERATING SPEECH SOUNDS BY ELECTRICAL MEANS
Roelof Vermeulen and Willem Six, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 18, 1946, Serial No. 662,960
In the Netherlands June 20, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires January 17, 1964
8 Claims. (Cl. 179—1)



1. In an electrical system for producing artificial speech sounds, a source of harmonically-related sound frequency oscillations having a fundamental frequency, means to control the fundamental frequency of said source in accordance with the fundamental frequency of a desired speech sound, means to select from said source a plurality of oscillations whose respective frequencies correspond to the formants of the desired speech sound, and means to combine said selected oscillations in an amplitude ratio corresponding to the amplitude ratio of the formants of the desired speech sound.

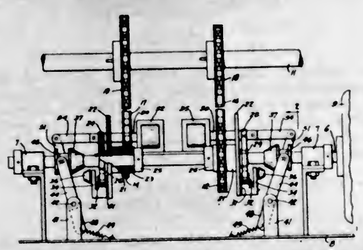
2,458,228
WEIGHING DEVICE WITH BAG FILLING AND BAG VIBRATING MEANS
Edric W. Vredenburg, Berkeley, Calif.
Application September 1, 1944, Serial No. 552,279
3 Claims. (Cl. 226—55)



1. In a machine for filling bags and similar receptacles, a supporting frame, spaced balance

bearings on said frame, a scale beam resting on said balance bearings, a feeding hopper supported at one end of said scale beam and having an outlet, a frame suspended from said hopper, means for securing a bag to said outlet, means carried by said last mentioned frame for supporting engagement with the bottom of a bag secured to said outlet, and vibrating means supported on said bag bottom support means for vibrating said bag bottom support means, said last mentioned frame, scale beam and said hopper simultaneously to facilitate discharge of material from said hopper into a bag and to pack the material in a bag supported between said hopper and said bag bottom support means.

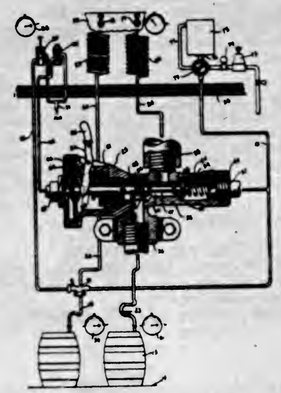
2,458,229
VARIABLE-SPEED DRIVE
Edric W. Vredenburg, Berkeley, Calif.
Application April 7, 1945, Serial No. 587,185
7 Claims. (Cl. 74—368)



1. In combination, a first shaft, a second shaft, a first drive means for driving one of said shafts from the other at a first speed, a second drive means for driving said one of said shafts from said other at a second speed less than said first speed, a first clutch associated with said first drive means and normally engaged to drive said one shaft at said first speed, an over-running clutch associated with said second drive means and effective when engaged to drive said one shaft at said second speed, said over-running clutch being ineffective to drive said one shaft at such second speed, while said first drive is effective to drive said one shaft at said one speed and cause over-running of said over-running clutch, and means for disengaging said first clutch whereby said over-running clutch ceases to over-run and said over-running clutch is rendered effective to drive said one shaft at said second speed.

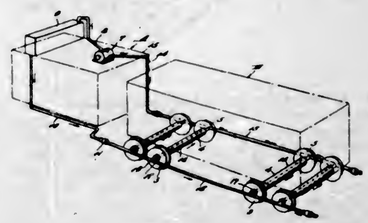
2,458,230
CLEANING MEANS FOR BEER DISPENSERS
Frederick J. Warcup, Nyack, N. Y.
Application September 8, 1945, Serial No. 615,207
4 Claims. (Cl. 225—12)

1. A beer distributing system including a valve casing, a conduit connecting the valve casing with a beer line leading to a tap, another conduit connecting the valve casing with a keg, a third conduit through which the valve casing communicates with a water supply line, two interconnected valve means in the casing, one of which is operable to put the beer line into communication with the keg, and the other of which is operable to put the beer line into communication with the water supply line, a lever that rocks about a fulcrum on the valve casing, and an operative connection between the lever and the valve means for shifting the valve means into position to put the water supply line conduit in communication with the conduit that connects the valve casing



with the keg while still leaving the valve means in a position to supply water from the water supply line to the beer line.

2,458,231
COOLING SYSTEM FOR CAR WHEEL AXLES
Wesley D. Weeks, Phillips, Tex.
Application August 30, 1944, Serial No. 551,970
5 Claims. (Cl. 308—77)



1. A cooling system for railway rolling stock comprising a pair of wheels, a tubular axle connecting said wheels and having end portions projecting beyond each of the wheels, a coolant conveyor pipe extending through said axle and therebeyond, and means whereby a cooling medium is gravity fed to and passed through said pipe from one end and pumped therefrom from the opposite end, said means embodying packing boxes on the ends of said pipe and swivel pipe connections extending from said boxes, a coolant feed pipe line communicating with the connection on one end of the pipe, a coolant withdrawal pipe line communicating with the other swivel connection, a pump with which the last line is connected, a radiator with which both lines are connected, said radiator being mounted for use on a plane above said feed line and providing said gravity feed.

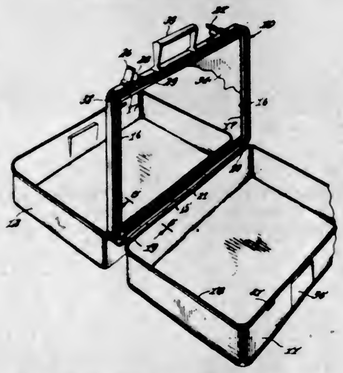
2,458,232
SOLDERING FLUX
Albert L. Wells, Atlanta, Ga.
No Drawing. Application June 17, 1948, Serial No. 33,661
2 Claims. (Cl. 148—23)

1. A flux composition consisting essentially of the following components in substantially the proportions stated:

Zinc chloride	pounds	2
Ammonium chloride	do	1
Stannic chloride	do	½
Cadmium chloride	do	¼
Lead chloride	ounce	¾
Methyl salicylate	do	1

Water sufficient to make one gallon of solution.

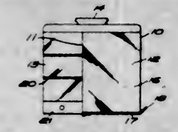
2,458,233
METAL SUITCASE
Robert B. Wemyss, Louisville, Ky., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware
Application January 29, 1947, Serial No. 725,136
2 Claims. (Cl. 190—19)



1. A metallic suitcase comprising two case members and a connecting backbone therefor formed of a unitary metallic member of relatively narrow width and having connected outer and inner walls which are spaced to provide oppositely directed channelways for receiving the margins of the case members, said channelways merging into an inwardly directed rib adapted for the attachment of a pocket-holding division between the two case members when the suitcase is closed, and latching members carried by the backbone for holding the two case members.

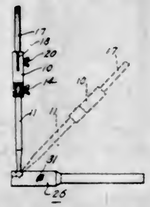
2,458,234
COIN COLLECTOR SELECTIVE APPARATUS
Granville M. Wilcox, Lincoln, and Max L. Grant, Providence, R. I.; said Wilcox assignor to said Grant
Application February 22, 1944, Serial No. 523,456
4 Claims. (Cl. 232—12)

1. A coin collector having a main coin receptacle, an auxiliary coin receiver, and a coin deposit portion, said deposit portion comprising a movable coin guide normally in position to guide a deposited coin to the main coin receptacle and movable to a second position to guide the deposited coin to the auxiliary coin receiver, means in said deposit portion engaging said coin guide and urging the coin guide to move to its second position, releasable means normally holding said urging means inoperative, and cooperating means in the deposit portion and the movable coin guide



interlocking upon completion of movement of the coin guide to its second position to prevent return movement of the coin guide to its first position.

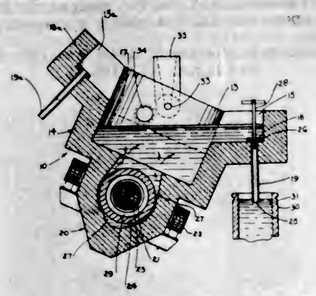
2,458,235
UMBRELLA HOLDER
Joe I. Williams, Sterling City, Tex.
Application August 12, 1947, Serial No. 768,183
2 Claims. (Cl. 248—42)



1. A device of the character described, comprising a sleeve, said sleeve being centrally apertured to receive the stem of an umbrella, the said sleeve being slotted to accommodate different sizes of stems, adjustable means for securing the stem in the sleeve, a shank, said sleeve being bifurcated to receive the upper extremity of the shank, a pivot pin passed through the upper portion of the shank and the furcations of the sleeve, means for adjustably controlling the friction between the contacting portions of the sleeve and the shank, a ball tip at the lower extremity of the shank, said ball being provided with an annular ear at right angle to the path of pivoting of the sleeve with respect to the shank, an arm adapted to receive the ball and the ear to permit movement between the shank and the arm, and means for controlling the frictional engagement of the shank and the arm.

2,458,236
CONTINUOUS POURING FURNACE
Edward L. Wolff, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application December 7, 1944, Serial No. 567,022
2 Claims. (Cl. 263—12)

1. A casting furnace; a plurality of channel members connected to the side of said furnace; said channel members being substantially regularly spaced around said furnace; said channel members each having a passage communicating with the interior of said furnace; each channel member extending substantially radially from the side of said furnace; the base of each channel member forming a hearth; an opening in each hearth; a spout mounted in each opening and extending beneath the hearth; means for tilting said furnace; molten metal flowing from the interior of said furnace into one of the channel members and over the hearth thereof when the furnace is tilted; and means for rotating said furnace to predetermine the particular channel



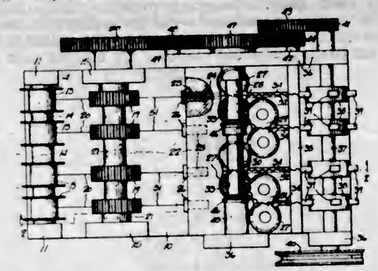
member into which the molten metal will flow when the furnace is tilted.

2,458,237
SHORT-CIRCUITED WINDING
Helge Arnemo, Vasteras, Sweden, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden
Original application September 23, 1942, Serial No. 459,415. Divided and this application February 21, 1948, Serial No. 9,976. In Sweden October 19, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires October 19, 1960
1 Claim. (Cl. 172—120)

A device of the class described comprising in combination, a squirrel cage rotor having slots for the reception of winding bars, winding bars in said slots, respectively, and projecting beyond the ends of the rotor, means securing each bar, to the rotor, such means being intermediate the ends of the slot occupied by that bar and permitting unhampered flexing movements of the bar in a plane passing through the axis of the rotor, a short circuiting ring at each end of the rotor and concentric therewith, said rings having notches for the reception of the ends of the winding bars, that portion of the end of each winding bar which is disposed in the plane of the associated short circuiting ring being divided so as to constitute two parts spaced apart circumferentially of the ring, and means securing each such part independently to the associated ring, the arrangement being such that expansion and contraction of the rings results in relative movements of the parts of the winding bar ends circumferentially of the rings without straining the means securing these parts to the rings.

2,458,238
MEANS FOR MAKING PACKING MATERIAL FOR CHEMICAL APPARATUS
George B. Bailey and Otto Ziegler, Michigan City, Ind., assignors to The Hays Corporation, Michigan City, Ind., a corporation of Indiana
Application May 24, 1945, Serial No. 595,526
11 Claims. (Cl. 140—105)

1. A wire working device comprising a frame, means for journaling a wire reel on said frame, means for successively crimping a wire sinuously in two different planes, said crimping means serving to advance said wire, means for guiding said wire, and means operating in timed relation



to said last acting crimping means for shearing said crimped wire in uniform lengths, said guide means including a narrow guide passage between said crimping means.

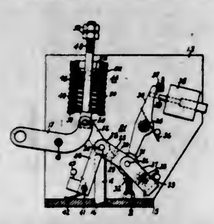
2,458,239
SUPPORT FOR FOWL OR THE LIKE
Edward T. Bartlett, Philadelphia, Pa.
Application October 17, 1946, Serial No. 703,894
2 Claims. (Cl. 99—419)

1. A support for fowl or the like comprising a base having a central elongated horizontal portion of non-circular cross-section, said base having a pair of vertical portions extending downward from the ends of said central portion, one of said vertical portions being provided with a portion having a reduced-diameter circular cross-section, and a plurality of impaling prongs slidably mounted upon said base, said prongs having non-circular openings formed therein, whereby said prongs can be positioned in non-rotating relationship relative to the non-circular portion of said base and whereby said prongs can be positioned in rotatable relationship to the reduced-diameter circular portion of said base.

2,458,240
OPERATING MECHANISM FOR ELECTRIC CIRCUIT BREAKERS
Ralph J. Baskerville, Merwood Park, Pa., assignor to General Electric Company, a corporation of New York
Application December 9, 1944, Serial No. 567,468
3 Claims. (Cl. 200—166)

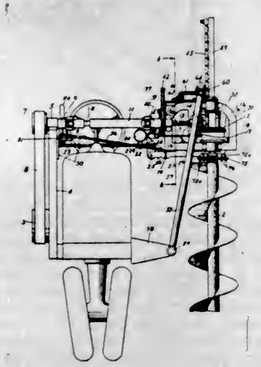
1. An arrangement for imparting opening force to a pivotally mounted main operating member

of an electric circuit breaker to open said circuit breaker and for arresting the opening operation of said circuit breaker comprising a pivotally mounted yoke member, a rod pivotally connected to said main operating member and slidable through an opening in said yoke member, spring means interposed between said yoke member and said main operating member for biasing said cir-



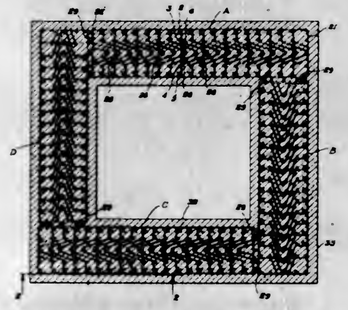
cuit breaker to the open position, said yoke member being movable about its pivotal support in such a way that the bias of said spring means is effective throughout the opening operation of said circuit breaker, cushioning material mounted on said yoke member, and a projection on said rod for engaging said cushioning material near the end of the opening operation of said circuit breaker.

2,458,241
POSTHOLE DIGGER
Lester E. Beck, Danville, Iowa
Application July 31, 1944, Serial No. 547,432
4 Claims. (Cl. 255—22)



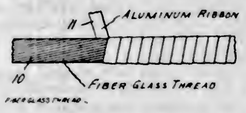
1. In a digger of the type indicated, means for adjustably mounting a vertically reciprocating auger upon the side of a tractor, an auger carried by said mounting means, and means for raising and lowering said auger, the last mentioned means including a chain secured to the auger, a sprocket carried by the supporting means and engaging the chain for moving the auger lengthwise, and operating means for rotating the sprocket, the operating means for the sprocket comprising a lever pivotally mounted at one end, carrying a pair of spaced pawls pivotally connected to the lever intermediate its ends, a ratchet fixedly connected to the sprocket, and mechanism for pivotally oscillating the lever about its end pivot in a vertical direction, with one of the pawls in engagement with the ratchet.

2,458,242
VAULT WALL CONSTRUCTION
Palmer Bescherer, York, Pa., assignor to Diebold, Incorporated, Canton, Ohio, a corporation of Ohio
Application September 27, 1946, Serial No. 699,770
20 Claims. (Cl. 109—83)



1. In a vault structure, a concrete wall, and a reinforcing structure embedded in said concrete wall including a plurality of A-frame members, each A-frame member comprising generally A-shaped cross rod members and spaced apart longitudinal rod members, said cross rod members being connected at spaced intervals with said longitudinal rod members, and means on the cross rod members of one A-frame member engaging certain longitudinal rods of the next adjacent A-frame member when a plurality of A-frame members are nested together to form said reinforcing structure.

2,458,243
ALUMINUM COVERED GLASS THREAD
Arthur Biddle, Richmond, Va., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware
Application August 2, 1946, Serial No. 687,990
17 Claims. (Cl. 57—140)

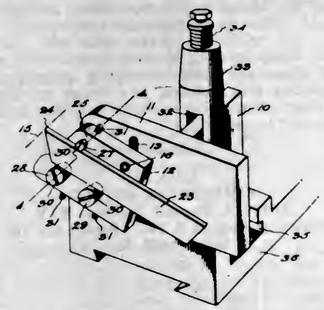


1. A composite thread comprising a central filamentary core of glass and a narrow strip of metal wound around the central core in the form of a spiral.

2,458,244
CUTTING TOOL
Hermann F. Bohl, Palisade, N. J.
Application June 18, 1943, Serial No. 491,362
8 Claims. (Cl. 29—98)

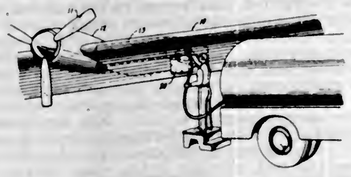
1. A cutting tool of the kind described comprising a T-shaped support including a stem adapted for connection with the tool post of a conventional lathe and a transverse member fixed on said stem, said transverse member being provided with curved slots having the lathe center as a center, a blade-holder located in surface engagement with said transverse member, mounting means co-operating with said slots for pivotally mounting said blade-holder on said transverse member and for fixing said blade-

holder in place thereon, studs rotatably mounted on said blade-holder in three-point relation to each other, eccentric heads carried by said studs and projecting outwardly beyond said blade-holder to provide three-point clamping supports, and a cutting blade engaged on its opposite longi-



tudinal edges by said eccentric heads and clamped in place thereby on said blade-holder, one of said mounting means including an eccentric device whereby said blade-holder is adjusted relatively to said transverse member to selectively raise and lower the cutting edge of said cutting blade.

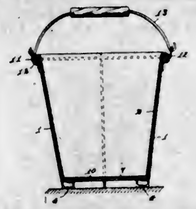
2,458,245
UNDERWING FUELING SYSTEM
Lawrence J. Bordelon, San Diego, Calif., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application January 20, 1947, Serial No. 723,183
9 Claims. (Cl. 244—135)



1. In an aerial vehicle having a wing, a tank for the storage of fuel located in the wing, said wing having an access opening located in the under surface thereof juxtaposed to one side of said tank and fuel reception means communicating with the interior of said wing and mounted on said tank adapted to be accessible from said access opening for fueling said tank from below said wing.

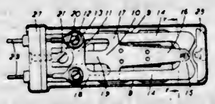
2,458,246
CONTAINER
Gilbert Brereton, Toronto, Ontario, Canada
Application May 31, 1945, Serial No. 596,855
4 Claims. (Cl. 220—84)

1. A receptacle comprising a bottom and a surrounding wall, a supporting frame for said receptacle comprising an annular member around which the top edge of the wall of the receptacle is adapted to be rolled, circumferentially arranged spaced vertical members depending from said annular member and at points equi-distant from their lower ends being turned inwardly to provide feet and then being turned upwardly and then outwardly and terminating with their ends equi-distant from the vertical portions of said members, and a ring embracing said outwardly turned portions and



secured to the ends thereof in spaced relation to said vertical members and providing a support for the bottom of the receptacle positioned on a higher plane than said feet, and means integral with the wall of said receptacle extending inwardly parallel with said bottom below said ring and holding said bottom into engagement with said ring.

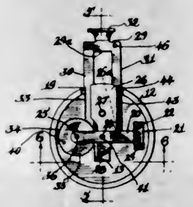
2,458,247
ELECTROMAGNETIC RELAY
Ernest Alfred Bryan, Bexley, England, assignor to Siemens Brothers & Co. Limited, London, England, a British company
Application February 5, 1945, Serial No. 576,283
In Great Britain October 8, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 8, 1963
1 Claim. (Cl. 175—336)



In an electromagnetic relay, a U-shaped core having two pole faces, a spring having an armature portion and right and left branches extending therefrom, means located at a distance from said armature portion for fixedly supporting the outer ends of said right and left branches to position said armature portion above and clear of both said pole faces, said right and left branches sufficiently long to permit ready flexing of said right and left branches between said supporting means and said armature portion, an elongated armature secured to said armature portion adjacent to but clear of both said pole faces, a third branch intermediate said right and left branches extending from said armature portion beyond said supporting means of said right and left branches, means engaging the outer end of said intermediate branch for tensioning said intermediate branch to downwardly flex said right and left branches, said downwardly flexed right and left branches cooperating with said tensioned intermediate branch for exerting pressure downwardly on said armature portion in the immediate area where said right, left and intermediate branches merge with said armature portion, thereby to force one end of said armature down on and in contact with one of said pole faces, said contacting of said one end of said armature with said one pole face pivoting said arma-

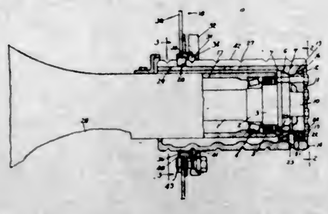
ture with respect to said other pole face thereby to provide a small air gap between the other end of said armature and said other pole face.

2,458,248
HAND DRIVEN DEVICE
Ramon Bujan, New York, N. Y.
Application July 26, 1946, Serial No. 686,496
2 Claims. (Cl. 74—130)



1. In a hand-driven device, a frame comprising a casing, a bottom wall therefor provided with an integral guide ridge, a hand-actuated rack member slidably engaging said bottom wall and the side walls of said ridge to be guided thereby, a side wall, connected to the casing penetrated by said rack member, a top bearing plate for said rack member secured to the casing bottom wall and the ridge thereof, a bracket secured to said casing bottom wall and extending at an angle to the guide ridge and elevated therefrom, a central rotatable shaft projecting above the casing and mounted between the bracket and the casing bottom wall and journalled in the guide ridge thereof, a second rotatable shaft mounted between the bracket and the casing bottom wall, gear and pinion means on and operatively connecting said shafts, ratchet means on one of the shafts, a cover member for said casing penetrated by the central shaft, spring means between the rack and a stationary portion of the frame to normally maintain the rack in outermost extended position beyond the casing side wall, the downward movement of the said rack actuating the gear and pinion means to cause rotation of the central shaft and the return upward movement of said rack being operative on the ratchet means rendering the central shaft stationary.

2,458,249
ADJUSTABLE WHEEL AND AXLE ASSEMBLY
Ernest V. Bunting, Dearborn, Mich., assignor to Harry Ferguson, Inc., Dearborn, Mich., a corporation of Delaware
Application November 13, 1944, Serial No. 563,247
18 Claims. (Cl. 301—9)



1. An adjustable wheel and axle assembly, having in combination an axle provided with a wheel support, a wheel and means for clamping the wheel upon the support with considerable clearance, the said wheel upon release of the clamping means dropping down upon the top of the wheel support to give increased clearance below the wheel support, whereby the wheel may be tipped and then turned with the axle to "hitch" or "walk" the wheel to a new position on the wheel support where the clamping means may again clamp the wheel in place, the said clamping means comprising split ring means to seat the wheel upon the support and a clamping ring for forcing and holding the wheel on the said split ring means in concentric position and perpendicular to said axle.

2,458,250
SHOESHINE SHIELD
Alfred A. Caputi, Buffalo, N. Y.
Application August 9, 1947, Serial No. 767,701
1 Claim. (Cl. 36—70)

A shoe shine shield comprising a split generally elliptically curved one piece body of thin flexible material of substantially uniform thickness throughout and formed to normally assume a shape in which the adjacent edges thereof providing said split are relatively widely spaced apart, said body including a sleeve section flared upwardly and outwardly relative to the vertical and adapted to surround a portion of the limb of the wearer immediately above the shoe, said sleeve section having a lower edge conformably curved to follow the conventional curvature of the upper edge of the upper structure of a shoe defining the foot opening of the shoe, and an integral flange of substantially uniform width extending downwardly and outwardly from said lower edge of said sleeve section and extending continuously therearound, the inclination of said flange relative to the vertical being normally greater than the inclination of said sleeve section and being normally greater than the inclination of said upper structure of the shoe adjacent said foot opening thereof, the juncture between said sleeve section and flange providing a relatively flat but sharply apexed V-shaped indentation in the exterior of said body, said flange being adapted to be inserted substantially its full width between the shoe and foot of the wearer thereof so that the apex of said V-shaped indentation is adjacent said upper edge of the shoe and with said body contracted to narrow the space between said adjacent edges thereof and with said flange forced to assume a greater vertical inclination thus causing said sleeve section to incline farther from the vertical whereby said flange is biased outwardly firmly against the inside of said upper structure of the shoe.

2,458,251
SOLID ELECTRIC HEATING PLATE
Etienne Challet, Paris, France, assignor to Entreprises Electriques Fribourgeoises, Fribourg, Switzerland, a company of Switzerland
Application October 28, 1937, Serial No. 171,576
In Switzerland January 13, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires January 13, 1957
3 Claims. (Cl. 219—37)

1. An integral electrically heated plate comprising heating units and an integral metallic

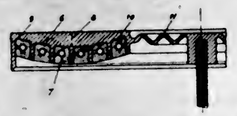


plate supporting said units, said plate having a thickness gradually increasing from the periphery inwardly and from the center outwardly towards a concentric zone intermediate said periphery and center so that a uniform heating throughout said plate may take place.

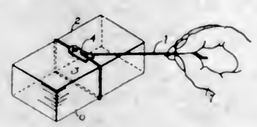
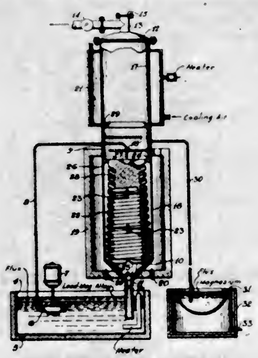
2,458,252
SECURING DEVICE
Lloyd N. Chatterton, Cleveland, Ohio
Application January 20, 1944, Serial No. 518,935
3 Claims. (Cl. 24—18)



1. A tying device for use with a flexible filament comprising a flat tag having a perforation through which a filament may be passed, the tag being formed to define a notch extending inwardly from one side of the tag at an intermediate point and a notch having tapered sides at the edge of the tag remote from said perforation, the inner end of the first mentioned notch being substantially in alignment with and between the perforation and the second mentioned notch.

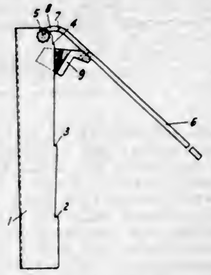
2,458,253
APPARATUS FOR METALS DISTILLATION
Douglas S. Chisholm and Thomas Griswold, Jr., Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application May 30, 1945, Serial No. 596,710
2 Claims. (Cl. 266—19)

1. In a still for the vacuum distillation of a volatile metal from a molten alloy thereof: a vertical elongated thermally-conductive closed still body having therein a vaporizing zone and a condensing zone in communication with each other, means for evacuating the still body, means for cooling the condensing zone, a furnace surrounding the still body at the vaporizing zone for raising the latter to a distilling temperature by heat applied externally to the still body, a conical pillar mounted axially in the still body within the vaporizing zone and having formed in the outer surface thereof a shallow open spiral trough extending in a continuous downward slope from the upper to the lower part of the zone, means for introducing the alloy to be distilled into the upper part of the trough and for collecting residual



alloy flowing from the bottom of the trough, and means for withdrawing condensate from the condenser.

2,458,254
CAN OPENER
Fred B. Cole, San Anselmo, Calif.
Application April 24, 1947, Serial No. 743,615
3 Claims. (Cl. 30—10)

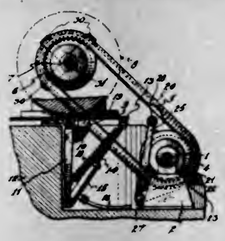


1. A can opener of the type indicated comprising a channel-shaped body member having spaced notches along the front longitudinal edges thereof, a handle pivotally mounted between opposite sides of the channel adjacent one end of the body member, and a can-perforating wedge-shaped member mounted on the handle in a position to cut into the end of the can adjacent the handle pivot when the handle is turned toward the body, the handle being foldable against the front edges of the body member to occupy a minimum of space.

2,458,255
RELEASING MECHANISM FOR POWER TAKE-OFFS
Kibbey W. Couse, Newark, N. J.
Application July 4, 1945, Serial No. 603,139
8 Claims. (Cl. 74—242.8)

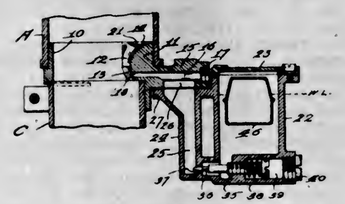
1. A releasing mechanism for a power take-off including driving and driven pulleys with supports therefor and belt means for running over the pulleys, a guard outside the belt, means for

shifting the guard longitudinally of its length and means connected to the guard for acting on the belt without shifting the position of the driv-



ing pulley for changing the tension of the belt means between the said pulleys.

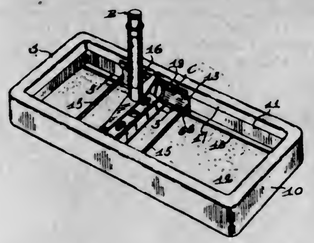
2,458,256
WATER CARBURETOR
Harold E. Crosier and Albert G. H. Vanderpoel, Los Angeles, Calif.
Application May 14, 1946, Serial No. 669,515
5 Claims. (Cl. 261—18)



1. A device for humidifying an air stream to be taken by an engine, comprising a tubular member forming a substantial cylindrical air passage and having in vertical axial position a bottom portion for attachment to the inlet end of a carburetor, said member having an internal projection extending within said passage from one side only thereof and leaving the major portion of the passage unobstructed, and an external projection directly adjacent said internal projection, there being in said projections a water passage extending into said member and said internal projection having a substantially Venturi-shaped surface extending axially and inwardly of the member so that the air flow along said surface induces water flow through said water passage into the member in accordance with the rate of air flow therethrough, and a water supply float chamber detachably secured to the underside of said external projection, said chamber containing beneath said external projection a riser passage through which water is taken upwardly into said water passage.

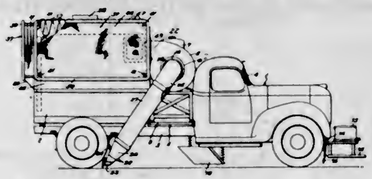
2,458,257
SAFETY RAZOR AND BLADE SHARPENER
Albert E. Donovan, Laniel, Quebec, Canada
Application June 25, 1946, Serial No. 679,036
5 Claims. (Cl. 51—158)

1. A device of the character described comprising, in combination, a casing having an abrading element therein, a carriage frictionally-slidable longitudinally in said casing, a blade holder adapted to grip a blade pivotally, said holder removably insertable into said carriage whereby the edges of said blade are disposed transverse the casing, and means on the carriage for auto-



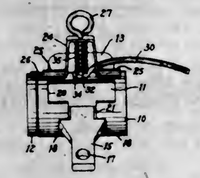
matically rocking the blade to bring alternate edges thereof into contact with said element when the carriage is reciprocated longitudinally.

2,458,258
SUCTION-TYPE STREET SWEEPER
William R. Furr, Washington, D. C.
Application September 15, 1943, Serial No. 502,517
1 Claim. (Cl. 15—340)



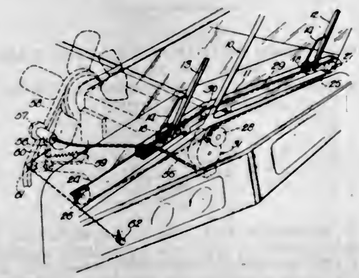
A street cleaner unit for removable mounting on a dump truck having a chassis frame supporting a cab and a dump body, which unit comprises, in combination, a support for removable mounting on the chassis frame between the cab and dump body, an open bottom collector housing for removable mounting on said dump body, a source of power mounted on said support transversely of the chassis frame, a centrifugal suction fan casing mounted on said support in alignment with said source of power, a fan in said casing connected to the drive shaft of said source of power to be driven thereby, an outlet peripherally of said fan casing and opening into said collector housing, an inlet axially of said fan casing, a universal pipe connection surrounding said inlet and secured to said casing, an elbow pipe secured at one end to said universal connection and with its other end extending downwardly in spaced relation to said casing to be beyond the side of the truck, a straight section of pipe secured at one end to the downward end of said elbow to be positioned downwardly alongside the truck, a nozzle member secured at the lower end of said straight pipe section and extending substantially at right angles thereto for positioning beneath the truck, said nozzle member having a nozzle opening extending longitudinally along the bottom thereof, from a point outside the adjacent truck wheels to a point inside the opposite truck wheels, and chains secured to the top of said nozzle member for adjustable attachment to the underside of the truck chassis.

2,458,259
TRACTOR COUPLER
Samuel W. Gordon, Canal Fulton, Ohio, assignor of one-half to Marvin J. Gordon, Sr., Canal Fulton, Ohio
Application February 27, 1947, Serial No. 731,180
7 Claims. (Cl. 280—33.15)



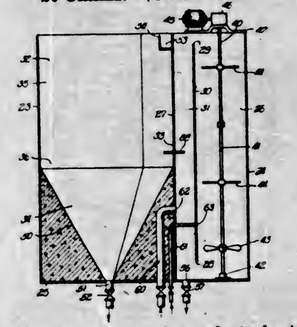
5. A coupler for detachably connecting a towing vehicle to a towed vehicle, including an outer sleeve having a yoke on one side adapted for pivotal connection with one of said vehicles, said outer sleeve having a T slot in its opposite side, an inner sleeve axially rotatable in said outer sleeve, said inner sleeve having a longitudinal slot for registering with the top longitudinal portion of said T slot, a T-shaped coupler bar adapted for pivotal connection with said other vehicle, the cross head of said bar being insertable in substantially horizontal position through said registering longitudinal slots and the stem being adapted to extend horizontally through the lower portion of said T slot when said slots are not in register, and a spring-pressed latch bar mounted on said outer sleeve for engaging and locking said sleeves together with said slots out of register.

2,458,260
WINDSHIELD WIPER MECHANISM
Ralph B. Gray, Chicago, Ill.
Application October 4, 1943, Serial No. 504,865
3 Claims. (Cl. 74—321)



1. A reversible winding means for a flexible member comprising a rotatable winding drum for said flexible member, a rotatable shaft on which said drum is fixed for rotation therewith, a driven gear on said shaft, a laterally shiftable driving gear meshing with said driven gear for operating the latter, and means for operating said driving gear alternately in opposite directions for effecting reversal of the direction of rotary movement of said drum comprising a uni-directionally operated pinion, a pair of connected laterally shiftable ring gears disposed on opposite sides of said pinion and secured to said driving gear, and means for effecting the lateral shifting of said ring gears for moving the same alternately into driven engagement with said pinion.

2,458,261
PROCESS AND APPARATUS FOR EFFECTING CHEMICAL REACTIONS
Walter H. Green, Geneva Township, Kane County, Ill., George A. McBride, Grosse Pointe, Mich., and George A. Hertzing, Los Angeles, Calif., assignors to Infilco Incorporated, Chicago, Ill., a corporation of Delaware
Application April 26, 1947, Serial No. 744,289
20 Claims. (Cl. 23—201)

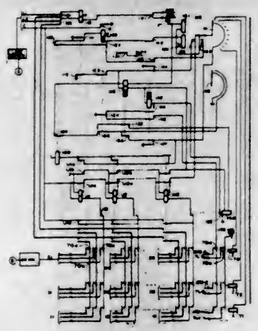


1. In the formation of a relatively insoluble precipitate from chemical solutions of such strength that conditions are unfavorable for the precipitation of particles of coarse size, the process which comprises the steps of retaining in the treating system a volume of already treated solution in amount bearing a predetermined ratio to the rate of entry of new solution, maintaining a circulation of said retained solution through a confined cyclic path, delivering new solution into the circulating solution at one point in its path and precipitating reagent at another point thereof, said points being so spaced apart that at least one of the introduced materials will be mixed with and diluted by the already treated solution before contacting and reacting with the other material, continuously diverting from the circulating solution a flow thereof substantially in excess of the rate of entry of new solution and passing said diverted flow laterally across a central elevation of a clarification compartment at a velocity sufficiently low to permit larger and heavier particles formed as a result of the precipitating action to deposit therefrom and sufficiently high to retain smaller and lighter particles in suspension, withdrawing said heavier and larger particles from below said diverted flow, withdrawing a portion of said flow as clarified barren solvent from above said diverted flow and discharging such portion to disposal, and returning the remaining part of said diverted flow, after passing laterally across said central elevation of said clarification compartment and carrying smaller and lighter particles, into the circulating flow whereby the returned liquid again acts as diluent and the smaller and lighter particles grow.

2,458,262
RELAY SELECTOR CIRCUIT ARRANGED TO SIMULTANEOUSLY TEST A SELECTED GROUP OF TRUNKS
Harlan E. Grimes, Bromley, Ludlow Station, Ky., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application January 30, 1946, Serial No. 644,339
11 Claims. (Cl. 179—18)

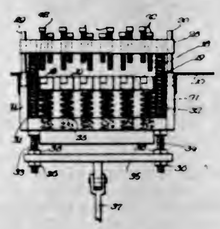
1. In a telephone system, a calling line, a plurality of groups of trunks each including a test

conductor for marking them busy or idle, a plurality of group selecting relays, a plurality of individual selecting relays, means for selectively operating said group selecting relays in accordance with digital impulses received over the calling line, each of said group selecting relays



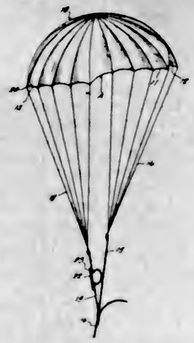
operative to extend the test conductors of a corresponding group of said trunks to said individual selecting relays, said individual selecting relays operative to test all of the trunks in the group extended thereto simultaneously and to extend said calling line to an idle one thereof.

2,458,263
STRING MUSICAL INSTRUMENT WITH CHORD TUNING MECHANISM
J. D. Harlin, Indianapolis, Ind., assignor to Harlin Brothers, Indianapolis, Ind., a partnership
Application August 21, 1947, Serial No. 769,922
13 Claims. (Cl. 84—312)



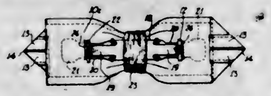
1. The combination in a musical instrument, of a group of laterally spaced strings, means for anchoring each of said strings at one end of the group, a plurality of rocker members, one for each of said strings individually, each of said rocker members being attached to its individual string and effective upon being rocked in one direction to increase the tension of its string and, upon being rocked in the opposite direction, to slacken the tension of its string, a crossbar associated with said rocker members conjointly, and means including a plurality of pairs of actuating screws for actuating said rocker members in response to a movement of said crossbar, said pairs of screws being individually associated with said rocker members, one screw of each pair being effective, when suitably adjusted, to cause a movement of its associated rocker member in a direction to increase the tension of its attached string, the other screw of each pair being effective, when suitably adjusted, to cause a movement of its associated rocker member in a direction to slacken the tension of its attached string.

2,458,264
PARACHUTE
Richard H. Hart, New Orleans, La.
Application May 25, 1945, Serial No. 595,778
10 Claims. (Cl. 244—142)



1. A parachute including a canopy and suspension means, the canopy having a non-central vent therein, said suspension means being gathered into a plurality of groups, and adjustable means for shortening only a group of said suspension means upon the side of said canopy opposite to said vent after inflation of the canopy; said suspension means on the side of said vent remaining constant at all times.

2,458,265
BOW TIE AND METHOD OF MAKING SAME
Sol Head, New York, N. Y.
Application July 14, 1947, Serial No. 760,785
4 Claims. (Cl. 2—154)



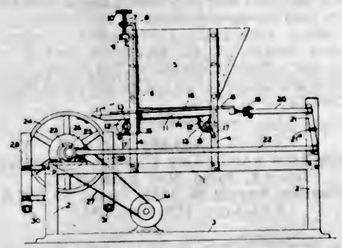
1. A decorative bow removably securable to women's garments, said bow comprising an elongated strip of material folded at each end to define an outer layer, an intermediate layer and an inner layer, said bow being doubled over about its longitudinal axis at approximately the midpoint thereof, a wire staple passing completely through said doubled over layers closely adjacent the bight thereof to partially shape said bow, a clip including a pair of oppositely extending fastening elements, additional wire staples extending transversely of said bow and located remote from said first-mentioned wire staple and slidably engaging said fastening elements against the inner layer of said bow and a tie-piece extending centrally around said bow and said clip.

2. A decorative bow removably securable to women's garments, said bow comprising an elongated strip of material folded at each end to define an outer layer, an intermediate layer and an inner layer, said bow being doubled over about its longitudinal axis at approximately the midpoint thereof, a wire staple passing completely through said doubled over layers closely adjacent the bight thereof to partially shape said bow, a clip including a pair of oppositely extending fastening elements, each of said elements having an enlarged terminal portion, a substantially vertical slit disposed near each end of said inner layer, each terminal portion of a respective fastening element being inserted within a respective slit for concealment between said inner layer and said intermediate layer, an additional wire staple slidably engaging each fastening element against the inner layer of said bow and a tie-piece extending centrally around said bow adjacent a respective slit and said clip.

2,458,266
PROCESS FOR MAKING ETHYLENE OXIDE
Rudolph L. Heider and Carlyle J. Stehman, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application February 9, 1945, Serial No. 577,153
13 Claims. (Cl. 260—348.5)

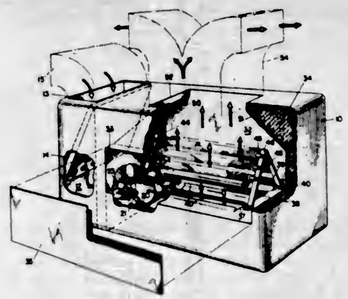
1. The process for making ethylene oxide by the direct chemical combination of ethylene and oxygen on a silver catalyst, which comprises passing ethylene and oxygen-containing gases at temperatures between 225° C. and 350° C. over a silver catalyst supported upon a carrier consisting essentially of a mixture of crystalline alpha silica and alpha-alumina, the alumina comprising from 2% to 15% by weight of said carrier.

2,458,267
ROTATING CYLINDER TYPE OF BEAN CLEANING MACHINES
James Wallace Henry, Gooding, Idaho
Application September 21, 1945, Serial No. 617,833
2 Claims. (Cl. 209—113)



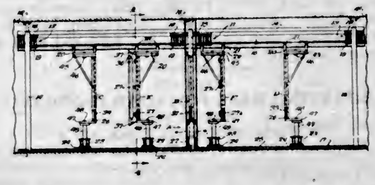
1. In combination, an open bottom hopper provided with a frontal discharge opening adjacent its bottom, a tiltable substantially horizontal floor provided with a frontal ledge, a reciprocatory, superimposed plate adapted to move the contents of the hopper forwardly over said ledge, a rotary cylinder provided with a highly polished surface and positioned longitudinally adjacent the ledge of said floor but separated therefrom by a transverse gap and positioned vertically so that the upper surface of its periphery is above said ledge, a motor adapted to rotate the cylinder at a high rate of speed in a direction away from the hopper, a vertically adjustable gate adapted to regulate the flow of matter through the discharge opening of the hopper and means for reciprocating said superimposed plate to feed material from the hopper on to the cylinder.

2,458,268
FORCED CIRCULATION ELECTRICALLY HEATED SPACE HEATER
John M. Hinds, Seattle, Wash., assignor to Northeast Electric & Engineering, Seattle, Wash.
Application February 5, 1946, Serial No. 645,512
4 Claims. (Cl. 219—39)



1. A heat-transfer mechanism, comprising: a sheet metal deck having upwardly flanged slots, means forming an adit chamber below said deck, means forming a heater chamber above said deck, prismatically arranged elongated electric heater bars in said chamber above the deck in alignment with the longitudinal axis of the slots, means forming a filter chamber adjacent and juxtaposed to said adit and heater chambers, an elongated horizontal thimble between said filter and adit chambers forming an air conduit, means to conduct air downward to said filter chamber, and means to conduct air upward and away from said heater chamber, said heater chamber having a reduced horizontal cross-section from below upward.

2,458,269
REPRODUCING CAMERA
William C. Huebner, New York, N. Y.
Application October 8, 1945, Serial No. 620,883
2 Claims. (Cl. 88—24)

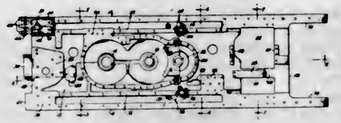


1. Reproduction photographic apparatus including an overhead guide, a lower guide, upper and lower carriages adjustable along said guides, the lower carriages including tensioning means, cooperating lens, copy and sensitized surface carrying frames located between said upper and lower carriages, a pivot on each of said upper carriages for rotatably supporting one of said frames for rotational movement through one hundred and eighty degrees while under tension from the tensioning means associated with said carriages, whereby to enable said frames to be rotated face-to-face, face-to-back and back-to-back positions so that copy, lens and sensitized surfaces may be supported in positions which will enable extreme reduction and enlargement of images.

2,458,270
GAS CONTROLLER FOR WELL PUMPS
Granville A. Humason, Houston, Tex.
Application August 25, 1945, Serial No. 612,657
2 Claims. (Cl. 102—5)

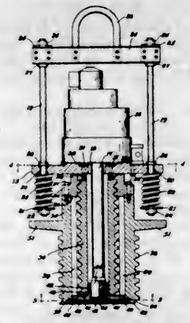
1. Production equipment for wells comprising, a casing in a well having a casing head thereon, a pump tubing in the casing, a tubing head on the casing head to which the upper end of the tubing is connected, a pump on the lower end of the tubing adapted to pump well liquid through the tubing, a pump rod in the tubing adapted to operate the pump from the ground surface, a seal above the pump between the tubing and casing, tubular valve cages forming couplings in the tubing one above and the other beneath said seal, each coupling having an inside downwardly facing seat and having ducts leading upwardly therethrough from said seats, downwardly opening valves in the couplings for controlling said ducts, yieldable members normally holding the valves closed, there being passageways leading inwardly through the wall of the tubing within said couplings whereby fluid passing through said ducts may enter the tubing, tubes anchored to the upper ends of the respective couplings in communication with said ducts, valve cages on the upper ends of said tubes having inlet passageways, downwardly opening valves controlling said inlet passageways and a seal around said rod and between it and the tubing head.

2,458,271
ROTATING BASE FOR LOAD HANDLING MACHINES
William M. Huston, Lima, Ohio
Application July 5, 1945, Serial No. 603,382
13 Claims. (Cl. 212—59)



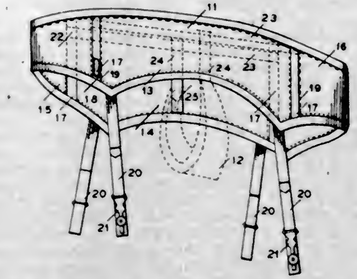
13. For a crawler type load handling machine, a rotating base structure comprising a pair of primary structural elements extending longitudinally of the base in transversely spaced parallel relation, boom pivot mountings carried by the longitudinal elements adjacent the front ends thereof, longitudinally spaced transversely extending structural elements interbracing the longitudinal elements toward the rear end thereof, an interbrace extending longitudinally of the base and inter-connecting said transverse elements, the longitudinal and transverse elements and the interbrace cooperating to define a pair of pockets in the base structure toward the rear end thereof for receiving and mounting a pair of boom hoist drums, and a pad on one of the pocket defining members adapted to carry a bearing support for a power shaft from which power is transmissible to the boom hoist drums.

2,458,272
ELECTRODE SPLICING DEVICE
Robert R. Jones, Akron, Ohio, assignor to Ohio Ferro Alloys Corporation, Canton, Ohio, a corporation of Ohio
Application July 27, 1946, Serial No. 686,706
11 Claims. (Cl. 13—14)



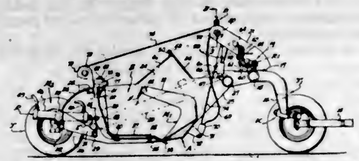
1. An electrode splicing device for splicing electrode sections having threaded sockets in their ends, said splicing device comprising a reversing motor, a drive shaft upon the motor, a tubular feed screw surrounding the drive shaft and fixed relative to the motor, a feed nut threaded upon the feed screw, a tubular plug surrounding the feed screw and fixed to the feed nut, said plug being externally threaded to engage a threaded socket of an electrode section, and means operatively connecting the drive shaft to said plug throughout the entire travel of the feed nut upon the feed screw.

2,458,273
WOMAN'S SANITARY UNDERGARMENT
Joyce L. Jurin, New York, N. Y.
Application August 30, 1947, Serial No. 771,516
6 Claims. (Cl. 128—291)



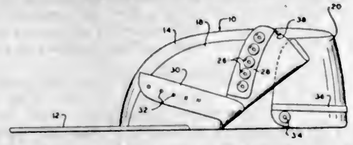
1. A garter belt and sanitary napkin support comprising a front panel, a rear panel and two side panels, secured to each other at their adjacent edges to form a garment, transverse stiffening members positioned at the junction of said panels, a front elastic band and a rear elastic band positioned along the inner surfaces of the front and rear panels respectively and secured at their ends to adjacent stiffening members, napkin supporting means secured to said bands.

2,458,274
CARRYING SCRAPER
Harald D. Kads, Glendale, Calif., assignor to Kay-Brunner Steel Products, Inc., a corporation of Delaware
Application June 18, 1945, Serial No. 600,087
4 Claims. (Cl. 37—126)



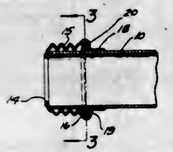
1. In a carrying scraper: a frame; a bowl mounted thereon for movement to loading and carrying positions, said bowl having relatively fixed sides, and hinged bottom and back sections mounted between said sides for advance movement from a retracted position, an apron mounted on said bowl for closing, partly opening and completely opening the front of said bowl; a first means for operating said bowl; a second means for moving said apron to partly open position; a third means for advancing and retracting said sections between said sides; and a fourth means including sheaves and a cable operatively connecting said sections to said apron so that with advancement of said sections said apron is moved to completely open position; and a device acting when said apron is held by said second means in partly open position, to hold against slackening that portion of said cable above said bowl.

2,458,275
ADJUSTABLE CAP
Richard T. Kriebel, Belmont, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application December 6, 1946, Serial No. 714,381
3 Claims. (Cl. 2—197)



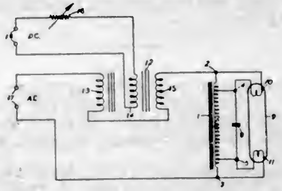
1. An adjustable cap comprising, in combination, a front and top panel, two side panels having their top edges attached to opposed side edges of said front and top panel, a rear panel having its top edge attached to the rear edge of said front and top panel, the rear edge of each of said side panels overlapping the adjacent side edge of said rear panel, a plurality of connecting means carried by the lower edge of each of said side panels, complementary connecting means carried by the lower edge of said rear panel, and means carried by said rear panel and slidably engaged by the rear edges of said side panels, said means comprising a tape fastened at spaced points to said rear panel.

2,458,276
ELECTRIC CONDUIT CONNECTOR
Stanley Langley, West Toronto, Ontario, Canada, and Alfred Warring, Detroit, Mich., assignors, by direct and mesne assignments, of one-third to said Warring, one-third to Norman A. Grams, and one-third to William Noponen, all of Detroit, Mich.
Application July 29, 1947, Serial No. 764,406
In Canada July 2, 1947
4 Claims. (Cl. 285—6.5)



1. A conduit connector of the class described comprising: an externally threaded tubular nipple; an inwardly turned portion at one end of said nipple to provide an annular body of smaller diameter than the internal diameter of the nipple; an outwardly bulged portion on the opposite end of said nipple; a gripping ring positioned in said outwardly bulged portion; a guide sleeve; an outwardly projecting flange on one end of said guide sleeve, said outwardly projecting flange engaging in said outwardly bulged portion; and a clamping structure on said outwardly bulged portion for clamping said flange and said ring in fixed relation to said nipple.

2,458,277
CONTROL OF ELECTRIC DISCHARGE LAMPS
Gordon Tremayne Kingsley Lark, Rowlands Gill, and Robert Boyd Davie, Dipton, England, assignors to Sturdy Electric Company Limited, Dipton, England, a company of Great Britain
Application May 28, 1947, Serial No. 751,092
In Great Britain June 19, 1946
8 Claims. (Cl. 315—284)



1. Control apparatus for a hot cathode gas discharge lamp of the type having two discharge electrodes, each associated with an electron emissive filament, comprising in combination a reactive element, means for varying the reactance of said reactive element, means providing an electric heating current for each of said filaments, and means for applying a striking voltage between the said two discharge electrodes, said reactive element being connected in series with said discharge lamp across an alternating current supply, and said means for providing filament heating currents and said means for applying a striking voltage being controlled by the discharge current of said lamp to decrease the filament currents and said striking voltage from their operative values as the discharge current increases from zero to the required running value for said discharge lamp and to increase said currents and voltage to their operative values as the discharge current falls to zero.

2,458,278
ELECTRIC CONTROL SYSTEM
Ralph Lee Lee, Cleveland, Ohio, assignor to Lee Products Company, Cleveland, Ohio, a corporation of Ohio
Application December 31, 1945, Serial No. 638,408
10 Claims. (Cl. 318—20)

1. In a control system for a motor, a pair of terminals for connection to a source of power, a motor circuit connected to said terminals, a motor in said motor circuit, a switch in said motor circuit, a control circuit connected to said terminals, a relay in said control circuit, a pair of contacts operated by said relay, a condenser connected to said contacts, a resistor connected to said contacts, a circuit connecting said condenser and said resistor in series, a circuit connecting said contacts in series with said switch, and a circuit connecting said condenser and said resistor in parallel with said switch.

2,458,279
ELECTRIC CONTROL SYSTEM
Ralph Lee Lee, Cleveland, Ohio, assignor to Lee Products Company, Cleveland, Ohio, a corporation of Ohio
Application December 31, 1945, Serial No. 638,409
10 Claims. (Cl. 318—20)

1. In a control system for a motor, a pair of terminals for connection to a source of power, a motor circuit connected to said terminals, a motor in said motor circuit, a switch in said motor circuit, a control circuit connected to said terminals, a relay in said control circuit, a pair of contacts operated by said relay, a condenser connected to said contacts, a resistor connected to said contacts, a circuit connecting said condenser and said resistor in series, a circuit connecting said contacts in series with said switch, and a circuit connecting said condenser and said resistor in parallel with said switch.

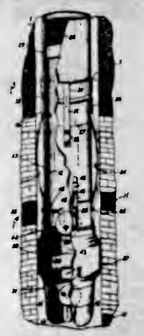
2,458,280
ELECTRIC CONTROL SYSTEM
Ralph Lee Lee, Cleveland, Ohio, assignor to Lee Products Company, Cleveland, Ohio, a corporation of Ohio
Application December 31, 1945, Serial No. 638,410
10 Claims. (Cl. 318—20)

1. In a control system for a motor, a pair of terminals for connection to a source of power, a motor circuit connected to said terminals, a motor in said motor circuit, a switch in said motor circuit, a control circuit connected to said terminals, a relay in said control circuit, a pair of contacts operated by said relay, a condenser connected to said contacts, a resistor connected to said contacts, a circuit connecting said condenser and said resistor in series, a circuit connecting said contacts in series with said switch, and a circuit connecting said condenser and said resistor in parallel with said switch.

2,458,281
ELECTRIC CONTROL SYSTEM
Ralph Lee Lee, Cleveland, Ohio, assignor to Lee Products Company, Cleveland, Ohio, a corporation of Ohio
Application December 31, 1945, Serial No. 638,411
10 Claims. (Cl. 318—20)

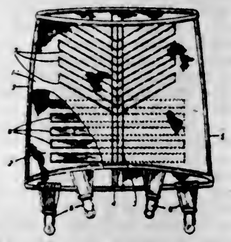
1. In a control system for a motor, a pair of terminals for connection to a source of power, a motor circuit connected to said terminals, a motor in said motor circuit, a switch in said motor circuit, a control circuit connected to said terminals, a relay in said control circuit, a pair of contacts operated by said relay, a condenser connected to said contacts, a resistor connected to said contacts, a circuit connecting said condenser and said resistor in series, a circuit connecting said contacts in series with said switch, and a circuit connecting said condenser and said resistor in parallel with said switch.

2,458,278
CEMENTING EQUIPMENT
John J. Larkin, St. Louis, Mo.; St. Louis Union Trust Company, Lillian V. Larkin, and Lila G. Daney, executors of said John J. Larkin, deceased, assignors to Larkin Packer Company, St. Louis, Mo., a corporation of Missouri
Application May 25, 1944, Serial No. 537,311
7 Claims. (Cl. 166—1)



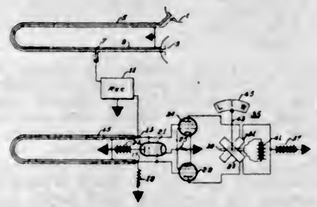
1. Cementing equipment comprising a shoe adaptable to be connected to a well casing and provided with an external packer, the said shoe being provided with ports extending from the interior to the exterior thereof and situated above the packer, a sleeve having a slidable but non-rotatable mounting on said shoe and having one end in abutment with said packer, openings in the sleeve communicating with the shoe ports, formation gripping means on said sleeve, and an actuator in abutment with the end of said sleeve remote from the packer and having a threaded engagement with said shoe whereby the sleeve may be shifted axially of the shoe to expand the packer upon relative rotation between the actuator and shoe.

2,458,279
CORSET AND WEARING APPAREL OF A SIMILAR CHARACTER
Sabine Levy, Stoken Church, England, assignor to Caprice Limited, London, England, a British company
Application September 5, 1946, Serial No. 694,969
In Great Britain May 21, 1946
1 Claim. (Cl. 2—36)



A garment comprising a close-fitting trunk-encircling portion of permanent tubular form made up of front and rear panels and fabricated wholly from two-way stretch fabric and strips made of one-way stretch fabric applied to said trunk-encircling portion to reinforce same locally, said reinforcing strips consisting of a plurality of strips extending in parallel formation across the lower half of the middle area of the rear panel symmetrical to the vertical center of said rear panel and of a plurality of strips extending in two sets in parallel formation and arranged in downward-pointing chevron formation in the upper half of the middle area of the front panel and symmetrical to the vertical center of said front panel.

2,458,280
RADIO DIRECTION FINDER
Nils E. Lindenblad, Rocky Point, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application July 1, 1946, Serial No. 680,611
7 Claims. (Cl. 343—123)

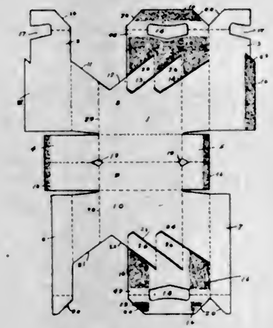


5. The method of amplifying and demodulating two coincidentally pulse modulated radio signals in a single channel, comprising the steps of delaying one of said signals with respect to the other so that the modulation pulses of said delayed signal are non-coincident with those of said other signal, combining said delayed signal and said other signal to provide a composite signal, amplifying and demodulating said composite signal, delaying said composite signal by an amount equal to the delay of said first mentioned signal, producing a control pulse in response to each coincidence of a pulse in said undelayed composite signal with a pulse in said delayed composite signal, producing an output pulse in response to each coincidence of a control pulse with a pulse in said undelayed composite signal, and producing separately a further output pulse in response to each coincidence of a control pulse with a pulse in said delayed composite signal.

2,458,281
BOTTLE CARRIER
Elmer H. Lupton, Ilchester, Md., assignor to The Bartgis Bros. Company, a corporation of Maryland
Application October 20, 1944, Serial No. 559,492
1 Claim. (Cl. 229—52)

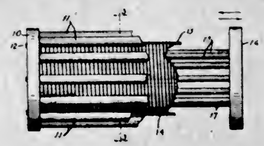
A bottle carrier for sustaining two rows of bottles stacked vertically therein, a single bank of material segregated into three sections integrally connected with one another, one of said sections being in the middle of the blank between a handle section on one side and an auxiliary handle section on the other, said middle section being of rectangular outline with an axial crease to facilitate its bending thereon and including border creases formed in addition to facilitate the bending of the handle sections at

right angles thereto, to form side walls for the carrier, the joining portions where the last mentioned creases are provided being limited in length to leave bottom flaps extending therefrom free and bendable in the same direction as said walls, the end portion of the flaps being arranged with an adherent for fastening them to other surfaces, the handle section aforesaid being cut to provide two full width end wall flaps bendable on creases connecting them to the middle portion of said handle section transversely across same, each of said end wall flaps being provided with extensions with angular terminal portions for a greater portion of the side of the flap, the remainder of the side of each of the said flaps being cut out to provide an open slot forming half the opening of a handle hole and opening towards said side, the middle portion of the section being cut out to form a relatively large space between it and one of said flaps and disposed opposite to the crease where the wall section connects to the middle section and with the cut border angularly contoured and apexed into the middle portion, the wall section between said opening and the opposite flap of the wall section being angularly slitted and creased to form a quasi-saw tooth contour and bendable from the outer portion of the middle



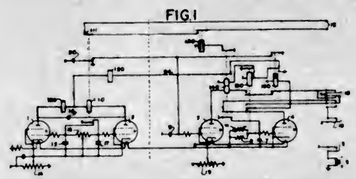
portion towards the one side of the wall section, said middle portion including a handle opening therein alignable with said slots when the end flaps are bent over in flat contact with said middle portion to form a handle having double thickness of material encompassing it, said auxiliary section being symmetrically cut out to conform with that of the handle section but with its end flaps of approximately half the width and without extensions, the handle and auxiliary handle sections when bent to form said walls having the portions included in the quasi-saw tooth contour bent towards each other for receptacles for containing bottles on opposite sides and resting on said bottom, said middle portions including adhesive in predetermined areas to permit the sections to be fastened together thereby to retain the form of the receptacles and strengthen the carrier, the formation of the receptacles being such that the quasi-saw tooth contour brings the edges of some above the edges of the remainder and the blank when assembled into its carrier form provides for a quadruple thickness of material as a spacing partition between the rows of bottles, and the bottom flaps bent over the carrier bottom to reinforce it.

2,458,282
HIGH-POWER PERMEABILITY CORE INDUCTANCE
George J. Maki, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application November 16, 1946, Serial No. 710,333
10 Claims. (Cl. 171—242)



4. An inductance unit comprising an inductance winding, an inner open-work core member, an outer open-work core member, said members surrounding each other and having said winding located therebetween, and header members at each end of said open-work members for completing the magnetic circuit therebetween, said open-work members and said headers each being constituted of comminuted high frequency iron.

2,458,283
IMPULSE GENERATOR
Harold J. McCreary, Lombard, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application October 23, 1944, Serial No. 560,076
8 Claims. (Cl. 315—245)

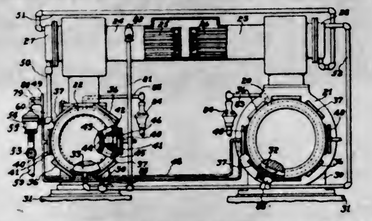


1. In combination, a gaseous discharge tube having at least a cathode, a control electrode, and an anode, a relay having a winding connected between said anode and cathode, a normally charged condenser connected between said control electrode and cathode, a resistor, means controlled by the relay for causing said condenser to discharge through said resistor so as to initiate an ionic discharge in the tube after a predetermined time interval, said relay being operated when said discharge occurs, and means responsive to the operation of said relay for deionizing said tube whereby the relay is periodically actuated.

2,458,284
COOLING-WATER SUPPLY APPARATUS FOR COMPRESSORS
Chester W. Metzgar, Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application February 16, 1945, Serial No. 578,318
5 Claims. (Cl. 230—26)

1. In a cooling-water supply apparatus for a compressor, in combination, a cylinder having a water jacket, means for supplying water to the water jacket, means for effecting the partial unloading and reloading of the cylinder, and means

acting in synchronism with the second said means for decreasing and increasing the supply of water



to the water jacket in accordance with the reduction and the increase in the load of the cylinder.

2,458,285
METHOD OF LINING COMBUSTION TUBES AND THE LIKE
David Meyer, Canton, Ohio, assignor to Meyer-Baker Fuel Unit, Incorporated, Dover, Ohio, a corporation of Ohio
Application November 17, 1947, Serial No. 786,393
2 Claims. (Cl. 25—155.5)

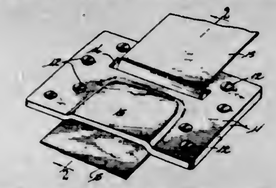
1. The method of making a porous refractory fuel burner liner which includes the steps of pulverizing burned firebrick to approximately pea size, adding thereto and mixing therewith a ceramic binder material selected from the class consisting of silicon-carbide, flint clay and dolomite, adding water thereto and mixing the same to form a stiff mass, and then forming a liner of desired shape by pressing layers of the mass and sprinkling between said layers a dry mixture of plaster of Paris, powdered alum, permanganate of potash and salicylic acid.

2,458,286
PHOSPHORESCENT PIGMENT
Neville F. Miller, Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application October 11, 1947, Serial No. 779,407
7 Claims. (Cl. 252—301.4)

1. A phosphorescent pigment comprising the product of heat treating at 900° to 1300° C. a mixture consisting essentially of an alkaline earth metal sulphide of the group consisting of calcium sulphide and strontium sulphide and containing minute amounts of a bismuth salt and a lead salt such as to comprise about 0.0043–0.043% bismuth and 0.00055–0.0032% lead by weight of the sulphide, said heating being continued for a sufficient period of time to effect diffusion of the bismuth and lead throughout the pigment.

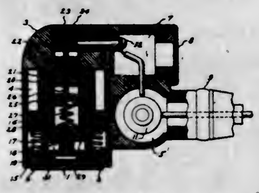
2,458,287
SNUBBER PLATE
John M. Moon, Evanston, Ill., assignor to Signode Steel Strapping Company, Chicago, Ill., a corporation of Delaware
Application August 31, 1944, Serial No. 552,020
1 Claim. (Cl. 105—369)

A snubber plate adapted to be attached securely to the floor of a car and having an elongated opening therethrough for engagement with a flexible strap for applying a braking effect on the longitudinal movement of the strap with respect to the plate, said plate being offset upwardly at an edge portion under which the strap normally extends in use for enabling a claw to be inserted on top of the strap and underneath



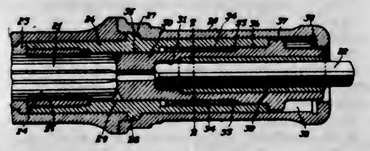
the plate for prying the plate loose from the floor, with said upward offset of the plate extending into close proximity to said elongated opening through the plate so as to reinforce and stiffen the plate for increasing its resistance to distortion from upward pressure of the strap thereon.

2,458,288
PIEZOELECTRIC CRYSTAL HOLDER
Charles D. Moriarty, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 24, 1946, Serial No. 718,188
7 Claims. (Cl. 171—327)



3. In combination, a crystal holder, a plurality of crystals resiliently supported in one face thereof, said crystals being concentrically arranged and insulated and shielded from each other in said holder and having substantially coplanar faces outwardly of the crystal holder adapted for simultaneous contact with a flat surface, separate electrical connections to adjacent crystals adapted for connection to external circuits and tuning inductances contained within said crystal holder in said connections.

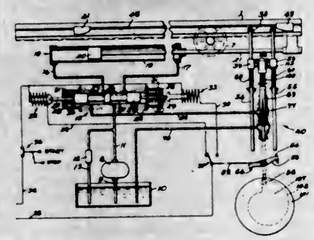
2,458,289
ROCK DRILL
William A. Morrison, Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application March 13, 1946, Serial No. 654,057
2 Claims. (Cl. 121—7)



2. In a rock drill, a casing, a working implement, a piston reciprocable and rotatable in the

casing, a chuck in splined engagement with the piston to rotate therewith, an anvil block slidable in the chuck and rotatable therewith to receive the blows of the piston and having a socket, a replaceable bushing in the socket to slidably receive the working implement, and a flange on the anvil block for cooperation with the chuck and the casing to limit endwise movement of the anvil block.

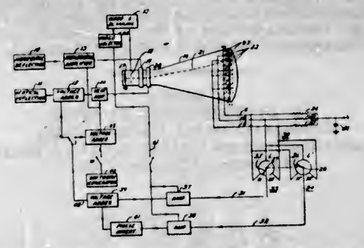
2,458,290
POWER TRANSMISSION FOR REVERSIBLE MACHINE ELEMENTS
Charles Z. Monroe, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application April 10, 1944, Serial No. 530,275
19 Claims. (Cl. 121—45)



1. A power transmission for a reversible translatory machine element comprising, in combination, reversible power drive means for translating said element, speed control means associated with said drive means and being selectively adjustable to effect translation of said element at any one of different predetermined rates during normal traverse, cam means for adjusting said speed control means, reversing means automatically operable upon translation of said element into a predetermined position to effect reversal of said drive means and thereby reversal of translation of said element, lost-motion trip means automatically operable by said reversing means to actuate said speed control means independently of said cam means and thereby decelerate said element to a predetermined low rate of translation immediately prior to said reversal regardless of the selected rate of normal translation, and means for disengaging said lost-motion trip means from said speed control means to reestablish said rate of normal translation immediately subsequent to said reversal.

2,458,291
DEVIATION CORRECTION FOR CATHODE-RAY BEAMS
Allen C. Munster, Philadelphia, and David E. Sunstein, Cynwyd, Pa., assignors to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application November 23, 1946, Serial No. 711,968
8 Claims. (Cl. 315—21)

1. In an electrical system: means for generating a beam of electrified particles; means for cyclically deflecting said beam successively along a plurality of preselected scanning lines; means responsive to deviations of said beam for generating signals identifiable with the direction of said deviations, said signals being derived from the change in the electrical potential of a scanning line which is impinged by said beam in deviated position; means for selecting said signals in synchronism with said beam deflection;

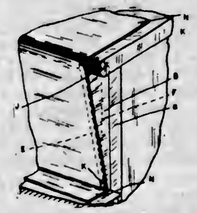


and means for applying said selected signals to said beam in such manner as to oppose said deviations.

2,458,292
METHOD OF RETARDING THE REVERSION OF ALKALI-METAL PHOSPHATE GLASS IN AQUEOUS SOLUTIONS AND A COMPOSITION OF MATTER THEREOF
Casimir J. Munter, Upper St. Clair Township, Allegheny County, Pa., assignor to Hall Laboratories, Inc., Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application January 2, 1945, Serial No. 571,116
7 Claims. (Cl. 252—175)

2. A composition comprising a mixture of (*a*) a water-soluble alkali-metal phosphate glass having essentially but a single alkali-metal oxide constituent, (*b*) an alkali-metal alkaline reacting crystalline compound the alkali-metal of which is other than the alkali-metal of (*a*), the amount of (*b*) in said composition being such that when the composition is dissolved in water the pH value thereof will be in excess of about 8.5 and also being such that when an aqueous solution of (*a*) and (*b*) containing about eight grams of (*a*) not less than about 1 gram of (*b*) per liter is boiled continuously for about six hours, not more than about 65% of (*a*) will have reverted to water-soluble orthophosphate.

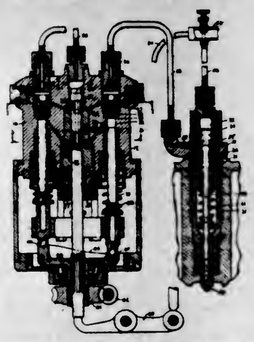
2,458,293
DUST EXCLUDING DEVICE FOR CARPETED STAIRS
William J. Neumann, East Detroit, Mich.
Application June 2, 1947, Serial No. 751,664
6 Claims. (Cl. 16—11)



1. A dust-excluding device for positioning along the under face of each marginal edge of those portions of a stair carpet piece which lie spacedly in front of the riser portions of the stair units, comprising a central web portion of

generally wedge-shaped contour, the broad end of each one of which is adapted to be placed subjacently of the overhanging forward edge of the tread portion of each stair, with its bounding flange portions attachable respectively to the face of the vertical portion of the stair structure and to the adjacent marginal edge of the carpet.

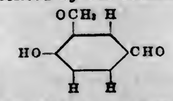
2,458,294
OIL DISTRIBUTING SYSTEM
Lenious G. Parker, Oakland, Calif.
Application January 17, 1945, Serial No. 573,249
9 Claims. (Cl. 123—139)



1. In a fuel oil distributor for multi-cylinder engines having a fuel injection nozzle for each cylinder provided with a valve controlled fuel oil passage to the cylinder and a pressure chamber sealed from said passage and adapted for opening the valve, a plurality of fuel oil pumps each having an oil inlet to the pump and a first oil outlet to the pressure chamber of one nozzle and a second oil outlet to the fuel passage of said nozzle, a distributor core including a member mounted to rotate in timed relation with the operation of the engine and including means to alternately open and close said inlets successively for the different pumps to a source of fuel oil, said core including a common delivery chamber for the second mentioned pump outlets operatively interposed between said second outlets and said nozzle passages and normally open to such second outlets, and means closing said second mentioned outlets to said common chamber successively from the different pumps during a portion of the oil delivery operation therein.

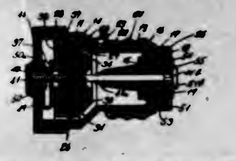
2,458,295
PRODUCTION OF VANILLIC ACID
Irwin A. Pearl, Appleton, Wis., assignor, by mesne assignments, to Sulphite Products Corporation, Appleton, Wis., a corporation of Wisconsin
No Drawing. Application May 17, 1944, Serial No. 536,041
2 Claims. (Cl. 260—521)

1. The method of preparing vanillic acid from vanillin represented by the formula:



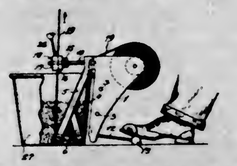
which comprises adding a solution of a soluble silver salt containing one weight atom of silver to a solution already containing one mole of vanillin and an excess of alkali at a temperature of at least about 50° C., whereby silver oxide is generated in a nascent condition in the presence of the vanillin and alkali, by which it is immediately reduced; and acidifying with sulfur dioxide to precipitate vanillic acid.

2,458,296
FUSE PLUG OF REGENERABLE TYPE
Roberto J. Peralta, Mexico City, Mexico
Application August 20, 1947, Serial No. 769,713
In Mexico February 26, 1947
7 Claims. (Cl. 200—125)



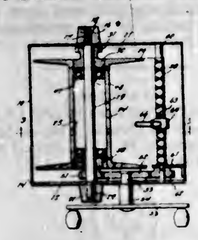
2. Improvements in fuse plugs of the regenerable type comprising a principal hollow body, a removable tablet-like member, a multi-pronged fusible element carried by said tablet-like member, a removable cover for said body, an axially extending screw for securing said cover to said body, a contact member secured to said cover for engaging said fusible element, a metallic threaded member positioned on said body, protuberances upon said body to prevent rotation of said threaded member, a contact strip electrically secured to said threaded metallic member and extending into said body for contact with one of the prongs at a time of said fusible element, and said screw being in electrical contact with said contact member.

2,458,297
CEMENT APPLICATOR FOR BUILDING TAPE
Wiley Petty, Farmersburg, Ind., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Delaware
Original application March 9, 1942, Serial No. 433,909. Divided and this application August 20, 1945, Serial No. 611,520
11 Claims. (Cl. 91—14)



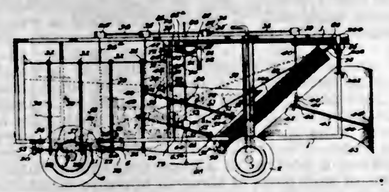
1. An adhesive applicator and tape dispenser having a frame constructed to be positioned over the side wall of a cement container such as a pail, means on said frame outside said container to support a supply of said tape, means to guide said tape downwardly and upwardly through a supply of adhesive in said container to apply a thick coat of adhesive on both sides of said tape, and adhesive removing and compressing means overhanging said container and guiding the free upwardly extending end of said tape so that said tape may be drawn therethrough, said last means being constructed to form a predetermined cross-sectional contour of adhesive on said tape and to simultaneously compress the adhesive thereon sufficiently to retain said contour, and to provide a thicker coating of adhesive on one side of said tape than on the other.

2,458,298
FISHING REEL
Stephen V. Polevoy, New York, N. Y.
Application April 11, 1946, Serial No. 661,427
5 Claims. (Cl. 242—84.4)



1. A fishing reel comprising a generally cylindrical casing having a line opening extending over a portion of its outer periphery and being provided with a fixed tail plate at one end thereof, a removable head plate at the opposite end thereof, a spool, a shaft fixed to the tail plate supporting the spool for rotative movement, the outer end of the shaft projecting through the head plate, a click mechanism positioned between one end of the spool and the tail plate, driving means positioned between the other end of the spool and the head plate, and a nut at the outer end of the shaft for retaining the head plate in place.

2,458,299
CANE HARVESTING MACHINE
George S. Powers, New Roads, La.
Application April 12, 1946, Serial No. 661,846
10 Claims. (Cl. 56—17)



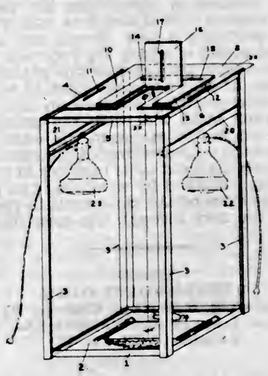
1. A cane harvesting machine including a vehicle body having a forwardly extending frame, a plurality of rotary leaf removing brushes operatively mounted on said frame, driving means operatively connected to said brushes, said brushes being inclined to the longitudinal horizontal axis of said machine, said brushes having their elevated ends mounted forwardly and their depressed ends located rearwardly in the frame, whereby said brushes will remove from the standing stalks the uppermost leaves and progressively remove the lower leaves from the standing stalks of cane.

2,458,300
RESILIENT WHEEL
Thomas A. Purvis, Tulsa, Okla., assignor of one-half to Joe Emil Hampton, Tulsa, Okla.
Application May 22, 1944, Serial No. 536,836
1 Claim. (Cl. 152—89)

In a vehicle wheel, a hub, a rim having a radially disposed central flange having relatively large circular holes formed therethrough, a disc secured rigidly to said hub, a removable disc slidably mounted on said hub and secured in fixed spaced apart relation to said first named disc by bolts passing through the central portion of said large circular holes of said rim whereby said rim has limited universal planar movement relative to said discs, a concentrically disposed annular bracket rigidly fixed to the inner face of said fixed discs, and having open slots formed in the

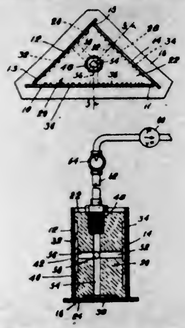
edge thereof, and a plurality of helical springs disposed non-radially between said discs and secured at their outer ends to said flange and at their inner ends in the open slots formed in the edge of said annular bracket whereby the rim and hub are normally secured in substantially concentric relation.

2,458,301
APPARATUS FOR PHOTOGRAPHING TITLES ON MOTION-PICTURE FILMS
John L. Rex, Rochester, N. Y.
Application October 1, 1945, Serial No. 619,532
6 Claims. (Cl. 88—24)



1. A stand having a lower deck capable of supporting a title, an upper deck having a hole placed centrally therein, a lower plate supported above the upper deck and adjustable thereon in one direction, an upper plate supported on the lower plate and adjustable thereon in a transverse direction, each of said plates having a large opening cut therein to expose the hole in the upper deck, an upright platen attached to said upper plate for supporting a camera above the upper deck with the lens of the camera pointed down to the lower deck and exposed through the hole in the upper deck.

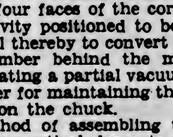
2,458,302
METHOD AND CHUCK FOR ASSEMBLING MOLD WALLS
John H. Richardson, Needham, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application February 5, 1946, Serial No. 646,431
2 Claims. (Cl. 29—148.2)



1. An assembling chuck for mold walls, comprising a core block having at least five sides, of which four sides constitute angularly related faces, each adapted to receive thereon one wall of a mold so that mold walls on the said four faces will enclose the core block on four sides thereof, each of said four faces of the core block having a separate cavity positioned to be covered by a said mold wall thereby to convert the cavity into a closed chamber behind the mold wall, and means for creating a partial vacuum in each said closed chamber for maintaining the mold walls in set positions on the chuck.

2. The method of assembling the walls of a mold for casting optical elements, comprising the steps of providing a core having five angularly related sides, two of which are generally parallel, arranging a mold wall on each side of the core excepting one of said generally parallel sides, creating a differential of pressure on the opposite sides of each mold wall with the pressure differential tending to maintain the walls against the core and in a predetermined relationship, rigidly securing the mold walls together in their said relationship, followed by equalizing the pressure on opposite sides of the mold walls to permit removal of the core through the open side of the mold.

2,458,303
CENTER JOINT FORM
Robert R. Robertson, Chicago, Ill.
Application January 16, 1946, Serial No. 641,470
2 Claims. (Cl. 94—17)



2. A joint form comprising a plate body, a one-piece anchoring member cut therefrom and in the set up condition of the joint form extending from opposite sides of the plate body, the cut edges of the anchoring member on one side of the plate body being offset and discontinuous from the cut edges on the opposite side of said plate body to provide juncture portions between the plate body and the anchoring member, and said juncture portions forming integral bendable connecting hinges by which said anchoring member is bent out of the plane of said plate body, at least one portion of the anchoring member being of generally dovetail outline.

2,458,304
SELF-TIGHTENING ROPE CLAMP
Kenneth E. Runde, Lemay, Mo.
Application January 19, 1944, Serial No. 518,787
3 Claims. (Cl. 24—136)

1. A rope clamp comprising two pairs of rope-engaging shoes, and a shell of hollow flattened cylindrical form having a substantially uniform bore therethrough which receives for sliding movement therein said pairs of rope-engaging shoes, each pair of shoes comprising a wedge shaped outer shoe which slidingly engages the face of the bore of said shell, and an inner shoe of substantially uniform thickness in a longitudinal direction, said wedge shaped outer shoes of said pairs of shoes being tapered in opposite directions and said inner shoes of said pairs of shoes being in sliding contact with each other, the shoes of each pair of shoes receiving therebetween a portion of a rope and sliding movement of said pairs of shoes in opposite directions within said shell causing said rope portions to be gripped between the shoes of said pairs of shoes.

2,458,305
TUBULAR ARTICLE COMPRISING RUBBER-LIKE MATERIAL
Richard D. Sanders, Phoenixville, Pa.
Application April 26, 1947, Serial No. 744,056
7 Claims. (Cl. 128—348)

1. A device of the kind described comprising a tubular portion and a tapering scoop-shaped tip attached to one end of the tubular portion, said tip narrowing toward its terminus to an extended externally rounded nose member having a terminal pocket therein; the side walls of said scoop-shaped tip being relatively thin, pliant, normally self-sustaining but collapsible and having embedded therein an openly arranged pattern of overlapping strands, at least one of which extends lengthwise of the tip; said tip having an opening into the tubular portion through a bore which is co-extensive with the bore of the tube and a lateral opening whose margin lays in an oblique plane which cuts across the axis of the tubular portion, thereby

providing an aperture directed downwardly and away from the tubular portion; said tubular portion comprising a skeleton formed of a strand of thermoplastic material embedded in rubber-like material, and being somewhat flexible, relatively difficultly collapsible, relatively rapidly and forcibly re-formable, capable of readily bending around corners without collapsing and

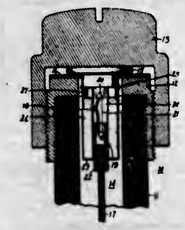
having higher tensile and bursting strength than a wall of like proportions composed of the rubber-like material, at least one of said skeleton members connecting with both ends of said tube through the wall; at least one of the longitudinally extending strands in said tip being joined with the skeleton of said tubular portion.

2,458,306
GAME
Joseph Schneider, New York, N. Y.
Application January 4, 1945, Serial No. 571,259
3 Claims. (Cl. 46—155)

1. Game apparatus comprising a hemisphere, the equatorial plane of which forms a normally horizontal platform, a stem rising vertically from the center thereof, a cup on the stem, a structure of separate blocks built on the platform and a ball loosely held in the cup.

2,458,307
ELECTRIC CIRCUIT INTERRUPTER
Sidney R. Smith, Jr., Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application April 23, 1943, Serial No. 484,232
5 Claims. (Cl. 200—120)

1. A fuse link comprising a buttonhead terminal, a second terminal including a flexible cable portion, a fusible element electrically interconnecting said terminals, and adapted upon rupture thereof to produce an arc between said terminals, means for rapidly extinguishing said arc comprising an hermetically sealed thin walled metal container supported as an integral part of said fuse link and having an arc passageway therethrough positioned so that said arc will ex-



tend into said passageway, and a vaporizable liquid in said container, said container electrically connected to one of said terminals and said passageway normally being free of said liquid, said arc upon operation of said fuse link burning through the walls of said container to vaporize said liquid and cause rapid extinguishment of said arc.

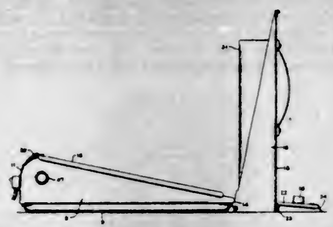
2,458,308
COLOSTOMY RECEPTOR
Roy W. Smoot, Springfield, Ohio
Application September 4, 1946, Serial No. 694,701
1 Claim. (Cl. 128—283)

A colostomy receptor, comprising a rigid one piece tubular element formed with an elongated stem providing a handle portion and a means of attachment of a flexible conduit thereto, and further formed with a bulbous head of substantially truncated spherical shape, said stem extending from said head at an inclination to the open face of the head and coincident with the lower margin of said open face.

2,458,309
SUCTION CLEANER
Eugene L. Snyder, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application June 26, 1944, Serial No. 542,107
15 Claims. (Cl. 183—52)

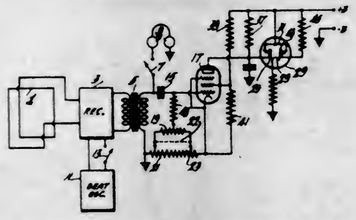
10. In a suction cleaner, a casing adapted to rest on a platform surface, a filter for removing dirt from a dirt-laden air stream and having a filter cleaning dirt-emptying mouth, means supporting said filter on said casing for movements to dirt collecting and filter cleaning positions, said means movably connecting said

filter on said casing at a point offset with respect to said dirt-emptying mouth, whereby as a result of said offset connection movement of said



filter to said filter cleaning position disposes said dirt-emptying mouth into substantially the plane of said supporting surface.

2,458,310
DIRECTION FINDER
Carl G. Sontheimer, Stamford, Conn., assignor to Radio Corporation of America, a corporation of Delaware
Application September 13, 1945, Serial No. 616,064
3 Claims. (Cl. 343—113)

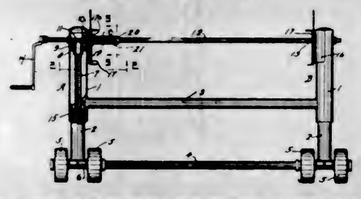


1. In combination with directional radio receiver means, a local oscillator connected to said receiver means to cause said receiver to produce a beat frequency output voltage in response to signal received by said receiver means, an audio frequency detector, means for applying said beat frequency voltage to said detector, electron ray indicator means including a fluorescent electrode, means providing a beam of electrons impinging on said electrode to produce a luminous image thereon, and an electrode for controlling the size of said image connected to the output circuit of said detector.

2,458,311
SELF-UNLOCKING LOCKUP RELAY
Henry N. Staats, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application February 2, 1945, Serial No. 575,910
5 Claims. (Cl. 175—335)

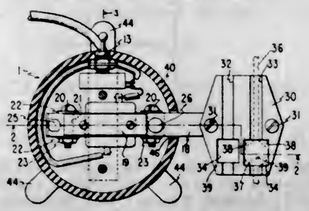
1. In an electromagnetic relay, a heel piece, an armature with an arm, a spring, the end of said arm being formed into the shape of an ellipse with one portion cut away to form a shelf or shoulder for the edge of said spring, said armature having three positions, means for energizing said relay to cause said armature to move from said first or normal position to the said second position in which the shoulder of said arm rests on said spring edge, means for energizing the said relay to a greater degree to cause said armature to move from the said second to the said third position to clear said spring edge, whereby de-energizing said relay will permit said armature to return to its said first position.

2,458,312
SUPPORT FOR TRAILER VEHICLES
James Stephen, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a corporation
Application March 6, 1947, Serial No. 732,835
5 Claims. (Cl. 254—86)



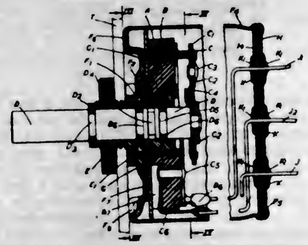
1. A vertical support for trailers, comprising, in combination, a pair of vertical supporting legs attachable to a trailer frame, each leg comprising an upper member and a lower member in telescopic relation, a connecting bar between the legs, a jacking screw on the upper member of each leg having screw connection with the associated lower member to move the latter relatively up and down, a driving shaft common to both legs and having driving connection with the jacking screws, and means comprising a screw section on the driving shaft, and an abutment member operable by the said screw section for engaging the frame structure adjacent one of the upper leg members to resist turning of the driving shaft.

2,458,313
AGITATING DEVICE
Daniel S. Stevens, Chicago, Ill.
Application April 28, 1947, Serial No. 744,369
6 Claims. (Cl. 259—75)



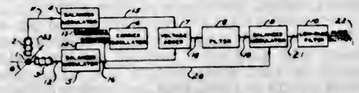
1. A clinical agitator comprising a flat leaf spring rigidly mounted at one end and adapted to be set in vibration, and the opposite end being free, and a pipette holder on and secured to the opposite end to be vibrated thereby, said holder comprising a mass of rubber having a pipette-receiving slot extending across the top thereof, said slot being open at the top and of a depth substantially greater than its width and said slot having a portion of a greater width than the rest of the slot for receiving the bulbous portion of a pipette, the slot being of sufficient depth and width so that a pipette inserted in the slot is free to bounce and turn therein during agitation thereof by vibration of the leaf spring.

2,458,314
VARIABLE ELECTRICAL RESISTOR
Eugene Leopold Straub, Wembley Hill, and Arthur Edward Charles Bennett, Kenton, England, assignors to Dubilier Condenser Company (1925) Limited, London England, a company of Great Britain
Application January 11, 1946, Serial No. 640,490
In Great Britain January 18, 1945
3 Claims. (Cl. 201—55)



1. A variable electrical resistor comprising a cup-like aluminium casing open at one end and having an apertured end wall at the other end, an axially bored and externally screwthreaded bearing boss extending through said aperture, an insulating body secured to the boss within the casing, a rotary adjusting spindle within the bearing boss and extending through the insulating body into the casing, an annular groove, for containing sealing oil or grease, formed in the part of the spindle lying within the bearing, two supplementary annular grooves formed in the spindle on opposite sides of said oil groove respectively, rings of resilient material located in the supplementary grooves and compressed between the spindle and the bearing bore, a clamping nut engaging the external screwthread of the bearing boss outside the casing, a strip-like resistor element carried by the insulating body, a moving contact carried by the spindle and bearing resiliently against the resistor element, a resilient washer arranged in a recess around the inside of the aperture through the end wall of the casing, an insulating disc interposed between the insulating body and said end wall of the casing, the rubber washer being compressed between the base of said recess and the insulating washer when the clamping nut is tightened to draw the insulating body towards the said casing end wall, a resilient sealing disc closing the said open end of the casing, a rigid backing disc of insulating material arranged against the inner face of said sealing disc, the rim at the open end of the casing being spun into a bead housing the edge portions of the sealing and backing discs with the edge of said rim pressed into the outer surface of the sealing disc without perforating the disc, thereby hermetically sealing the joint between the casing and the discs, three tubular rivets extending through apertures in the discs, and three electric leads extending respectively into the rivets and electrically connected to the moving contact operated by the spindle and to the two ends of the resistor element, the outermost flanges of the rivets being pressed into the outer surface of the sealing disc whilst the leads are soldered in the rivets whose bores are thus hermetically sealed.

2,458,315
METHOD AND APPARATUS FOR REPRODUCTION OF ANGULAR MAGNETIC RECORDING
David E. Sunstein, Elkins Park, Pa., assignor to Philco Corporation, a corporation of Pennsylvania
Application May 3, 1945, Serial No. 591,675
18 Claims. (Cl. 179—100.2)



12. The method of reproducing signals from a magnetic wire recording which comprises electromagnetically producing signals which vary in accordance with the recording and as a function of the angle of transverse recording axis and thereafter electrically eliminating from the reproduced signal those signals which are a function of the transverse angle of recording.

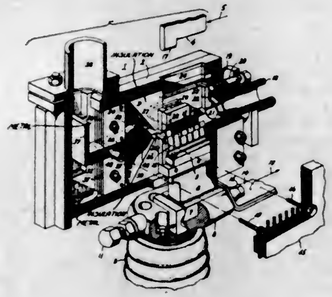
16. In a magnetic wire reproducing system in which transverse recordings are made on magnetic wire, a plurality of pick-up coils angularly disposed about said wire, each of said coils having an output circuit and each of said coils being energized by the component of the signal recording on the wire determined by the angular position of the axis of the coil with respect to the direction of the flux of the recording, a source of oscillations for each of said coils, the oscillations for one of said coils being phase displaced with respect to the oscillations for the other of said coils in amounts depending on the physical angular displacement of said coils with respect to each other, means including the output circuits of each of said coils for modulating said oscillations in accordance with the signals flowing in the output circuits of said coils, and means for combining said modulated signals and producing a resultant audio signal in accordance with the recordings and independent of the flux angle of said recordings with respect to the axis of any reproducing coil.

2,458,316
TAXI HAILING FLAG
Theodore Swertlow, Bronx, N. Y.
Application June 22, 1945, Serial No. 600,853
5 Claims. (Cl. 287—58)

1. In a taxi hailing flag, an adjacent pair of telescopically engaged non-rotative tubular sections adapted to be extended and collapsed and the inner end of the inner section having an outwardly directed flange and the adjacent end

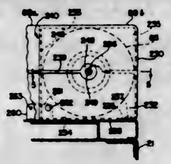
of the outer section having an inwardly directed flange extending over said outwardly directed flange and continuing into an inwardly directed short tubular portion spaced outwards from said inner section, said inner section including an aperture, a spring urged pin engaging through said short tubular portion and extending across the space to said inner section and engaging in said aperture of said inner section for holding said sections extended, a cam-like leaf spring mounted within the inner section and engaging the inner end of said pin for moving said pin outwards when moved outwards for releasing said sections, and another telescopic section slidably engaging in said inner section and when moved inwards acting to move said leaf spring outwards.

2,458,317
ARC EXTINGUISHING MEANS FOR ELECTRIC CIRCUIT BREAKERS
Dell K. Tower, Millbrook, N. Y., and Benjamin S. Beall, III, Upper Darby, Pa., assignors to General Electric Company, a corporation of New York
Application August 24, 1946, Serial No. 692,886
5 Claims. (Cl. 200—148)



1. An electric circuit breaker of the fluid blast type comprising an arc chute, a pair of relatively separable contacts arranged to draw an arc adjacent the entrance of said arc chute, means for directing a blast of fluid under pressure transversely across the arc gap formed between the contacts upon separation thereof, the structure of said arc chute defining a pair of confining walls proceeding divergently from said gap, cooling means disposed in said chute downstream from said gap, an insulating barrier extending transversely across the interior of said chute having its leading edge closely adjacent to said gap, the thickness of said barrier progressively increasing from its leading edge to a region of maximum thickness intermediate said gap and said cooling means then decreasing therefrom toward said cooling means whereby the surfaces of said barrier cooperate with the surfaces of said divergent walls to define a pair of narrow arcing passages each of which flares widely toward said cooling means, an electrode embedded in said barrier arranged with its tip projecting through the surface of said barrier in said region of maximum thickness for providing a breakdown spark gap in said arc chute, a resistance associated with said circuit breaker, and means for electrically connecting one terminal of said resistance to one of said contacts and the other terminal of said resistance to said electrode.

2,458,318
WIRE DISPENSING CONTAINER
Miles H. Tuft, Huntington Park, Calif., assignor to Deere Manufacturing Co., a corporation of Iowa
Original application May 19, 1945, Serial No. 594,684. Divided and this application October 5, 1946, Serial No. 701,575
6 Claims. (Cl. 242—146)



4. A dispensing container comprising a box having one end open to receive a coil of wire or the like and including a pair of connected side walls spaced on opposite sides of said open side, each of said side walls having an aperture therein through which wire can be drawn and a slot extending outwardly from said aperture to said open end, a complementary container member including a side wall portion adapted to slide into said box along one of said side walls and an end wall adapted to close said open end, said side wall of the complementary member having an aperture disposed normally in register with the aperture in said one side wall and a slot extending therefrom to an edge of the wall, and a bushing in said aperture to form a smooth bearing through which wire can be drawn, said bushing being provided with a slot curving spirally from the center of the bushing and communicating with said slots.

2,458,319
SOLDERING IRON
Cyril L. Uhing, Hartington, Nebr.
Application December 11, 1945, Serial No. 634,209
2 Claims. (Cl. 219—27)

1. In a solder dispensing electric soldering iron, the combination of a hollow handle which contains a plurality of particles of solder with flux melted into said particles, a tube axially extended through said handle, with a perforated disk of larger diameter than said handle being rotatable on that portion of said tube which projects beyond said handle, and a stem through which are extended a longitudinal wire bore and a longitudinal solder channel and which is secured to said projecting tube portion beyond said disk and is provided at its lower end portion with a soldering tip and a heating element; electrical conductors leading from said heating element through said wire bore through said tube; and means for projecting one solder particle at a time from one of the disk perforations through said solder channels; said handle having a passage adjacent said disk for allowing said solder particles to pass from said handle into said disk perforations, and the diameter of the orifice of the channel in said tip being smaller than the diameter of the remaining channel portions; all substantially as set forth.

2,458,320
FLOW TUBE
Henry M. Unschuld, Chicago, Ill.
Application December 1, 1944, Serial No. 566,141
4 Claims. (Cl. 204—312)

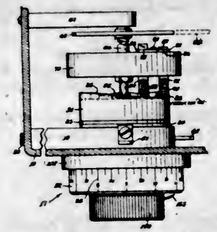
1. A flow tube for use in treating fluid with electrostatic charges comprising a generally tubular glass member, a partition dividing said tubular member into two axially spaced chambers, connecting means on the ends of said tubular glass member for connecting the one end to a fluid supply line and the other end to a discharge line, a pair of spaced electrodes in the one of said chambers which receives the fluid to be treated, and a temperature controlling means in the other of said chambers, said dividing partition having walls forming a hollow truncated cone-shaped extension for said other chamber with the small end thereof extending within said fluid receiving chamber to a point between said electrodes and with the walls thereof spaced from the walls of said receiving chamber whereby the flow of the fluid in the receiving chamber is retarded and subjected to the electrostatic charges for a longer period of time.

2,458,321
FLOW TUBE
Henry M. Unschuld, Chicago, Ill.
Application March 29, 1946, Serial No. 658,362
5 Claims. (Cl. 204—312)

1. In an elongated flow tube, axially aligned chambers, a pair of spaced axially aligned electrodes in the first one of said chambers, temperature controlling means in the second one of said chambers, converging partition walls separating said chambers, said partition walls extending from said second chamber into said first chamber to a point between said electrodes and forming a restricted passageway between said chambers, means for connecting said tube to a fluid supply line to supply fluid to the said first chamber, and means for connecting said tube to a fluid discharge line to receive fluid from said second chamber, said connecting means including bellows type shock absorbing members.

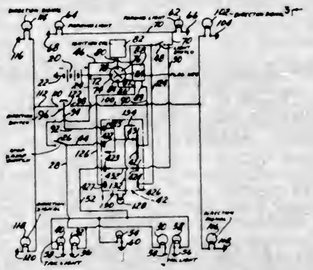
2,458,322
TIME SET CONTROL
Franklin R. Van Sickle, Beech Grove, Ind.
Application June 24, 1946, Serial No. 678,966
20 Claims. (Cl. 200—36)

2. A time-set control switch mechanism comprising a first circular trackway and a second trackway, a portion of a continuous surface of each of said trackways comprising electrically-conductive material and a portion of such surface of each trackway comprising electrically non-conductive material, said trackways being mounted for independent adjustment about a common axis, a shaft journalled for rotation upon said common axis, means for driving said shaft at constant speed, a block carried on said shaft, said block being formed with a pair of openings therethrough, said openings registering, respectively, with said trackway surfaces, a plunger reciprocably mounted in each of said openings, abutment means removably secured to said block and bridging said plungers, spring means for each of said plungers, confined between said



respective plungers and said abutment means and resiliently urging said plungers into contact with said trackway surfaces, respectively, said plungers and said abutment means establishing, at times, an electrically-conductive path between said trackway surfaces, and separate stationary terminal members constantly in electrical contact with the conductive portions of said trackway surfaces, respectively.

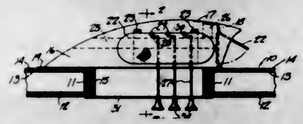
2,458,323
ELECTRICAL WARNING LIGHT SYSTEM FOR MOTOR VEHICLES AND A SWITCH FOR USE IN SUCH A SYSTEM
John Volker, Brooklyn, N. Y.
Application June 28, 1946, Serial No. 679,980
7 Claims. (Cl. 177—337)



1. An electrical warning light system for motor vehicles comprising: a source of electrical current, a stop lamp circuit connected with said source of electrical current, said stop lamp circuit including a stop lamp switch and at least one stop lamp, a tail light circuit connected with said source of electrical current, said tail light circuit including a light switch and a plurality of tail lights, a current intermitter circuit including a current intermitter, said current intermitter circuit being connected with said stop lamp circuit in shunt to said stop lamp switch, and a warning light switch having at least four terminals and two mechanically connected movable bridging contact members arranged for cooperation with said terminals, two terminals of said warning light switch being arranged in said current intermitter circuit and two other terminals of said

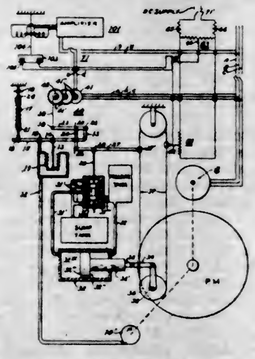
warning light switch being arranged in said tail light circuit, said bridging contact members of said warning light switch interrupting said current intermitter circuit and closing said tail light circuit in the "off"-position of the warning light switch, and said bridging contact members interrupting said tail light circuit and connecting said current intermitter with the stop lamp and the tail lights in the "on"-position of the warning light switch.

2,458,324
VENTILATOR
Maurice C. Volkmann and Clarence A. Johnson, Elkhart, Ind., said Johnson assignor to said Volkmann
Application January 1, 1945, Serial No. 570,960
2 Claims. (Cl. 98—20)



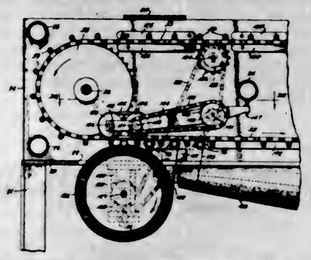
1. A ventilator adapted to be mounted on the roof of a vehicle at a ventilating opening, comprising a hood member having upright side and rear walls and a forwardly inclined member forming a top and front, said upright walls each having an opening, a closure for each wall opening, pivoted at its upper edge above said opening, a rigid bracket secured to said top and positioned within said hood, said bracket including an elongated member having a pair of vertically spaced substantially horizontal rigid web portions, each having a plurality of apertures substantially vertically aligned with apertures in the other web portion, and a plurality of closure operators each including an operating member journaled in one set of aligned web apertures and extending downwardly through said roof opening.

2,458,325
PRIME MOVER DYNAMO PLANT WITH SPEED GOVERNOR
Henry E. Warren, Ashland, Mass.
Application August 20, 1946, Serial No. 691,742
15 Claims. (Cl. 290—4)



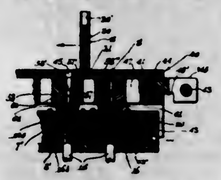
1. In a power system having a plurality of prime movers driving a multiplicity of alternating current generator units connected by tie lines for synchronous operation, a governor for controlling the speed of an alternating current generator unit to maintain the output frequency thereof approximately constant, in combination with a standard frequency generator, a Selsyn actuated by the alternating current of the generator being governed and the alternating current of said standard frequency generator, means connecting said Selsyn to said governor for biasing the latter to eliminate variances between the frequency of the current of the generator being governed and the current of said standard frequency generator, and switch means for disconnecting said Selsyn from the standard frequency generator and connecting the same to the system to be fed by the generator being governed.

2,458,326
APPARATUS FOR REMOVING RESIDUAL THREAD FROM BOBBINS
John J. Wilson, Watertown, Mass., assignor to Dodcam Corporation, West Newton, Mass., a corporation of Massachusetts
Application March 12, 1947, Serial No. 734,284
30 Claims. (Cl. 28—19)



3. Apparatus for removing the residual thread from bobbins which comprises a setaceous member, means for supporting the thread in contact with said setaceous member and effecting a relative tangential movement between them, and means acting independently of said member for rotating the bobbin while in contact with said setaceous member and in the same direction that the thread is wound on the bobbin, whereby the thread-end is picked away from the bobbin.

2,458,327
PRODUCTION OF MOLDED ARTICLES
Robert O. Wood, Upper Montclair, N. J.
Application September 20, 1943, Serial No. 503,119
8 Claims. (Cl. 18—1)



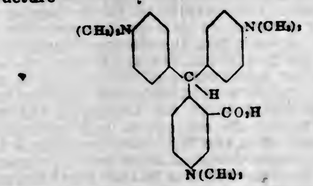
2. The method of producing molded plastic articles having metallic inserts joined thereto in the molds, which consists; providing a molding press having a multiplicity of molding stations in the form of cavities, each provided with a respective recess for retaining a respective one of said inserts; providing a portable device having a frame registerable with said molding press and in which frame are provided a multiplicity of

controllable recesses corresponding in location with the recesses of the said cavities and adapted to be controlled in a manner to retain or to release said inserts; providing a tubular device for storing said inserts in file-formation whereby the same may be distributed into the recesses of said frame; providing guide means on the surface of said frame; then moving the outlet end of said magazine along said guide means quickly to distribute the inserts into the recesses of said frame, registering said frame with the plate of said press, releasing the inserts, removing the frame, and then placing the molding material in the cavities and closing the press under heat and pressure.

3. A portable apparatus for use in loading a molding machine with lugs of the character herein described, comprising a main plate having portions thereof formed to register with the multi-cavity bed-plate of said machine; said main plate having rows of apertures made into its face and extending through its thickness for admitting each a lug into said apparatus; a pair of members associated with each row of said apertures and located beneath said plate; one of said members being held secured to the said plate and the other arranged for movement with respect to the plate; said members having each a series of indentations cooperative with the indentations of the other to form rows of adjustable pockets correspondingly in alignment below the apertures of each of said rows; means connecting all of the movable members associated with the rows, and a common means, pivoted on the said main plate and connected with said first means for simultaneously controlling the adjustment of the said pockets whereby the lugs admitted through said apertures will be effectively held into or released from said apparatus.

2,458,328
2(4,4'BIS DIMETHYLAMINOBENZOHYDRYL)5 DIMETHYLAMINOBENZOIC ACID
Clyde S. Adams, Yellow Springs, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
No Drawing. Application June 16, 1945, Serial No. 599,968
1 Claim. (Cl. 260—391)

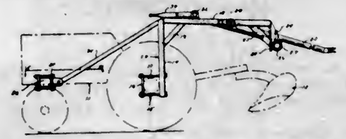
The compound 2(4,4'bis dimethylaminobenzohydryl) 5-dimethylaminobenzoic acid, having the structure



2,458,329
CLAMP FOR APPLYING AND REMOVING JAR COVERS
Edward N. Archer, Inglewood, Calif.
Application March 24, 1945, Serial No. 584,676
1 Claim. (Cl. 81—3.30)

A gripping and supporting clamp for a jar cover of the type having a circumferential skirt, said clamp comprising an arm having a substantially semi-circular flexible jaw portion, a shank extending radially outward of one end of the jaw adapted for connection with a support for holding said arm in fixed position, an ear projecting radially from the opposite end of the jaw, a complementary substantially semi-circular jaw having one end hingedly connected to said shank and an ear projecting radially from its opposite end, said fixed and hinged jaws cooperatively embracing the circumferential skirt of the jar cover, said fixed jaw having teeth extending transversely thereof on its inner side for gripping the jar cover and having a plurality of lugs directed inwardly of its bottom edge so as to engage the bottom edge of the cover skirt, and means engaging said radial ears for releasably clamping the jaws about covers of varying diameter.

2,458,330
SWINGING HITCH
Harold George Bauer, Eden, Idaho
Application June 5, 1946, Serial No. 674,599
5 Claims. (Cl. 280—33.44)

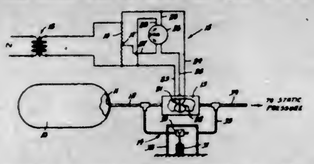


1. An attachment of the kind described, comprising a pair of vertical frame members, clamps for securing said vertical members on a tractor, forwardly extending supporting members fixed to said vertical members, means securing said supporting members to the tractor, horizontal rearwardly extending members fixed to said vertical members, a transverse member fixed between said horizontal members, a lock bar rotatably supporting from said horizontal members, means rotatably supported said lock bar below the rear end of said horizontal members, a lever fixed to said lock bar, a control handle, a link between said lever and said handle whereby pivoting movement of said handle effects rotation of said lock bar, said link being fastened to the end of said lever and intermediate the length of said handle, a drawbar pivotally secured to said transverse member and engageable on said pivot member, and a lock member fixed to said lock bar for holding said drawbar on one side thereof, said lock member comprising a plate having an outer edge perpendicular to said lock bar, and spaced inwardly from said bar supporting means.

2,458,331
FLOWMETER
George L. Borell, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 25, 1945, Serial No. 590,227
4 Claims. (Cl. 73—204)

4. In a device of the class described, an enclosed fluid reservoir, conduit means for connecting said reservoir to a source of static pressure, said conduit means including a hot wire

flow responsive means, additional conduit means connected to said first named conduit means and by-passing said flow responsive means, valve means for controlling flow through said addi-



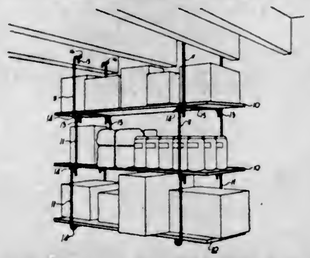
tional conduit means, and pressure responsive means for actuating said valve means, said pressure responsive means being connected and arranged for responding to said static pressure.

2,458,332

SHELF HANGER

Francis Boschan, Philadelphia, Pa.

Application June 3, 1947, Serial No. 752,136
2 Claims. (Cl. 248—249)



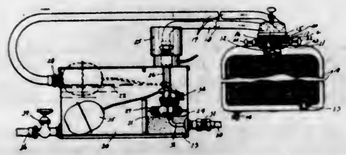
1. A shelf hanger unit of a single piece of wire comprising spaced vertical side arms disposed in the same plane, a supporting hook at the upper end of each of the side arms and disposed in the same plane as the side arms, loops at the lower ends of the side arms adapted for engagement by supporting hooks of a hanger unit therebelow, said loops being disposed in planes normal to the plane in which the side arms are disposed, and a horizontally disposed shelf supporting cross arm connecting said loops, said cross arm being spaced from said side arms by said loops, said loops extending below said cross arms thereby providing for insertion and removal of the hooks of a hanger unit therebelow without removal of the shelf supported on said cross arm.

2,458,333

METHOD AND APPARATUS FOR CLEANSING WATER-COOLING SYSTEMS AND THE LIKE

Francis E. Brady, Jr., Muncie, Ind.

Application August 16, 1946, Serial No. 691,078
6 Claims. (Cl. 134—24)



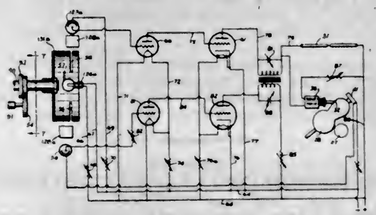
1. Apparatus for cleaning and flushing cooling systems and the like having an opening therein, comprising a fitting having inlet and outlet conduits adjacent each other, means for sealing said fitting over said opening with said conduits communicating with the interior of said system, a water containing tank having a compartment in liquid communication therewith for receiving a cleaning compound, a fresh water inlet connection with said tank, a float controlled valve for controlling said fresh water inlet for preventing intake of fresh water when the water in said tank is at a predetermined level, a motor driven mixing pump in said compartment in fluid connection with said inlet conduit for forcing a cleaning solution therethrough, a fluid connection for delivering fluid from said outlet conduit back to said tank for continued circulation of the cleaning fluid through said system and tank, and a drain valve connected with the bottom of said tank for draining the circulating cleaning solution therefrom and permitting the water level in said tank to drop causing said float controlled valve to admit fresh water thereto for forced circulation through said system to effect the flushing of the cleaning fluid therefrom.

2,458,334

LIGHT CONTROL

John Broslus, Jr., Seattle, Wash.

Application September 10, 1946, Serial No. 695,969
10 Claims. (Cl. 315—155)



1. A stroboscopic light control for a motion picture projector comprising a drive shaft rotatable at a constant speed and a light source including a transformer, the light source being connected to one side of the primary winding of said transformer, a thyratron tube connected to the other side of said primary winding for causing an electron flow in said primary winding, a second thyratron tube connected to one side of the secondary winding of said transformer for effecting an electron flow therein in a direction opposite to the flow in the primary thereof, at least one amplifier tube connected to the grid of said thyratron tubes, a light sensitive cell for each of said amplifier tubes for activating the grid thereof whereby the current in said light source is dependent upon the light sensitive cells, a second light source for said light cell, and means actuated in timed relation to said shaft for controlling the light on said light cells whereby the first light source is established and extinguished in timed relation to said shaft.

2,458,335

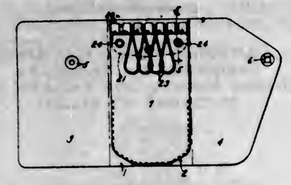
ATTACHING PANEL FOR KEY CASES

Douglas J. Broughton, Springfield, Mass., assignor to Buxton, Incorporated, Springfield, Mass., a corporation of Massachusetts

Application November 8, 1946, Serial No. 708,647
2 Claims. (Cl. 150—40)

1. In a key case, a panel by which a key holding mechanism, having a plate member provided with

key connecting members along its upper edge, is attached to the case which comprises, a piece of flexible material having a front member, flap members extending from the sides thereof and folded rearwardly onto the rear face of said front member, the lower portions of said flap members being secured to the adjacent face of the front member, the upper portions being free of attachment to the front member to provide a pocket in which the plate holding member of the key holding mechanism is positioned with the key



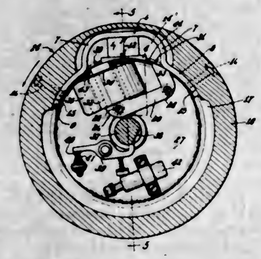
connecting members exposed above and along the upper edge of the front member, a bottom flap extending from the lower edge of the front member and folded rearwardly upon the lower portions of said flap members, the side edges of said bottom flap being secured to the side edges of the front member to form an upwardly opening pocket on the rear face of the panel, means securing the key holding mechanism in the first named pocket and means connecting the upper edges of said side flap members to the keycase.

2,458,336

FIELD MAGNET UNIT FOR FLYWHEEL MAGNETOS

Allen L. Brownlee, West Springfield, Mass., assignor to Wico Electric Company, West Springfield, Mass., a corporation of Massachusetts

Application July 16, 1947, Serial No. 761,283
3 Claims. (Cl. 171—209)



1. A three-pole magnetic rotor for a flywheel magneto, comprising in combination, a flywheel rotatable about an axis, two pole shoes of magnetic material having curved polar surfaces of equal radius coaxial with the flywheel and angularly spaced about said axis, a single pole shoe of magnetic material located intermediate the first-named pole shoes and having a curved polar surface of said radius coaxial with the flywheel and having its ends angularly spaced from the adjacent ends of the first-named pole shoes, a single permanent magnet having a straight polar axis located radially of the flywheel and having one polar end fixed to said single pole shoe, and magnetic connections between the other polar end of said magnet and each of the first-named pole shoes, whereby the latter are of like polarity and of a polarity opposite to said intermediate shoe, said shoes being successively different in polarity in the direction of revolution of the rotor.

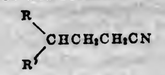
2,458,337

METHOD OF PREPARING GAMMA-DIALKYL BUTYRONITRILES

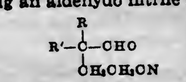
Herman A. Bruson, Rydal, and Thomas W. Riener, Philadelphia, Pa., assignors, by mesne assignments, to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application January 28, 1948, Serial No. 4,924
5 Claims. (Cl. 260—465.1)

1. A method for preparing gamma-dialkyl butyronitriles of the formula



wherein R and R' are alkyl groups, which comprises treating an aldehydo nitrile of the formula



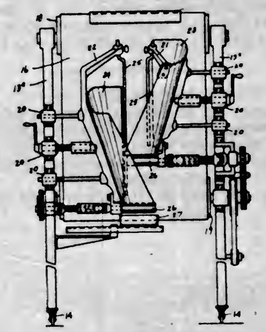
with an organic peroxide as a catalyst and decarbonylating said aldehydo nitrile.

2,458,338

DOUGH FOLDING MACHINE

John Buechek, Kokomo, Ind., assignor, by mesne assignments, of one-half to American Bakery Machinery Company, St. Louis, Mo., a corporation

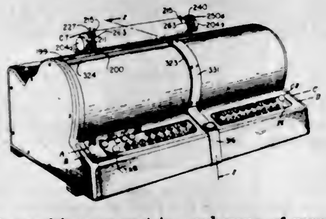
Application September 25, 1943, Serial No. 503,739
4 Claims. (Cl. 107—9)



1. Apparatus for continuously folding a continuously advancing sheet of dough including an endless belt having a downwardly directed run and a pair of confronting elongated U-shaped turning members adjustable towards and away from each other and vertically disposed forwardly of the belt run, with their belt adjacent faces lying substantially coplanar, said belt adjacent faces being generally triangular in projected outline and with their respective base lines disposed uppermost, the opposite faces of said U-shaped members being spaced forwardly from said belt adjacent faces and having a generally triangular projected outline with their vertices uppermost, so as to lie in a reversed relation with

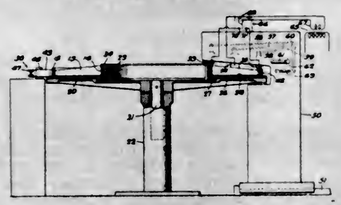
respect to the said adjacent belt faces, the said U-shaped turning members being vertically offset relative to each other in an amount less than the length of either member, elongated means rigid with each turning member and disposed immediately forward of the belt adjacent face for dough sheet travel therebetween and sheet fold location determination, and endless pressure means for each turning member having a portion disposed immediately adjacent the lowermost end of the member and movable with the same.

2,458,339
MACHINE ADAPTED FOR TYPING CHINESE IDEOGRAPHS
Eugen Buhler and Christopher A. Berry, Poughkeepsie, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application May 3, 1946, Serial No. 666,980
29 Claims. (Cl. 197—1)



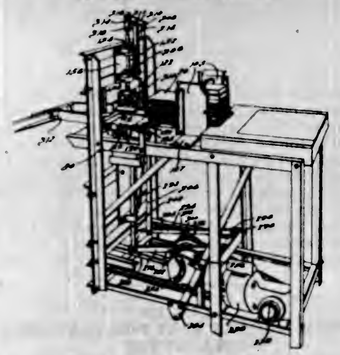
5. A machine comprising columns of recording elements, a device coacting therewith to effect recording on a sheet, drive means for effecting transverse, relative shift between the columns and said device, an emitter operable correspondingly with the transverse shift, column selecting means, and circuits controlled by the emitter and the column selecting means for so controlling the extent of said transverse, relative shift as to present the desired column to the recording device.

2,458,340
METHOD OF ELECTRICALLY WELDING COMPOSITE METAL REEL HEADS
Arthur A. Bureau, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application May 20, 1944, Serial No. 536,520
3 Claims. (Cl. 219—10)



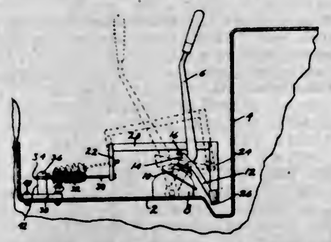
1. A method of forming a reel head comprising assembling inner and outer annular metal members in abutting relation to an intermediate annular metal member, engaging in radial alignment an arcuate portion of substantial length of each of the annular members with individual conforming electrodes, completing circuits to the electrodes to pass a welding current through the intermediate member and alternately the inner and outer members to weld alternately arcuate sections of substantial length of the inner and outer annular members to the intermediate annular member, and thereafter engaging successive portions of the annular members with the conforming electrodes and completing circuits to the electrodes to pass a welding current through the intermediate member and alternately the inner and outer members to weld alternately successive portions of the inner and outer members to the intermediate member.

2,458,341
CARTON FOLDING MACHINE
Andrew R. Cake, Norfolk, Va.
Application August 3, 1944, Serial No. 547,821
19 Claims. (Cl. 93—49)



1. In a machine for folding carton blanks having a bottom, side walls, and end walls and in which said end walls are provided with extensions adapted to fold over corner gussets, means for supporting said blank, means to engage and turn the side and end walls perpendicular to the plane of said bottom, means to engage the corner gussets and cause them to fold inwardly as said walls move, means to fold said extensions inwardly and downwardly over said corner gussets, and movable means engageable with said gussets during the folding of said extensions to hold said gussets in their inwardly folded position.

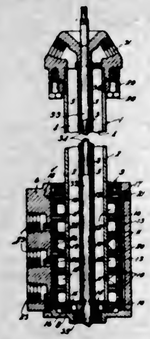
2,458,342
CONTROL LEVER BOOSTER
Harold G. Carbuhn, Spokane, Wash.
Application June 21, 1947, Serial No. 756,117
1 Claim. (Cl. 74—97)



A power booster for a control lever having a pivot point and comprising a U-frame having a short leg and a long leg bent to form a yoke and

a ball bearing in the yoke, an angular arm secured to the lever and rearwardly, spherically recessed to receive the bearing of the long leg, and spring means tensioning the short leg so that the bearing of the arm and the long leg will be above the pivot point or below the pivot point to urge the lever to the manually initiated position.

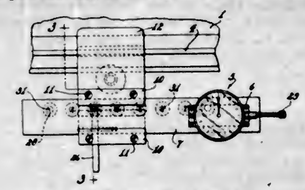
2,458,343
ROTARY SEAL
Emile J. Carleton, Holyoke, Mass., assignor to Hydraulic Engineering Co. Inc., Holyoke, Mass., a corporation of Massachusetts
Application June 18, 1945, Serial No. 600,037
5 Claims. (Cl. 285—97.3)



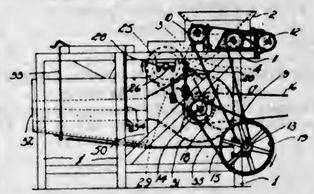
1. A rotary seal device comprising a shaft having a fluid conduit extending longitudinally thereof, a casing having a bore within which one end of the shaft is rotatably mounted, spaced solid, annular bearing members secured to the wall of the bore, a relatively thin bearing ring secured to the wall of the bore between said members, an annular channeled member secured to the shaft with its channel opening toward the shaft and positioned to rotate between said bearing members, the radially inner face of the bearing member and the radially outer face of the channel member being in bearing contact with the shaft and said bearing ring respectively, an opening through the casing in substantial radial alignment with the channel member, opening through the bearing rings, the adjacent wall of the channel member and the shaft to establish constant communication between the casing opening and the conduit in the shaft in all positions of rotation of the shaft with respect to the casing, a drain passage formed in the casing connecting the outer end faces of the bearing members and an opening through the casing from said drain.

2,458,344
PRECISION DIAL INDICATOR MOUNTING FOR MACHINE TOOLS
Richard S. Carroll, Longmeadow, Mass.
Application May 22, 1948, Serial No. 28,686
2 Claims. (Cl. 33—125)

2. A dial indicator and mounting for use on a cutting machine having a traveling carriage which comprises, a supporting member, a bar slidably mounted in said supporting member, a dial indicator fixed to one end of the bar with its actuating stem extending in the direction of the path of movement of the bar relative to the member, a plurality of recesses formed in the bar, frustro-conical seats mounted in the recesses, the centers of said seats being spaced from each other predetermined distances representing major units of measurement for the cutting operation in relation to minor units of measurement indicated on the dial of the stem actuated indicator, a pin having a frustro-conical head reciprocably mounted in the supporting member, a spring engaging the end of the pin opposite the head and urging said head into engagement in a selected frustro-conical seat in the bar, manually operated means for withdrawing said pin from engagement with the seats, and means to releasably clamp said supporting member to the bed of the cutting machine.



2,458,345
APPARATUS FOR THRASHING PODDED OR SHELL INCLOSED FIELD CROPS
John Andries Cass, Mooifontein, Transvaal, Union of South Africa
Application December 3, 1945, Serial No. 632,450
In the Union of South Africa July 16, 1945
8 Claims. (Cl. 130—30)

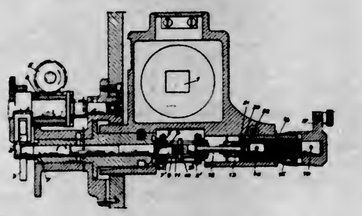


1. In a machine for thrashing podded or shell-enclosed field crops, a rubbing drum, two coacting converging and downwardly sloping feeding belt conveyors, terminal rollers disposed close to one another over which said conveyors pass and closely adjacent to and parallel with said rubbing drum, said rubbing drum being arranged to be rotated with its periphery so close to the feed opening between said rollers, through which opening the crop is adapted to be slowly fed by the belts of said feeding conveyors, that as the pods or shells are projected towards the periphery of the rubbing drum they are, while being held in said feed opening, broken open and split by what is in effect a rubbing or abrading action which takes place between the said drum periphery and one of said terminal rollers, which action thereby releases the kernels and sieving and winnowing means provided at a lower level onto which said kernels drop.

2,458,346
PICTURE CENTERING MECHANISM FOR MOTION-PICTURE PROJECTION APPARATUS
André Marie Bernard Charlin, Montrouge, France
Application June 6, 1947, Serial No. 752,992
In France June 22, 1946
3 Claims. (Cl. 88—18)

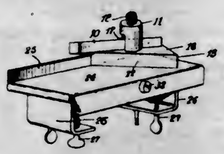
1. A picture centring mechanism for motion picture projection apparatus, which comprises

a Maltese cross driven in the usual manner, a shaft secured to said cross, said shaft having a hollow portion thereon, a drum provided with claws for feeding the film and mounted on said hollow portion, two diametrically opposite oblique slots in the hollow portion of the shaft, two oblique slots in the drum which cross these of the shaft, a rod arranged in alignment with the first mentioned shaft and engaging with its end in the hollow portion of said shaft, a pin



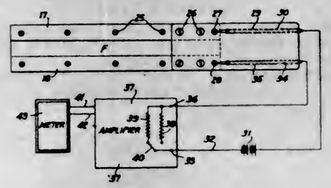
passing through the four slots and said end of the rod, a sleeve supporting said rod, members for locking the rod in the sleeve, a screw secured to said sleeve, a stationary nut co-operating with said screw, an actuating member on the screw a cheek on said hollow portion, a friction plate bearing against said cheek and against one of the faces of said drum, and resilient conical washers pushing said drum against said friction plate.

2,458,347
FORM TOOL GRINDING ATTACHMENT FOR GRINDING MACHINES
William Joseph Christiansen, Bogota, N. J.
Application April 15, 1948, Serial No. 21,163
5 Claims. (Cl. 51—224)



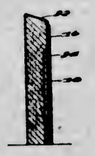
1. In combination, a tool form grinding attachment for a grinding machine, the latter including a tool rest and a grinding wheel, said attachment comprising a tool rest plate having a tool guiding edge, a tool form block having at least one corner forming a predetermined angle between two adjoining sides of the block, means for clamping a tool to said block in a predetermined grinding position with respect to the said one angular corner, said tool form block being manually movable upon the said tool rest plate along the guiding edge thereon with the tool extending from said block into grinding relation with the said grinding wheel to be automatically ground thereby with an angle similar to the said angle of the block as the latter is moved along the said guiding edge with the said adjoining sides in alternate engagement with the edge and means for mounting the attachment upon the tool rest of the grinding machine in operative relation to said grinding wheel.

2,458,348
ELECTRIC RESISTANCE FILM HYGROMETER
Harry W. Cleveland, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application May 6, 1944, Serial No. 534,416
10 Claims. (Cl. 201—63)



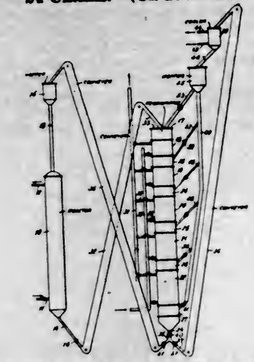
1. A humidity responsive device comprising a pair of resistance elements each composed of a flexible sheet support coated on one side with a thin film of gelatin and placed in support-to-support relation, and a pair of electrode members each including a pair of contact bars engaging opposed surfaces of the respective gelatin films and each pair of contact bars being spaced from the other pair of contact bars to engage spaced surface portions of respective gelatin films.

2,458,349
MOUNT OF CELLULAR MATERIAL HAVING DEPRESSED DISPLAY AREA
Carroll N. Cross, Middleboro, Mass.
Application May 4, 1945, Serial No. 591,993
1 Claim. (Cl. 40—154)



A display mount comprising, a single unitary base member of cellular material having an uncompressed thickness of one-half to three-quarters of an inch and having a weight in the uncompressed state approximating twelve ounces per square foot, the central front area of said base member being depressed to compact said area of the base portion and provide a well in the front face having a depth for receiving sheet-like display material in said well with the front face of the display material substantially in the plane of the uncompressed portion of the base member bounding said well, said base member having a plane flat rear surface over the entire area thereof, a flexible covering material extending over the rear face and edges of said base member and lying along the boundary portion of the front face thereof, a display window attached to and overlying the covering material bounding said well, said window overlying the edges of said covering material and having internal margins extending inwardly over the boundary edges of said well.

2,458,350
METHOD AND APPARATUS FOR CONDUCTING GAS-SOLID CONTACT OPERATIONS
John A. Crowley, Jr., Scarsdale, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application December 14, 1944, Serial No. 568,136
24 Claims. (Cl. 196—52)



1. An apparatus for conducting gas-solid contact operations involving change in heat level which apparatus comprises: a substantially vertical elongated vessel adapted for conducting gas-solid contacting, means to pass a particle form solid material downwardly through said vessel as a substantially compact column, means to substantially change the heat level of at least a part of the contacted solid material particles, a receptacle outside of said vessel, a plurality of downwardly sloping conduits communicating said receptacle with said vessel at a plurality of vertically spaced levels, said conduits extending downwardly into said vessel at a substantial slope with the horizontal so as to permit gravity flow of said solid from said receptacle to said vessel substantially independently of contact and carrier fluid and means to deliver at least part of said solid material, so changed in heat level to said receptacle.

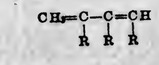
11. The method for conducting gas-solid contact operations involving a change in heat level which comprises: passing a particle form solid material as a substantially compact column downwardly through a contacting zone while contacting it therein with a gaseous material, changing the temperature level of at least part of the contacted solid material in a direction opposite to its change in said contacting zone and admitting, in substantial absence of fluid material flow controlled portions of said solid material so altered in temperature level to said contact zone at a plurality of vertically spaced levels along its length to effect control of the temperature range of the solid material passing through said zone substantially solely by means of said solid material so admitted at said plurality of vertically spaced levels.

2,458,351
HARD RUBBER
Leo J. Cukierski, Melrose Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio
No Drawing. Application April 27, 1944, Serial No. 533,059
3 Claims. (Cl. 260—727)

1. A hard rubber dust filler substitute for use with sulphur-vulcanizable compositions of the group of natural rubber and synthetic rubber in making hard material, which consists of a mill ground soft rubber of vulcanized condition in minute particle form, the particles plastic on the surface only and the mass just short of a condition of sheeting on the mill.

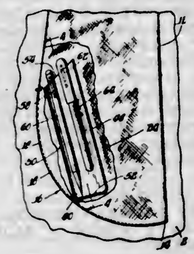
2,458,352
METHOD OF PREPARING MOLECULARLY ORIENTED COPOLYMERS OF ACRYLONITRILE, BUTADIENE 1,3, AND DIETHYL MALEATE
Gaetano F. D'Alelio, Cleveland, Ohio, assignor to Fro-phy-lac-tic Brush Company, Northampton, Mass., a corporation of Delaware
No Drawing. Application April 3, 1947, Serial No. 739,266
19 Claims. (Cl. 260—82.4)

1. A composition suitable for use in producing articles of desired shape comprising a liquid nitroalkane and a polymerization product of a mixture consisting of 10 to 25 parts of a diene of the formula



wherein R is hydrogen and methyl, 70 to 80 parts acrylonitrile and 5 to 25 parts of diethyl maleate, said composition being a workable cohesive gel.

2,458,353
MEN'S TROUSERS
Ted S. Decker, Chicago, Ill., assignor to Society Brand Clothes, Inc., a corporation of Illinois
Application May 5, 1945, Serial No. 592,129
2 Claims. (Cl. 2—250)



1. A pair of trousers having the usuel pair of front trouser pockets disposed at the side of the trousers with the mouths of the pockets substantially vertical and disposed substantially as an upper continuation of the side seams of the trousers, and an elongated, relatively narrow pocket adapted to receive a pencil or pen and formed in association with the inner wall of one of said side pockets, the mouth of said second pocket being disposed inside said first named pocket and adjacent to the mouth thereof, said second pocket extending downwardly and wholly within the confines of said first named pocket and the wall of said second pocket having a free edge at the mouth of the first pocket spaced from the walls of said first named pocket and adapted to be received between a pencil or pen and a clip mounted on said pencil or pen.

2,458,354
ELECTRIC STRAIN DEVICE WITH TEMPERATURE COMPENSATOR
Alfred V. de Forest, Marlboro, N. H., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application January 20, 1945, Serial No. 573,801
20 Claims. (Cl. 201—63)

1. In combination, a member adapted to be strained, an electrical conducting filament whose resistance varies with strain connected to said member so that a change of strain therein is transmitted to said filament thereby to vary its resistance, temperature compensating means for controlling the strain of said member automatically in accordance with temperature changes, and means for varying the compensating action of said temperature compensating means.

2,458,355
COPOLYMERS OF 2-ACYLAMINO-1,3-BUTADIENES AND VINYL COMPOUNDS
Joseph B. Dickey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application December 22, 1945, Serial No. 637,097
11 Claims. (Cl. 260—86)

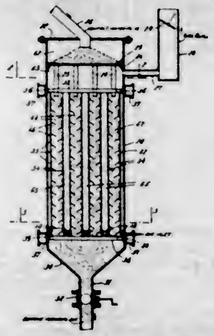
1. A copolymer derived by polymerization of a mixture including from about 1 to 99 molecular parts of a conjugated diene of the general formula:

$$CH_2{=}CH{-}C{=}CH_2$$
$$\quad\quad\quad |$$
$$\quad\quad R{-}N{-}R_1$$

wherein R represents a member selected from the group consisting of hydrogen, an alkyl group, an aryl group of the benzene series, and the acyl radical of a carboxylic acid; and R_1 represents the acyl group of a carboxylic acid, each of said radicals having not more than 12 carbon atoms in the chain, and from about 99 to 1 molecular parts of a polymerizable monomeric ethylenically unsaturated organic compound.

2,458,356
METHOD AND APPARATUS FOR BURNING CONTAMINANTS FROM A MOVING BED CONTACT MASS
Louis P. Evans, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application February 19, 1944, Serial No. 523,105
12 Claims. (Cl. 252—242)

1. A process for conducting regeneration of a particle-form solid contact mass material by burning of a contaminant deposit thereon with a combustion supporting gas comprising: flowing said particle-form solid contact material and said combustion supporting gas through a confined regeneration zone in a plurality of independent alternate gas and solid streams, maintaining each of said solid streams in substantially free contact at a plurality of surfaces along two longitudinal opposite boundaries thereof with a solid particle-free gas stream, each of said solid streams being a laterally confined, upright, substantially compact column of particle-form solid gravitating downwardly in a zigzag fashion so as to continuously interchange solid particles within said column with those at said plurality of surfaces, continuously replenishing said columns at their upper ends with contaminant bearing material and continuously withdrawing regenerated contact material from the lower ends of said columns at such a rate as to maintain said columns filled and as to insure adequate burning of the contaminant deposit, continuously supplying combustion supporting gas at a controlled rate and temperature along one of the vertically extending extremities of alternate members of said gas streams, flowing said gas in a substantially horizontal direction in said alternate members of said gas streams, withdrawing gas from the opposite vertically extending extremity of each of said gas streams,

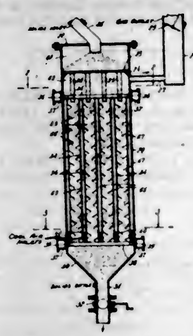


continuously supplying combustion supporting gas at a controlled rate and temperature to the remaining gas streams along those vertically extending extremities which are adjacent the extremities of gas withdrawal in said first named alternate gas streams, flowing said gas in said last named remaining gas streams in a substantially horizontal direction opposite to the direction of flow in said first named gas streams, withdrawing gas from the opposite vertically extending extremities of said last named gas streams, said controlled rate and temperature of gas supply to said streams being such as to support combustion of said contaminant and to remove as increased sensible heat in the effluent gas at least most of the heat liberated by said combustion.

2,458,357
METHOD AND APPARATUS FOR CONDUCTING REACTIONS IN THE PRESENCE OF A CONTACT MASS
Louis P. Evans, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application February 19, 1944, Serial No. 523,106
9 Claims. (Cl. 252—418)

1. A process for burning carbonaceous contaminant deposits from particle form solid contact materials which comprises: maintaining a substantially compact column of downwardly gravitating particle form contact material, withdrawing regenerated contact material from the lower section of said column and replenishing said column with contaminant bearing contact material at its upper end, passing a combustion supporting gas stream along at least one of the longitudinal sides of said column while effecting free contact between said gas stream and said column at a plurality of locations along at least a portion of said longitudinal side of said column

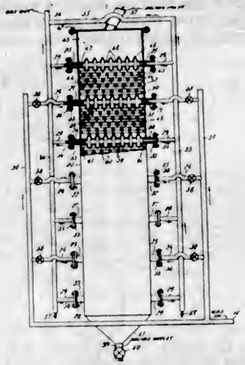
in the absence of any substantial flow of said gas transversely across said column, supplying combustion supporting gas to said stream at a temperature substantially below the range of contact material regeneration temperatures within said column, and maintaining a balanced relationship between the amount of contaminant combustion conducted in the column, the rate and temperature of combustion supporting gas supply to said gas stream and the pressure drop due to gas flow in said gas stream wherein the pressure drop due to gas flow in said gas stream is at least about 0.5 to 1.0 inch of water per foot in the direction of gas flow for contact material



particle diameter of the order of 0.16 to 0.06 inch respectively but insufficient to cause substantial boiling of the contact material in said column, and wherein the rate and temperature of combustion supporting gas supply to said gas stream are that which will remove as increased sensible heat in the effluent gas at least a major portion of the heat released by the contaminant combustion occurring in said column without cooling the contact material below an efficient contaminant combustion temperature to thereby effect regeneration of said contact material at a regeneration temperature range which is below the level at which the contact material would suffer heat damage.

2,458,358
PROCESS OF REGENERATING A MOVING BED OF SOLID CATALYST
Louis P. Evans, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application March 14, 1944, Serial No. 526,454
2 Claims. (Cl. 252—418)

1. A method for regenerating particle form contaminant bearing adsorbents by the action of a combustion supporting gas comprising: maintaining a substantially compact, elongated column of downwardly moving adsorbent particles, continuously replenishing said column with spent adsorbent at its upper end and continuously withdrawing regenerated adsorbent from the lower end of said column, introducing a plurality of feed streams of combustion supporting gas, existing at a temperature substantially below the temperature in said column, into said column at a plurality of spaced apart levels along its length, splitting each of said feed streams into two portions, passing one portion of each feed stream in a winding upward direction through said column from the level of its introduction as a plurality of confined tortuous secondary streams from which gravity flow of solid particles is excluded and which are uniformly distributed across said column, said confined secondary streams being open along their undersides to the column so as to permit direct contact between the gas and the solid particles, withdrawing said secondary streams from said column at levels along its length intermediate said levels of gas introduction, similarly passing the other portion of each feed stream downwardly through the column as a plurality of similar confined secondary streams and similarly withdrawing the gas from said last named secondary streams from the column at levels intermediate said levels of gas introduction, con-

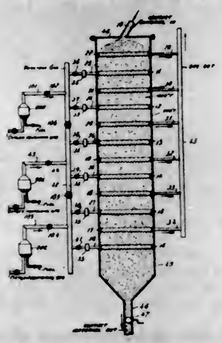


trolling the rate of introduction of each of said gas feed streams into said column insufficiently in excess of that required to support the contaminant combustion in the portion of the column through which it flows to cool the adsorbent below an efficient contaminant combustion temperature but sufficient to remove from the column as increased sensible heat in the gas the excess heat liberated by said contaminant combustion, and at the same time maintaining the pressure drop due to gas flow in said secondary confined streams below that which would cause boiling of the adsorbent column but sufficiently high to force a substantial amount of gas from said secondary streams to flow into the column and through the column between the adsorbent particles.

2,458,359
PROCESS OF MULTIPLE-ZONE REGENERATION OF A MOVING BED CATALYST
Louis P. Evans, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application May 5, 1944, Serial No. 534,188
5 Claims. (Cl. 252—242)

1. A method for regenerating particle form contaminant bearing inorganic adsorbents by the action of a combustion supporting gas comprising: maintaining a substantially compact, elongated column of downwardly moving inorganic adsorbent particles, continuously replenishing said column with spent adsorbent at its upper end and continuously withdrawing regenerated adsorbent from the lower end of said column, introducing a plurality of feed streams of combustion supporting gas, existing at a temperature substantially below the temperature in said col-

umn, into said column at a plurality of spaced apart levels along its length, splitting each of said feed streams into two portions, passing one portion of each feed stream upwardly through said column from the level of its introduction and passing the other portion of each stream downwardly through said column to effect combustion of the contaminant on said adsorbent, withdrawing gaseous combustion products from said column at a plurality of levels intermediate said levels of gas introduction, controlling the temperature and rate of said gas introduction at said plurality of levels to effect removal as increased sensible heat in the effluent gas of an amount of heat approximately equal to that released by the contaminant combustion in said column and maintaining the flowing contact material at most of the successive levels of gas withdrawal from said column at substantially the same intermediate temperature within the critical range defined by the minimum temperature required for rapid combustion of the contact combustion and the mixmum temperature above which the contact material will suffer heat damage, whereby the contact material as it flows downwardly achieves about the same intermediate temperature at most successive levels of gas withdrawal and achieves a maximum temperature at levels in said column intermediate any given level of gas withdrawal and the level of gas introduction next below and achieves a minimum temperature at levels in said column intermediate any given level of gas introduction and the level of gas withdrawal next below, and limiting the maximum and minimum temperatures reached by the contact material at said intermediate levels within said critical range of temperatures by controlling the rate of contact material withdrawal from the lower end of said column.



2,458,360
CLOSURE DEVICE
Joseph W. Fay and Rudolph Fay, Villa Park, Ill.; said Rudolph Fay assignor to said Joseph W. Fay
Application February 23, 1944, Serial No. 523,536
2 Claims. (Cl. 215—43)

1. A closure device for receptacles wherein a vacuum is developed in the receptacle by cooling of the contents thereof, comprising a curvilinear sealing disk characterized by its ability to be held in concave form by the greater pressure externally of the receptacle and capable by its inherent resiliency of assuming a convex form when the pressure upon opposite sides of the disk becomes substantially equalized, a cap having a skirt portion for threaded engagement with said receptacle and a portion adapted to engage and urge said sealing disk into sealing engagement with said receptacle, a boss pressed upwardly from the top of said cap and having a slot at two opposite ends thereof to receive an implement for turning said cap onto and off of said receptacle, and said boss having a central opening through which access may be had to said sealing disk.

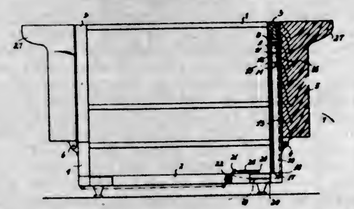
2,458,361
AIRWAY TRAFFIC CONTROL SYSTEM
Oscar S. Field and Sedgwick N. Wight, Rochester, N. Y., assignors to General Railway Signal Company, Rochester, N. Y.
Application July 29, 1944, Serial No. 547,175
53 Claims. (Cl. 343—112)

1. In an airway traffic route signalling system, the combination with an airway traffic route consisting of at least one rearwardly directed radio energy emitting ground station and having associated therewith forwardly directed radio receiving ground apparatus, a plurality of airplane carried radio stations each including forwardly directed radio receiving apparatus and rearwardly directed radio transmitting apparatus, and means for interconnecting such radio energy emitting ground station with its associated radio receiving ground apparatus so as to cause such radio energy emitting ground station to emit a distinctive radio signal of restrictive significance to an airplane carried radio station in the rear when such associated radio receiving ground apparatus is activated by a forwardly located receding airplane carried radio station.

2,458,362
ABRASIVE CUTTING ROLL
Henry Marshall Field, Dayton, Ohio
Application April 2, 1947, Serial No. 738,821
4 Claims. (Cl. 5—190)

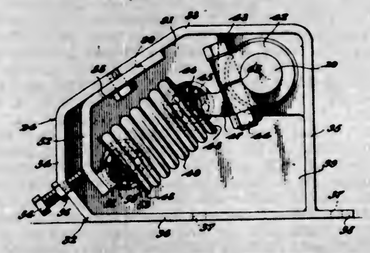
1. An abrasive roll comprising an elongated blank, flexible material having an abrasive surface and a smooth surface, adhesive material along the longer longitudinal edge of said blank, said blank being rolled upon itself to form a cylindrical body, said one longitudinal edge having V-shape tangs struck therefrom providing a series of V-shaped openings, said tangs engageable through said openings in the overlying layer of said body for interlocking the successive layers of said roll.

2,458,363
CONVERTIBLE FURNITURE
Bernard Finer, New York, N. Y.
Application July 2, 1946, Serial No. 681,018
1 Claim. (Cl. 155—46)



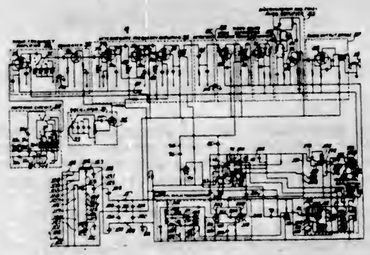
A piece of furniture adapted to be converted into an armchair or into a bed, comprising a main frame composed of two vertical rear and two vertical front posts, braces connecting the said posts, two side rests having outflaring portions at the upper end hingedly connected with a pair of said posts consisting of one front and one rear post, said side rests being adapted to be swung from the upright position adjacent to said posts into a horizontal position and to be supported in this position by said outflaring portions and further adapted to be reswung into the upright position, vertical recesses in said rear posts, means in said recesses to automatically lock said side rests in the upright position adjacent to said vertical posts, said means including hooks connected to said side rests, vertically displaceable locking rods to engage said hooks, two pulling wires fastened to said rods, two springs surrounding said rods and fastened to said posts to be compressed by the downward displacement of said rods, a shaft journalled in said frame, a double arm lever carried by said shaft, the ends of said lever being connected with said two pulling wires, and a foot pedal to rotate said shaft and to thereby pull said rods out of engagement with said hooks and to release said side rests for a down-swing exercised by the weight of said outflaring portions.

2,458,364
CLUTCH ACTUATOR AND ADJUSTER
Edwin E. Foster, Austin, Tex.
Application May 26, 1943, Serial No. 488,605
8 Claims. (Cl. 192—89)



1. A device for aiding the operation of a spring urged clutch of a vehicle and the like comprising a frame secured to the vehicle and operatively connected to a shaft of a clutch operator, a bracket mounted on the frame, a clamp member secured on the shaft, and a compression spring mounted between the bracket and the clamp member to assist the operation of the clutch by overcoming a part of the force exerted by the clutch spring.

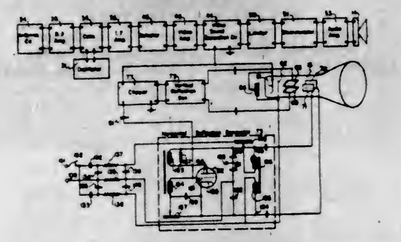
2,458,365
TELEVISION RECEIVER
George W. Fyler, Lombard, Ill., assignor to Motorola, Inc., a corporation of Illinois
Application September 11, 1946, Serial No. 696,129
14 Claims. (Cl. 250—27)



1. In a television receiver including a cathode ray tube and a plurality of other thermionic vacuum tubes for translating signals to be displayed on said cathode ray tube and for producing voltages for accelerating and deflecting the beam of said cathode ray tube, and in which said tubes include heaters adapted to be electrically energized and plate loads adapted to be connected across sources of direct current potential; a power supply system adapted to be energized by a source of single phase alternating current, comprising means for connecting said heaters to said alternating current source in a series-parallel arrangement, a pair of rectifiers connected to said alternating current source in a voltage doubler circuit to provide a direct current network, and means for connecting said plate loads to said direct current network in a series-parallel arrangement so that the load on said power supply system is made a minimum.

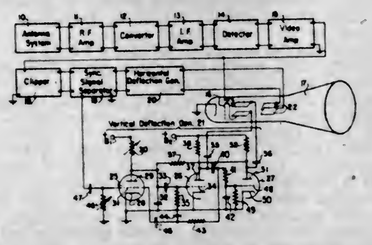
4. In a signal translating device including a direct current power supply having terminals maintained at positive and negative potentials and a terminal maintained at an intermediate potential substantially half way between said positive and negative potentials, an amplifier including first and second electron discharge valves each including at least a cathode, a grid and a plate, means for applying a signal to be amplified to said grid of said first valve, means for applying the amplified signal from said plate of said first valve to said grid of said second valve, means including a variable resistor for connecting said cathode of said first valve to said negative terminal, means providing a direct current path between said plate of said first valve and said cathode of said second valve, means for connecting said plate of said second valve to said positive terminal, and means for coupling said grid of said second valve to said terminal of intermediate potential, whereby by control of said resistor the plate current of said first and second valves is controlled.

2,458,366
SAW-TOOTH VOLTAGE GENERATOR
George W. Fyler, Lombard, Ill., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Original application September 11, 1946, Serial No. 696,129. Divided and this application April 10, 1948, Serial No. 20,250
17 Claims. (Cl. 250—36)



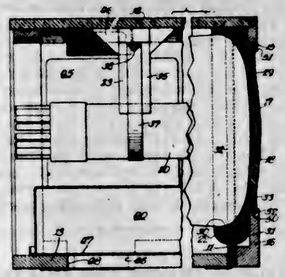
15. A sawtooth voltage generator circuit comprising, condenser means, means for charging said condenser means at a uniform rate, an electron discharge valve having input and output electrodes, a transformer having primary and secondary windings, said output electrodes of said valve and said primary winding being connected across said condenser means and forming a series resonant circuit thereby in which oscillations can take place when said valve conducts, said secondary windings being connected to said input electrodes of said valve to transfer energy thereto for rendering said valve more conductive, differentiating circuit producing pulses from the sawtooth voltage wave in the output circuit of said second valve for rendering said first valve conductive to discharge said condenser, a third electron discharge valve including input and output circuits, means for applying a portion of the output voltage wave produced by said second valve to said input circuit of said third valve so that a pair of balanced voltage waves are produced in said output circuits, means for applying said output voltage waves to said deflection plates including a pair of small condensers which attenuate the low-frequency components thereof, and means for accentuating the low frequency response of said generator comprising a feedback path from the output circuit of said third valve to said condenser which is independent of said charging means so that the amplitude of said sawtooth voltage wave developed across said condenser can be varied by said charging means independently of said means for accentuating said low frequency response, the sawtooth voltage in said output circuit of said third valve being in phase with the voltage across said condenser so that an increasingly greater voltage is applied to said condenser and the voltage developed thereacross builds up at a rate which increases with time.

2,458,367
SAW-TOOTH VOLTAGE GENERATOR
George W. Fyler, Lombard, and Garth J. Heisig, Chicago, Ill., assignors to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Application January 23, 1948, Serial No. 4,048
11 Claims. (Cl. 315—29)



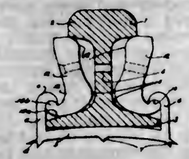
10. A sawtooth voltage generator adapted to produce balanced potentials for the deflection plates of a cathode ray tube for deflecting the beam of said tube, comprising a condenser, means including a source of potential for charging said condenser at a variable rate, a first electron discharge valve connected across said condenser for discharging the same so that a sawtooth voltage wave is developed thereacross, a second electron discharge valve including input electrodes connected to said condenser and an output circuit in which an inverted and amplified sawtooth wave is produced, a differentiating circuit coupling said output electrode of said second valve to said input electrodes of said first valve, said

2,458,368
TELEVISION RECEIVER CABINET AND CATHODE-RAY TUBE MOUNTING
Vernon A. Kamin, Elgin, and Lawrence J. Mattingly and Raymond R. Wingert, Chicago, Ill., assignors to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Application January 10, 1948, Serial No. 1,593
9 Claims. (Cl. 178—5.8)



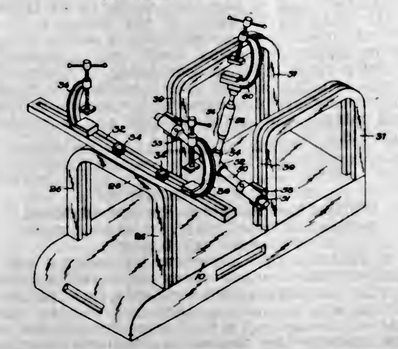
9. A television receiver comprising a cathode ray tube having an enlarged front portion, a walled cabinet the inside vertical dimension of which is substantially the same as the diameter of said enlarged portion of said tube, said cabinet having a front wall with a closed transparent portion and a portion with openings therein, a resilient mask engaging said front wall and positioned about said transparent portion, a receiver chassis supported on the bottom wall of said cabinet, said chassis having a cut-out portion therein on the side adjacent said transparent portion of said cabinet front wall, and circuit components mounted on said chassis on the other side thereof adjacent said front wall of said cabinet, said components having controls extending through said openings in said front of said cabinet, said cathode ray tube being positioned in said cabinet with the enlarged end portion thereof extending into said cut-out portion of said chassis and engaging said mask.

2,458,369
RAIL JOINT
Louis Gagnon, Sault Ste. Marie, Ontario, Canada
Application June 28, 1947, Serial No. 756,434
In Canada May 29, 1947
3 Claims. (Cl. 238—212)



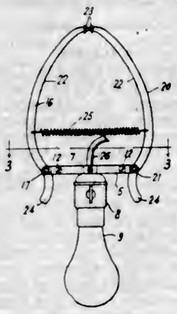
1. In a joint for adjoining rail ends of the type including head, base and connecting web portions, a base plate transversely curved throughout its length to initially present an upper convex surface to receive and support the base portions of the rail ends upon one or more ties, said plate including upstanding side flanges, a pair of fish plates, each of said fish plates including a lower portion having a convex under surface adapted to be rockingly and slidably engaged with the upper surface of the rail base flange and a laterally extending tail piece interlocked with a side flange on said base plate and an upper portion which upon rocking of said fish plate inwardly toward the rail web portion wedges against and imparts an upward thrust to the under face of the rail head portion thereby causing a sliding motion of the convex under surface of said fish plates on the upper surface of said rail base flange, and tightening bolts extending through said fish plates and the web portions of the adjoining rail ends for rockingly drawing said fish plates inwardly thus affecting said upward thrust of the fish plates against the head portions of the rail ends and simultaneously exerting a lifting force upon said side flanges to thereby strain the initially convex base plate into contact with the base portions of the rail ends throughout substantially the entire width of the latter.

2,458,370
APPLIANCE FOR USE IN REPAIRING AUTOMOBILE BODIES
John W. Geddes, Boston, Mass., assignor to H. K. Porter, Inc., Everett, Mass., a corporation of Massachusetts
Application August 3, 1944, Serial No. 547,917
3 Claims. (Cl. 29—239)



1. A device for positioning automobile parts while they are being worked upon comprising a base adapted to support strain, a standard extending along one end thereof providing for the support of clamping devices, a pair of parallel frames of general inverted U shape remote from said standard and disposed in planes transverse to said end, a pair of shaft-supporting elements having shaft-receiving eyes and parts which seat on the periphery of the frames to dispose the planes of the eyes perpendicular thereto, means for clamping the elements to the frames at selected positions throughout at least a major portion of the perimeter thereof, a cross-shaft received in the eyes and a sleeve slidably mounted on the shaft and having a laterally presented coupling for securing an extensible leg or like utensil.

2,458,371
SPRING CLAMP FOR HOLDING ELECTRIC LAMPS
George F. Grice, Jamaica, N. Y.
Application September 11, 1946, Serial No. 696,147
2 Claims. (Cl. 248—226)

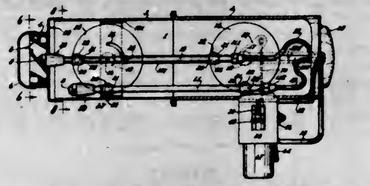


1. An electric lamp holder comprising a two part cross bar, the parts of the bar having recesses for receiving and retaining a lamp socket, means for fastening the parts together, each of said parts having lugs and these lugs of the respective parts being aligned with one another to provide bearings, holder levers pivotally connected to the bearing lugs and at the opposite sides of the cross bar and having upper ends cooperating with one another and adapted to lie on the opposite sides of a girder or the like when the holder has been connected thereto, said levers having loop portions whereby they may contain or surround the girder, and a spring connected between the loop portions of the lever to urge the levers toward one another, and handle portions depending respectively from the levers.

2,458,372
ATOMIZING OIL BURNER OF THE HIGH-LOW TYPE
Herman O. Grimmelsen, West Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application March 3, 1947, Serial No. 731,902
2 Claims. (Cl. 158—28)

1. In a gun type oil burner, having a tube through which air for combustion is delivered and an air director in said tube having vanes for whirling such air, two nozzles having different firing rates, both nozzles being located in said tube and adapted to be used one at a time, oil

supply means, valve means for connecting either nozzle to the oil supply means and disconnecting the other nozzle therefrom, each nozzle being shiftable in said tube from a firing position in which it lies coaxial with said air director to an inactive position in which it lies in back of one of the vanes of said air director and is shielded by

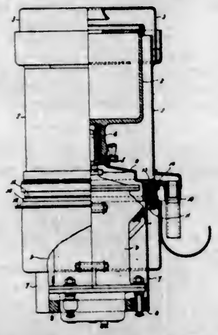


such vane from heat reflected back from the fire produced by the burner, and means operable as either nozzle is connected to the oil supply means to shift such nozzle into firing position and operable as either nozzle is disconnected from the oil supply means to shift such nozzle into inactive position.

2,458,373
PROCESS FOR PREPARING NITRILES OF DICARBOXYLIC ACIDS
Hugh J. Hagemeyer, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application August 10, 1945, Serial No. 610,197
2 Claims. (Cl. 260—465.2)

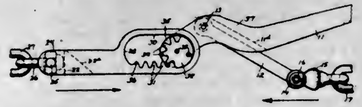
1. A method of preparing nitriles of adipic and sebacic acids which comprises continuously passing through a packed pyrolysis tube in which a temperature of 350–550° C. is maintained a compound in liquid phase selected from the group consisting of the amides and the ammonium salts of adipic and sebacic acids and passing through the tube countercurrently to the liquid for a contact time of 4–6 seconds an aliphatic acid anhydride in vapor phase.

2,458,374
RAYON AND LIKE SPINNING MACHINES
Walter Hartley, Radcliffe, England
Application June 14, 1947, Serial No. 754,638
In Great Britain July 27, 1946
6 Claims. (Cl. 57—77)



1. In a machine for rayon and like pot spinning a circular container, said container having at one end a diameter sufficient to allow the spinning pot to be inserted and removed easily, a detachable cover to said container, a fixed bottom to that part of said container in which the pot is mounted, a central hole in said bottom, a lower part of said circular container and of less diameter than said part containing the pot, an electric motor housed in said lower narrower part, a spindle on said motor passing through said hole in said bottom and on which the pot is mounted to rotate, a flexible mounting on the underside of said bottom and external of said narrower part, the machine frame having a circular wall forming an opening for receiving the lower part of the container and said flexible mounting resting on the top of said wall thereby to support the entire container and its contents.

2,458,375
GEAR RACK LOAD BINDER
Leo Haubert, Tulsa, Okla.
Application September 27, 1946, Serial No. 699,873
20 Claims. (Cl. 24—68)



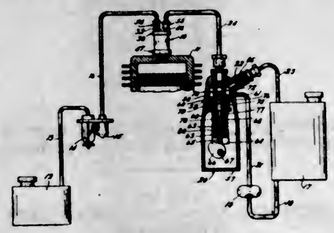
1. A load binder comprising, in combination, a lever, a link or clevis pivotally connected to the lever near its fulcrum, a partially formed gear fixed to the lever at its fulcrum, a rack member with which the teeth of the gear mesh to provide a shifting fulcrum for the lever, said rack member having means limiting travel of the gear and hence swinging of the lever, and separate means facilitating attachment of the free end of the link or clevis and the end of the rack to a load-binding element.

2,458,376
PHOTOGRAPHIC DEVELOPER ANTIOXIDANTS
Richard W. Henn, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application March 14, 1946, Serial No. 654,527
7 Claims. (Cl. 95—88)

1. A composition of matter adapted to form a developing solution having a low sulfite ion concentration and a high resistance to oxidation when dissolved in water in the presence of a strong inorganic base, comprising a photographic silver halide developing agent and a member selected from the class consisting of cyclohexanone-bisulfite, methyl cyclohexanone-bisulfites, mixtures of cyclohexanone and a soluble sulfite, and mixtures of cyclohexanone and a soluble bisulfite.

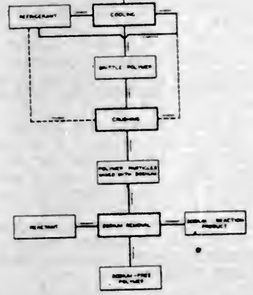
2,458,377
LIGHT FUEL INJECTOR
William Earl Hennings, Springfield, Mass.
Application June 3, 1944, Serial No. 538,657
5 Claims. (Cl. 103—41)

1. Fuel injection apparatus for internal combustion engines which comprises, a fuel injector having a moveable wall member, a fuel chamber at one side of said member for receiving fuel under pressure and a fluid pressure chamber at the opposite side thereof, a discharge opening from the fuel chamber, a spring loaded discharge valve closing said opening, a spring acting against the piston in the same direction as does the fuel pressure, an independent oil supply for said fluid pressure chamber, pump means for maintaining the supply of oil to the fluid pressure chamber and for maintaining the oil pressure in said cham-



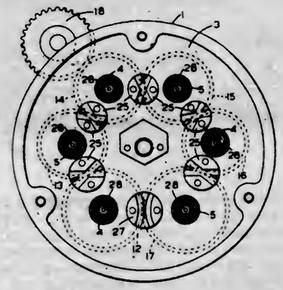
ber above the pressure of the fuel but less than the combined pressures of the fuel and the spring and a second pump acting on the oil supplied to the fluid pressure chamber to intermittently increase the pressure of the oil above the combined pressures of the fuel and the spring.

2,458,378
PROCESS OF SEPARATING METALLIC SODIUM FROM HIGH MOLECULAR WEIGHT POLYMERS MADE BY POLYMERIZATION OF VINYL COMPOUNDS
Glenn Herbolsheimer, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 7, 1946, Serial No. 639,668
11 Claims. (Cl. 260—86.5)



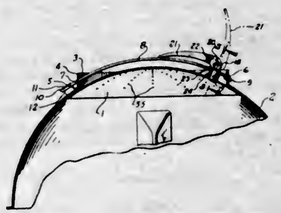
1. A process for the separation of metallic sodium from a high molecular weight organic polymer resulting from the mass polymerization of a vinyl compound with metallic sodium which comprises cooling said polymer containing metallic sodium to a temperature at which the polymer is frangible, disintegrating said polymer while it is at said temperature and thereby exposing the individual particles of metallic sodium contained in the polymer, and reacting the resulting disintegrated mass of sodium and polymer with a sodium reactant selected from the group consisting of water and normal and iso alcohols containing from 1 to 5 carbon atoms per molecule, and separating the sodium reaction product from said polymer.

2,458,379
BRAIDING MACHINE
Percival Leonard Hobourn, Leamington Spa, and William Henry Joy, Coventry, England
Application January 7, 1947, Serial No. 726,502
In Great Britain January 15, 1946
3 Claims. (Cl. 87—50)



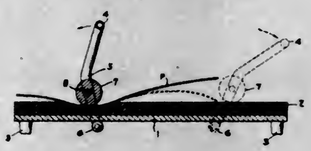
1. Improvements connected with braiding machines comprising in combination a base member; a plurality of circumferentially adjacent notched discs in driven geared relationship mounted on said base member and adapted to engage only the bases of each of the wanderer spindles and carry same, the guiding lugs of said wanderer spindles being free from bearing relationship over the major part of their travel; members adapted to circumferentially surround said notched discs and lie in the same plane thereof to retain said wanderer spindles thereon; and guide members mounted on said base member under the circumferential junctions of the notched discs at which point the guiding lugs of said wanderer spindles engage said guide members to effect directional control of said wanderer spindles.

2,458,380
CLOSURE FOR LAUNDRY MACHINE TUBS
John F. Horvath, Milwaukee, Wis., assignor to Appliance Corporation of America, Milwaukee, Wis., a corporation of Wisconsin
Application October 31, 1946, Serial No. 706,870
19 Claims. (Cl. 220—25)



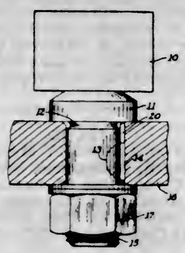
1. A laundry machine tub having a spherically curved upper portion formed with a top opening having around its margin an upstanding lip, said lip having holes on opposite sides of said top opening, a spherically curved door below said top opening and extending beyond all sides thereof when closed, an arcuate slide bar longitudinally movable in said lip holes, said door being supported by said slide bar to move therewith in a curved path longitudinally with relation to the slide bar when the door is being opened and closed.

2,458,281
PHOTOGRAPHIC PRINT STRAIGHTENER
Carter J. Hughey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application November 30, 1946, Serial No. 713,316
6 Claims. (Cl. 92—76)



1. A print straightener comprising a rigid base with a resilient top surface, a bar having bent ends extending downwardly at each side of the base and tiltable forwardly and backwardly above the base, anti-friction bearings projecting inwardly from the ends of said arms under the base, and a roller pivoted between said arms above the resilient surface and movable thereon with said bar.

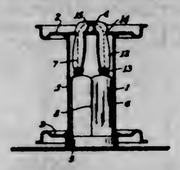
2,458,282
SHOCK TESTING
Miller R. Hutchison, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application February 14, 1946, Serial No. 647,586
2 Claims. (Cl. 73—12)



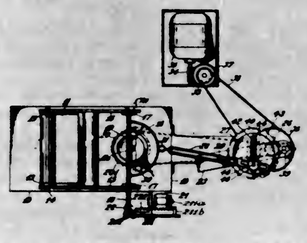
1. The method of testing the ability of an object to withstand shock which comprises placing a metal rod of known tensile strength in a substantially vertical tensioning device with the upper end of the rod forming a substantially horizontal table, placing the object on the table and gradually increasing the tension on the rod until it ruptures.

2,458,383
EXPOSURE-INDICATING SPOOL
Joseph Isaac, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application February 9, 1946, Serial No. 646,535
14 Claims. (Cl. 242—71)

1. An exposure-indicating film spool comprising, in combination, a hollow hub, apertured flanges on the hub, a slide member mounted in the hollow hub having a non-signaling position inside the hub and a signaling position projecting at least partially from the hub, and a snap latch element carried by the slidable member and engageable with an aperture in a flange preventing movement of the slide member from its signaling position to its non-signaling position.



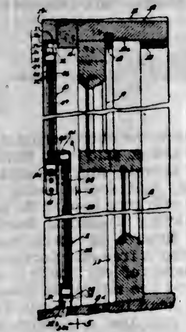
2,458,384
GRINDING OF LENSES OR OF DIES THEREFOR
John Henry Jeffree, Cobham, England, assignor to Combined Optical Industries Limited, Slough, England, a British company
Application March 9, 1945, Serial No. 581,736
In Great Britain October 26, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 26, 1963
2 Claims. (Cl. 51—58)



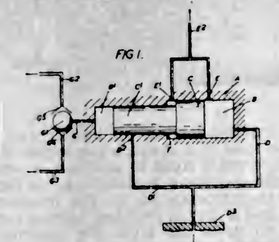
1. In apparatus for grinding or polishing optical surfaces, including aspheric surfaces, the combination of a workpiece holder, means for rotating it about an axis of symmetry of a workpiece thereon, a pivot member, a tool carrier, means for supporting said carrier in sliding engagement with said pivot member, to swing thereabout, with the edge of a tool carried thereby pressed against the surface of a workpiece on said workholder, and means for swinging said edge across said surface with a varied stroke, comprising, a rotatable eccentric pin, a carrier pivoted thereto, a disc journalled on said carrier and rotated by driving connection from said pin, a pin eccentrically mounted on said disc, and driving connections between said last named pin and said tool carrier.

2,458,385
STORM WINDOW ASSEMBLY
Langdon M. Jenness, Palos Heights, Ill., assignor to Werth Insulation & Mfg. Co. Inc., a corporation of Illinois
Application March 9, 1945, Serial No. 581,780
3 Claims. (Cl. 20—55)

3. A storm window assembly including in combination channelled slide members on the sides of a building-window-frame means, a storm window slidable vertically in the slide members and having a frame with side portions substantially Z-shaped in cross-section, each such side portion comprising a central walled portion substantially square in cross-section with a fin extending outwardly from one corner of the central portion and a second fin extending inwardly from an oppositely disposed corner of the central portion, each of said first-named fins positioned in a corresponding channelled slide member and said second fins having a glass supported thereon, and means in the storm window assembly acting at the first-named fins to maintain said fins in weather-seal engagement with said channelled slide members.

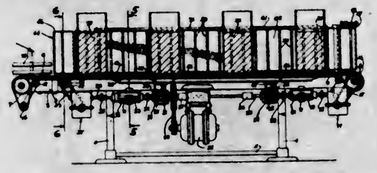


2,458,386
COMPENSATING VALVE FOR FLUID PRESSURE SYSTEMS
Edward Harry Johnson, Coventry, England, assignor to The Keelavite Company Limited, Allesley, Coventry, England, a company of Great Britain
Application August 12, 1943, Serial No. 498,374
In Great Britain November 30, 1942
11 Claims. (Cl. 137—153)



1. Valve apparatus for maintaining and controlling pressure in a closed chamber of a fluid pressure system subject to fluctuations in pressure and functioning to maintain the pressure in the chamber at a level between the pressures on the high and low pressure sides of said fluid pressure system, said valve apparatus comprising a valve housing having at least one continuously open port communicating with said chamber, at least one relief port communicating with a relief passage and at least one pressure port communicating with the high pressure side of the system, and a valve member arranged in the housing for operation by the pressure in said chamber, and so controlling the ports that when the pressure in the chamber drops below an appropriate value the valve brings into communication the pressure port with said open port, and when the pressure in said chamber rises above the appropriate value the valve brings into communication the relief port with said open port.

2,458,387
MACHINE FOR COMPACTING MATERIAL IN CONTAINERS
Harold V. Kindseth, Minneapolis, Minn., assignor to Bemis Bro. Bag Company, Minneapolis, Minn., a corporation of Missouri
Application January 26, 1946, Serial No. 643,573
2 Claims. (Cl. 259—72)



1. In a machine of the class described, a conveyor belt for advancing filled bags through the machine, opposed side belts, vertically disposed cleats on the side belts adapted to engage the bag bodies, and means engageable with the outer surfaces of the side belts for periodically moving said side belts inwardly to impart a patting action to opposite sides of the bag bodies and to cause said cleats to intermittently indent the walls of the bag bodies to partially displace portions of the contents thereof whereby the contents of the bag bodies will become more firmly settled therein.

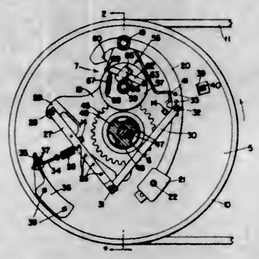
2,458,388
SIMULATED FOOTBALL GAME
Edward A. Kobs, Minneapolis, Minn.
Application May 23, 1945, Serial No. 595,280
5 Claims. (Cl. 273—94)

1. In a simulated football game, a base, a pair of members supported on said base having indicia bearing portions subdivided into individual indicia areas representing the results of football plays, one of said members lying over the other, said members being independently movable relatively to said base, said upper member having windows disposed in its indicia bearing portion and between certain of said individual indicia areas to permit the reading of indicia on the underlying of said members, a cover overlying said members, and said cover having apertures with movable closures to permit viewing of indicia aligned with said apertures when said closures are shifted to an open position.

2,458,389
CENTRIFUGALLY CONTROLLED PLANETARY GEARING
Henry E. Koruna, East Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application September 9, 1944, Serial No. 553,434
7 Claims. (Cl. 74—260)

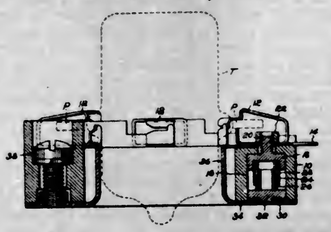
1. In a power transmitting connection, the combination of a rotary driving member, a rotary driven member, an arm pivotally connected to one of said members and having a weighted portion adapted to move outwardly under the action of centrifugal force, a spring opposing said outward movement, a planet member rotatably mounted on said one member, drive means connecting said planet member to the other of said

members for rotating said planet member by relative movement between said driving and driven members, and a pair of interengageable elements on said arm and on said planet member, respectively, adapted to be engaged or disengaged by movement of said arm about its pivot connection responsive to a change in speed of said members, at least one of said elements being



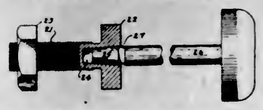
movable relative to its support and having a lost motion connection thereto so arranged and constructed that upon engagement of the edges of said elements by movement of said arm the initial transmission of driving force acts to move said one element through the range of its lost motion connection into more secure engagement with the other of said elements.

2,458,390
SOCKET FOR ELECTRONIC TUBES WITH ASSOCIATED CONDENSERS
William J. Larkin, Lynnfield, Mass., and Dana H. Bacon, deceased, late of Arlington, Mass., by Ardell E. Bacon, executrix, Arlington, Mass., assignors to National Company, Inc., Malden, Mass., a corporation of Massachusetts
Application February 21, 1946, Serial No. 649,364
6 Claims. (Cl. 250—16)



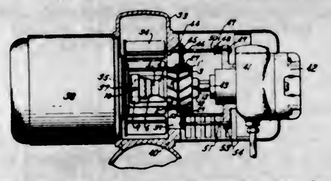
6. A socket for an electronic tube comprising a base of insulating material within which base the tube may be received, the base having at its upper surface contacts for engaging radially extending leads from the tube, the base having a bore from its lower side defining a wall beneath one of said contacts, a fastener of the screw and nut type traversing the wall for securing the contact thereto and having a part received in the bottom of the bore, a condenser comprising a dielectric cylinder with inner and outer plate-forming layers thereon, the condenser being housed in the bore and resting against said part with one plate in conducting relation thereto and a disc in the lower end of the bore opposing the lower end of the cylinder and in conducting relation to the other plate and providing at the exterior of the base means for making an electrical connection from said other plate.

2,458,391
SCREW AND DRIVER
David Paul Laviolea, Sparta, N. C.
Application July 26, 1947, Serial No. 763,786
1 Claim. (Cl. 145—50)



A metallic screw member having a head and a screw threaded shank, said head having a conical socket formed therein and in axial alignment with the shank, said socket being tapered inwardly from its entrance toward its bottom and a screw driver having a conical hardened screw engaging head tapered to correspond with the socket and having a free end portion, said screw engaging head being of less length than the depth of the socket and the minimum diameter of the screw engaging head being at said free end and being greater than the minimum diameter of the socket, the maximum diameter of said screw engaging head being slightly less than the diameter of the socket at its entrance.

2,458,392
AIR SUPPLY CONTROL FOR OIL BURNERS
Joseph A. Logan, Hadley, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application April 23, 1947, Serial No. 743,363
5 Claims. (Cl. 103—6)

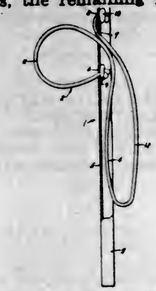


1. In combination an oil burner fan housing having an inlet and outlet, a fan within the housing, a drive shaft fixed to said fan, a centrifugal clutch with a driving member having fan blades directed to introduce air to the interior of the housing and a driven member having fan blades directed to draw air from the interior of the housing, said driving member being operatively connected to and driven by said drive shaft, a shutter device at said housing inlet having an open ended cylindrical sleeve to encase said clutch members, and oil delivery means with a driven shaft connected to said driven member and adapted for actuation of said means when said clutch is centrifugally operated.

2,458,393
TOOL FOR TURNING THREADED CONTAINER CAPS
David J. Loudfoot, Springfield, Mass.
Application August 29, 1947, Serial No. 771,184
1 Claim. (Cl. 81—3.43)

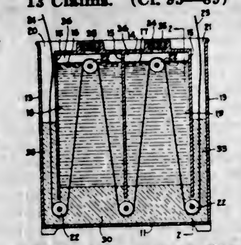
A tool for turning screw caps comprising a handle in the form of a channel bar having three aligned openings adjacent one end thereof and cut in the central panel of the bar, the central opening being of larger diameter than the others and located adjacent the outer of said openings, and a length of cord provided with a frictional

surface having the ends thereof passing through said outer and inner openings, said ends being knotted in the channel of said bar, the intermediate portion of said cord being threaded through said central opening with the short end portion of cord adjacent the outer opening lying across the surface between said outer and central openings, the remaining intermediate por-



tion forming between the central and inner openings at the front side of the handle a loop for encircling a screw top and at the back side of said handle a reserve loop for the adjustment of said front loop, the aforesaid short outer end portion providing a cushioned fulcrum contact for the turning of said handle when the tool is in use.

2,458,394
FILM PROCESSING UNIT
Benjamin E. Lubosher, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application November 15, 1945, Serial No. 628,915
13 Claims. (Cl. 95—89)

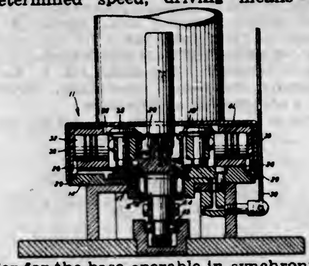


1. A portable self-contained film processing unit through which a photographic film strip may be drawn to process the latter comprising, in combination, a hollow body portion having the interior thereof divided into a plurality of connected compartments having different photographic treating liquids positioned therein, and a fusible material positioned in the path of the film between said compartments for sealing said compartments against liquid communication.

2,458,395
SWAGING APPARATUS
John C. Luley, Teaneck, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 2, 1946, Serial No. 659,015
5 Claims. (Cl. 153—9)

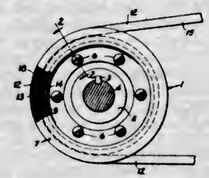
1. An apparatus for connecting a cylindrical article to a base having an annular groove therein, the apparatus comprising a swaging tool, re-

spective holders for the article and base, driving means to rotate the holder for the article to drive the article in a given direction and at a predetermined speed, driving means for the



holder for the base operable in synchronism with the first driving means to drive the base in the same direction and at the same speed, and means to move the tool toward the base to force portions of the article into the groove of the base.

2,458,396
TRANSMISSION GEARING
Laurence B. MacGregor, Long Beach, Calif., assignor to L. & M. Rubber Products, Inc., a corporation of California
Application May 25, 1944, Serial No. 537,233
4 Claims. (Cl. 74—230.7)



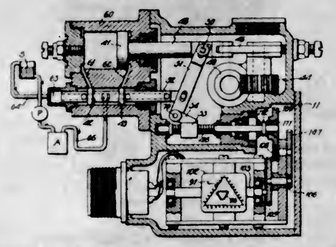
1. Transmission gearing, comprising, a pulley provided with a wedge-shaped belt groove and a normally wedge-shaped belt designed to engage said groove, with side walls of said belt in driving contact with the walls of the groove, said belt being of sufficient depth to be normally non-flexing transversely when its inner face is appreciably spaced from the bottom of the groove, the belt being designed relative the groove so that the inner face of the belt is slightly spaced radially from the bottom of the groove so as to be normally out of contact therewith, but so that under abnormal conditions of load said innerface engages the bottom of the groove.

2,458,397
DYEING OF NYLON FIBERS BY TREATING WITH NITROGENOUS CONDENSATION PRODUCTS
James Hutchison MacGregor, Bocking, Braintree, England, assignor to Courtaulds Limited, London, England, a British company
No Drawing. Application October 12, 1944, Serial No. 558,469. In Great Britain November 18, 1943
5 Claims. (Cl. 8—31)

1. A process for dyeing nylon fibres at an enhanced rate of absorption with direct cotton dyestuffs having little affinity for nylon which comprises incorporating in the nylon fibres a water-insoluble condensation product of formaldehyde and a member of the group consisting of cyanamide, dicyandiamide, melamine, guanidine, biguanide, dicyandiamidine, alkyl, hydroxy-

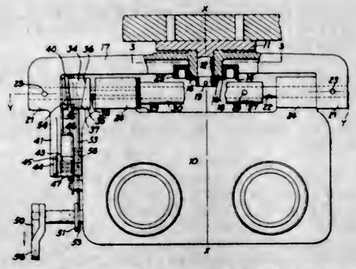
alkyl, and aryl substituents of guanidine, biguanide and dicyandiamidine and dyeing the fibres with the direct cotton dyestuff from an acid dyebath.

2,458,398
ENGINE SPEED CONTROL
Charles I. MacNeil, Glen Ridge, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application December 8, 1943, Serial No. 513,419
1 Claim. (Cl. 264—3)



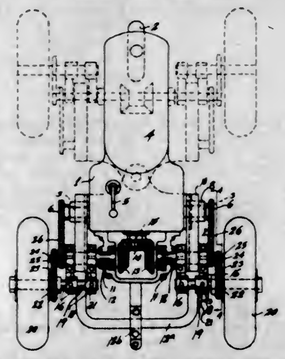
Means for varying the speed of a propeller-driving internal combustion engine, comprising a governor for controlling the speed of said engine, said governor having a speeder spring forming a part thereof, means including a hydraulic servo-motor for varying the loading of said speeder spring, said servo-motor including a hydraulic control valve normally occupying a neutral position, motion translating means for shifting said valve, electrical means for actuating said motion translating means, said motion translating means operably connecting said valve to said servo-motor and said electrical means, said electrical means including a synchronous motor having rotor and stator windings, engine-actuated means for energizing one of said windings, and constant speed means for energizing the other of said windings, and manually operable means located within reach of the pilot of the craft when the latter is in flight for alternately rendering the energization of one or the other of said windings ineffective, whereby the speed of said controlled engine may be independently regulated by the pilot.

2,458,399
SWIVEL MOUNT
Joseph Mihalyi and Harlow D. Philips, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application July 3, 1945, Serial No. 603,008
8 Claims. (Cl. 248—183)



1. In a mount, the combination with a support, of a device, means for mounting said device on said support for movement on the latter about normally arranged axes, means for separately locking said device against movement about each of said axes, means tending to release one of said locking means, means normally retaining both of said locking means in locking relation, and a control means for releasing said retaining means and for moving one of said locking means to permit the free and selective movement of said device about said axes.

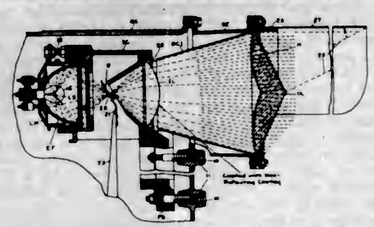
2,458,400
ADJUSTABLE DRIVE MECHANISM FOR TRACTORS
Owen J. Milliken, Davenport, Wash.
Application February 1, 1946, Serial No. 644,909
2 Claims. (Cl. 180—41)



1. In a tractor, a body, a rotary power shaft having end portions projecting from opposite sides of the body, a rotary power-takeoff shaft projecting from the rear end of the body, supports at opposite sides of the body projecting rearwardly therefrom, driven shafts rotatably mounted through the projecting rear portions of said supports and geared to the power-takeoff shaft for turning in opposite directions when the said power-takeoff shaft is rotating, double sprockets loosely mounted about outer end portions of the driven shafts, arms fixed to said driven shafts and normally extending rearwardly therefrom, axles carried by the arms and projecting from opposite sides of the tractor, drive wheels rotatably carried by outer end portions of said axles, sprockets carried by said wheels, sprockets carried by the protruding end portions of the power shaft, and sprocket chains trained about the double sprockets and about the sprockets of the power shaft and the wheels for transmitting rotary movement from the power shaft to the wheels, said driven shafts when rotated causing the arms to be swung vertically and the wheels moved vertically in opposite directions to adjusted positions for maintaining the tractor horizontal while traveling across a side of a hill.

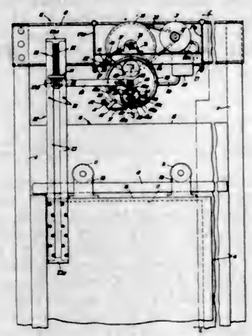
2,458,401
LIGHT SIGNAL FOR RAILROADS
Edmund W. Moore, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application November 2, 1945, Serial No. 626,348
10 Claims. (Cl. 177—327)

1. In a light signal of the type described, a concentrated source of light, means for collecting a large portion of the light emitted by said source and directing it through a focal point, means near said focal point for allowing the passage only of light of a particular color, an inner lens for concentrating said light of a particular color into a beam of large spread, and an



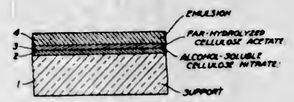
outer lens for concentrating said beam of large spread into a beam of narrow spread, said outer lens having an outer surface of conical contour and an inner surface curved inwardly toward the axis of the lens to an extent to substantially concentrate said beam.

2,458,402
AUTOMATIC OPERATOR FOR ELEVATOR DOORS AND HALL DOORS
Mortimer A. Myers, Bellaire, N. Y., assignor to The Maintenance Company, Inc., New York, N. Y., a corporation of New York
Application February 29, 1944, Serial No. 524,390
13 Claims. (Cl. 268—53)



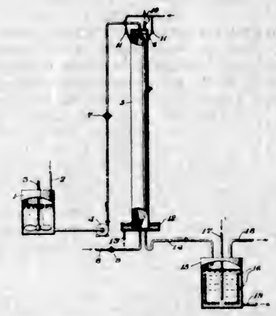
9. In an operating device for a slidably mounted door, a transverse guide member secured to the door, a pivotally mounted operating member movably and pivotally engaging the guide member, the first-named pivot being substantially fixedly positioned with respect to the door, electrically actuated operating means adapted to cause opening of the door by rotation of the operating member, and gravity operated switching means operatively associated with the electrically actuated means and disposed to control the actuation thereof, the switching means being effectively fixedly positioned with respect to the operating member and being further disposed to control the actuating means to stop further rotation of the operating member upon being rotated therewith into an angular position corresponding substantially to the open position of the slidably mounted door.

2,458,403
PHOTOGRAPHIC FILM EMPLOYING HYDROLYZED CELLULOSE ACETATE EMULSIONS
Gale F. Nadeau and Clemens B. Starek, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application March 31, 1945, Serial No. 585,898
4 Claims. (Cl. 95—9)



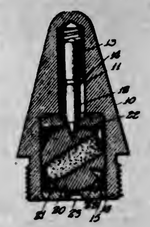
1. A photographic film of satisfactory flexibility and stripping properties which comprises a flexible cellulose ester film support and a photographically sensitive layer essentially consisting of silver halide and a far-hydrolyzed lower fatty acid ester of cellulose having an acyl content of 19–28%, united to the support throughout its area by a composite intervening layer comprising a cellulose nitrate coating on the support, and a hydrolyzed lower fatty acid ester of cellulose coating on the cellulose nitrate, the cellulose ester in the latter coating having an acyl content of 23–27%.

2,458,404
MANUFACTURE OF SODIUM HYDROXYLAMINE SULFONATES
Wesley Michael Nagle, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application June 5, 1945, Serial No. 597,659
5 Claims. (Cl. 23—114)



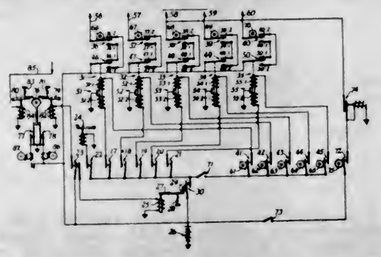
1. A process for preparing sodium salts of hydroxylamine sulfonic acids which comprise contacting an aqueous solution containing substantially equimolar proportions of sodium nitrite and sodium acid sulfite with gaseous sulfur dioxide at a temperature between 10° and 75° C., any collected mass of solution being of such film thinness and in continuous contact with sulfur dioxide that the reaction with substantially complete conversion to the said sulfonic acid salt is completed within a period not exceeding 10 seconds, and maintaining that portion away from admixture with solution containing unreacted salts, whereby side reactions of the hydroxylamine sulfonates formed and the reactants are avoided.

2,458,405
FUSE
Harry J. Nichols, New York, N. Y.
Application April 14, 1943, Serial No. 483,027
11 Claims. (Cl. 102—80)



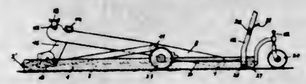
1. In a fuse of the class described, a fuse body and safety arming and automatic delay action exploding mechanism therein comprising, in combination, an axially slidable firing pin normally mounted in exploding position, said firing pin having means near its mid-section for sustaining the thrust of a spring, spring means mounted co-axially with said firing pin for normally exerting pressure thereon to maintain said firing pin in exploding position, and for moving the firing pin to armed position after firing in a gun, a detonator, a centrifugal rotor carrying said detonator and normally maintained in unarmed position by said firing pin, and means including said spring and said firing pin for automatically delaying the explosion of said detonator until after penetration of armor defeated by the projectile, while permitting instananeous explosion of said detonator on encountering armor likely to defeat the projectile.

2,458,406
CIPHERING AND CHECKING DEVICE
Harry J. Nichols, New York, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application September 28, 1945, Serial No. 619,222
3 Claims. (Cl. 178—22)



1. In ciphering apparatus having means for producing successive character code signals representing a straight language message according to a predetermined combinational-position code system and a first group of contacts each selectively adjustable to an on and an off electrical condition in correspondence to said code signals and a group of differential code relays each having a first coil corresponding to contacts of said first group of contacts and a second coil corresponding to contacts of a second group of contacts, said first coils being responsive to the electrical condition of the corresponding contacts of said first group of contacts; a second group of contacts corresponding to contacts of said first group and each connected to a corresponding second coil of said code relays for rendering said coil responsive thereto when said second group of contacts are selectively adjusted to on and off electrical conditions to produce a signal for each of said character code signals; a series of cipher discs each corresponding to contacts of said second group of contacts and mounted in spaced relation on a rotatable shaft and in spaced relation to contacts of said second group; a ratchet wheel fixedly mounted on said shaft; actuating devices attachable to and detachable from the periphery of said discs to enable said disc upon rotation to selectively adjust the electrical condition of said second group of contacts in a preselected cyclic pattern and means for rotating said discs in step-by-step fashion, said means including a rotatable solenoid-operated armature resiliently urged against rotation, a dog pivotally mounted on said armature from the center thereof and extending therefrom into urged engagement with the periphery of said ratchet wheel so that energization of the solenoid causes said armature to rotate in one direction and said dog to engage the next tooth of the ratchet wheel and deenergization thereof causes the armature to be rotated in the other direction and rotate said shaft an amount corresponding to the displacement of one tooth of the ratchet wheel.

2,458,407
TOGGLE LINK JACK WITH TWO LIFTING PHASES
Alfred Niederhauser, Basel, Switzerland
Application August 6, 1947, Serial No. 766,811
In Switzerland October 21, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires October 21, 1964
9 Claims. (Cl. 254—9)



1. A lifting jack comprising a frame, a link pivotally connected at one end to said frame, driven means mounted in said frame for movement toward and away from said pivotal connection, a lifting arm pivoted at one end to said means and at an intermediate point to the other end of said link, thereby forming a toggle mechanism which in lowest position has the three pivot points substantially in horizontal alignment, and auxiliary means for lifting the free end of said lifting arm sufficiently to form a suitable triangle of forces for the lifting movement of said lifting arm produced by said driven means.

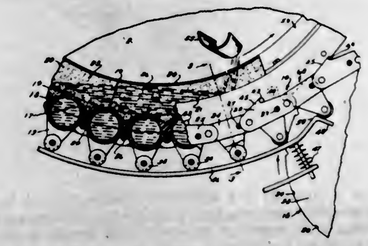
2,458,408
ACROLEIN-PHENOL RESIN
Grafton R. Owens, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application August 17, 1945, Serial No. 611,245
7 Claims. (Cl. 260—53)

1. The process for producing a resinous condensation product comprising heating together at a temperature between 52° C. and 105° C. a mixture consisting of phenol, acrolein and an aqueous solution of acid, said mixture containing between 0.75 to 1 mol of phenol for each 1 to 3 mols of acrolein, and said aqueous solution having an acid activity equivalent to that furnished by from 0.014% to0.028% of H_2SO_4, based on the weight of phenol and acrolein in the mixture.

2,458,409
OUTLET BOX CONNECTOR
Isaac A. Paige, Chicago, Ill., assignor to Paige Electrical Products Corp., Chicago, Ill., a corporation of Illinois
Application February 17, 1947, Serial No. 729,090
6 Claims. (Cl. 285—6.5)

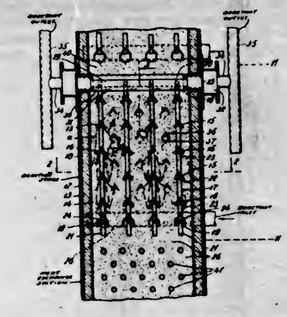
1. A connector member for securing the end of an electrical conduit to an outlet box, comprising a one-piece tube-like member of spring material, said member being longitudinally slotted throughout its length whereby it is radially contractible for insertion of one end in a knockout hole in the wall of an outlet box, cooperating spaced abutment shoulders adjacent one end of said member forming a groove on said member for preventing axial movement of said member after it is inserted in said knockout hole and permitted to expand into engagement with the outlet box wall, and integral spring fingers extending on the other end of said member in a radially and axially inward direction within said member for engagement with the electrical conduit to retain the same in position in said connector.

2,458,410
PROCESS OF CASTING
Oliver F. Parsons, Phoenix, Ariz., assignor to E. A. Spring, Phoenix, Ariz., and T. E. Norman, Denver, Colo.
Application April 16, 1945, Serial No. 588,667
2 Claims. (Cl. 22—209)



2. The method of casting metal which comprises moving a series of upper mold sections in a circular path about a horizontal axis on a support providing an annular trough therein, moving a series of complementary bottom mold sections in an endless path so that the upper and lower section are brought into assembled molding relation throughout an arcuate portion of their travel, continuously pouring molten metal into the trough to form a pool in the bottom part thereof and upon the assembled mold sections so as to successively fill the molds through openings in the top thereof, the molten metal being fed into the trough in such manner as to cause the metal entering the molds to increase in temperature as the assembled molds move through their filling travel.

2,458,411
METHOD FOR CONTACTING GASES WITH A SOLID CONTACT MATERIAL
John W. Payne, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application May 20, 1944, Serial No. 536,494
6 Claims. (Cl. 252—242)

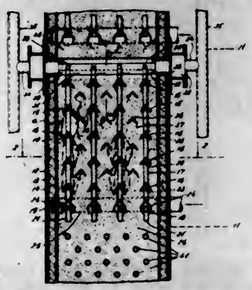


1. In a method for conducting reactions involving a contact mass of granular inorganic material and gasiform reactants the improvement which comprises the steps of passing said granular inorganic contact material to a contacting zone as a substantially compact column of downwardly moving solid material, introducing a gasiform reactant into said column at a plurality of horizontally spaced locations extending transversely of the contacting zone at a plurality of vertically spaced levels, withdrawing gasiform reaction products from said column at a plurality of horizontally spaced locations extending transversely of the contacting zone at a second plurality of vertically spaced levels, said outlet locations being positioned vertically intermediate said inlet locations, deflecting the flowing column of solid material at a third plurality of locations so as to provide a plurality of substantially particle form solid-free by-pass passages for gas flow through portions of the solid material column, said by-pass passages being positioned vertically intermediate said reactant inlet and outlet locations and horizontally outside of the direct passage for gas flow between adjacent reactant inlet and outlet locations, said by-pass passages thereby encouraging more uniform distribution of gas flow across the entire cross-section of said column of flowing particle form solid material.

2,458,412
APPARATUS FOR CONTACTING GASES WITH A SOLID MATERIAL
John W. Payne, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Original application May 20, 1944, Serial No. 536,494. Divided and this application January 10, 1946, Serial No. 640,363
7 Claims. (Cl. 23—288)

1. In an apparatus for contacting gas with particle form solid material, means defining a vertical chamber, a plurality of gas inlet and gas outlet deflectors arranged in a plurality of substantially vertical rows of vertically spaced alternate inlet and outlet deflectors, said vertical rows being spaced side by side across said chamber, each of said deflectors comprising an inverted trough, a plurality of vertical tubes, spaced hori-

zontally apart, passing through each deflector of each vertical row of deflectors so as to form a plurality of rows of said vertical tubes spaced side by side across said vessel, certain of said tubes being perforated to provide communication between the interior thereof and the space below each gas inlet deflector through which they pass, said tubes serving as distributor tubes, the remainder of said tubes being perforated to provide communication between the interior thereof and the space below each gas outlet deflector, said tubes serving as collector tubes, duct means to



admit gas to each of said distributor tubes and duct means to withdraw gas from each of said collector tubes, a second plurality of deflectors comprising inverted troughs positioned within said chamber at locations horizontally intermediate said vertical rows of inlet and outlet deflectors and vertically intermediate adjacent inlet and outlet deflectors, said last named inverted troughs having foraminate sides of such construction as to permit flow of gas therethrough while substantially preventing passage of solid particles therethrough.

2,458,412
WIRE CONNECTOR
Ford Pennell, Webster Groves, Mo., assignor to Jane Booth Pennell, Webster Groves, Mo.
Application March 29, 1946, Serial No. 658,168
10 Claims. (Cl. 24—135)

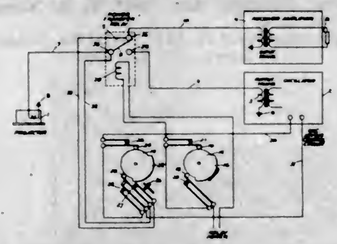
1. A wire connector comprising a body member having a transverse opening with closed ends for receiving wires, a washer surrounding at least a portion of said body member and having a tongue extending into and held by the ends of said opening against accidental removal of said washer lengthwise of said body member, and means to exert pressure on said washer to cause said washer to engage a wire positioned in said opening.

2,458,414
NAVIGATION SIGNAL SYSTEM
Edgar W. Fenton, Fairfax County, Va.
Application May 19, 1944, Serial No. 536,297
5 Claims. (Cl. 177—352)

1. A signalling system comprising means for projecting a red beam, having a light distribution pattern symmetrical about an axis, along a course with the axis of the red beam angularly divergent from the line of the course so that the said red beam is asymmetrical thereof, means for projecting a green beam, having a light distribution pattern symmetrical about an axis, along the same course with the axis of the green beam angularly divergent from the said line of the course and asymmetrical thereof, said red and said green beams mutually overlapping in a path

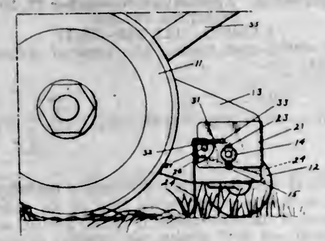
symmetrical of the line of the course, said respective beams forming a line substantially coincident with the line of the course partaking equally of the energy of both said beams so that the visual aspect of the formed line is a resultant of an even additive mixture of the two beam colors while the visual aspect even slightly to one side of the formed line is of an additive mixture of unequal energies in which the greater energy dominates and establishes the visual aspect.

2,458,415
APPARATUS FOR ECHO DISTANCE MEASUREMENT
Robert E. Peterson, Danvers, Mass., assignor to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Continuation of application Serial No. 455,391, August 19, 1942. This application October 22, 1947, Serial No. 781,329
6 Claims. (Cl. 177—386)



1. In a system for distance measurement by the time-of-travel method, a single projecting and receiving unit, a source of projection power, a receiving circuit, transfer-switching means having a plurality of groups of switch contacts, a first of said groups of switch contacts connecting said source to said unit, a second of said groups of switch contacts connecting said receiving circuit to said unit, a keying circuit which energizes said source, a third of said groups of switch contacts completing said keying circuit, a distance indicator connected to the output of said receiving circuit and operating in a predetermined time sequence, said transfer-switching means also including operating means associated in operation with said indicator and operating said first group of switch contacts for a predetermined period, operating said third group of switch contacts during said period, and operating said second group of switch contacts just after the operation of said third group of switch contacts.

2,458,416
RAKE ATTACHMENT FOR LAWN MOWERS
Manuel Pimentel, Mamaroneck, N. Y.
Application May 31, 1946, Serial No. 673,570
5 Claims. (Cl. 56—249)

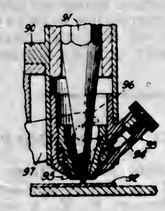


1. Apparatus for raking lawn grass comprising the combination of a lawn mower wheel, a lawn mower roller, and a rake attachment, said rake attachment comprising a mounting plate having a vertically elongated opening and adjustably mounted adjacent one end of said roller behind said wheel, a bracket pivotally mounted on said plate and extending laterally therefrom, a plurality of resilient raking tines attached to said bracket and extending downwardly vertically therefrom, and a spring attached to said pivotally mounted bracket and said plate forcing the lower ends of said tines downwardly and forwardly.

2,458,417
DRY SHAVER
Frank Pollifrone, Mill Valley, Calif.
Application September 18, 1946, Serial No. 697,643
13 Claims. (Cl. 30—43)

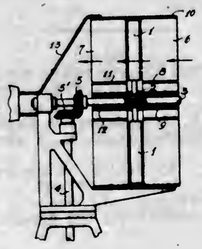
1. A dry shaver comprising a housing, a spirally grooved cutter means journaled at one end of said housing, a slotted comb member on said housing end in cooperative juxtaposition with said spiral cutter means, means for alternately rotating said spiral cutter means in opposite directions, said rotating means comprising a spring driver member, one end of which is secured to said housing and the other end of which comprises a spiral groove engaging point, cooperative guide means on said driver member adjacent said point end and on said housing maintaining said point in driving engagement within the groove in said spirally grooved cutter means, said housing being cutaway along at least a portion of one side providing operative access to said driver member whereby said housing may be manually held in shaving position to depress and release said spring driver member to alternately rotate said spiral cutter means.

2,458,418
CONTINUOUS AND INTERMITTENT RECORDING INSTRUMENT
Frederick Q. East, Rochester, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Original application April 29, 1943, Serial No. 485,623. Divided and this application April 12, 1944, Serial No. 530,705
1 Claim. (Cl. 346—50)



In combination, a stylus movable across a surface to record a continuous line thereon, a marking device comprising a circular marking wick and an enclosed ink reservoir connected thereto, said wick and reservoir surrounding the stylus and normally spaced from the said surface, and means for effecting a straight line reciprocation of the marking device in a direction parallel to the axis of the stylus to deposit an ink ring upon the line traced by the stylus.

2,458,419
WIND WHEEL
Moses Abraham Reinmann, Jerusalem, Palestine
Application January 5, 1944, Serial No. 517,037
In Palestine February 4, 1943
2 Claims. (Cl. 170—40)



1. In a wind motor in combination: a wheel rotatable in a vertical plane which can be turned so as to be perpendicular to the wind, said wheel having a plurality of substantially sector-shaped sails fixed to a common hub mounted on a horizontal shaft, with clearance between the projections of said sails on the plane of rotation; a stationary cylindrical casing closely surrounding said wheel and being co-axial therewith; a plurality of pairs of aligned straight radial vanes extending inwards from said casing normal to the plane of rotation of the wheel at both sides of said

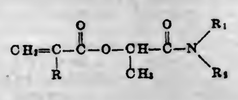
wheel, the inner ends of said vanes being secured to two sleeves surrounding said shaft at either side of the wheel, the distance between said vanes in axial direction substantially corresponding to the depth of the path covered by said wheel while the distances between any two neighboring vanes are not larger than the width of the projection of any one of said sails on the plane of rotation, measured at equal distances from the axis, the spaces between each two neighboring pairs of aligned vanes thus forming a plurality of straight air channels of uniform cross-sectional area, and the sails of the wheel being so positioned relative to the plane of rotation as to be adapted substantially to shut off said air channels individually, intermittently and simultaneously as the wheel rotates.

2,458,420
ACRYLIC ESTER-AMIDES AND POLYMERS THEREOF

Delbert D. Reynolds and William O. Kenyon, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application November 22, 1947, Serial No. 787,606
8 Claims. (Cl. 260—83)

1. A compound having the general structural formula:



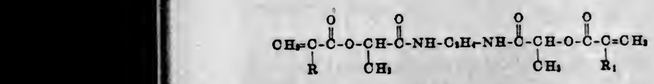
where R represents a member selected from the group consisting of an atom of hydrogen, a halogen atom, a cyano group, an alkyl group, an aryl group, an aralkyl group, an alkoxy group, an aryloxy group, a cycloalkyl group, a carboxylic acid acyl group, a carboxylic acid acyloxy group, a piperidyl group, a carboxyl group, a carbalkoxy group, and an amino group, and R_1 and R_2 each represents a member selected from the group consisting of an atom of hydrogen, an alkyl group and an aryl group.

2,458,421
UNSATURATED DERIVATIVES OF ETHYLENE DIAMINE AND POLYMERS THEREOF

Delbert D. Reynolds and William O. Kenyon, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application November 22, 1947, Serial No. 787,607
6 Claims. (Cl. 260—78)

1. A compound having the general structural formula:



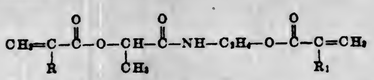
wherein R and R_1 each represents a member selected from the group consisting of an atom of hydrogen, a halogen atom, a cyano group, an alkyl group, an aryl group, an aralkyl group, an alkoxy group, an aryloxy group, a cycloalkyl group, a carboxylic acid acyl group, a carboxylic acid acyloxy group, a piperidyl group, a carboxyl group, a carbalkoxy group, and an amino group.

2,458,422
ACRYLIC DIESTER-PROPIONAMIDES AND POLYMERS THEREOF

Delbert D. Reynolds and John H. Van Campen, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application November 22, 1947, Serial No. 787,608
6 Claims. (Cl. 260—78.3)

1. A compound having the general structural formula:



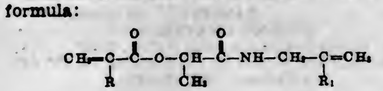
wherein R and R_1 each represents a member selected from the group consisting of an atom of hydrogen, a halogen atom, a cyano group, an alkyl group, an aryl group, an aralkyl group, an alkoxy group, an aryloxy group, a cycloalkyl group, a carboxylic acid acyl group, a carboxylic acid acyloxy group, a piperidyl group, a carboxyl group, a carbalkoxy group and an amino group.

2,458,423
N-ALLYL DERIVATIVES OF ACRYLIC ESTER-AMIDES AND POLYMERS THEREOF

Delbert D. Reynolds and John H. Van Campen, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application November 22, 1947, Serial No. 787,609
7 Claims. (Cl. 260—83)

1. A compound having the general structural formula:



wherein R represents a member selected from the group consisting of an atom of hydrogen, a halogen atom, a cyano group, an alkyl group, an aryl group, an aralkyl group, an alkoxy group, an aryloxy group, a cycloalkyl group, a carboxylic acid acyl group, a carboxylic acid acyloxy group, a piperidyl group, a carboxyl group, a carbalkoxy group and an amino group, and R_1 represents a member selected from the group consisting of an atom of hydrogen, a halogen atom and an alkyl group.

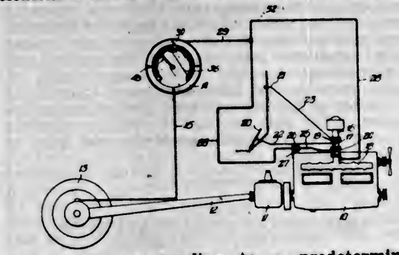
2,458,424
AUTOMATIC SPEED CONTROL FOR INTERNAL-COMBUSTION ENGINES

Roland G. Reynoldson, Madison, Wis.

Application April 24, 1947, Serial No. 743,688
6 Claims. (Cl. 180—82.1)

2. A speed control device for a vehicle which is driven by an internal combustion engine having a throttle controlled fuel feed valve, said control device comprising a separate independently operated fuel feed valve, pressure controlled means for operating said separate valve, vehicle speed indicator mechanism having a movable indicator element, said pressure controlled means including a movable actuator valve having a bleeder port and cooperating means on said movable indicator element for opening and closing said bleeder port to operate said valve, whereby said movable actuator valve may be set in the path of movement of said indicator element to operate said

independent fuel feed valve when said indicator element reaches a predetermined point in its



movement corresponding to a predetermined speed of said vehicle.

2,458,425
OIL COMPOSITIONS

Albert G. Rocchini, Springdale, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware

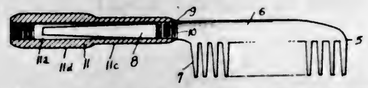
No Drawing. Application June 19, 1947, Serial No. 755,735
10 Claims. (Cl. 252—33.6)

1. An oil composition consisting essentially of a major proportion of a mineral oil and a minor proportion sufficient to improve the detergent, anti-oxidant, and anti-corrosion characteristics of said mineral oil of an oil-soluble polyvalent metal salt of an alkenyl-succinic acid monoamide in which the alkenyl group contains from 5 to 18 carbon atoms.

2,458,426
COMBINED COMB AND HAIR CURLER

Frank Rosiello, Bronx, N. Y.

Application January 29, 1946, Serial No. 644,051
1 Claim. (Cl. 132—19)



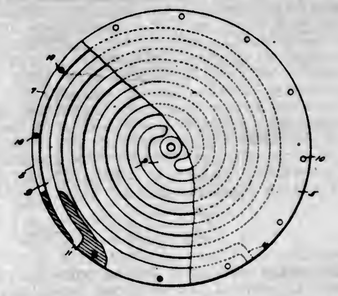
A hair comb having a tapered handle extending from one end thereof and an externally threaded portion at the inner end of said handle and a shoulder at the inner end of said externally threaded portion, a handle extension for the comb handle having a uniform cylindrical bore with internal screw threads in each end thereof engageable with the externally threaded portion of the comb, said handle extension having cylindrical hair curler surfaces on the opposite end portions thereof of different diameters capable of forming different sized hair curls by winding hair strands thereon, the end of the handle extension threaded on the comb handle engaging the shoulder of the comb handle to rigidly connect the handle extension to the comb.

2,458,427
METHOD OF MANUFACTURING RECORD DIES

Edward E. Russell and Monica I. Russell, Woodmont, Conn.

Application December 19, 1946, Serial No. 717,186
6 Claims. (Cl. 76—107)

1. The method of forming dies used in the manufacture of phonograph records, consisting in providing die plates, providing a channel member cutting away portions of the channel member, providing channels extending throughout the entire thickness of the channel members, positioning the channel member between the die



plates, securing the channel member between the die plates, placing a brazing medium within the channels and finally, subjecting the connected die plates and channel member to a temperature sufficient to braze the die plates and channel member together.

2,458,428
COATING COMPOSITIONS FOR MOISTURE-PROOFING BY HOT MELT COATING

Martin Salo, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application December 12, 1945, Serial No. 634,628
5 Claims. (Cl. 260—17)

1. A non-blocking melt-coating composition adapted to give coatings of low moisture vapor permeability essentially consisting of at least 40% of a heat stable butyric acid ester of cellulose having a butyryl content of at least 42%, a total acyl content of at least 50%, a cuprammonium viscosity of less than 10 centipoises, a viscosity in 10% acetone solution at 25° C. of 10–200 centipoises, and not more than 2 hydroxyl groups per 24 cellulose carbon atoms, sufficient di-2-ethyl hexyl phthalate within the range of 10–40% to impart good fluidity to the composition at 150–200° C., ½–7% of a wax and unhydrolyzed polyvinyl acetate having a viscosity of ½–10 centipoises, determined in solution in benzene of 86 g. polyvinyl acetate per 1000 cc. of solution at 20° C., sufficient in amount within the range 5–40% to render the wax permanently compatible with the composition.

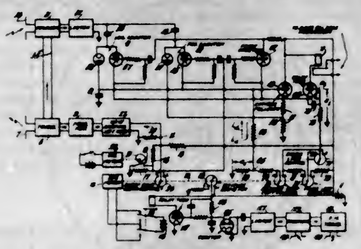
2,458,429
RADIO BOMB RELEASE SYSTEM

Royden C. Sanders, Jr., Chestnut Hill, Mass., and Daniel Blitz, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware

Application July 16, 1945, Serial No. 605,412
5 Claims. (Cl. 342—7)

1. In a radio bomb release system which includes radio reflection means substantially continuously responsive to the slant distance and slant speed of an aircraft with respect to a selected target to provide an output comprising two differentially related components which are predetermined functions respectively of said dis-

tance and said speed, and relay means responsive to the attainment by said output of a predetermined magnitude to effect release of a bomb, altimeter means substantially continuously responsive to the altitude of said craft to provide an output corresponding in magnitude to said



altitude means responsive to the output of said altimeter to control the response sensitivity of said radio reflection means to distance as a predetermined function of said altitude, and means responsive to the output of said altimeter to bias said relay means in accordance with a predetermined function of said altitude.

2,458,430

MEDICINAL SOLUTIONS

Reinhard Schläpfer, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application May 16, 1946, Serial No. 670,207. In Switzerland June 5, 1945
6 Claims. (Cl. 167—81)

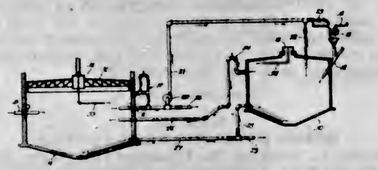
2. A medicinal solution containing water, a difficultly soluble medicinally active substance selected from the group consisting of lactoflavin, 2-methyl-naphthoquinone-(1,4) and neohesperidine dissolved therein in an amount greater than its normal water solubility, and pyridyl-3-carbinol as a solubilizer.

2,458,431

APPARATUS FOR AND METHOD OF DIGESTING GARBAGE

Harry E. Schlenz, Glencoe, Ill., assignor to Pacific Flush Tank Company, Chicago, Ill., a corporation of Illinois

Application April 20, 1944, Serial No. 531,917
10 Claims. (Cl. 195—104)



1. The method of digesting garbage material which comprises the steps of grinding a mass of garbage, feeding the ground mass to a zone sealed against the admission of air for decomposition therein, feeding sewage sludge to a zone separated and distinct from said first zone and sealed against the admission of air for anaerobic decomposition therein, continually passing liquor of digestion from said sewage sludge digestion zone to said garbage digestion zone for promoting and maintaining anaerobic digestion in said garbage digestion zone and maintaining the temperature of the digesting garbage mass at substantially the temperature of the digesting sewage sludge mass, returning liquor of digestion from said garbage digestion zone to said sewage sludge digestion zone where it is commingled with the mass digesting in said sewage sludge digestion zone so that it is conditioned similarly to the liquor of digestion in said sewage sludge digestion zone, and passing the finally digested liquor from the sewage sludge digestion zone to point of disposal.

2,458,432

THIOL ESTER MODIFICATION OF SYNTHETIC RUBBERS

William Henry Sharkey, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application December 22, 1944, Serial No. 569,421
11 Claims. (Cl. 260—84.5)

1. In a process of polymerizing a conjugated diene monomer composition containing the diene in amount at least 50% by weight of the polymerizable monomers present, the improvement which comprises exposing the diene composition to polymerizing conditions in an aqueous alkaline medium in the presence of an ester of an acyclic aliphatic monocarbothiolic acid of one to six carbon atoms having carbothiolic hydrogen replaced by the radical of a monohydric alcohol of six to eighteen carbon atoms.

2,458,433

METHOD FOR CONTACT MATERIAL REGENERATION

Thomas P. Simpson, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application November 30, 1943, Serial No. 512,324
7 Claims. (Cl. 252—418)

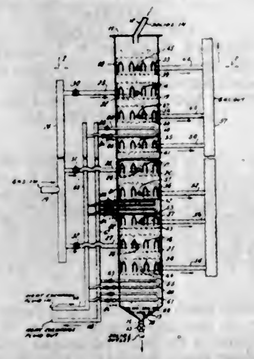
1. The process for regeneration of a solid particle form contact mass material which has become spent by deposition of a carbonaceous deposit thereon and which exists at a temperature suitable for initiating combustion of said deposit which process comprises: passing said particle form solid material downwardly through a plurality of burning zones through each of which it moves as a substantially compact column of gravitating particles, similarly passing said solid material through a heat exchange zone intermediate each two successive burning zones only in the intermediate and later portions of the zone series, passing an oxygen containing gas at controlled rates in direct contact with said solid material in the burning zones in the initial portion of the zone series to burn the contaminant in the absence of indirect heat exchange with a heat exchange fluid to heat the solid material by the released combustion heat to a temperature suitable for practical rapid contaminant combustion rates but below a temperature which would cause heat damage to said solid contact material, passing an oxygen containing gas independently into direct contact with the contact material in each of the remaining burning zones to burn off a portion of said deposit in each burning zone, effecting a separation of the gaseous regeneration products formed in each burning zone from the contact material before any substantial amount of said gaseous products formed in any given one of said burning zones passes into any other of said burning zones and discarding said separated gaseous products outside of said burning zones, passing a fluid cooling medium in indirect heat exchange relationship with said solid material in each of said heat exchange zones, maintaining the contact material in the adjacent burning zones below a heat damaging temperature but above the minimum temperature required for practical rapid contaminant burning rates by control of the amount of said indirect heat exchange in said heat exchange zones, and effecting in successively later heat exchange zones a gradual decrease in the amount of heat removal by the indirect heat exchange with the fluid cooling medium relative to the weight of contaminant burned in the corresponding preceeding burning zones.

2,458,434

METHOD AND APPARATUS FOR REGENERATING MOVING BED PARTICLE FORM CONTACT MASS MATERIALS

Thomas P. Simpson, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application April 26, 1944, Serial No. 532,802
9 Claims. (Cl. 252—418)



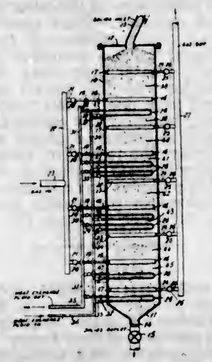
1. A method for removal of contaminant deposits from a particle form solid contact mass material by the action of a combustion supporting gas at controlled elevated temperatures comprising: passing said contaminant bearing solid contact mass material at a controlled rate through a vertical series of burning zones as a substantially compact column of downwardly flowing particle form solid material, introducing a combustion supporting gas into said column of solid material at a substantially centrally located level in each of said zones, causing a portion of the gas introduced into each of said zones to pass upwardly within said column and the remaining portion to flow downwardly within said column to effect combustion of said contaminant, withdrawing gaseous combustion products from said column adjacent either end of each of said zones independently of the gaseous products formed in any other zone while excluding the flow of said gas into the portions of said column between said zones, passing an externally controlled heat exchange fluid in indirect heat transfer relationship with said column of solid material in said portions of said column between most of said zones to control the range of temperature of said solid material passing through said burning zones.

2,458,435

METHOD AND APPARATUS FOR REGENERATING A MOVING BED CONTACT MATERIAL

Thomas P. Simpson, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

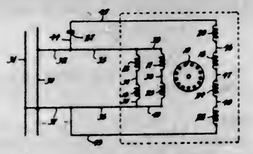
Application October 21, 1944, Serial No. 559,734
6 Claims. (Cl. 252—418)



3. The method for regenerating a particle form contact material bearing a carbonaceous contaminant deposit which comprises: passing said contaminant bearing particle form contact material as a substantially compact column downwardly through a vertical series of alternating combustion zones wherein the contaminant is burned in the substantial absence of cooling and combination combustion and cooling zones wherein the contaminant is burned in the presence of cooling by indirect heat transfer with a cooling fluid, introducing streams of combustion supporting gas into said column at alternate common levels between adjacent combustion and combination combustion and cooling zones, splitting said streams to cause a portion of each stream to flow upwardly through one of said zones from its level of introduction and the remaining portion to flow downwardly through the adjacent zone from the same level of introduction, withdrawing the gaseous regeneration products from said column as a plurality of streams from the remaining alternate common levels between adjacent combustion and combination combustion and cooling zones, passing a suitable cooling fluid in indirect heat transfer relationship with said column in each of said

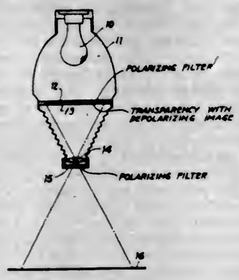
combination combustion and cooling zones to effect a substantial descrease in the contact material temperature in said combination combustion and cooling zones while excluding cooling by indirect heat transfer in said combustion zones so as to permit a substantial rise in the contact material temperature in said combustion zones.

2,458,436
SPLIT-PHASE INDUCTION MOTOR
Edgar M. Smith, Trenton, N. J., assignor to The Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application September 29, 1944, Serial No. 556,343
4 Claims. (Cl. 318—220)



3. A split phase induction motor of the capacitor type having in combination, a rotor, a capacitor, a stator comprising a plurality of line phase windings and capacitor phase windings each of which has an equal number of turns and an equal resistance with an inductive reactance to resistance ratio greater than unity, said windings of said capacitor and line phases being electrically displaced from one another, said line phase windings being permanently connected in series-parallel, and said capacitor phase windings being permanently connected in series with one another and with said capacitor the optimum value of which provides a condition of resonance within said capacitor phase and a substantially equal voltage drop per winding.

2,458,437
PHOTOGRAPHIC GAMMA CONTROL
Cedric Harold Smith, Wealdstone, England, assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application April 20, 1945, Serial No. 589,393
6 Claims. (Cl. 95—5)

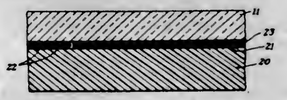


1. The method of controlling gamma in an image which comprises forming the image in silver iodide in a transparent sheet, transilluminating the image uniformly with polarized light and orienting a polarizing filter in the light from the image in accordance with the gamma desired.

2,458,438
OVERSHOE WITH LINING FOR SHINING SHOES
Henry B. W. Snelling, Concord, Mass.
Application September 13, 1946, Serial No. 696,711
6 Claims. (Cl. 36—7.3)

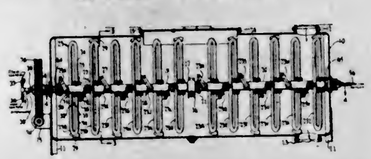
1. An overshoe comprising a napped lining impregnated with shoe-lining wax.

2,458,439
METHOD OF MAKING PHOTOGRAPHIC IMAGES ON PLASTIC
Henry C. Staehle, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application May 15, 1946, Serial No. 669,918
1 Claim. (Cl. 41—24)



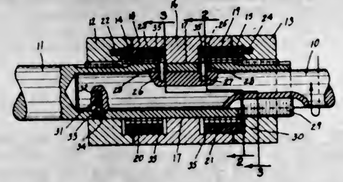
A method of preparing an image on a plastic sheet of methyl-methacrylate comprising, providing a transparent film base of a cellulose ester having a positive gelatine emulsion relief image formed on one surface thereof, the portions of said surface not occupied by said image having the emulsion removed therefrom to expose said base, and cementing said base to said sheet with a cement comprising nitro-cellulose dissolved in ethylene chloride and methyl alcohol to adhere said portions to said sheet.

2,458,440
CRYSTALLIZER
John W. Stafford, Hoboken, N. J., assignor to The Turi Iron and Car Company, Inc., New York, N. Y., a corporation of New York
Application April 24, 1946, Serial No. 664,455
12 Claims. (Cl. 127—15)



1. A rotary heat exchanger coil for sugar crystallization or the like comprising a shaft rotatable in a drum, a plurality of planar rectangularly shaped closed loops mounted on said shaft, each of said loops having a pair of legs, one leg of each loop comprising two portions substantially aligned with each other and connected with said shaft astraddle the same, the longitudinal axes of said loops being substantially at right angles to the axis of said shaft and the transverse axes of said loops being disposed at acute angles relative to the axis of said shaft, and means to conduct heat exchanging medium through said loops.

2,458,441
BIDIRECTIONAL NO-BACK POWER TRANSMISSION
William Carleton Starkey, Indianapolis, Ind.
Application July 2, 1945, Serial No. 602,788
15 Claims. (Cl. 192—8)



1. In a power transmission, the combination of driving and driven members, one of said members having opposed pockets, a fixed element having opposed pockets matching the afore-mentioned pockets, respectively, and a braking element comprising a helical spring mounted in each pair of matching pockets for locking engagement therewith, each of said springs having one end portion thereof operable by one of said members tending to exert a locking action with said pockets and the other end operable by the other of said members for causing it to release said pockets, said members being operably engageable with each other to provide an interdriving connection therebetween upon one of said clutch springs being moved out of locking engagement with one of its associated pockets.

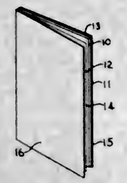
2,458,442
FOG INHIBITOR FOR PHOTOGRAPHIC EMULSIONS
Robert Eliot Stauffer and William F. Smith, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application October 17, 1947, Serial No. 780,568
12 Claims. (Cl. 95—7)

1. A silver halide emulsion layer containing a compound having the structure

$$R_2ReX_6$$

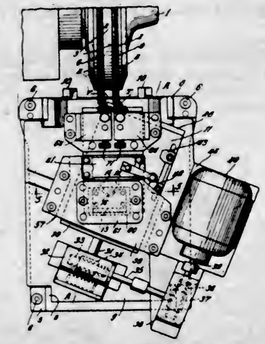
where X is a halogen atom and R is of the group consisting of hydrogen, ammonium and alkali metals.

2,458,443
RAZOR BLADE SHARPENER
Odgard C. Stemland, Minneapolis, Minn.
Application July 13, 1946, Serial No. 683,524
3 Claims. (Cl. 51—211)



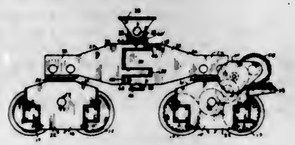
1. A device of the character described comprising a flat sharpening element, and a cover for said flat sharpening element consisting of an exterior cover member constituted as a flat sheet of relatively stiff material and an interior cover member constituted as a flat sheet of flexible material, said exterior and interior cover members being substantially of twice the area of said flat sharpening element and the cover being adapted to be folded so as to include the flat sharpening element between flaps of the exterior and interior cover members, a coat of paint upon a rearward surface of said flat sharpening element, adhesive material between substantially the whole of a forward surface of a flap of said interior cover member and the rearward surface of the flat sharpening element having said coat of paint, and adhesive material between substantially the whole of a rearward surface of said mentioned flap of said interior cover member and a forward surface of a flap of said exterior cover member.

2,458,444
DRESSING MECHANISM
Gilbert Stewart, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application February 28, 1945, Serial No. 580,125
9 Claims. (Cl. 125—11)



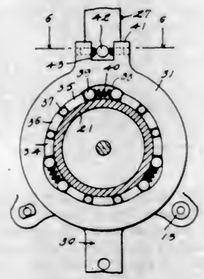
1. A grinding wheel dressing mechanism comprising, in combination, a base formed with transverse spaced parallel arcuate guides on the top, a cradle mounted on said guides for rotary adjustment about a predetermined axis, an actuating slide having a ball bearing support on said cradle for reciprocation in a direction inclined to said axis, reversible drive means on said cradle for translating said slide and including a lead screw in threaded engagement with a nut on the underside of said slide, upstanding standards on said cradle at opposite sides of said slide, a bridge plate connected to said standards and extending in spaced relation over said slide, a dresser slide having a ball bearing support on said actuator slide for reciprocation in a direction parallel to said axis, a contour cam removably mounted on the underside of said bridge plate and having a form with oppositely inclined faces complemental to the form to be produced on the grinding wheel, a follower on said dresser slide engaging said cam, spring means urging said follower constantly in engagement with said cam, and a dressing tool mounted on and movable with said dresser slide, the angle of inclination of said actuating slide being less than that of the similarly inclined face of said cam, whereby for movement of said actuating slide in one direction the movement of said dresser slide relative thereto will be in one direction regardless of reversal of movement of said dresser slide relative to said cradle.

2,458,445
CRANE TRUCK
Robert J. Steddard, St. Paul, Minn., assignor to American Hoist & Derrick Co., St. Paul, Minn., a corporation of Delaware
Application December 17, 1945, Serial No. 635,547
15 Claims. (Cl. 105—157)



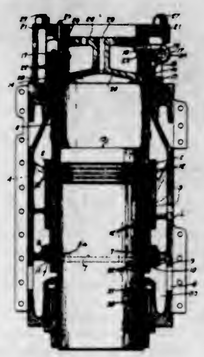
1. A truck comprising spaced apart truck frames, supporting wheels for said truck frames, a girder frame consisting of separate girder elements between and assembled with said truck frames, and a vertical center pin hingedly connecting said girder elements to each other.

2,458,446
SELF-LOCKING LEVER CONTROL
Charles R. Suska, Dayton, Ohio, assignor to Aero Supply Mfg. Co. Inc., Corry, Pa.
Application April 24, 1947, Serial No. 743,675
1 Claim. (Cl. 74—531)



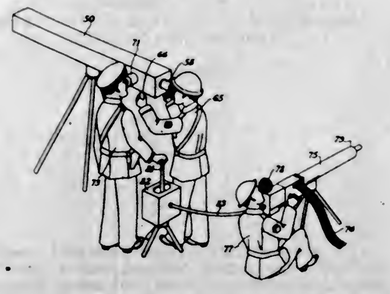
A lever control comprising a frame, a shaft fixed relative to said frame, a driving member formed with a hub rotatably engageable over said shaft, a driven member, a hub on said driven member formed with a central opening having peripherally spaced apart inwardly opening cam recesses, peripherally spaced apart bearing lugs on the hub of said driving member, the hub of said driven member engaging about the bearing lugs of said driving member, wedging elements between the lugs of said driving and driven members disposed in said cam recesses, releasing fingers on said driving member between the hubs of said driving and driven members engageable with the wedging elements for moving the latter to release position, a pair of confronting screws carried by one of said members, an abutment member carried by the other of said members positioned between said screws for engagement thereby whereby said driving member may have initial lost motion relative to said driven member, the initial lost motion of said driving member constituting the release cycle during which said release fingers are effective.

2,458,447
ENGINE CYLINDER
Adolph Taschella, Altadena, Calif., assignor, by mesne assignments, to Nordberg Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application February 3, 1945, Serial No. 576,029
10 Claims. (Cl. 123—173)



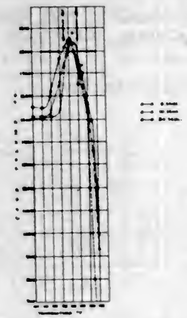
8. Engine cylinder construction comprising a member providing a water-jacket casing, a liner supported by said member at a portion of the liner remote from the head of the liner and cooperating with said casing to form the water-jacket, the head end of said liner being substantially out of contact with said casing, means closing the water-jacket space at the head end of the liner and permitting substantially unrestrained linear and radial movement of the head end of the liner, a cylinder head extending into the head end of the liner, and means to connect the cylinder head to said member and hold the head substantially fixed with respect thereto, the head end of the liner being free to expand linearly along the cylinder head.

2,458,448
GUN TRAINING BY TRACER FIRE SPOTTING
Fordyce Tuttle, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application February 26, 1944, Serial No. 524,028
9 Claims. (Cl. 89—41)



1. The method of fire control which comprises sending tracer fire along with the damage inflicting fire from a rapid fire gun, optically forming in a single field of view and from spaced viewing points superimposed images of the target being fired on and images of the tracer fire, observing said images whereby the tracer fire appears as travelling along two lines crossing over at a distant point, adjusting the forming of the target images to bring them into coincidence and aiming the gun to bring the apparent crossover point of the tracer fire onto the target.

2,458,449
EGG IMPROVING PROCESS
Walter M. Urbain, Berwyn, and Leon D. Mink, Chicago, Ill., assignors to Swift & Company, Chicago, Ill., a corporation of Illinois
Application January 22, 1944, Serial No. 519,310
2 Claims. (Cl. 99—92)



1. In the process of making cake baked goods of increased volume of at least 20 per cent over that obtainable with untreated egg material, the step comprising heating liquid egg material separated from the shell at a temperature of between 135° F. to 150° F. while agitating said material, and for a period of time between 3 minutes and 30 minutes to cause an increase in viscosity of the liquid egg material of from 10 to 50 seconds.

2,458,450
DECOLORIZATION OF ESTERS OF ACRYLIC AND α-ALKYL-ACRYLIC ACIDS
William P. Utermohlen, Jr., Charlottesville, Va., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Original application January 7, 1943, Serial No. 471,607. Divided and this application November 2, 1945, Serial No. 626,427
4 Claims. (Cl. 260—486)

1. A process for decolorizing a colored monomeric ester of acrylic acid and esters of α-alkylacrylic acids in which the alkyl group contains from 1 to 2 carbon atoms, the color of said monomeric ester being caused by the presence of colored oxidation products of phenolic polymerization inhibitors and the color not being removable from said monomeric ester by distillation of said monomeric ester, comprising treating the colored ester with an aqueous solution of an alkali metal bisulfite.

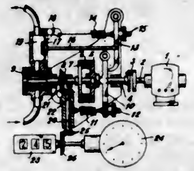
2,458,451
METHOD OF FORMING NONTHERMOPLASTIC SYNTHETIC RESIN FILMS
Gordon T. Vaala, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 18, 1943, Serial No. 491,400
5 Claims. (Cl. 117—65)

1. The process of preparing sheet material which comprises mixing a polyvinyl butyral resin having a hydroxyl number above 60 with a melamine-formaldehyde-alcohol condensation product at about 60° C., forming a solvent free mass thereof into a sheet, and thereafter rendering the composition non-thermoplastic and insoluble by heating the same for 1 to 3 hours at a temperature of 105 to 125° C.

4. The process of claim 1 in which the sheeting comprises calendering the mass into an unsupported film.

5. The process of claim 1 in which the sheeting comprises calendering the mass onto a fabric.

2,458,452
DRIVING DEVICE FOR REVOLVING MEMBERS
Pierre Georges Vanni, Neuchatel, Switzerland
Application February 18, 1944, Serial No. 522,989
In Switzerland April 5, 1943
1 Claim. (Cl. 103—11)

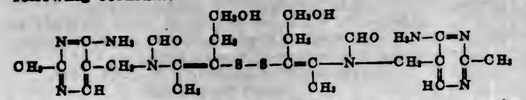


A device for regulating the outflow pressure of a pump, comprising a revolving member driving the pump, the outflow pressure of which is to be regulated, a second pump, a revolving driving member which continually cooperates with the first-mentioned revolving member, friction means between the revolving members for transmitting a torque practically independent of the speed of the revolving driving member, and means wherein the outflow pressure of the pumps control the adjustment of the friction means, one of said pumps being regularly driven and feeds the other which is driven by the revolving member, the friction means being operated by a member placed under the dependence of the intake pressure of the second pump and by a member placed under the dependence of the outflow pressure of this same pump whereby the outflow pressure is automatically maintained at a value at least equal to the intake pressure of said pump.

2,458,453
PROCESS FOR PRODUCING THIAMIN DERIVATIVES
Kurt Warnat, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application April 9, 1946, Serial No. 660,857. In Switzerland June 1, 1945
1 Claim. (Cl. 260—251)

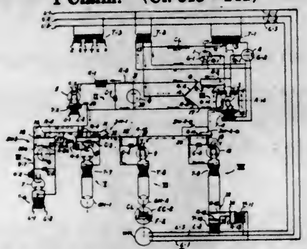
A process which comprises mixing and reacting one mol of thiamin with three mols of caustic soda and mixing and reacting the thiamin sodium salt thus obtained with one mol of potassium

ferricyanide so as to produce a compound of the following formula:



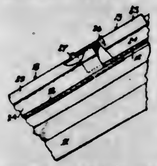
while maintaining at least 8 per cent of organic substance in the reaction mixture throughout the reaction, said organic substance being that supplied by the aforementioned sodium salt and the final reaction product.

2,458,454
ELECTRONIC CONTROL APPARATUS
Anthony Winther, Kenosha, Wis., assignor to Martin P. Winther, trustee, Waukegan, Ill.
Original application May 4, 1944, Serial No. 534,111. Divided and this application April 29, 1946, Serial No. 665,884
1 Claim. (Cl. 315—141)



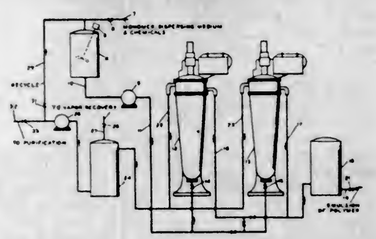
Tube firing control apparatus for at least one gas-filled rectifier tube having an anode, a cathode and a grid, comprising an A. C.-potential circuit including a D. C. load and connected across said cathode and anode, the current of which circuit is rectified by said tube to feed said load, an adjustable D. C. network adapted to produce an adjustable D. C. potential component, a control tube having an anode non-inductively connected with the grid of said rectifier tube and having a grid connected to said adjustable D. C. network, an A. C. network having a potential in fixed out-of-phase relation to the A. C. potential impressed upon the anode of said rectifier tube, said A. C. network being also connected to said grid of the control tube, whereby the grid of the rectifier tube is supplied by the anode of the control tube with an adjustable firing voltage composed of an adjustable D. C. component and a fixed A. C. component undistorted between the said tubes.

2,458,455
GREENHOUSE CONSTRUCTION
Walter Wilson, Yonkers, N. Y., assignor to Burnham Corporation, a corporation of New York
Application January 24, 1946, Serial No. 643,024
1 Claim. (Cl. 108—16)



A roof construction which comprises a rafter having lateral shoulders and a central ridge portion, said shoulders adapted to receive the edges of overlapping glass panes resting thereon, a cap member fitted over the rafter and having a crown portion fitting over the ridge portion and flanges extending over the edges of the panes of glass, the lower edges of said panes abutting against and being supported by the upper edge of the next lower cap member, said cap member having an aperture in the lower portion of its crown portion and a rib at the upper end of its crown portion.

2,458,456
EMULSION POLYMERIZATION
I. Louis Wolk, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application December 23, 1944, Serial No. 569,595
2 Claims. (Cl. 260—86.5)



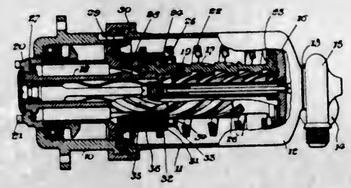
1. A process for the continuous emulsion polymerization of a conjugated diolefin and a monomer copolymerizable therewith containing an active $CH_2=C<$ group, which comprises forming an aqueous emulsion of said diolefin and said monomer; continuously introducing said emulsion into a centrifuging zone under polymerizing conditions and continuously subjecting said emulsion in said zone to the action of a centrifugal force sufficient to continuously separate polymer, as formed, in a polymer-rich fraction at one point in said zone, and unpolymerized material at another point in said zone; continuously removing said polymer-rich fraction from said zone and separating polymer therefrom, continuously removing said unpolymerized material from said zone; admixing said unpolymerized material with additional conjugated diolefin and monomer to form an aqueous emulsion; and introducing said emulsion into said centrifuging zone.

2,458,457
DUST COLLAR
Charles A. Wright, Milwaukee, Wis.
Application October 12, 1945, Serial No. 621,879
2 Claims. (Cl. 286—6)

1. In a journal box supporting a rotating shaft, a dust guard therefor comprising a first and a second flat cheek parallel to and spaced from each other, said cheeks having axle openings in register with each other, a hinge integrally formed with said cheeks together at the bottom sides thereof, a packing disk between said cheeks and having an opening in register with the axle openings, a plurality of spaced tongue portions extending about and integrally formed with the sides and bottom of said first cheek, said tongue portions being bent over the second cheek where-

by said packing disk is retained between said cheeks, a bent flange at the top of one of said cheeks extending toward the other of said cheeks.

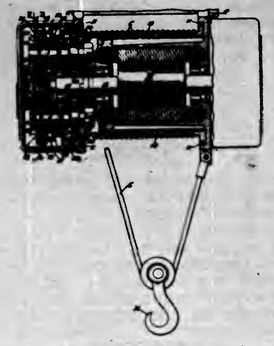
2,458,458
CUSHIONING MEANS FOR ENGINE STARTERS
Frank Wright, Moreno, Calif., assignor to Breeze Corporations, Inc., Newark, N. J., a corporation of New Jersey
Original application August 11, 1943, Serial No. 498,441. Divided and this application July 8, 1947, Serial No. 759,633
2 Claims. (Cl. 123—179)



1. An engine starter comprising in combination, a gas expansion motor including a fixed cylinder, a piston movable therein and a spring to return the piston to its initial position; a hollow drive shaft rotatably mounted in said piston, said shaft having coarse helical internal and external concentric screw threads, a stationary nut to engage the external threads, a clutch shaft to engage the internal threads to be driven thereby, a fixed casing spaced circumjacent said nut, a plunger ring movable in said casing, and a plurality of resilient elements disposed in said casing adapted to force said plunger ring outwardly to intercept said drive shaft near the termination of its outward stroke thereby to prevent malformation of the parts in contact.

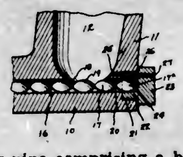
2,458,459
TRANSMISSION MECHANISM
William F. Wright, Lisbon, Ohio
Application October 3, 1944, Serial No. 557,031
18 Claims. (Cl. 74—280)

1. In combination, a support mounted for rotation about a given axis, interlocking coaxial gears rotatably carried by said support for rotation about an axis parallel to and spaced from said given axis, a stationary gear operatively connected to one of said rotatable gears to cause the latter and said support to rotate in opposite directions, an overrunning clutch having an inner member rotatable about the axis of said rotatable gear and an outer member rotatable only with said support about said given axis, a driving member, means providing a driving connection between said driving member and said gear, a driven member, and means providing a driving



connection between said support and driven member.

2,458,460
TOBACCO SMOKE PIPE
Charles V. Wright, Jr., Tamaqua, Pa.
Application March 25, 1946, Serial No. 656,961
1 Claim. (Cl. 131—215)

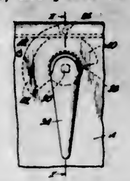


A smoking pipe comprising a bowl, a stem on said bowl, said stem having a longitudinal smoke passage therethrough intersecting said bowl at the bottom thereof and opening on the forward side of the bowl, said bowl having a counterbore concentric to said smoke passage, said bowl also having an air vent passage communicating with said counterbore and said bowl adjacent said smoke passage, a plug rotatable in said counterbore having a vent passage therein for registration with the air vent of said bowl, and a spiral member fixed on said plug disposed in said smoke passage along the length thereof whereby said plug may be rotated for displacing obstructions in said smoke passage and positioning for controlling the air vent into said bowl.

2,458,461
COMBINATION DOOR LOCK AND VALVE FOR STEAM COOKERS
Cyril Charles Young and Donald F. Troupe, Kansas City, Mo., assignors to The Vendo Company, Kansas City, Mo., a corporation of Missouri
Application August 28, 1944, Serial No. 551,589
6 Claims. (Cl. 126—20)

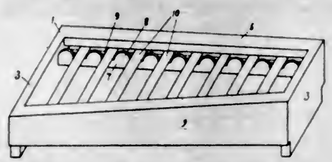
1. In a steam cooker having a body provided with a compartment, a connection with a steam supply, an exhaust tube, a closure swingable to and from a position closing the compartment, and a steam supply and exhaust valve constructed to admit steam to the compartment when in one position and to exhaust steam from the compartment through the exhaust tube when in the normal position; a latch having parts on the closure and parts on the cooker

body, said parts on the closure being manually movable through a path of travel during the first portion whereof the parts on the closure interconnect with the parts on the body to hold the closure shut, the parts on the closure being



formed to engage and actuate the valve from said normal position exhausting the compartment through said tube to the position supplying steam to the compartment as the latch is moved through the last portion of its path of travel.

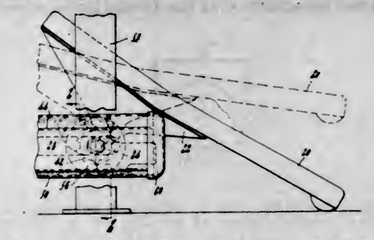
2,458,462
XYLOPHONE
Harry Zimmerman, New York, N. Y.
Application November 3, 1944, Serial No. 561,680
1 Claim. (Cl. 84—403)



A xylophone comprising a frame, including lateral walls having inwardly extending upper and lower ledges defining inner channels extending longitudinally of the lateral walls, the lower ledges projecting inwardly of the frame beyond the upper ledges and having side edges, strips extending along the side edges of the lower ledges and projecting upwardly therefrom and formed with recesses spaced from each other longitudinally of the strips, soft pads upon the lower ledges having portions exposed through lower portions of the recesses, and sound bars extending transversely of the frame, the sound bars being of less width than the recesses and having end portions passing through the recesses and resting upon the pads with their side edges spaced from sides of the recesses and their ends spaced from walls of the channels.

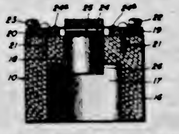
2,458,463
ADJUSTABLE FOOTRAIL
Alfred B. Bell, Philadelphia, Pa., assignor to Heywood-Wakefield Company, Gardner, Mass., a corporation of Massachusetts
Application August 28, 1945, Serial No. 613,065
9 Claims. (Cl. 155—170)

1. An adjustable rail mechanism for a chair or the like, comprising two horizontal channel members supported at the sides of the chair, a shaft extending between and supported by said channel members, rack and gear means on said channel members and shaft for causing said shaft to travel along said channel members when it rotates, an elongated rail loosely mounted on said shaft parallel therewith and rockable about the axis thereof, and means operative to lock said rail and shaft against movement along the channel members when said rail is in position for use



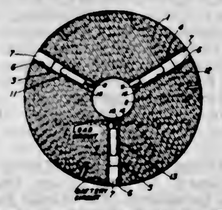
and to release said rail and shaft when the rail is rocked from its position for use.

2,458,464
SWITCH
John W. Busacker, Houston, Tex., and Thomas M. Perry, Bennington, Vt., assignors to the United States of America as represented by the Secretary of the Navy
Application January 21, 1943, Serial No. 473,148
2 Claims. (Cl. 200—52)



1. An unshorting switch comprising a short circuiting wire, a retainer adjacent the wire, and a plunger connected to the wire and the retainer and normally held thereby in an inoperative position, the plunger being operable by a force of setback to break the retainer and the wire.

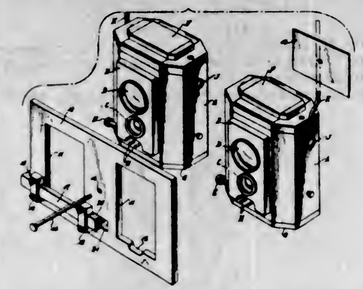
2,458,465
CENTRIFUGAL SWITCH
John W. Busacker, Houston, Tex., assignor to the United States of America as represented by the Secretary of the Navy
Application September 17, 1943, Serial No. 502,831
1 Claim. (Cl. 200—80)



A centrifugal switch including a flat-sided circular body to be mounted with its axis parallel to an axis of rotation, said body having a plurality of bores disposed at angles with respect to each other and extending substantially diametrically, said bores being in different horizontal planes and having outer ends communicating with the outer surface of the body, fixed contacts of soft metallic material carried in the outer end portions of said bores, said bores being enlarged throughout substantially half their respective lengths, plungers movably carried in the enlarged portions of said bores and having

nibs, and restraining springs connected between the corresponding inner ends of the bores and the plungers, said plungers being movable by centrifugal force against the tension of said springs for engaging said nibs in said fixed contacts upon rotation of the body.

2,458,466
CAMERA ADAPTER FOR STEREOPICTURES
Lawrence F. Campbell, Silver Spring, Md.
Application April 23, 1947, Serial No. 743,372
3 Claims. (Cl. 95—18)

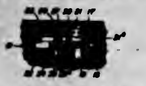


1. A holder device for adapting two cameras for taking snapshot stereo pictures and which comprises a plate-like member having two spaced framing openings to receive and position the lens carrying face of the housings of two cameras respectively for taking stereo pictures, the lenses of said cameras being exposed through said openings, a clamp member disposable on the opposite faces of said two cameras and adjustably and detachably secured to the plate-like member for securing said rigid camera housings in said framing-openings, and a manually operable mechanism mounted on said plate-like member for movement and having extensions projecting therefrom to respectively engage with the shutter-levers of both of said cameras when clamped to said plate-like member, a single finger-piece carried by said mechanism for actuating the latter so that operative movement of said mechanism will simultaneously operate the shutters of both of said cameras to take stereo snapshots.

2,458,467
CENTRIFUGAL DELAY SWITCH
Sheldon H. Dike, Ventnor, N. J., assignor to the United States of America as represented by the Secretary of the Navy
Application February 20, 1943, Serial No. 476,573
6 Claims. (Cl. 102—70.2)

1. A switch comprising a switch member movable by centrifugal force between open-circuit and closed-circuit positions, a fusible element normally locking the switch member in one of said positions, and means responsive to a force of setback for heating said element to release the switch member.

2,458,468
SAFETY GATE FOR PROJECTILES
William J. Flett, Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy
Application January 26, 1943, Serial No. 473,649
1 Claim. (Cl. 102—70)

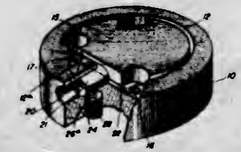


A safety device for projectiles, comprising a gate movable between operative and inoperative positions, a member normally locking the gate in its operative position, the member being movable in one direction in the gate by a force of setback and in the opposite direction in the gate to release the gate, and an explosive device mounted at one end of said member and operable by a force of setback on the member to move the same in the direction for releasing the gate.

2,458,469
METHOD FOR DEIRONING CHROMIUM AND MANGANESE ORES
André Greffe, La Bathie, France, assignor to Societe D'Electro-Chimie, D'Electro-Metallurgie et Des Acieries Electriques D'Ugine, Paris, France, a corporation of France
No Drawing. Application July 4, 1945, Serial No. 603,279. In France December 13, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 13, 1963
2 Claims. (Cl. 75—27)

1. The process of producing base-metal of the group consisting of chromium and manganese and containing less than 1% of iron by reduction of ore containing oxide of said base-metal and oxide of iron, which comprises deironing the ore by subjecting it in the molten state to the reducing action of a ferro-alloy which is rich in said base-metal, separating the overlying slag layer from the underlying metallic phase, subjecting the molten slag to the reducing action of a portion of the base-metal obtained as the final product of the process and having a higher content of the base-metal than that in the ferro-alloy used in the first deironing step, whereby the quantity of iron in the slag is decreased but the quantity of oxide of said base-metal in the slag is increased, separating the overlying slag from the underlying metallic phase, and subjecting the deironed slag to a reduction treatment to produce base-metal of said group containing less than 1% of iron.

2,458,470
CENTRIFUGAL UNSHORTING DEVICE
Lawrence R. Hafstad and William J. Flett, Washington, D. C., assignors to the United States of America as represented by the Secretary of the Navy
Application January 27, 1943, Serial No. 473,762
3 Claims. (Cl. 102—70.2)



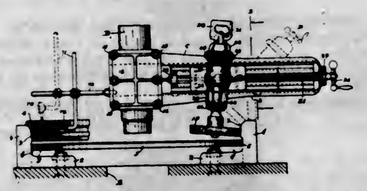
1. An unshorting switch for use in a rotating projectile, which comprises an insulating body

having a squib-receiving recess, a pair of terminals on the body, said body having a passage for conducting wiring from the squib to said terminals, a shortcircuiting wire extending between the terminals, means in the body connected to the shortcircuiting wire for rupturing the wire in response to centrifugal force, and means in the body for locking the rupturing means in an inoperative position and movable by a force of setback to release the rupturing means.

2,458,471
EMBEDDED HEATING ELEMENT AND METHOD OF MAKING THE SAME
Kemper M. Hammell and Edwin J. Balluff, Detroit, Mich., assignors to Eureka Williams Corporation, Detroit, Mich., a corporation of Michigan
Application March 13, 1946, Serial No. 654,110
7 Claims. (Cl. 201—67)

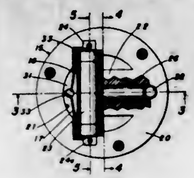
1. An embedded electric resistance heating element comprising a member having a channel therein, a preformed unit comprising an armor plate and a compacted mass of dielectric material having an electric resistance element embedded therein, said unit being arranged in said channel with the dielectric material engaging the sides and bottom of said channel and with said armor plate extending across said channel and overlying said dielectric material, said armor plate being channel-shaped in cross-section with the sides thereof extending downwardly into said channel and in engagement with the side walls thereof, said walls of said channel being provided with stakes which bear against the upper side of the armor plate along both edges thereof for securing said unit under pressure in said channel in said member.

2,458,472
JAW GRINDING MECHANISM FOR CAR WHEEL BORING MILLS
Henry Irwin, Chicago, Ill., assignor to General American Transportation Corporation, Chicago, Ill., a corporation of New York
Application May 24, 1945, Serial No. 595,539
4 Claims. (Cl. 51—241)



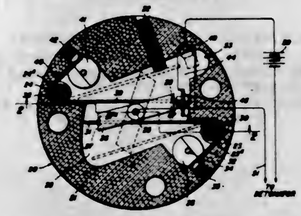
1. The combination of a boring mill having a vertical boring bar and a rotary chuck having a series of radially movable clamping jaws, a holding ring adapted to hold the jaws in concentric relation to the axis of the boring bar, a jaw grinding device adapted to be detachably mounted on said boring bar and adapted to grind the gripping faces of the jaws as the jaws are successively brought into grinding relation thereto by the rotation of the chuck, said grinding device comprising a main supporting arm having means at one end for clamping the arm upon the boring bar, a grinding unit comprising a motor having a grinding wheel on its shaft, said grinding unit being mounted upon said arm with the axis of its shaft in a plane radial to the axis of the boring bar, and means for rotatably and bodily shifting the grinding unit in the plane of its axis to position the grinding wheel in grinding relation to the jaws.

2,458,473
DETONATOR
James D. Jordan, Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy
Application January 26, 1943, Serial No. 473,650
2 Claims. (Cl. 102—71)



1. In a detonator, a body having an opening, an electrically operable squib extending across the opening and seated at its ends in the body, a web extending transversely from one side of the body into the opening and abutting at its free end against the squib, the web having a bore perpendicular to and communicating at one end with the opening and at the other end with a recess in the body, a detonating charge in the bore, and a mechanically operable explosive device in the recess for firing said charge.

2,458,474
CENTRIFUGALLY OPERATED CONTROL DEVICE
James D. Jordan, Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy
Application February 23, 1943, Serial No. 476,871
8 Claims. (Cl. 200—80)

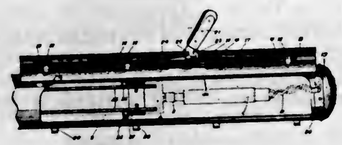


2. In an initially open, centrifugally operated and automatically closed electrical switch, the combination with a fixed contact, of a resiliently mounted movable contact and a separable insulator thereon in frictional engagement with the fixed contact, whereby the movable contact is operated to separate the insulator, and at deceleration of centrifugal force the movable contact automatically moves into electrical connection with the fixed contact.

2,458,475
ROCKET DEVICE
Charles C. Lauritsen and John McMorris, Pasadena, Calif., assignors to the United States of America as represented by the Secretary of the Navy
Application April 2, 1943, Serial No. 481,652
5 Claims. (Cl. 102—49)

1. A rocket device comprising a payload, a rocket motor to the rear of the payload, a releasable connection between the payload and the motor including a pair of members movable relatively in one direction to accommodate forward movement of the motor toward the payload when the motor is fired, an operating element carried by the payload, means actuated by movement of one of said members for initiating operation of said element, and means for moving said members relatively in the opposite direction, upon a decrease in the propelling force of the motor, and thereby forcibly separating the motor from the payload.

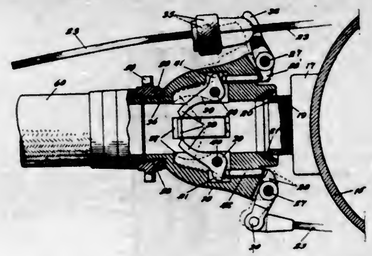
2,458,476
ROCKET LAUNCHER
Charles C. Lauritsen, Pasadena, Calif., and John McMorris, deceased, late of Pasadena, Calif., by Helen C. McMorris administratrix, Pasadena, Calif., assignors to the United States of America as represented by the Secretary of the Navy
Application January 4, 1946, Serial No. 639,084
4 Claims. (Cl. 89—1.7)



1. A rocket launcher comprising a tube closed at one end and open at the opposite end, the tube having an opening in its side wall for inserting a rocket into the tube, launching guide rails within said tube for receiving a rocket from said side opening, and a movable cover on the tube for covering said side opening.

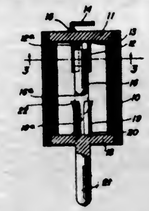
2,458,477
COUPLING FOR WATER HOSE AND THE LIKE
William C. MacKenzie, New York, N. Y.
Application May 29, 1946, Serial No. 672,940
15 Claims. (Cl. 285—1)

3. For an outlet of fluid under pressure having a terminal rim, a coupling comprising a ring companion to the rim and comprising a duct through the ring extending through the coupling, a connection between the coupling and the outlet attachable exteriorly thereof and operable to hold the ring in position for registry with the rim, one or more vanes in the duct positioned to be actuated by fluid flowing through the coupling, and mechanism operable by actuation of the



vanes to press the ring into firm seating engagement with the rim.

2,458,478
SETBACK SWITCH
Richard L. Maneval, Houston, Tex., assignor to the United States of America as represented by the Secretary of the Navy
Application April 10, 1943, Serial No. 482,654
1 Claim. (Cl. 200—52)

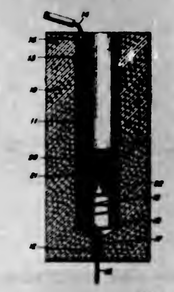


A switch operable solely by the set-back action of sustained acceleration, said switch consisting of a casing, an inherently free circuit-closing rod-plunger operable in the casing, and axially confronted but spaced spring clips fixed in the casing, one of the clips slidably but permanently gripping the plunger at one end in circuit-open position, the grip of said clip yielding to set-back action under sustained acceleration for end movement into the embrace of the other spring clip, said other spring clip adding its grip to compound the total grip on the plunger, thereby progressively slowing the penetration of the plunger and stopping it in circuit-closing suspension between the clips.

2,458,479
SETBACK SWITCH
Thomas M. Perry, Bennington, Vt., assignor to the United States of America as represented by the Secretary of the Navy
Application April 28, 1943, Serial No. 484,966
5 Claims. (Cl. 200—52)

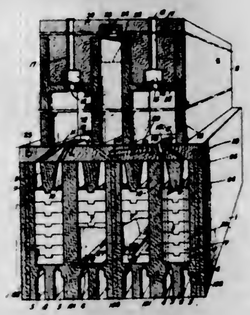
2. A setback switch adapted to be mounted within a projectile to close at least a portion of an electrical detonating circuit upon the application of setback force created when the projectile is fired comprising a body member, a bore in said body member, an electrical contact sleeve positioned within said bore, a wire mounted in said body member and extending within said contact sleeve in spaced relation thereto, and a plunger

positioned within said sleeve capable of sliding therein upon the application of setback force for



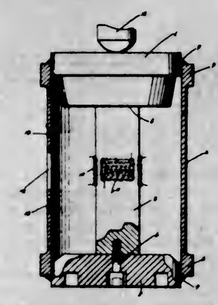
bending said wire to make a plurality of contacts between said wire and said contact sleeve.

2,458,480
BY-PRODUCT COKE OVEN
Paul M. Pinckard, Kalamazoo, Mich.
Application July 3, 1947, Serial No. 758,948
25 Claims. (Cl. 202—134)



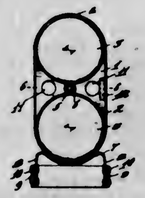
1. In a coke oven having a coking chamber and heating flues on each side of the coking chamber, regenerators below the coking chambers, each regenerator composed of two independent main longitudinal sections communicating with at least two heating flues on the same side of the coking chamber, which are grouped together for exchange of heat, each regenerator section having at least two independent rows of spaced, vertical ducts, supporting walls separating the adjacent regenerator sections, each section being formed of a series of superimposed horizontal bricks extending between said supporting walls, each brick having two vertical openings forming said ducts, each brick having a depressed groove in the upper surface between said openings and a corresponding projection downward from the lower surface, means for supporting the lowermost row of bricks between said openings and a wall supported between the openings by the uppermost row of bricks, said supporting walls and last named wall which support said coking chamber and heating flues, forming an integrated structure.

2,458,481
LOAD WEIGHING DEVICE
Arthur C. Rage, Cambridge, Mass., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application September 1, 1944, Serial No. 552,326
6 Claims. (Cl. 73—141)



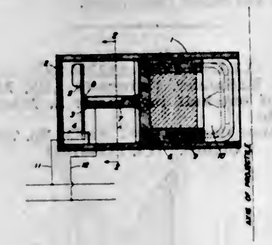
1. A load weighing device comprising, in combination, a pair of opposed transverse elements which are inflexible in all directions, load weighing means disposed between said elements and adapted to transmit an axial load from one element to the other, and substantially axially extending means connected directly to said inflexible elements for rigidly connecting the same together to resist entirely through said axial means transmission of undesired forces from said elements to the weighing means but at the same time transmit only a part of the load to be weighed while the remainder of the load is transmitted through said load weighing means which is calibrated to serve as an index for the entire load.

2,458,482
TRAFFIC SIGNALING DEVICE SUPPORT
Charles D. Eyder, Covington, Ky., assignor to The Grote Manufacturing Company, Bellevue, Ky., a corporation of Kentucky
Application May 10, 1947, Serial No. 747,279
1 Claim. (Cl. 248—33)



A road signal of the character disclosed embodying a base member of strip material in bow form and a pair of panels, each for reflecting light directed thereat for signal service, pivotally connected to and between the limbs of the base member adapting the same to be positioned in adjoining relation to extend perpendicularly from the base member for light reflection in relative oppdsite directions and alternately to telescopically pack the same within the base member.

2,458,483
CENTRIFUGAL SAFETY DELAY SWITCH
Howard E. Tatel, Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy
Application May 17, 1946, Serial No. 670,359
3 Claims. (Cl. 200—80)



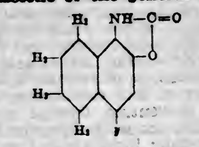
1. A delay switch in a projectile comprising a mass of thermally and electrically conductive material, said mass forming one member of a switch, a second switch member coacting therewith, an easily fusible substance holding the two switch members in electrical contact with one another, said substance being in thermal contact with said mass, a pyrotechnic material, said material being in thermal contact with a different portion of said mass, means actuated by and in response to centrifugal force, produced by the spin of the projectile, to ignite the material, whereby the combustion thereof heats the mass and after a delay determined by the heat conductivity of said mass, causes the substance to melt and thus releases the switch member previously held thereby.

2,458,484
PROCESS OF PREPARING EPOXY DERIVATIVES FROM UNSATURATED ALIPHATIC COMPOUNDS
David E. Terry and Donald H. Wheeler, Minneapolis, Minn., assignors to General Mills, Inc., a corporation of Delaware
No Drawing. Application June 17, 1946, Serial No. 677,400
7 Claims. (Cl. 260—348)

1. Process for the epoxidation of water immiscible organic compounds selected from the group consisting of acids, esters and amides, said compounds containing a long chain unsaturated aliphatic group, which comprises reacting said organic compound with aqueous peracetic acid immiscible with said organic compound under conditions of vigorous agitation, allowing the reaction mixture to separate into two phases, and separating the two phases.

2,458,485
PROCESS OF PREPARING 4-SUBSTITUTED-ar-TETRAHYDRO-2-NAPHTHOLS
Curt G. Vogt, Union, N. J., and Joseph M. Wilkinson, Jr., Easton, Pa., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application September 6, 1946, Serial No. 695,283
7 Claims. (Cl. 260—575)

1. A process of preparing 1-amino-4-substituted-ar-tetrahydro-2-naphthols which comprises hydrolyzing a 4-substituted-ar-tetrahydro-β-naphthoxazolone of the general formula:



wherein y is a radical selected from the group consisting of the nitro, amino, halogen, hydroxy, cyano, thiocyano and sulfonic acid radicals, by heating in the presence of an aqueous suspension of hydrated lime.

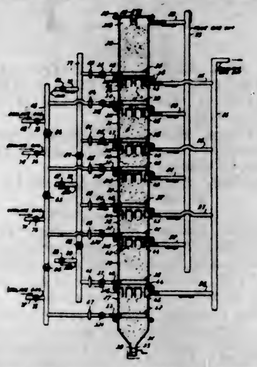
2,458,486
FUSIBLE AND READILY REMOVABLE PROTECTIVE COATING FOR METAL ARTICLES, COMPRISING ETHYL CELLULOSE AND MINERAL OIL
Arthur E. Young, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application August 27, 1945, Serial No. 613,015
6 Claims. (Cl. 260—17)

1. A fusible coating composition, free from volatile solvents, which is homogeneous in the molten state, and which congeals, when cooled to below 100° F. in contact with a metal surface, to form thereon a homogeneous, supple, and easily removable coating, substantially free from oily exudation, comprising as principal constituents: from 15 to 30 per cent of ethyl cellulose having an ethoxy content between 47 and 52 per cent; from 35 to 55 per cent of a mineral oil having a Saybolt viscosity between 200 and 800 at 100° F., and an aniline point less than 90° C.; from 7 to 30 per cent of a liquid condensate having a molecular weight between 300 and 600 obtained by heating a material selected from the group consisting of (1) styrene, (2) the mono-methyl homologs of styrene, and (3) mixtures of the foregoing with a liquid monocyclic aromatic hydrocarbon from the group consisting of toluene and xylene, at a temperature between 50° and 150° C. in the presence of a condensation catalyst; and from 3 to 12 per cent of a hydroxylated fatty oil.

2,458,487
METHOD AND APPARATUS FOR CONDUCTING THE REGENERATION OF A MOVING BED CATALYST
John A. Crowley, Jr., Scarsdale, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application May 24, 1944, Serial No. 537,136
8 Claims. (Cl. 252—418)

1. In a process of the type described, a method for burning contaminant deposits from a particle form inorganic solid contact material by the action of a combustion supporting gas at controlled elevated temperatures comprising: passing said solid through a series of superposed alternate combustion and cooling zones wherein it flows as a substantially compact column of downwardly flowing particle form solid material, continuously supplying contaminant bearing solid to the uppermost zone at a temperature sufficient to initiate the contaminant combustion, continuously withdrawing said solid from the lowermost zone at a controlled rate, introducing combustion supporting gas to each of said combustion zones at an independently controlled rate, distributing said gas at a plurality of locations

within each of said combustion zones and collecting gas to a second plurality of locations within each of said combustion zones, said distributing and collecting locations being so spaced apart as to permit the total required gas flow through the moving solid within each of said combustion zones without boiling of said solid, withdrawing gas from each of said combustion zones while substantially preventing flow of said gas into adjacent cooling zones, independently introducing a substantially inert cooling gas into each of said cooling zones at a controlled rate and temperature, similarly distributing and collecting said gas within each of said cooling zones and withdrawing it therefrom; controlling the



rate of combustion supporting gas introduction to each combustion zone to effect therein an amount of contaminant combustion sufficient to heat said solid from an inlet temperature which is near but above that minimum required for rapid contaminant combustion to an outlet temperature which is near but below that which would cause heat damage to the solid material, and controlling the rate and temperature of inert cooling gas introduction to said cooling zones to effect removal from the solid material of substantially all the heat absorbed by it in the preceding combustion zone without the aid of indirect heat transfer between the solid material and any cooling fluid.

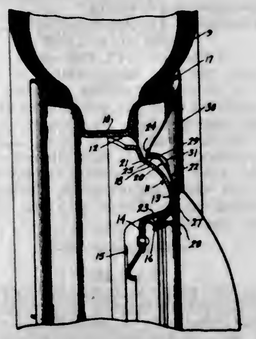
2,458,488
MAGIC TRICK
Kenneth S. Franke, Woodside, Long Island, N. Y.; Marian Franke executrix of said Kenneth S. Franke, deceased
Application July 25, 1946, Serial No. 686,089
7 Claims. (Cl. 272—8)

1. A magic trick device comprising a plurality of objects of substantially identical outward shape and size, certain of said objects being provided with indentations of different depths, means covering the openings to said indentations so that they are not visible to the eye and means for determining the depth of an indentation comprising a pointed instrument adapted to penetrate said cover means and to enter one of the objects to the bottom of its indentation, the amount of penetration serving as an indication of the depth of the indentation and thus of the identity of the object penetrated.

2,458,489
LEASH FOR ANIMALS
Arthur L. Hallander, University City, Mo., assignor of one-half to Charles L. Martin, St. Louis, Mo.
Application March 5, 1947, Serial No. 732,465
7 Claims. (Cl. 119—109)

2. A leash for animals comprising a cord having a figure-8 loop at one end and an apertured element on each side of one lobe of said loop slidably receiving the adjacent side of the other lobe thereof.

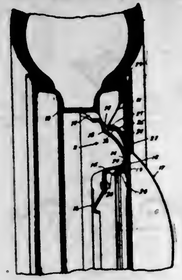
2,458,490
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application December 8, 1944, Serial No. 567,191
14 Claims. (Cl. 301—37)



1. As an article of manufacture a wheel trim retaining element comprising an annulus having a radially outer substantially right angular portion facing radially outwardly, an intermediate portion of curved convex cross sectional shape to fit over a wheel body and a radially and axially inner turned edge for detachable engagement by

retaining elements on a wheel, said right angular portion including a radial leg at the axially inner side of the angular portion to serve as a backing for an edge of a trim element and an axial leg extending axially outwardly from the radially inner edge of the radial leg to juncture with the intermediate portion and forming a seat for the edge of the trim element.

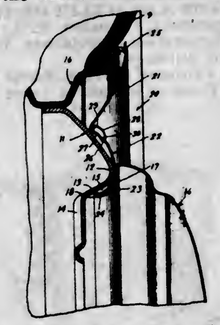
2,458,491
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application January 8, 1945, Serial No. 571,851
4 Claims. (Cl. 301—37)



1. In combination in a wheel cover adapted to be applied to the outer side of a vehicle wheel comprising a tire rim and a load sustaining body portion, radially inner and outer concentric cover sections formed in one piece and extending in generally divergent directions from their junction, the outer of said sections being adapted to cover the tire rim and having a convex generally tire side wall simulating shape and the inner of said sections being adapted to lie in body concealing relationship, the junction between said sections providing a generally axially outwardly opening groove defined at its inner section side by a generally radially outwardly facing shoulder, radially outwardly protruding trim retaining protrusions on said shoulder, and a reinforcing and ornamental bead structure having a turned edge extending substantially to the root of said groove and being retained by said protrusions in snap-on relationship.

2,458,492
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application January 8, 1945, Serial No. 571,852
9 Claims. (Cl. 301—37)

1. In a cover structure for a wheel including a flanged tire rim part, a body part provided with hub cap retaining protuberances, and a hub cap detachably held on the wheel by said protuberances, a cover including an annulus of resiliently pliable material for substantially concealing exposed side flanges of the rim part and having an inner edge retainingly attached to the hub cap, said annulus having a free outer edge manually accessible for flexure said annulus being so constructed and related to the hub cap and the protuberances that when the annulus is manually pulled generally axially outwardly away from the wheel it results in forcibly pull-



ing the cap and said annulus out of retained engagement with said protuberances, said annulus being of generally channel-like cross-sectional shape with an outer portion disposed over the rim flanges and an inner portion disposed over a portion of the body part and extending to the attachment on the hub cap, and a reinforcing bead at the junction of said two cover portions.

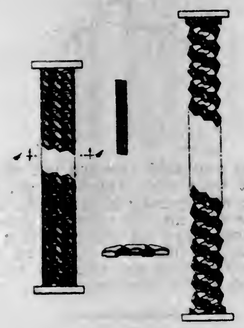
2,458,493
METHOD OF ORNAMENTATION
Ellen Troy, New York, N. Y.
Application July 26, 1946, Serial No. 686,375
2 Claims. (Cl. 41—34)

1. The process of producing on a pliable fabric base an ornamentation, which consists in applying a relatively thin layer of paint of plastic composition to one of the surfaces of said base, introducing from the opposite surface of said base and within the confines of said layer through said base anchoring means so that the same extend to said one surface, retaining in place by said anchoring means on said one surface a rigid jewel element, and finally depositing adjacent said anchoring means and said element, a further layer of said paint, whereby the pliability of said base will be substantially maintained at the location of said ornamentation.

DESIGNS

JANUARY 4, 1949

152,225
DESIGN FOR A BRACELET OR THE LIKE
Karl C. Augenstein, Cranston, R. I., assignor to Speidel Corporation, Providence, R. I., a corporation of Rhode Island
Application February 25, 1948, Serial No. 144,728
Term of patent 14 years
(Cl. D45—4)



The ornamental design for a bracelet or the like, substantially as shown and described.

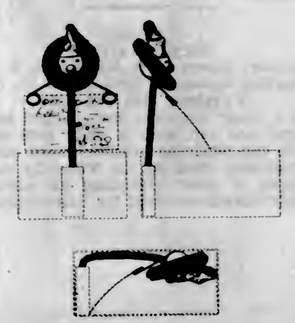
152,227
DESIGN FOR A TERMINAL LINK FOR A WATCH BRACELET OR SIMILAR ARTICLE
Karl C. Augenstein, Cranston, R. I., assignor to Speidel Corporation, Providence, R. I., a corporation of Rhode Island
Application June 9, 1948, Serial No. 146,862
Term of patent 14 years
(Cl. D45—4)

The ornamental design for a terminal link for a watch bracelet or similar article, substantially as shown.

152,236
DESIGN FOR A BRACELET OR THE LIKE
Karl C. Augenstein, Cranston, R. I., assignor to Speidel Corporation, Providence, R. I., a corporation of Rhode Island
Application June 9, 1948, Serial No. 146,861
Term of patent 14 years
(Cl. D45—4)

The ornamental design for a bracelet or the like, substantially as shown and described.

152,238
DESIGN FOR A JACK-IN-THE-BOX DISPLAY FIGURE
Leslie V. Barofsky, Chicago, Ill.
Application April 29, 1947, Serial No. 138,676
Term of patent 7 years
(Cl. D1—2)



The ornamental design for a jack-in-the-box display figure, substantially as shown and described.

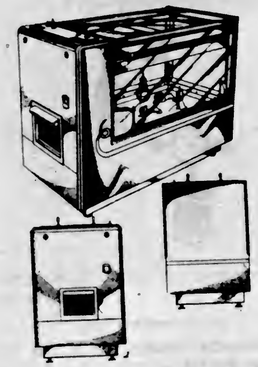
152,239
DESIGN FOR A PERFUME BOTTLE
Main R. Boeher, New York, N. Y.
Application August 25, 1947, Serial No. 141,055
Term of patent 14 years
(Cl. D58—8)

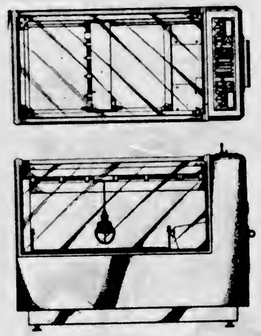
The ornamental design for a perfume bottle, as shown and described.

152,240
DESIGN FOR A JEWELRY FINDING
Michael Chernow, New York, N. Y.
Application July 19, 1947, Serial No. 140,405
Term of patent 7 years
(Cl. D45—1)

The ornamental design for a jewelry finding, substantially as shown.

152,241
DESIGN FOR AN AMUSEMENT MACHINE CABINET
Edward J. Collins, Brentwood, Los Angeles, Calif., assignor to Raymond T. Maloney, Chicago, Ill.
Application June 20, 1947, Serial No. 139,833
Term of patent 14 years
(Cl. D24—5)





The ornamental design for an amusement machine cabinet, substantially as shown.

152,242
DESIGN FOR A FISH LURE
Norman W. Dahm and Albert F. Keller, San Diego, Calif.
Application September 29, 1947, Serial No. 141,638
Term of patent 14 years
(Cl. D31—4)

The ornamental design for a fish lure, substantially as shown.

152,243
DESIGN FOR A FISHING LURE
George C. De Bay, Jr., West Palm Beach, Fla.
Application May 7, 1947, Serial No. 138,863
Term of patent 14 years
(Cl. D31—4)

The ornamental design for a fishing lure, as shown.

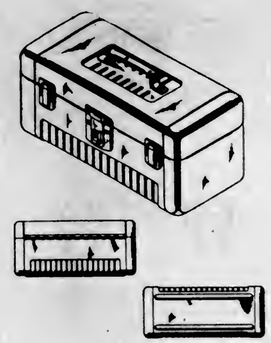
152,244
DESIGN FOR A JACKET
Simon Etkin, New York, N. Y.
Application July 13, 1948, Serial No. 147,531
Term of patent 3½ years
(Cl. D2—4)

The ornamental design for a jacket, substantially as shown.

152,245
DESIGN FOR A FOAM SCRAPER HOLDER
Frank Farrell, New York, N. Y., assignor to Jacob Ruppert, New York, N. Y., a corporation of New York
Application June 7, 1947, Serial No. 139,508
Term of patent 14 years
(Cl. D2—3)

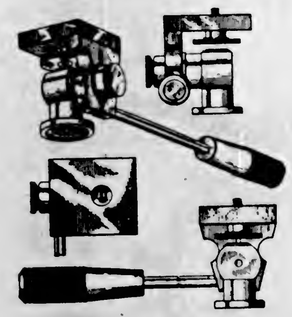
The ornamental design for a foam scraper holder, substantially as shown and described.

152,246
DESIGN FOR A TOOL CHEST OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to Master Metal Products, Inc., Buffalo, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,707
Term of patent 14 years
(Cl. D58—12)



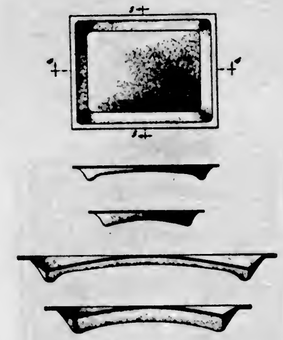
The ornamental design for a tool chest or the like, substantially as shown.

152,247
DESIGN FOR A TRIPOD HEAD FOR A CAMERA OR SIMILAR ARTICLE
Stanley J. Flesh, Chicago, Ill.
Application April 30, 1948, Serial No. 146,075
Term of patent 7 years
(Cl. D61—1)



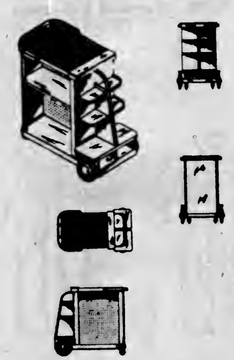
The ornamental design for a tripod head for a camera or similar article, substantially as shown.

152,248
DESIGN FOR A TELEVISION SCREEN PROTECTOR
Thomas Fortino, Belleville, N. J.
Application July 17, 1947, Serial No. 140,341
Term of patent 7 years
(Cl. D26—14)



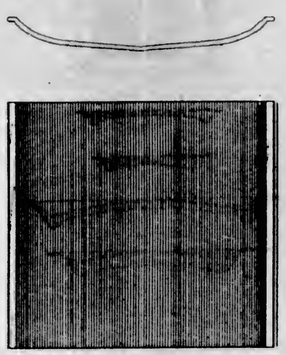
The ornamental design for a television screen protector, as shown.

152,249
DESIGN FOR A SERVICE CART FOR SERVICE STATIONS AND THE LIKE
Alexander P. Fox, University City, Mo., assignor to Lincoln Engineering Company, St. Louis, Mo., a corporation of Missouri
Application December 20, 1947, Serial No. 143,264
Term of patent 3½ years
(Cl. D14—3)



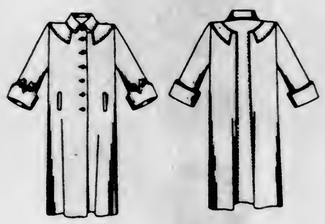
The ornamental design for a service cart for service stations and the like, substantially as shown.

152,250
DESIGN FOR A GLASS PLATE FOR LIGHTING FIXTURES
Kurt Franck and Vearl Winse, Newark, Ohio, assignors to Holophane Company, Inc., New York, N. Y., a corporation of Delaware
Application March 21, 1946, Serial No. 127,749
Term of patent 14 years
(Cl. D48—16)



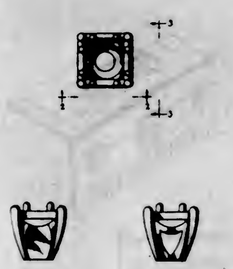
The ornamental design for a glass plate for lighting fixtures, as shown and described.

152,251
DESIGN FOR A COAT
Jules Freedman, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application June 26, 1948, Serial No. 147,217
Term of patent 3½ years
(Cl. D3—4)



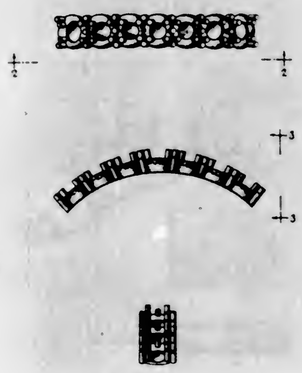
The ornamental design for a coat, substantially as shown.

152,253
DESIGN FOR A JEWELRY SETTING OR SIMILAR ARTICLE
Fred J. Gaertner, Maplewood, N. J.
Application May 5, 1947, Serial No. 138,810
Term of patent 14 years
(Cl. D45—1)



The ornamental design for a jewelry setting or similar article, as shown.

152,253
DESIGN FOR A JEWELRY SETTING OR SIMILAR ARTICLE
Fred J. Gaertner, Maplewood, N. J.
Application May 5, 1947, Serial No. 138,811
Term of patent 14 years
(Cl. D45—1)



The ornamental design for a jewelry setting or similar article, as shown.

152,254
DESIGN FOR A HOLDER FOR EYEGLASSES
Michael S. Gallo, Racine, Wis.
Application April 20, 1947, Serial No. 138,697
Term of patent 14 years
(Cl. D57—1)

The ornamental design for a holder for eyeglasses, as shown and described.

152,255
DESIGN FOR AN OVERSHOE
Doris A. Geeller, Mishawaka, Ind., assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a corporation of Indiana
Application March 26, 1948, Serial No. 145,381
Term of patent 14 years
(Cl. D7—4)

The ornamental design for an overshoe, as shown.

152,256
DESIGN FOR A FISH LURE
Chester J. Gorman, West Bend, Wis.
Application March 24, 1947, Serial No. 137,839
Term of patent 3½ years
(Cl. D31—4)

The ornamental design for a fish lure, as shown.

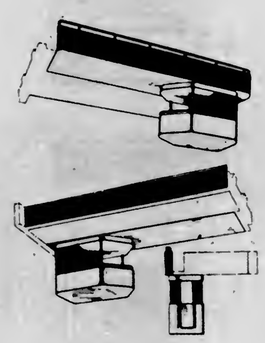
152,257
DESIGN FOR A PIN RECEPTACLE
Dudley M. Gould, New York, and Alexander E. Lewis, Brooklyn, N. Y.
Application November 15, 1947, Serial No. 142,554
Term of patent 7 years
(Cl. D86—10)

The ornamental design for a pin receptacle, as shown.

152,258
DESIGN FOR AN ELECTRIC CONNECTOR
Hugh B. Gould, Berwyn, Ill., assignor, by mesne assignments, to Francis C. Keilath, Chicago, Ill.
Application May 29, 1946, Serial No. 130,229
Term of patent 14 years
(Cl. D26—1)

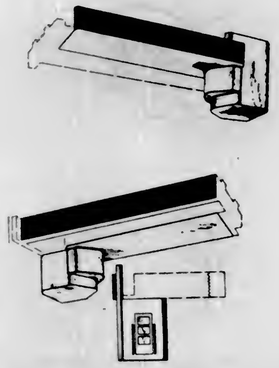
The ornamental design for an electric connector, as shown.

152,259
DESIGN FOR A BRIDGE CRANE
Folke Malcolm Gustafson and John McLeod Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich., a corporation of New Jersey
Application November 29, 1946, Serial No. 135,158
Term of patent 14 years
(Cl. D41—1)



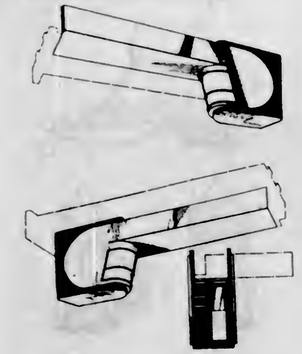
The ornamental design for a bridge crane, substantially as shown and described.

152,260
DESIGN FOR A BRIDGE CRANE
Folke Malcolm Gustafson and John McLeod Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich., a corporation of New Jersey
Application November 29, 1946, Serial No. 135,159
Term of patent 14 years
(Cl. D41—1)



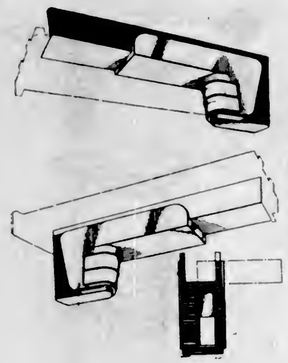
The ornamental design for a bridge crane, substantially as shown and described.

152,261
DESIGN FOR A BRIDGE CRANE
Folke Malcolm Gustafson and John McLeod Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich., a corporation of New Jersey
Application November 29, 1946, Serial No. 135,160
Term of patent 14 years
(Cl. D41—1)



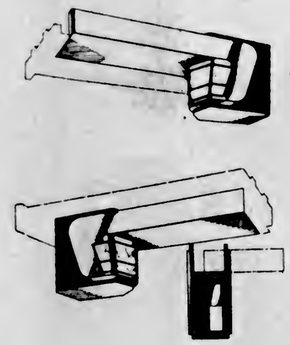
The ornamental design for a bridge crane, substantially as shown and described.

152,262
DESIGN FOR A BRIDGE CRANE
Folke Malcolm Gustafson and John McLeod Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich., a corporation of New Jersey
Application November 29, 1946, Serial No. 135,161
Term of patent 14 years
(Cl. D41—1)



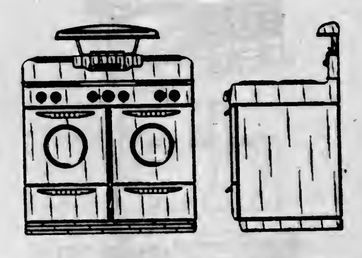
The ornamental design for a bridge crane, substantially as shown and described.

152,263
DESIGN FOR A BRIDGE CRANE
Folke Malcolm Gustafson and John McLeod Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich., a corporation of New Jersey
Application November 29, 1946, Serial No. 135,163
Term of patent 14 years
(Cl. D41—1)



The ornamental design for a bridge crane, substantially as shown and described.

152,264
DESIGN FOR A RANGE
Michael Hallward, Swampscott, Mass., assignor to Glenwood Range Company, Taunton, Mass., a corporation of Massachusetts
Application April 2, 1947, Serial No. 138,106
Term of patent 3½ years
(Cl. D81—4)

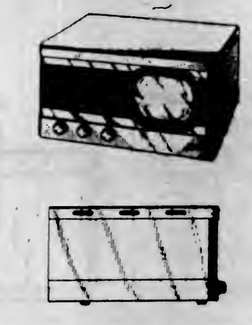


The ornamental design for a range, as shown and described.

152,265
DESIGN FOR A RAILROADER'S CAP
Andrew O. Hatlell, Grand Forks, N. Dak.
Application November 13, 1947, Serial No. 142,505
Term of patent 7 years
(Cl. D3—13)

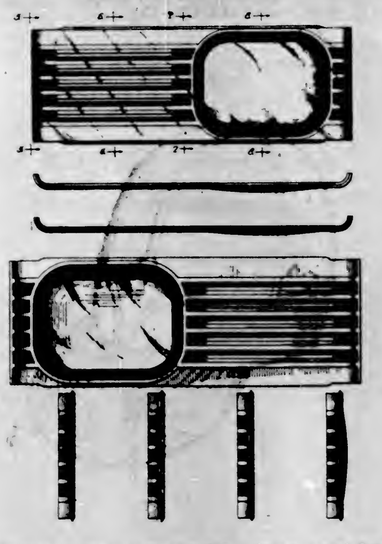
The ornamental design for a railroader's cap, as shown and described.

152,266
DESIGN FOR A TELEVISION RECEIVER CABINET
Albert L. Jenks, Dixon, Ill., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Application February 25, 1948, Serial No. 144,725
Term of patent 14 years
(Cl. D86—4)



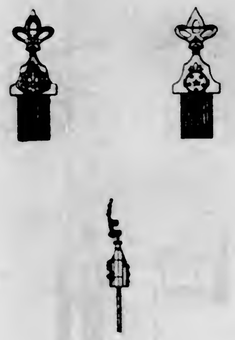
The ornamental design for a television receiver cabinet, substantially as shown.

152,267
DESIGN FOR A FRONT PANEL FOR A TELEVISION RECEIVER OR THE LIKE
Vernon A. Kamin, Elgin, Ill., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Application January 9, 1948, Serial No. 142,632
Term of patent 14 years
(Cl. D86—4)



The ornamental design for a front panel for a television receiver or the like, substantially as shown.

152,268
DESIGN FOR A JEWELRY PIN
Daniel Kaseff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,621
Term of patent 3½ years
(Cl. D45—19)

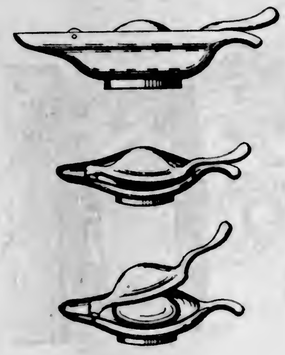


The ornamental design for a jewelry pin, substantially as shown.

152,269
DESIGN FOR A JEWELRY PIN
Daniel Kaseff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,624
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a jewelry pin, substantially as shown.

152,270
DESIGN FOR A FRUIT SQUEEZER
Jan Kasprzak, New York, N. Y.
Application January 27, 1947, Serial No. 136,451
Term of patent 3½ years
(Cl. D44—29)



The ornamental design for a fruit squeezer, as shown.

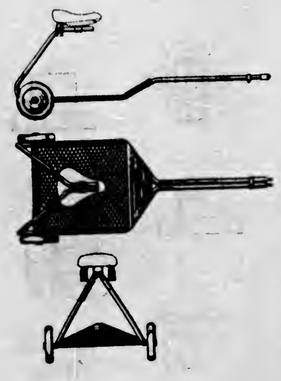
152,271
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Louis Kramer, New York, N. Y.
Application July 22, 1948, Serial No. 147,706
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article substantially as shown.

152,272
DESIGN FOR AN ILLUMINABLE VANITY CASE OR THE LIKE
Fritz Kueppersbusch, Mamaroneck, N. Y.
Application October 5, 1946, Serial No. 133,784
Term of patent 14 years
(Cl. D86—10)

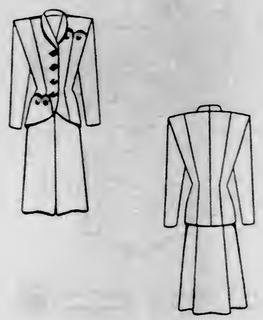
The ornamental design for an illuminable vanity case or the like, as shown and described.

152,273
DESIGN FOR A TRAILER ATTACHMENT FOR A POWER LAWN MOWER OR THE LIKE
Ralph N. Leonard, Chicago, Ill.
Application January 10, 1948, Serial No. 143,655
Term of patent 7 years
(Cl. D14—3)



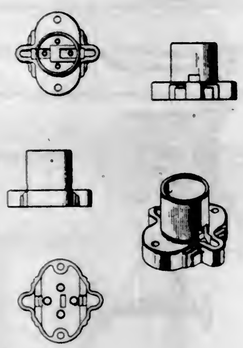
The ornamental design for a trailer attachment for a power lawn mower or the like, as shown and described.

152,274
DESIGN FOR A LADY'S SUIT
Julius Lipman, New York, N. Y.
Application June 30, 1948, Serial No. 147,296
Term of patent 3½ years
(Cl. D2—4)



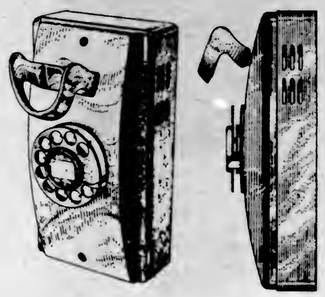
The ornamental design for a lady's suit, substantially as shown.

152,275
DESIGN FOR AN ELECTRICAL CLEAT RECEPTACLE BODY
Louis Ludwig, New York, N. Y.
Application August 14, 1947, Serial No. 140,860
Term of patent 14 years
(Cl. D26—1)



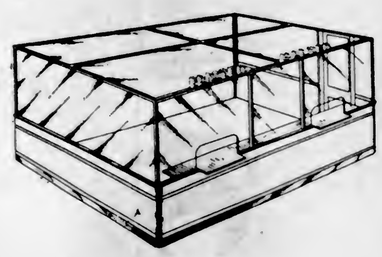
The ornamental design for an electrical cleat receptacle body, as shown.

152,276
DESIGN FOR A WALL MOUNTING FOR A HAND TELEPHONE
George R. Lum, South Wilton, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 9, 1947, Serial No. 143,066
Term of patent 14 years
(Cl. D26—14)



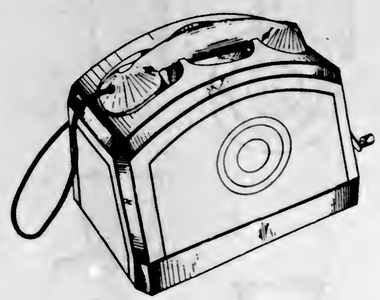
The ornamental design for a wall mounting for a hand telephone, as shown.

152,277
DESIGN FOR A BOOTH
Charles N. Manville, Lynwood, Calif.
Application December 12, 1946, Serial No. 135,436
Term of patent 3½ years
(Cl. D13—1)



The ornamental design for a booth, substantially as shown and described.

152,278
DESIGN FOR A COMBINED TELEPHONE DESK STAND AND HANDSET
Edward F. McKenna, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application June 26, 1947, Serial No. 139,940
Term of patent 14 years
(Cl. D26—14)



The ornamental design for a combined telephone desk stand and handset, as shown.

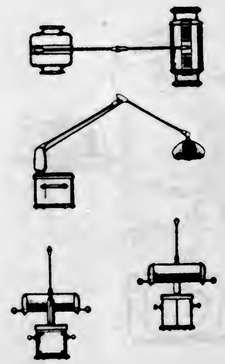
152,279
DESIGN FOR A LIQUOR JIGGER OR SIMILAR ARTICLE
Thomas B. McKiernan, Meriden, Conn., assignor to The Ellmore Silver Co., Inc., Meriden, Conn., a corporation of Connecticut
Application May 14, 1947, Serial No. 139,032
Term of patent 14 years
(Cl. D36—8)

The ornamental design for a liquor jigger or similar article, as shown.

152,280
DESIGN FOR A LIQUOR JIGGER OR SIMILAR ARTICLE
Thomas B. McKiernan, Meriden, Conn., assignor to The Ellmore Silver Co., Inc., Meriden, Conn., a corporation of Connecticut
Application May 14, 1947, Serial No. 139,033
Term of patent 14 years
(Cl. D36—8)

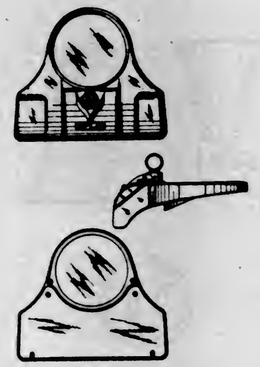
The ornamental design for a liquor jigger or similar article, as shown.

152,281
DESIGN FOR AN ULTRAVIOLET LAMP
Jacob A. Mehr, St. Louis, Mo.
Application August 30, 1947, Serial No. 141,133
Term of patent 7 years
(Cl. D48—20)



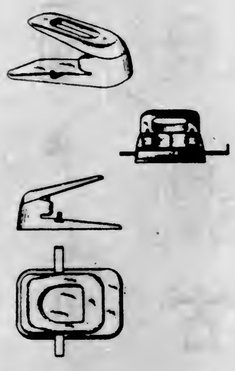
The ornamental design for an ultra-violet lamp, as shown.

152,282
DESIGN FOR A COMBINED LAMP AND MAGNIFIER
Jacob A. Mehr, St. Louis, Mo.
Application September 13, 1947, Serial No. 141,383
Term of patent 14 years
(Cl. D48—26)



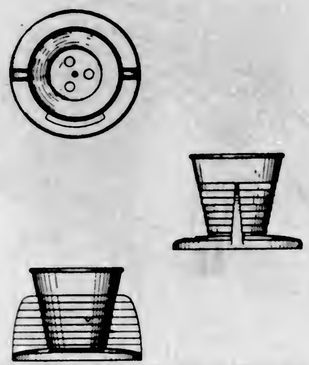
The ornamental design for a combined lamp and magnifier, as shown.

152,283
DESIGN FOR A PAPER PUNCH
William H. Misson, Los Altos, Calif.
Application January 13, 1947, Serial No. 136,115
Term of patent 14 years
(Cl. D74—1)



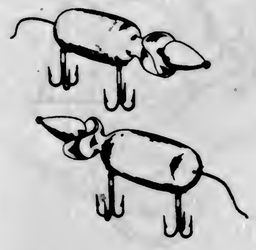
The ornamental design for a paper punch, as shown.

152,284
DESIGN FOR A BEVERAGE BREWING DEVICE
Peter Muller-Munk, Pittsburgh, Pa., assignor to The Hartford Products Corporation, Chicago, Ill., a corporation of Connecticut
Application February 4, 1947, Serial No. 136,676
Term of patent 14 years
(Cl. D44—9)



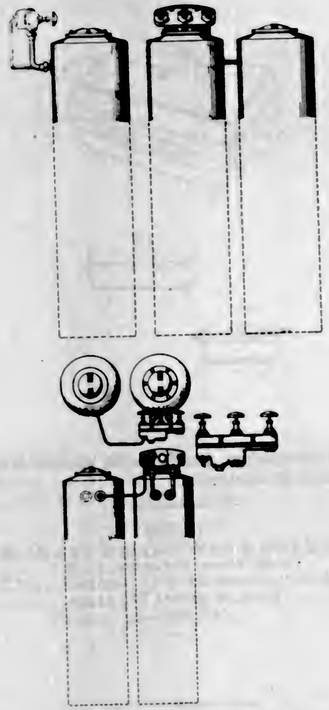
The ornamental design for a beverage brewing device, substantially as shown.

152,285
DESIGN FOR A FISH LURE
Frank Nemeth, Akron, Ohio, assignor of one-half to Albert B. Carpenter, Akron, Ohio
Application October 10, 1947, Serial No. 141,851
Term of patent 14 years
(Cl. D31—4)



The ornamental design for a fish lure, as shown.

153,286
DESIGN FOR A BASE EXCHANGE WATER TREATMENT APPARATUS
Glenn A. Patterson, Delavan, Wis., assignor to Sta-Rite Products, Incorporated, Delavan, Wis., a corporation of Wisconsin
Application June 26, 1946, Serial No. 131,032
Term of patent 14 years
(Cl. D16—2)



The ornamental design for a base exchange water treatment apparatus, substantially as shown and described.

152,287
DESIGN FOR A FISH LURE
Melkiah Edward Pope, Montrose, Calif.
Application October 21, 1947, Serial No. 142,042
Term of patent 3½ years
(Cl. D31—4)

The ornamental design for a fish lure, as shown.

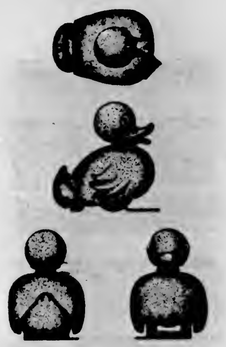
152,288
DESIGN FOR A TEXTILE FABRIC
Edwin Raphaels, New York, N. Y.
Application January 8, 1948, Serial No. 143,591
Term of patent 7 years
(Cl. D98—1)

The ornamental design for a textile fabric, substantially as shown.

152,289
DESIGN FOR A LINK CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Harry Reinstein, Rye, N. Y.
Application June 2, 1947, Serial No. 139,400
Term of patent 3½ years
(Cl. D45—4)

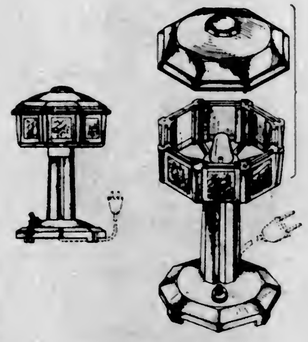
The ornamental design for a link chain for a bracelet or similar article, as shown and described.

152,290
DESIGN FOR A PULL TOY
Henry C. Roberts, Detroit, Mich.
Application October 10, 1947, Serial No. 141,854
Term of patent 7 years
(Cl. D34—15)



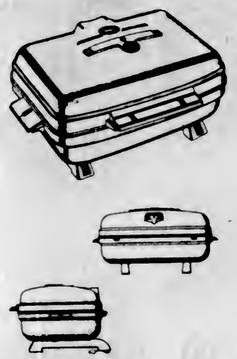
The ornamental design for a pull toy, as shown.

152,291
DESIGN FOR A LAMP
Herman Rubin, Los Angeles, Calif., assignor to National Pictorial Lamp, Inc., Los Angeles, Calif., a corporation of California
Application July 28, 1947, Serial No. 140,565
Term of patent 14 years
(Cl. D42—20)



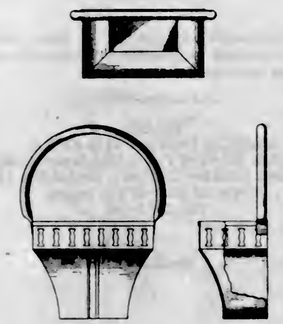
The ornamental design for a lamp, as shown and described.

152,292
DESIGN FOR AN ELECTRIC BROILER
Harry Sado, New York, N. Y., assignor to Marlun Manufacturing Company, Inc., New York, N. Y.
Application February 24, 1948, Serial No. 144,699
Term of patent 14 years
(Cl. D81—10)



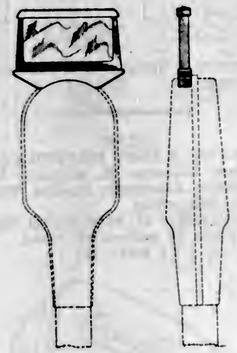
The ornamental design for an electric broiler, substantially as shown.

152,293
DESIGN FOR A HANGING FLOWER BASKET
Jack Shaw, Brooklyn, N. Y.
Application March 19, 1947, Serial No. 137,742
Term of patent 3½ years
(Cl. D35—2)



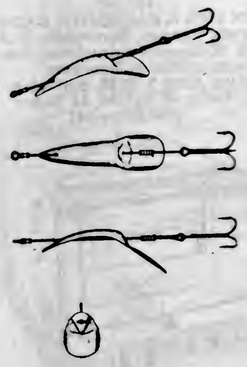
The ornamental design for a hanging flower basket, as shown.

152,294
DESIGN FOR AN ADVERTISING DISPLAY DEVICE FOR ATTACHMENT TO PARKING METERS
Harold R. Siegel and Morris Paull, Rochester, N. Y.
Application February 13, 1947, Serial No. 136,890
Term of patent 14 years
(Cl. D1—12)



The ornamental design for an advertising display device for attachment to parking meters, substantially as shown and described

152,295
DESIGN FOR A TROLLING SPINNER
Vavrince Simun, Detroit, Mich.
Application October 7, 1947, Serial No. 141,780
Term of patent 14 years
(Cl. D31—4)



The ornamental design for a trolling spinner, as shown.

152,296
DESIGN FOR A BOTTLE
Frazier Smith, Wheeling, W. Va., assignor to L. Perrigo Company, Allegan, Mich.
Application October 16, 1947, Serial No. 141,945
Term of patent 14 years
(Cl. D58—5)

The ornamental design for a bottle, as shown.

152,297
DESIGN FOR A BADGE OR THE LIKE
Jesse E. Smith, Greenbelt, Md.
Application January 21, 1947, Serial No. 136,269
Term of patent 14 years
(Cl. D29—2)

The ornamental design for a badge or the like, substantially as shown.

152,298
DESIGN FOR A COAT
John F. Strassner, New York, N. Y.
Application July 13, 1948, Serial No. 147,547
Term of patent 3½ years
(Cl. D3—4)

Th ornamental design for a coat, substantially as shown.

152,299
DESIGN FOR A JACKET
John F. Strassner, New York, N. Y.
Application July 13, 1948, Serial No. 147,548
Term of patent 3½ years
(Cl. D2—4)

The ornamental design for a jacket, substantially as shown.

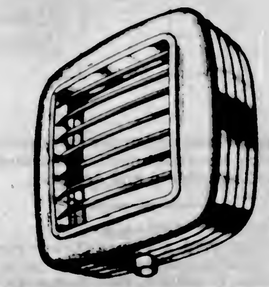
152,300
DESIGN FOR A COAT
John F. Strassner, New York, N. Y.
Application July 13, 1948, Serial No. 147,550
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a coat, substantially as shown.

152,301
DESIGN FOR A JACKET
John F. Strassner, New York, N. Y.
Application July 13, 1948, Serial No. 147,551
Term of patent 3½ years
(Cl. D3—4)

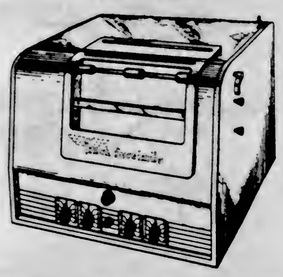
The ornamental design for a jacket, substantially as shown.

152,302
DESIGN FOR A UNIT HEATER CASING
James Teague, Chicago, Ill., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application January 31, 1947, Serial No. 136,557
Term of patent 14 years
(Cl. D81—10)



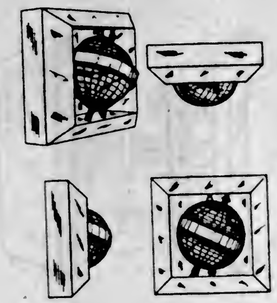
The ornamental design for a unit heater casing, as shown and described.

152,303
DESIGN FOR A FACSIMILE RECORDER
Walter Dorwin Teague, Annandale, N. J., assignor to Finch Telecommunications, Inc., Passaic, N. J., a corporation of Delaware
Application April 3, 1946, Serial No. 128,228
Term of patent 14 years
(Cl. D26—14)



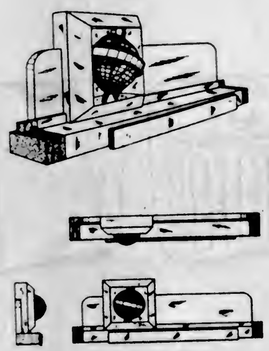
The ornamental design for a facsimile recorder, as shown and described.

152,304
DESIGN FOR AN ILLUMINABLE OUTDOOR ADVERTISING DISPLAY
Henry A. Thuernau, Clayton, Mo., assignor to Globe-Democrat Publishing Co., St. Louis, Mo., a corporation of Missouri
Application January 22, 1947, Serial No. 136,284
Term of patent 3½ years
(Cl. D1—12)



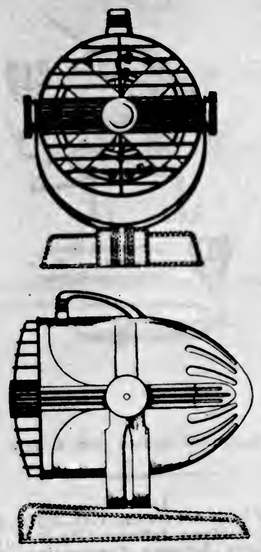
The ornamental design for an illuminable outdoor advertising display, substantially as shown.

152,305
DESIGN FOR AN OUTDOOR ADVERTISING BULLETIN BOARD
Henry A. Thuernau, Clayton, Mo., assignor to Globe-Democrat Publishing Co., St. Louis, Mo., a corporation of Missouri
Application January 22, 1947, Serial No. 136,285
Term of patent 3½ years
(Cl. D1—12)



The ornamental design for an outdoor advertising bulletin board, substantially as shown.

152,306
DESIGN FOR AN ELECTRIC CIRCULATING HEATER
Lawson Eugene Turner, Owosso, Mich., assignor to Diecha Industries, Owosso, Mich., a corporation of Michigan
Application May 6, 1946, Serial No. 129,367
Term of patent 3½ years
(Cl. D81—10)

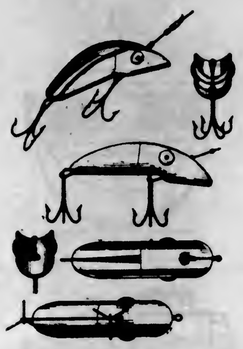


The ornamental design for an electric circulating heater, as shown and described.

152,307
DESIGN FOR A CHAIN TIE CLIP
Harold C. Valsey, Rochester, N. Y., assignor to Hickok Manufacturing Co. Inc., Rochester, N. Y., a corporation of New York
Application June 10, 1947, Serial No. 139,565
Term of patent 14 years
(Cl. D17—10)

The ornamental design for a chain tie clip, as shown.

152,308
DESIGN FOR A FISH LURE
Russell W. Wells, Pomona, Calif.
Application May 21, 1947, Serial No. 139,186
Term of patent 14 years
(Cl. D31—4)

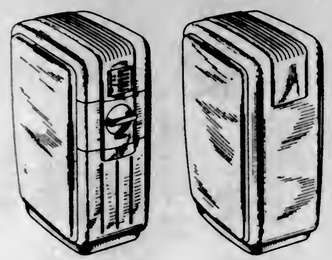


The ornamental design for a fish lure, as shown.

152,309
DESIGN FOR AN OVER-THE-SHOE BOOT
William T. Williams, Johnson City, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application July 8, 1948, Serial No. 147,443
Term of patent 7 years
(Cl. D7—4)

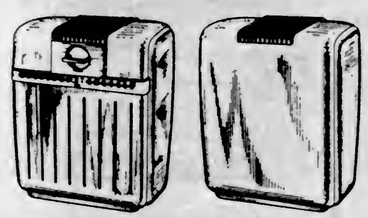
The ornamental design for an over-the-shoe boot, substantially as shown and described.

152,310
DESIGN FOR A PHOTOGRAPHIC FILM DEVELOPING UNIT OR SIMILAR ARTICLE
Douglas F. Winnek, Margate City, N. N. J.
Application December 17, 1946, Serial No. 135,578
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a photographic film developing unit or similar article, substantially as shown.

152,311
DESIGN FOR A PHOTOGRAPHIC FILM DEVELOPING UNIT OR SIMILAR ARTICLE
Douglas F. Winnek, Margate City, N. J.
Application December 17, 1946, Serial No. 135,579
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a photographic film developing unit or similar article, substantially as shown.

152,312
DESIGN FOR A HOT WATER PLATE
Eva S. Zeisel, New York, N. Y., assignor to China & Glass Distributors, Inc., New York, N. Y., a corporation of New York
Application April 18, 1947, Serial No. 138,469
Term of patent 7 years
(Cl. D44—15)

152,312—Continued

The ornamental design for a hot water plate, substantially as shown.

Leather for boots and shoes. Graton & Knight Mfg. Co. 76,621, Feb. 1, 1910. Republished Jan. 4.
Leather for boots and shoes. Graton & Knight Mfg. Co. 77,918, May 17, 1910. Republished Jan. 4.
Leather, Full grained and buffed sole. J. Greenebaum Tanning Co. 505,382, Jan. 4; Serial No. 529,049, published Apr. 27, 1948.
Leather in the piece. Graton & Knight Company. 422,424, July 23, 1948. Republished Jan. 4.
Leather, Shoe-sole. Driscole Tanning Company. 246,761, Sept. 11, 1928. Republished Jan. 4.
Leather, Shoe-sole. Driscole Tanning Company. 252,286, Jan. 29, 1929. Republished Jan. 4.
Leather, Sole. Graton & Knight Company. 236,259, Dec. 6, 1927. Republished Jan. 4.
Oakum. American Manufacturing Company. 505,380, Jan. 4; Serial No. 528,848, published Sept. 28, 1948.
Plastic material. Boston Woven Hose & Rubber Company. 505,337, Jan. 4; Serial No. 513,385, published Sept. 28, 1948.
Plastic material in sheet form, Transparent and opaque resinous. The B. F. Goodrich Company. 441,766, Jan. 4; Serial No. 509,417, published Sept. 28, 1948.
Plastic materials in the form of tubes, rods, strips, and monofilament threads, Extruded resinoid. Irvington Varnish & Insulator Co. 392,351, Dec. 23, 1941. Republished Jan. 4.
Plastic tubes, rods, strips, and monofilament threads, Extruded resinoid. Irvington Varnish & Insulator Co. 420,390, Apr. 9, 1946. Republished Jan. 4.
Resin sheets, Polyvinyl. Middletown Rubber Corporation. 441,750, Jan. 4; Serial No. 497,948, published Sept. 28, 1948.
Rosin, Heat-treated "X" grade wood. Newport Industries, Inc. 372,839, Nov. 14, 1939. Republished Jan. 4.
Rosin, Polymerized or partially polymerized. Newport Industries, Inc. 402,625, July 27, 1943. Republished Jan. 4.
Rosin, Solid lime-treated pale. Newport Industries, Inc. 372,838, Nov. 14, 1939. Republished Jan. 4.
Rosin, Solid zinc-treated. Newport Industries, Inc. 372,836–7, Nov. 14, 1939. Republished Jan. 4.
Rosin, Solid zinc-treated. Newport Industries, Inc. 402,506, July 27, 1943. Republished Jan. 4.
Rosin solution in petroleum solvent, Zinc-treated. Newport Industries, Inc. 374,710, Jan. 23, 1940. Republished Jan. 4.
Rosin solutions in petroleum solvents, Zinc-treated. Newport Industries, Inc. 372,835, Nov. 14, 1939. Republished Jan. 4.
Seeds, Grass, field, and vegetable. E. F. Burlingham & Sons. 505,542, Jan. 4; Serial No. 531,642.
Skins, Fur, or pelts. Quebec Fur Breeders Cooperative Association. 441,767, Jan. 4; Serial No. 509,470, published Sept. 28, 1948.

CLASS 2

Bags. The Carls Company. 505,347, Jan. 4; Serial No. 519,170, published Sept. 28, 1948.
Bags, Garment, laundry and shoe bags. Plymouth Wholesale Dry Goods Corporation. 505,522, Jan. 4; Serial No. 509,453.
Bags, Garment, laundry bags, shopping bags, etc. Plymouth Wholesale Dry Goods Corporation. 505,521, Jan. 4; Serial No. 509,446.
Bottles, Molded plastic. Pro-phy-lac-tic Brush Company. 441,748, Jan. 4; Serial No. 493,622, published Feb. 4, 1947.
Bottles, Vacuum, and lunch boxes. Affiliated Retailers, Inc. 441,791, Jan. 4; Serial No. 520,078, published Sept. 28, 1948.
Boxes, trucks, cans, barrels, etc. Rogers Fibre Company. 237,231, Jan. 3, 1928. Republished Jan. 4.
Cabinets, paper garment bags, and cardboard storage chests, Paperboard or corrugated pasteboard. Odora Company, Inc. 505,420, Jan. 4; Serial No. 537,072, published Sept. 21, 1948.
Chick boxes for shipping. Anderson Box Company. 232,265, Sept. 6, 1927. Republished Jan. 4.
Compact and vanity cases. Aristocrat Leather Products, Inc. 505,411, Jan. 4; Serial No. 534,973, published Sept. 28, 1948.
Dispensing containers, Tubular. Cambridge Paper Box Company. 505,345, Jan. 4; Serial No. 517,552, published Sept. 28, 1948.
Harness snaps, and snap hooks for harnesses. North & Judd Manufacturing Company. 505,381, Jan. 4; Serial No. 528,942, published Sept. 21, 1948.
Paper and pasteboard boxes and paper and pasteboard containers. Karl Voss Corporation. 220,282, Nov. 9, 1926. Republished Jan. 4.
Tanks. Wayne Oil Tank & Pump Company. 139,227, Jan. 25, 1921. Republished Jan. 4.
Waste-baskets. American Vulcanized Fibre Co. 111,160, July 4, 1916. Republished Jan. 4.

CLASS 3

Animal equipment. The Buchheimer Company. 255,933, Apr. 30, 1929. Republished Jan. 4.
Bags, Reticules or utility. Royal Dalton, Ltd. 441,768, Jan. 4; Serial No. 509,603, published Sept. 14, 1948.
Billfolds, Brown & Bigelow. 505,506, Jan. 4; Serial No. 530,182, published Sept. 21, 1948.
Billfolds, pocket books, purses and wallets. Nash, Incorporated. 434,456, Nov. 18, 1947. Republished Jan. 4.
Handbags, portable cases. Talon, Inc. 505,371, Jan. 4; Serial No. 527,891, published Sept. 21, 1948.
Handbags, portable cases, etc. Talon, Inc. 505,370, Jan. 4; Serial No. 527,868, published Sept. 21, 1948.
Handbags, wallets, portfolios, etc. Cavendish Trading Corporation. 412,733–4, Mar. 20, 1945. Republished Jan. 4.
Luggage, Hand, trunk portfolios, bags and cases, etc. Spaulding & Company. 441,754, Jan. 4; Serial No. 500,837, published Sept. 21, 1948.
Suitcases, hand luggage cases equipped with garment carrying fixtures, and wardrobe suitcases. Hartmann Company. 505,430, Jan. 4; Serial No. 539,877, published Sept. 21, 1948.
Wallets and billfolds, Leather pocket. Buxton, Incorporated. 505,461, Jan. 4; Serial No. 543,092, published Sept. 21, 1948.
Wallets or billfolds. Swank, Inc. 505,413, Jan. 4; Serial No. 535,756, published Sept. 14, 1948.

CLASS 4

Cleaner, Hand, and hectograph ink remover. Columbia Ribbon & Carbon Manufacturing Company, Inc. 441,786, Jan. 4; Serial No. 519,259, published Sept. 28, 1948.
Cleaner, Household. Hood Chemical Co., Inc. 426,393, Dec. 24, 1946. Republished Jan. 4.
Cleaner, Household. Hood Chemical Co., Inc. 433,881, Nov. 4, 1947. Republished Jan. 4.
Cleaning and scrubbing preparations and soaps. "J A V," Société Anonyme. 505,350, Jan. 4; Serial No. 495,389, published Sept. 28, 1948.
Cleaning composition, powdered metal polish, Powdered. L. J. Wilharts. 441,796, Jan. 4; Serial No. 521,301, published Sept. 28, 1948.
Cleaning compound, Liquid. Alpha Chemical Company. 223,234, Jan. 25, 1927. Republished Jan. 4.
Cleaning fluid. Bell & Howell Company. 505,386, Jan. 4; Serial No. 529,559, published Sept. 28, 1948.
Cleaning powder, Washing and general. Seco Products Company. 441,753, Jan. 4; Serial No. 498,864, published June 17, 1947.

Cleansing preparation in powder form. The Great American Tea Company. 505,498, Jan. 4; Serial No. 550,917, published Sept. 28, 1948.
Cream, Shaving. The Great American Tea Company. 505,497, Jan. 4; Serial No. 550,915, published Sept. 28, 1948.
Detergents. General Dyestuff Corporation. 505,339, Jan. 4; Serial No. 514,029, published Sept. 28, 1948.
Dressing, Belt. Graton & Knight Company. 417,910, Nov. 20, 1945. Republished Jan. 4.
Dressing, Belt. Graton & Knight Company. 418,364, Dec. 18, 1945. Republished Jan. 4.
Metal-polish. M. Loewenstein. 69,229, May 26, 1908. Republished Jan. 4.
Polishes, Shoe, and cleaners for white shoes. Gem Products, Inc. 402,594, Aug. 3, 1943. Republished Jan. 4.
Polishing and cleaning preparations. The Kiwi Polish Company Proprietary Limited. 294,324, May 24, 1932. Republished Jan. 4.
Powder soluble to make a cleaning solution. S. M. Edison. 441,810, Jan. 4; Serial No. 525,808, published Mar. 30, 1948.
Razor hones. S. R. Droescher, Inc. 505,435, Jan. 4; Serial No. 538,733, published Sept. 28, 1948.
Scouring powder. The Cudahy Packing Company. 505,505, Jan. 4; Serial No. 558,372, published Sept. 28, 1948.
Soap in powdered form, Laundry. The Cudahy Packing Company. 505,504, Jan. 4; Serial No. 558,351, published Sept. 28, 1948.
Soap, metal polishes. The Sherwin-Williams Company. 441,805, Jan. 4; Serial No. 524,729, published Sept. 28, 1948.
Soaps. The Sherwin-Williams Company. 135,831, June 6, 1922. Republished Jan. 4.
Soaps, Shaving. The Lander Co. Inc. 441,756, Jan. 4; Serial No. 502,070, published Feb. 25, 1947.
Soaps, Shaving, shaving creams, and toilet soaps. S. Perr. 441,763, Jan. 4; Serial No. 508,002, published July 8, 1947.
Steel wool, pumice and other polishing stones, etc. James H. Rhodes & Company. 505,327, Jan. 4; Serial No. 490,969, published Sept. 28, 1948.
Washing powder. Pacific Soap Company. 441,802, Jan. 4; Serial No. 523,187, published Sept. 28, 1948.

CLASS 5

Adhesives, Heat activated, thermosetting resinous, etc. United States Plywood Corporation. 441,771, Jan. 4; Serial No. 510,457, published July 20, 1948.
Adhesives, Liquid, semi-liquid or solid non-drying. Abril Corporation (Gt. Britain) Limited. 441,769, Jan. 4; Serial No. 510,224, published Aug. 31, 1948.
Cement. H. B. F. Kuhls. 441,795, Jan. 4; Serial No. 521,192, published July 20, 1948.
Cement, Adhesive. Major Manufacturing Co. 253,384, renewed Feb. 28, 1949. O. G. Jan. 4.
Cement, Adhesive belt. The Graton & Knight Manufacturing Company. 217,350, Aug. 31, 1926. Republished Jan. 4.
Cement, Adhesive belt. Graton & Knight Company. 414,542, June 12, 1945. Republished Jan. 4.
Cement, Adhesive belt. Graton & Knight Company. 422,598, July 30, 1946. Republished Jan. 4.
Cement, Linoleum. Benjamin Foster Company. 441,790, Jan. 4; Serial No. 519,806, published Sept. 7, 1948.
Cement, Rubber. Cat's Paw Rubber Company, Inc. 505,442, Jan. 4; Serial No. 540,247, published Sept. 21, 1948.
Glue. Anderson Brothers Co. Inc. 194,814, Feb. 10, 1925. Republished Jan. 4.
Glue, Stick. Rockwell Manufacturing Company. 505,409, Jan. 4; Serial No. 534,354, published Sept. 21, 1948.
Grain cement. G. C. Nixon. 441,764, Jan. 4; Serial No. 509,025, published Sept. 7, 1948.
Paper, Wrapping, tissue paper, paper towels, etc. H. J. Grey. 240,657, Apr. 3, 1928. Republished Jan. 4.
Paste, Cold-water. Knefler-Bates Manufacturing Company. 224,446, Mar. 1, 1927. Republished Jan. 4.

CLASS 6

Agent, Emulsifying. H. H. Fries. 296,914, Aug. 23, 1932. Republished Jan. 4.
Alcohol preparation. Publicker Inc. 228,384, May 31, 1927. Republished Jan. 4.
Aldehydes, alcohols, and natural synthetic essential oils, etc. Felton Chemical Company, Inc. 242,637–8, May 29, 1928. Republished Jan. 4.
Alkaline effervescent tablets. Effervescent Products, Inc. 401,312, May 11, 1943. Republished Jan. 4.
Ammonia washing sal soda, laundry bleach, liquid blue, etc. The Great Atlantic and Pacific Tea Company. 505,430, Jan. 4; Serial No. 538,125, published Sept. 21, 1948.
Anaesthetics. H. H. Fries. 236,873, Dec. 27, 1927. Republished Jan. 4.
Anesthetising, Local, nerve blocking tablets, local anesthetising, nerve blocking powders; etc. A. E. Smith. 505,364, Jan. 4; Serial No. 527,211, published Sept. 28, 1948.
Anesthetising, Local, nerve blocking tablets, local anesthetising, nerve blocking powders, etc. A. E. Smith. 505,366, Jan. 4; Serial No. 527,215, published Sept. 28, 1948.
Antibiotic with vasoconstrictor. Wyeth, Incorporated. 505,463, Jan. 4; Serial No. 543,250, published Sept. 28, 1948.
Antiseptic and disinfectant. H. H. Fries. 289,719, Dec. 1, 1931. Republished Jan. 4.
Baking powder and bluing, gloss starch, and salt for food purposes. Kansas City Wholesale Grocery Co. 225,186, Mar. 15, 1927. Republished Jan. 4.
Bleaching, cleansing, antiseptic and germicidal compound. Clorox Chemical Co. 505,456, Jan. 4; Serial No. 542,285, published Sept. 28, 1948.
Carboxymethyl cellulose. Hercules Powder Company. 505,462, Jan. 4; Serial No. 543,181, published Sept. 7, 1948.
Chemical mixture. Paradise Products Corporation. 505,490–1, Jan. 4; Serial Nos. 549,746–7, published Sept. 28, 1948.
Chemical, pharmaceutical, and biological preparations. Woodard Laboratories, Inc. 441,809, Jan. 4; Serial No. 525,470, published Sept. 28, 1948.
Chemical preparation. Hood Chemical Co., Inc. 505,459, Jan. 4; Serial No. 542,470, published Sept. 28, 1948.
Chemical preparation. Rohloff Manufacturing Company. 505,383, Jan. 4; Serial No. 526,974, published Sept. 28, 1948.
Chemo-therapeutic substances. Givaudan-Delawanna, Inc. 505,374, Jan. 4; Serial No. 528,345, published Mar. 23, 1949.
Chlorid or ethyl. H. H. Fries. 63,705, July 2, 1907. Republished Jan. 4.
Compositions in the nature of electrolytes and addition agents. Poor & Company. 505,483, Jan. 4; Serial No. 547,148, published Sept. 28, 1948.
Compound, Liquid. Patek and Co. 441,761, Jan. 4; Serial No. 505,915, published Sept. 28, 1948.
Cosmetic sets. Avon Products, Inc. 434,678, Dec. 2, 1947. Republished Jan. 4.
Cosmetics. Whitehall Pharmacal Company. 505,499, Jan. 4; Serial No. 552,300, published Sept. 28, 1948.
Cough drops, Medicated. M. Stein. 441,743, Jan. 4; Serial No. 477,533, published June 12, 1945.
Cream, Cleansing. Royal Drug Company. 341,426, Dec. 8, 1936. Republished Jan. 4.
Cream, Hand bleaching, face cream, face bleaching cream, etc. V. Fisher. 441,788, Jan. 4; Serial No. 519,577, published Sept. 28, 1948.
Dentifrices in form of fluids, powders or paste. Yaso Medicinal, S. A. 441,794, Jan. 4; Serial No. 520,489, published Sept. 28, 1948.
Diaper wash. W. F. Hetman. 505,410, Jan. 4; Serial No. 534,777, published Sept. 28, 1948.
Disinfectant, Perfumed, and hospital germicide. Huntington Laboratories, Inc. 434,230, Nov. 11, 1947. Republished Jan. 4.
Disinfectants. Rockland Chemical Co. 246,734, renewed Sept. 11, 1948. O. G. Jan. 4.
Dressing for the nipples of nursing mothers. Swan-Myers Company. 254,532, renewed Mar. 26, 1949. O. G. Jan. 4.
Dyes and dyestuffs. General Dyestuff Corporation. 505,377, Jan. 4; Serial No. 528,565, published Sept. 28, 1948.
Dyestuffs. General Dyestuff Corporation. 505,336, Jan. 4; Serial No. 512,328, published Sept. 7, 1948.
Dyestuffs and intermediates. Wetterwald & Pfister Company, Inc. 250,438, renewed Dec. 11, 1948. O. G. Jan. 4.
Effervescent alkalising preparation. Effervescent Products, Inc. 352,413, Nov. 30, 1937. Republished Jan. 4.
Ethyl protocatechuic aldehyde. H. H. Fries. 249,714, Nov. 20, 1928. Republished Jan. 4.
Face powder. Florian Inc. 194,742, Feb. 10, 1925. Republished Jan. 4.
Face powder. Lucien Lelong, Inc. 505,389, Jan. 4; Serial No. 530,213, published Sept. 28, 1948.
Fixer for X-ray films. Picker X-Ray Corporation. 419,111, Feb. 5, 1946. Republished Jan. 4.
Flame proofing compound. The Selig Company. 505,359, Jan. 4; Serial No. 524,354, published Sept. 21, 1948.
Flooring composition, completed flooring, stucco composition, etc. Selby, Battersby & Co. 204,448–9, Oct. 20, 1923. Republished Jan. 4.
Fuel gas, Hydrocarbon and manufactured. C. W. Potter. 505,334, Jan. 4; Serial No. 507,417, published Sept. 28, 1948.
Gas in portable tanks. Roxana Petroleum Corporation. 253,361, renewed Feb. 26, 1949. O. G. Jan. 4.
Gas used in the industrial arts, A highly refined. Acetogen Associates, Inc. 423,736, Sept. 10, 1946. Republished Jan. 4.
Gases, Compressed. National Cylinder Gas Company. 401,145, Apr. 27, 1943. Republished Jan. 4.
Germicide and fungicide. H. H. Fries. 272,208, July 1, 1930. Republished Jan. 4.
Hair salves, hair elixirs, dandruff preparation, etc. Normany Products Company. 292,873, Mar. 29, 1932. Republished Jan. 4.
Hair tonics, hair restorer. Gallagher-Thomas Chemical Co. 254,466, renewed Mar. 26, 1949. O. G. Jan. 4.
Inorganic chemicals. The Solvay Process Company. 251,430, renewed Jan. 8, 1949. O. G. Jan. 4.
Insecticides. Standard Oil Company. 441,806, Jan. 4; Serial No. 525,126, published Sept. 28, 1948.

Insecticides and moth preventative and exterminator. The Diversey Corporation. 505,438, Jan. 4; Serial No. 539,290, published Sept. 28, 1948.
Lanolin, Anhydrous, technical lanolin, etc. I. W. Malmstrom. 441,778, Jan. 4; Serial No. 513,435, published Sept. 28, 1948.
Laundry-starch polish. E. A. Bromund Company. 87,419, July 16, 1912. Republished Jan. 4.
Laxative medicine in tablet form. The Dill Co. 322,292, Mar. 5, 1935. Republished Jan. 4.
Laxatives, Chocolated, cold laxatives, chewing gum laxatives, etc. Tru-Pak Products Corp. 441,744, Jan. 4; Serial No. 490,555, published Sept. 28, 1948.
Liniment. The Troy Chemical Co. 249,276, renewed Nov. 13, 1948. O. G. Jan. 4.
Liniment, All-purpose. Leake Chemical Company. 505,346, Jan. 4; Serial No. 519,074, published Sept. 28, 1948.
Liquid compounds for the prevention of freezing and boiling of water, etc. National Carbon Company, Inc. 250,542, Dec. 11, 1928. Canceled Nov. 29, 1946. O. G. Jan. 4.
Lye. B. T. Babbitt, Inc. 505,387, Jan. 4; Serial No. 529,863, published Sept. 21, 1948.
Make-up preparation, Foundation. Lucien Lelong, Inc. 505,391, Jan. 4; Serial No. 530,222, published Sept. 28, 1948.
Masking solution. Mallinckrodt Chemical Works. 505,357, Jan. 4; Serial No. 523,403, published Aug. 31, 1948.
Medicinal preparation. J. U. Korée. 441,801, Jan. 4; Serial No. 522,930, published Sept. 28, 1948.
Medicinal preparation. Sandoz Chemical Works, Inc. 505,446, Jan. 4; Serial No. 540,721, published Sept. 28, 1948.
Medicinal preparations. Anabolic Food Products, Inc. 505,335, Jan. 4; Serial No. 509,489, published Aug. 31, 1948.
Medicine for fowl. J. H. Gum. 505,502. Jan. 4; Serial No. 555,265, published Sept. 28, 1948.
Nerve sedative. Dr. Miles Medical Company. 255,380, Apr. 23, 1929. Republished Jan. 4.
Nitrous oxide, carbon dioxide, insecticides, etc. W. B. Threm. 441,804, Jan. 4; Serial No. 524,259, published Sept. 28, 1948.
Ointment. W. B. Sellmer. 505,427, Jan. 4; Serial No 537,625, published Sept. 28, 1948.
1-methyl-3-dimethyl-cyclohexanol-(5). Fries Bros., Inc. 407,446, June 6, 1944. Republished Jan. 4.
Perfume. J. B. Nethercutt. 441,772, Jan. 4; Serial No. 510,856, published Sept. 28, 1948.
Perfumes and eaux de cologne. S. A. Luxana. 441,789, Jan. 4; Serial No. 519,588, published Sept. 28, 1948.
Perfumes, colognes, toilet waters, etc. Lucien Lelong, Inc. 505,390, Jan. 4; Serial No. 530,219, published Sept. 28, 1948.
Perfumes, colognes, toilet waters, etc. Lucien Lelong, Inc. 505,393, Jan. 4; Serial No. 530,225, published Sept. 28, 1948.
Perfumes, colognes, toilet waters, etc. Lucien Lelong, Inc. 505,406, Jan. 4; Serial No. 534,159, published Sept. 28, 1948.
Perfumes, lipsticks, rouge, etc. La Florida, S. A. 441,803, Jan. 4; Serial No. 523,898, Sept. 28, 1948.
Perfumes, toilet waters, colognes, etc. Ramler, Société à Responsabilité Limitée. 441,800, Jan. 4; Serial No. 522,927, published Sept. 28, 1948.
Pharmaceutical preparation. F. Carbonaro. 505,445, Jan. 4; Serial No. 540,382, published Sept. 7, 1948.
Pharmaceutical preparation. Cib Pharmaceutical Products, Inc. 505,480. Jan. 4; Serial No. 546,760, published Sept. 28, 1948.
Pharmaceutical preparations. F. Trenka. 198,187, renewed May 5, 1945. O. G. Jan. 4.
Photographic chemicals. C. E. Payne. 505,501, Jan. 4; Serial No. 555,009, published Sept. 28, 1948.
Pine oil, Emulsifiable. Newport Industries, Inc. 373,905, Dec. 26, 1939. Republished Jan. 4.
Preparation containing specially processed extracted animal liver meal, carotene extract, etc. World Products Corp. 505,476, Jan. 4; Serial No. 545,319, published Aug. 3, 1948.
Preparation for neutralising and overcoming alcoholic and similar breath odors. J. Roy Allen. 330,335, Nov. 26, 1935. Republished Jan. 4.
Preparation for the relief of nervousness, etc. Glen Medical Company, Inc. 505,423, Jan. 4; Serial No. 537,449, published Sept. 28, 1948.
Preparations in powder and cigarette form. The J. H. Guild Company Inc. 505,486, Jan. 4; Serial No. 548,815, published Sept. 21, 1948.
Remedy for hard corns. Dr. Camden Woofter. 95,504, Feb. 17, 1914. Republished Jan. 4.
Remedy for phthisis. F. Hoffmann-La Roche & Cie. 32,563, renewed Feb. 28, 1949. O. G. Jan. 4.
Replenisher for developer for X-ray. Picker X-Ray Corporation. 416,742, Sept. 25, 1945. Republished Jan. 4.
Resin for use in a tackifier, plasticiser, etc. Newport Industries, Inc. 407,882, July 4, 1944. Republished Jan. 4.
Rouge and lipstick. Lucien Lelong, Inc. 505,392, Jan. 4; Serial No. 530,223, published Sept. 28, 1948.
Rouges, dusting powders, sachet powders, etc. Lucien Lelong, Inc. 505,405, Jan. 4; Serial No. 534,158, published Sept. 28, 1948.
Round worm remedy, chocolate coated laxative, tooth paste, etc. Furst-McNess Company. 505,354, Jan. 4; Serial No. 522,841, published Sept. 28, 1948.
Salicylate, iodide with alkali buffers in an effervescent tablet. Effervescent Products, Inc. 352,878, Dec. 14, 1937. Republished Jan. 4.
Scenting extracts, eau de cologne, scenting lotions, etc. Union des Parfumeurs de France (U. P. F.). 441,776, Jan. 4; Serial No. 512,725, published Sept. 28, 1948.
Solution applied to lithographic paper plates. Columbia Ribbon & Carbon Manufacturing Company, Inc 505,441, Jan. 4; Serial No. 540,176, published Sept. 28, 1948.
Solution to be used as a test for urine. Menley & James; Limited. 252,606, Feb. 12, 1929. Republished Jan. 4.
Solvent, Liquid. H. H. Fries. 265,227, Dec. 17, 1929. Republished Jan. 4.
Solvents for flavoring extracts. Fries Bros., Inc. 505,471, Jan. 4; Serial No. 544,260, published Sept. 28, 1948.
Sulfathiazole compound. P. M. Turnbull. 505,484, Jan. 4; Serial No. 547,376, published Sept. 28, 1948.
Sweeteners, Powdered or liquid, saccharine substances, and benzoic sulfinids. Fries Bros. 31,790, July 5, 1898. Republished Jan. 4.
Tablet, Reagent. Ames Company, Inc. 421,386, May 28, 1946. Republished Jan. 4.
Tablets, Alkaline effervescent. Effervescent Products, Inc. 384,076, Jan. 7, 1941. Republished Jan. 4.
Tablets, Effervescent. Ames Company, Inc. 413,584, May 1, 1945. Republished Jan. 4.
Toilet waters, perfumed powder sachets, face and talcum powders, etc. D'Orsay Perfumeries Corporation. 505,485, Jan. 4; Serial No. 548,347, published Sept. 28, 1948.
Toiletries, Men's. Avon Products, Inc. 434,690, Dec. 2, 1947. Republished Jan. 4.
Tonic. Indo-Vin, Inc. 316,848, Sept. 4, 1934. Republished Jan. 4.
Tonic, General. L. N. Renault & Sons, Inc. 249,037, renewed Nov. 6, 1948. O. G. Jan. 4.
Tonics, Nutritive. Jamieson Pharmacal Company. 540,400, Jan. 4; Serial No. 531,673, published Sept. 28, 1948.
Vitamin and mineral preparations. Anabolic Food Products, Inc. 505,343, Jan. 4; Serial No. 515,526, published Aug. 31, 1948.
Vitamin preparations, Multiple. Ayerst, McKenna & Harrison Limited. 505,496, Jan. 4; Serial No. 550,574, published Sept. 28, 1948.
Wafers containing dicalcium phosphate and viosterol. Jamieson Pharmacal Company. 540,401, Jan. 4; Serial No. 531,676, published Sept. 28, 1948.

CLASS 7

Cord, Sash, clothes-line and rope. Anco Corporation. 505,481, Jan. 4; Serial No. 546,940, published Sept. 21, 1948.
Rope, Wire, cable and cord. John A. Roebling's Sons Company. 505,472, Jan. 4; Serial No. 544,286, published Sept. 28, 1948.
Twines, string, sash cord, etc. Charles C. Davis and Company. 505,348, Jan. 4; Serial No. 519,180, published Sept. 21, 1948.
Wire, wire rope, and cables. The Colorado Fuel and Iron Corporation. 505,447, Jan. 4; Serial No. 540,982, published Sept. 21, 1948.

CLASS 8

Cigar, cigarette, and pipe lighters, etc. Lektrolite Corporation. 441,807, Jan. 4; Serial No. 525,222, published Sept. 28, 1948.
Flints. Ronson Art Metal Works, Inc. 505,333, Jan. 4; Serial No. 506,962, published Sept. 28, 1948.
Pipes, Smoking. March Corporation. 441,755, Jan. 4; Serial No. 501,994, published Dec. 21, 1946.
Pipes, Tobacco. F. Schneider. 505,536, Jan. 4; Serial No. 532,030.

CLASS 10

Fertilizers. New Orleans Acid & Fertilizer Company. 73,337, re-renewed Apr. 13, 1949. O. G. Jan. 4.

CLASS 11

Carbon black for use in the manufacture of ink. Godfrey L. Cabot, Inc. 305,440, Jan. 4; Serial No. 540,167, published Sept. 28, 1948.
Inking ribbons. Burroughs Adding Machine Company. 505,355, Jan. 4; Serial No. 522,976, published Sept. 28, 1948.
Inking ribbons. Burroughs Adding Machine Company. 505,356, Jan. 4; Serial No. 523,149, published Sept. 28, 1948.

CLASS 12

Brick, Acid-proof. Harbison-Walker Refractories Company. 331,438, Jan. 7, 1936. Republished Jan. 4.
Brick, Fire. Harbison-Walker Refractories Company. 353,278, Dec. 28, 1937. Republished Jan. 4.

Brick, Fire. Harbison-Walker Refractories Company. 415,351, Aug. 7, 1945. Republished Jan. 4.
Brick, Fire, and refractory cements. Harbison-Walker Refractories Company. 188,715, Sept. 2, 1924. Republished Jan. 4.
Brick, Refractory, insulating, and acid-proof. Harbison-Walker Refractories Company. 321,533, Feb. 5, 1935. Republished Jan. 4.
Bricks, Fire. Harbison-Walker Refractories Company. 315,912, Aug. 14, 1943. Republished Jan. 4.
Building materials, Structural iron and steel. Concrete Engineering Company. 118,162, Aug. 21, 1917. Republished Jan. 4.
Cement, Refractory. Harbison-Walker Refractories Company. 154,043, Apr. 4, 1922. Republished Jan. 4.
Cement, Refractory. Harbison-Walker Refractories Company. 160,206, Oct. 17, 1922. Republished Jan. 4.
Cement, Refractory. Harbison-Walker Refractories Company. 310,762, Mar. 6, 1934. Republished Jan. 4.
Columns, Steel supporting, metal window, etc. James Manufacturing Company. 250,539, renewed Dec. 11, 1948. O. G. Jan. 4.
Firebrick, Plastic. Mexico Refractories Company. 505,454, Jan. 4; Serial No. 541,857, published Aug. 31, 1948.
Flooring composition, completed flooring, stucco composition, etc. Selby, Battersby & Co. 204,448–9, Oct. 20, 1925. Republished Jan. 4.
Lumber. Bolcom Canal Lumber Co. 172,134, Aug. 21, 1923. Republished Jan. 4.
Plywood and plywood blocks for strip flooring. The Bestline Corporation. 505,554, Jan. 4; Serial No. 544,031.
Shingles and siding. Sherriff-Goslin Co. 364,392, Jan. 31, 1939. New certificate. O. G. Jan. 4.
Shingles, metal laths, etc., Metal. Penn Metal Company. 305,044, July 25, 1933. Canceled Nov. 19, 1948. O. G. Jan. 4.
Shingles, Wooden. C. E. Putman. 265,538–9, Dec. 31, 1929. Republished Jan. 4.
Wood, slate, composition, etc. C. E. Putman. 255,478, Apr. 23, 1929. Republished Jan. 4.

CLASS 13

Atomisers, Oil burner. Harvey-Whipple, Incorporated. 349,785, Sept. 7, 1937. Republished Jan. 4.
Gas pressure regulators. National Cylinder Gas Company. 410,773, Dec. 19, 1944. Republished Jan. 4.
Glasiers' points. Snell-Jones Tack Corporation. 368,758, June 27, 1939. Republished Jan. 4.
Nozzle, Fire-extinguishing. Ansul Chemical Company. 505,520, Jan. 4; Serial No. 507,707.
Nozzles and nozzle-casings. Wayne Oil Tank & Pump Company. 139,050, Jan. 18, 1921. Republished Jan. 4.
Valves, Brass and iron, and brass, malleable and gray iron pipe fittings for plumbing, etc. Jarecki Manufacturing Co. 505,528, Jan. 4; Serial No. 514,958.
Valves, Flush. Sloan Valve Company. 255,451, Apr. 23, 1929. Republished Jan. 4.
Valves, Flush. Sloan Valve Company. 284,196, June 16, 1931. Republished Jan. 4.
Valves, Flush. Sloan Valve Company. 284,212, June 16, 1931. Republished Jan. 4.
Valves for use in water supply systems. Sloan Valve Company. 271,429, June 3, 1930. Republished Jan. 4.
Valves for water supply system, Flush. Sloan Valve Company. 410,682, Dec. 12, 1944. Republished Jan. 4.
Valves, Steam and water. The Fairbanks Company. 505,544, Jan. 4; Serial No. 533,869.

CLASS 14

Castings, Permanent mold gray iron. Eaton Manufacturing Company. 505,519, Jan. 4; Serial No. 507,115.
Copper and copper alloy welding rods. Chase Brass & Copper Co. Incorporated. 399,595, Jan. 19, 1943. Republished Jan. 4.

CLASS 15

Gasoline. The Cincinnati Oil Works Co. 262,469, Oct. 15, 1929. Republished Jan. 4.
Gasoline. The Elco Petroleum Company. 187,280, July 29, 1924. Republished Jan. 4.
Grease, Lead base lubricating. The Elco Grease & Oil Company. 292,691, Mar. 22, 1932. Republished Jan. 4.
Greases, Lubricating, and lubricating oils. Panhard Oil Corporation. 257,541, June 11, 1929. Republished Jan. 4.
Oil, Lubricating. A. T. Stratton. 422,620, Aug. 6, 1946. Republished Jan. 4.
Oils and greases, Lubricating. The Elco Grease and Oil Company. 349,996, Sept. 14, 1937. Republished Jan. 4.
Oils and greases, Lubricating. The Elco Grease and Oil Company. 387,690, May 27, 1941. Republished Jan. 4.
Oils and greases, Lubricating. The Pennzoil Company. 254,976, renewed Apr. 2, 1949. O. G. Jan. 4.

CLASS 16

Carbon black. The Grasselli Chemical Company. 244,116, July 10, 1928. Republished Jan. 4.
Coating material, in sprayable form, Rust, corrosion, and abrasive resistant rubberized. Minnesota Mining & Manufacturing Company. 441,797, Jan. 4; Serial No. 521,356, published Sept. 14, 1948.
Lacquers; varnishes; paint enamels, etc. Atlas Powder Company. 505,341, Jan. 4; Serial No. 514,930, published Sept. 14, 1948.
Liquid substitute for turpentine. Seidlits Paint & Varnish Co. 505,414, Jan. 4; Serial No. 536,159, published Sept. 14, 1948.
Oil for mops. Gem Hammock & Fly Net Company. 152,785, Mar. 7, 1922. Republished Jan. 4.
Oil substitutes for paints and varnishes, Drying. Newport Industries, Inc. 402,941, Aug. 24, 1943. Republished Jan. 4.
Paint and varnish remover. The Smith-Alsop Paint and Varnish Company. 424,289, Oct. 1, 1946. Republished Jan. 4.
Paint enamel. Great Lakes Varnish Works, Inc. 505,408, Jan. 4; Serial No. 534,273, published Aug. 10, 1948.
Paint enamel for exterior use. The Smith-Alsop Paint & Varnish Company. 304,176, June 27, 1933. Republished Jan. 4.
Paint enamels, dry, ready mixed, and paste paints, varnishes, polishes, etc. Star-Brite Paint Co. 341,883, Dec. 29, 1936. Republished Jan. 4.
Paint for use upon cement floors. The Smith-Alsop Paint and Varnish Company. 199,379, June 9, 1925. Republished Jan. 4.
Paint in liquid form, White. M. J. Merkin Paint Co., Inc. 505,436, Jan. 4; Serial No. 539,068, published Sept. 14, 1948.
Paint, Paste, and paint enamel. Great Lakes Varnish Works, Inc. 505,407, Jan. 4; Serial No. 534,272, published Aug. 10, 1948.
Paints and enamels. Boston Varnish Company. 129,333. Feb. 17, 1920. Republished Jan. 4.
Paints both paste and liquid, varnishes, etc. Walter N. Boysen Co. 441,799, Jan. 4; Serial No. 522,721, published Sept. 14, 1948.
Paints, Mixed. The Sherwin-Williams Company. 67,166, Jan. 21, 1908. Republished Jan. 4.
Paints, Paste and ready-mixed. The Smith-Alsop Paint and Varnish Company. 206,095, Nov. 24, 1925. Republished Jan. 4.
Paints, Ready-mixed, colors in oil, paints for masonry, etc. Hampden Color and Chemical Company. 441,782, Jan. 4; Serial No. 515,835, published Sept. 14, 1948.
Paints, Ready-mixed and paste, varnishes, paint enamels, etc. Enterprise Paint Mfg. Co. 169,451, June 19, 1923. Republished Jan. 4.
Paints, Ready-mixed, wood stains, and paint enamels. Chicago Paints, Inc. 505,431, Jan. 4; Serial No. 538,371, published Sept. 14, 1948.
Polish for furniture, automobiles, floors, woodwork, etc. The Gem Hammock & Fly Net Company. 138,246, Dec. 21, 1920. Republished Jan. 4.
Polish, Oil type furniture, white emulsion furniture polish, etc. Gem Products, Inc. 408,188, July 25, 1944. Republished Jan. 4.
Solvents for lacquers and synthetic enamels, Hydrocarbon. Velsical Corporation. 505,383, Jan. 4; Serial No. 529,322, published Sept. 14, 1948.
Varnish for linoleum. The Smith-Alsop Paint and Varnish Company. 315,497, July 31, 1934. Republished Jan. 4.
Varnish stains, paint enamels, spar varnish, etc. The Con-Ferro Paint and Varnish Company. 335,579, June 9, 1936. Republished Jan. 4.
Varnishes; ready-mixed, dry, and paste paints; oil and varnish stains; etc. The American Varnish Company. 505,331, Jan. 4; Serial No. 499,461, published Sept. 14, 1948.
Wall-finish, iron-enamel, mixed paint, varnish stain, oil stain, etc. Wadsworth-Howland Company. 150,639, Jan. 3, 1922. Republished Jan. 4.
Wood filler, enamels, paints, and varnishes. The Smith-Alsop Paint and Varnish Company. 195,384, Feb. 24, 1925. Republished Jan. 4.

CLASS 17

Cigars. G. H. P. Cigar Company, Inc. 203,569, Sept. 22, 1925. Republished Jan. 4.
Cigars. Grandias, Annis & Co., Inc. 505,556, Jan. 4; Serial No. 552,309.
Cigars. Tampa Importers, Inc. 334,671, May 12, 1936. Canceled Nov. 24, 1948. O. G. Jan. 4.
Stogies. H. Haslett. 62,837, May 28, 1907. Republished Jan. 4.
Stogies. H. Haslett. 63,310–11, June 11, 1907. Republished Jan. 4.
Tobacco, Smoking. Philip Morris & Co. Ltd. Incorporated. 505,451, Jan. 4; Serial No. 541,693, published Sept. 28, 1948.

CLASS 19

Airplanes and structural parts therefor. Lockheed Aircraft Corporation. 505,362, Jan. 4; Serial No. 526,986, published Aug. 31, 1948.
Automotive vehicles. N. P. Zbrojovka Brn. 505,449, Jan. 4; Serial No. 541,366, published Sept. 14, 1948.
Bicycle drawn carts. Merrill and McKinney. 441,784, Jan. 4; Serial No. 517,580, published Aug. 24, 1948.

Boats, Small, dinghies, tenders, etc. Island Creek Boat Shop. 441,792, Jan. 4; Serial No. 520,219, published Aug. 24, 1948.
Boxes, trucks, cans, barrels, etc. Rogers Fibre Company. 237,231, Jan. 3, 1928. Republished Jan. 4.
Brake shoes, Automobile, shock absorbers, and caps for automobile hubs, etc. Pick Manufacturing Company. 505,460, Jan. 4; Serial No. 542,648, published Aug. 24, 1948.
Canoes and row boats. G. Zavadil. 441,759, Jan. 4; Serial No. 504,816, published Aug. 24, 1948.
Heaters, Vehicle. E. A. Laboratories, Inc. 505,448, Jan. 4; Serial No. 541,100, published Aug. 24, 1948.
House trailers. D. R. Boles. 505,490, Jan. 4; Serial No. 537,869, published Sept. 14, 1948.
Motorcycles. G. M. Hendee. 39,008, Oct. 7, 1902. Republished Jan. 4.
Strollers, Walker, and strollers. The Frank F. Taylor Company. 505,450, Jan. 4; Serial No. 541,602, published Aug. 24, 1948.
Trailer trucks and self-propelled load hauling trucks. R. G. Le Tourneau, Inc. 441,774, Jan. 4; Serial No. 511,688, published Sept. 7, 1948.
Truck bodies, truck cabs, and tractor cabs. L. J. Gebrlein. 441,757, Jan. 4; Serial No. 502,972, published Sept. 14, 1948.
Vehicle suspensions. The Firestone Tire & Rubber Company. 441,749, Jan. 4; Serial No. 497,854, published Sept. 14, 1948.
Vehicle wheel rims. The Goodyear Tire & Rubber Company. 505,394, Jan. 4; Serial No. 530,308, published Sept. 21, 1948.

CLASS 21

Automobile accessories. Inter-State Auto Parts Co., Inc. 247,855, renewed Sept. 25, 1948. O. G. Jan. 4.
Cambric tape, used for electrical insulation purposes, Yellow varnished. Irvington Varnish & Insulator Co. 424,948, Oct. 29, 1946. Republished Jan. 4.
Electric welding apparatus and direct current welding apparatus, Alternating current. National Cylinder Gas Company. 401,176, Apr. 27, 1943. Republished Jan. 4.
Electric wire, Insulated. The Whitney Blake Company. 421,195, May 21, 1946. Republished Jan. 4.
Electric wire, Insulated. The Whitney Blake Company. 427,000, Jan. 21, 1947. Republished Jan. 4.
Electrical apparatus comprising oscillators, vibrators, and rectifiers. Good-All Electric Manufacturing Company. 505,523, Jan. 4; Serial No. 512,499.
Electrical insulation material. Irvington Varnish & Insulator Co. 185,527, June 17, 1924. Republished Jan. 4.
Electrically heated blankets. Marshall Field & Company. 434,737, Dec. 2, 1947. Republished Jan. 4.
Fabricated material for electrical insulation, Laminated. National Vulcanized Fibre Co. 210,431, Mar. 16, 1926. Republished Jan. 4.
Heaters, Electric water. Bastian-Morley Co. 248,676, renewed Oct. 30, 1948. O. G. Jan. 4.
Heating units, Electric, and electric heaters. Edwin L. Wiegand Company. 505,368, Jan. 4; Serial No. 527,671, published Sept. 21, 1948.
Heating units, Electric, and electric heaters. Edwin L. Wiegand Company. 505,369, Jan. 4; Serial No. 527,865, published Sept. 21, 1948.
Mechanically and electrically operated door opening mechanism, Combination. The Vendo Company. 505,526, Jan. 4; Serial No. 513,959.
Plug fuses, Electric. Cable Electric Products, Inc. 505,555, Jan. 4; Serial No. 546,756.
Switches and fuses, Electric. W. N. Matthews Corporation. 505,365, Jan. 4; Serial No. 527,213, published Sept. 21, 1948.
Tubing for electrical insulation, Extruded plastic. Irvington Varnish & Insulator Co. 393,129, Jan. 27, 1942. Republished Jan. 4.
Tubing for electrical insulation, Extruded plastic. Irvington Varnish & Insulator Co. 397,541–2, Sept. 8, 1942. Republished Jan. 4.
Tubing for electrical insulation, Extruded plastic. Irvington Varnish & Insulator Co. 402,320, July 13, 1943. Republished Jan. 4.
Tubing for electrical insulation, Extruded plastic. Irvington Varnish & Insulator Co. 405,222, Jan. 11, 1944. Republished Jan. 4.
Tubing for electrical insulation, Varnished. Irvington Varnish & Insulator Co. 393,180, Jan. 27, 1942. Republished Jan. 4.
Wire and cables, Insulated. The Whitney Blake Company. 106,128, Oct. 12, 1915. Republished Jan. 4.
Wires and cables, Insulated. The Whitney Blake Company. 402,190, July 6, 1943. Republished Jan. 4.
Wires and cables, Insulated. The Whitney Blake Company. 406,670, Apr. 18, 1944. Republished Jan. 4.

CLASS 22

Baby toys. Tykie Toy Company. 389,077, July 22, 1941. Republished Jan. 4.
Golf clubs. The Crawford, McGregor and Canby Company. 188,932, Sept. 9, 1924. Republished Jan. 4.
Golf clubs and golf balls. The Crawford, McGregor & Canby Company. 137,977, Dec. 14, 1920. Republished Jan. 4.
Playing cards, noise makers, etc. Cavendish Trading Corporation. 413,447, Apr. 24, 1945. Republished Jan. 4.
Skates, Roller, golf clubs, golf balls, fishing lines, etc. Cavendish Trading Corporation. 412,736, Mar. 20, 1945. Republished Jan. 4.
Target throwing devices. O. F. Mossberg & Sons, Inc. 382,319, Oct. 22, 1940. Republished Jan. 4.
Targets and clay pigeons. O. F. Mossberg & Sons, Inc. 383,234, Nov. 26, 1940. Republished Jan. 4.
Trapshooting game. O. F. Mossberg & Sons, Inc. 384,990, Feb. 11, 1941. Republished Jan. 4.

CLASS 23

Agricultural machinery. Minneapolis-Moline Power Implement Company. 505,375, Jan. 4; Serial No. 528,361, published Sept. 14, 1948.
Automotive service equipment. J. D. Cochin. 441,785, Jan. 4; Serial No. 517,620, published Sept. 7, 1948.
Bearings and bushings. Bound Brook Oil-Less Bearing Company. 202,397–8, Aug. 18, 1925. Republished Jan. 4.
Bushings, Self-lubricating trolley-wheel, and metal and graphite bearings and bushings. The Graphite Lubricating Company. 116,521, May 8, 1917. Republished Jan. 4.
C-clamps. The Cincinnati Tool Company. 505,397, Jan. 4; Serial No. 530,719, published Sept. 21, 1948.
Calk extractors, Horse shoe; calk punches, picks, etc. Diamond Calk Horse Shoe Company. 421,445, June 4, 1946. Republished Jan. 4.
Card grinding machines, Textile; textile roller, bowl and cylinder grinding machines; etc. Dronsfield Brothers, Ltd. 441,742, Jan. 4; Serial No. 474,401, published Sept. 21, 1948.
Carpet-sweepers, Hand-operated suction. The Scott & Fetzer Company. 131,367, May 11, 1920. Republished Jan. 4.
Choppers, Meat, vegetable and food; pruners, tinners, etc. The Henkel-Clauss Co. 136,455, Nov. 2, 1920. Republished Jan. 4.
Conveying machinery, Vertical and horizontal. Samuel Olson Manufacturing Company, Inc. 328,933, Oct. 8, 1935. Republished Jan. 4.
Covers for ingot molds. Harbison-Walker Refractories Company. 369,116, July 18, 1939. Republished Jan. 4.
Cutter for cutting miters in wood. The Pootatuck Corporation. 441,770, Jan. 4; Serial No. 510,274, published Sept. 21, 1948.
Dishwashing machines. Lake States Products, Inc. 505,367, Jan. 4; Serial No. 527,524, published Sept. 21, 1948.
Fertiliser distributors. Columbus Iron Works Company. 362,981, Dec. 6, 1938. Republished Jan. 4.
Fire extinguishing equipment, Portable hand and wheel-mounted. Ansul Chemical Company. 441,751, Jan. 4; Serial No. 498,395, published Sept. 21, 1948.
Grinders, Face, shapers, catheads, etc. General Engineering & Mfg. Co. 505,824, Jan. 4; Serial No. 464,942, published Sept. 21, 1948.
Heel sweeps for cultivators. Columbus Iron Works Co. 212,785, May 11, 1926. Republished Jan. 4.
Hoists, Differential. Chisholm-Moore Hoist Corporation. 251,382, renewed Jan. 8, 1949. O. G. Jan. 4.
Internal-combustion engines. Hendee Manufacturing Company. 103,727–8, Apr. 18, 1915. Republished Jan. 4.
Jigger, ice mallet, cork puller, and bottle decapper, Combination. Tempro, Incorporated. 441,760, Jan. 4; Serial No. 505,366, published Sept. 21, 1948.
Loom supplies. Graton & Knight Company. 391,414, Nov. 4, 1941. Republished Jan. 4.
Loom supplies. Graton & Knight Company. 393,756, Mar. 3, 1942. Republished Jan. 4.
Loom supplies. Graton & Knight Company. 393,768, Mar. 3, 1942. Republished Jan. 4.
Lubricant-dispensing apparatus, Portable. Lincoln Engineering Company. 505,332, Jan. 4; Serial No. 506,325, published Sept. 21, 1948.
Machine-bearings, bushings, and thrust bearings of washer type, Metal and graphite. The Graphite Lubricating Company. 83,488, Sept. 19, 1911. Republished Jan. 4.
Machinery bearings, bushings, and machine parts. Bound Brook Oil-Less Bearing Company. 395,576, June 2, 1942. Republished Jan. 4.
Machinery bearings, bushings, machine parts, etc. Bound Brook Oil-Less Bearing Company. 379,698, July 23, 1940. Republished Jan. 4.
Machines for grinding, cracking, and otherwise treating coffee and chaff. Jabez Burns & Sons, Inc. 238,672, Feb. 14, 1928. Republished Jan. 4.
Molding machines, Hand-operated plastic injection. N. R. K. Mfg. & Engineering Co. 441,779, Jan. 4; Serial No. 514,132, published Sept. 7, 1948.
Openers, Hand manipulable can. R. H. Clark. 505,873, Jan. 4; Serial No. 527,877, published Sept. 7, 1948.
Package tying machines. B. H. Bunn Company. 505,878, Jan. 4; Serial No. 528,689, published Sept. 21, 1948.
Perforators, Motion picture film, motion picture film perforator exhausters, etc. Bell & Howell Company. 130,637, May 4, 1920. Republished Jan. 4.
Pipe working machines, threading machines, reaming machines, etc. Beaver Pipe Tools, Inc. 505,829, Jan. 4; Serial No. 492,803, published Sept. 21, 1948.

Plows. Columbus Iron Works Co. 281,717, Mar. 24, 1931. Republished Jan. 4.
Power-hammers and trip-hammers. Barbour Stockwell Company. 294,165–6, May 17, 1932. Republished Jan. 4.
Power operated machines, Portable hand and wheel mounted. Innis, Speiden & Co. 505,395, Jan. 4; Serial No. 530,511, published Sept. 7, 1948.
Power tranamissions, clutches, fluid wheels for power transmission through fluid means, Mechanical. Borg-Warner Corporation. 505,326, Jan. 4; Serial No. 480,734, published Sept. 21, 1948.
Pump plungers, Porcelain. The Aldrich Pump Company. 238,075, Dec. 6, 1927. Republished Jan. 4.
Pumps for internal combustion engines, Fuel. Ireland & Matthews Manufacturing Company. 205,145, Nov. 3, 1925. Republished Jan. 4.
Switches and switch stands for railroads, Mechanical. Cleveland Frog & Crossing Co. 505,388, Jan. 4; Serial No. 529,963, published Sept. 21, 1948.
Tool handle. Somar Specialty Corp. 441,745, Jan. 4; Serial No. 491,219, published Sept. 7, 1948.
Winches designed to be powered by an internal combustion engine. A. W. Evans. 505,524, Jan. 4; Serial No. 512,828.
Wrenches and pliers. Barcalo Manufacturing Company. 403,467, Sept. 28, 1943. Republished Jan. 4.

CLASS 24

Dry-cleaning machines. Star Equipment Corporation. 505,432, Jan. 4; Serial No. 538,466, published Sept. 7, 1948.

CLASS 25

Key blanks. Atlas Key Co. 350,051, Sept. 14, 1937. Republished Jan. 4.
Seals, etc., Base-metal truck-car and shipping-case. E. J. Brooks and Company. 248,550, renewed Oct. 23, 1948. O. G. Jan. 4.

Flesh, Stanley J., Chicago, Ill. Tripod head for a camera or similar article. 152,247, Jan. 4.

Fortino, Thomas, Belleville, N. J. Television screen protector. 152,248, Jan. 4.

Fox, Alexander P., University City, assignor to Lincoln Engineering Company, St. Louis, Mo. Service cart for service stations and the like. 152,249, Jan. 4.

Franck, Kurt, and V. Wince, Newark, Ohio, assignors to Holophane Company, Inc., New York, N. Y. Glass plate for lighting fixtures. 152,250, Jan. 4.

Freedman, Jules, assignor to Morris W. Haft & Bros., Inc., New York, N. Y. Coat. 152,251, Jan. 4.

Gaertner, Fred J., Maplewood, N. J. Jewelry setting or similar article. 152,252, Jan. 4.

Gaertner, Fred J., Maplewood, N. J. Jewelry setting or similar article. 152,253, Jan. 4.

Gallo, Michael S., Racine, Wis. Holder for eyeglasses. 152,254, Jan. 4.

Glenwood Range Company, assignee: *See*—
Hallward, Michael.

Globe-Democrat Publishing Co., assignee: *See*—
Thuernau, Henry A.

Goeller, Doris A., assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind. Overshoe. 152,255, Jan. 4.

Gorman, Chester J., West Bend, Wis. Fish lure. 152,256, Jan. 4.

Gould, Dudley M., New York, and A. E. Lewis, Brooklyn, N. Y. Pin receptacle. 152,257, Jan. 4.

Gould, Hugh B., Berwyn, assignor, by mesne assignments, to F. C. Kollath, Chicago, Ill. Electric connector. 152,258, Jan. 4.

Grad, David, Company, assignee: *See*—
Kasoff, Daniel.

Gustafson, Folke M., and J. M. Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich. Bridge crane. 152,259, Jan. 4.

Gustafson, Folke M., and J. M. Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich. Bridge crane. 152,260, Jan. 4.

Gustafson, Folke M., and J. M. Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich. Bridge crane. 152,261, Jan. 4.

Gustafson, Folke M., and J. M. Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich. Bridge crane. 152,262, Jan. 4.

Gustafson, Folke M., and J. M. Little, Toledo, Ohio, assignors to Manning, Maxwell & Moore, Inc., Muskegon, Mich. Bridge crane. 152,263, Jan. 4.

Haft, Morris W., & Bros., Inc., assignee: *See*—
Freedman, Jules.

Hallward, Michael, Swampscott, assignor to Glenwood Range Company, Taunton, Mass. Range. 152,264, Jan. 4.

Hartford Products Corporation, The, assignee: *See*—
Muller-Munk, Peter.

Hatlell, Andrew O., Grand Forks, N. Dak. Railroader's cap. 152,265, Jan. 4.

Hickok Manufacturing Co. Inc., assignee: *See*—
Vaisey, Harold C.

Holophane Company, Inc., assignee: *See*—
Franck, Kurt, and Wince.

Jenks, Albert L., Dixon, assignor to Motorola, Inc., Chicago, Ill. Television receiver cabinet. 152,266, Jan. 4.

Kamin, Vernon A., Elgin, assignor to Motorola, Inc., Chicago, Ill. Front panel for a television receiver or the like. 152,267, Jan. 4.

Kasoff, Daniel, Brooklyn, assignor to David Grad Company, New York, N. Y. Jewelry pin. 152,268, Jan. 4.

Kasoff, Daniel, Brooklyn, assignor to David Grad Company, New York, N. Y. Jewelry pin. 152,269, Jan. 4.
Kasprsak, Jan, New York, N. Y. Fruit squeezer. 152,270, Jan. 4.
Keller, Albert F.: *See*—
Dahm, Norman W.
Kollath, Francis C., assignee: *See*—
Gould, Hugh B.
Kramer, Louis, New York, N. Y. Brooch or similar article. 152,271, Jan. 4.
Kueppersbusch, Fritz, Mamaroneck, N. Y. Illuminable vanity case or the like. 152,272, Jan. 4.
Leonard, Ralph N., Chicago, Ill. Trailer attachment for a power lawn mower or the like. 152,273, Jan. 4.
Lewis, Alexander E.: *See*—
Gould, Dudley M., and Lewis.
Lincoln Engineering Company, assignee: *See*—
Fox, Alexander P.
Lipman, Julius, New York, N. Y. Lady's suit. 152,274, Jan. 4.
Little, John M.: *See*—
Gustafson, Folke M., and Little.
Ludwig, Louis, New York, N. Y. Electrical cleat receptacle body. 152,275, Jan. 4.
Lum, George R., South Wilton, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wall mounting for a hand telephone. 152,276, Jan. 4.
Manning, Maxwell & Moore, Inc., assignee: *See*—
Gustafson, Folke M., and Little.
Manville, Charles N., Lynwood, Calif. Booth. 152,277, Jan. 4.
Marlin Manufacturing Company, Inc., assignee: *See*—
Sado, Harry.
Master Metal Products, Inc., assignee: *See*—
Federico, Joseph B.
McKenna, Edward F., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Combined telephone desk stand and handset. 152,278, Jan. 4.
McKiernan, Thomas B., assignor to The Ellmore Silver Co., Inc., Meriden, Conn. Liquor jigger or similar article. 152,279, Jan. 4.
McKiernan, Thomas B., assignor to The Ellmore Silver Co., Inc., Meriden, Conn. Liquor jigger or similar article. 152,280, Jan. 4.
Mehr, Jacob A., St. Louis, Mo. Ultraviolet lamp. 152,281, Jan. 4.
Mehr, Jacob A., St. Louis, Mo. Combined lamp and magnifier. 152,282, Jan. 4.
Mishawaka Rubber and Woolen Manufacturing Company, assignee: *See*—
Goeller, Doris A.
Misson, William H., Los Altos, Calif. Paper punch. 152,283, Jan. 4.
Modine Manufacturing Company, assignee: *See*—
Teague, James.
Moloney, Raymond T., assignee: *See*—
Collins, Edward J.
Motorola, Inc., assignee: *See*—
Jenks, Albert L.
Kamin, Vernon A.
Muller-Munk, Peter, Pittsburgh, Pa., assignor to The Hartford Products Corporation, Chicago, Ill. Beverage brewing device. 152,284, Jan. 4.
National Pictorial Lamp, Inc., assignee: *See*—
Rubin, Herman.
Nemeth, Frank, assignor of one-half to A. B. Carpenter, Akron, Ohio. Fish lure. 152,285, Jan. 4.
Patterson, Glenn A., assignor to Sta-Rite Products, Incorporated, Delavan, Wis. Base exchange water treatment apparatus. 152,286, Jan. 4.
Pope, Melkiah E., Montrose, Calif. Fish lure. 152,287, Jan. 4.
Raphaels, Edwin, New York, N. Y. Textile fabric. 152,288, Jan. 4.
Reinstein, Harry, Rye, N. Y. Link chain for a bracelet or similar article. 152,289, Jan. 4.
Roberts, Henry C., Detroit, Mich. Pull toy. 152,290, Jan. 4.
Rubin, Herman, assignor to National Pictorial Lamp, Inc., Los Angeles, Calif. Lamp. 152,291, Jan. 4.
Ruppert, Jack, assignee: *See*—
Farrell, Frank.
Sado, Harry, assignor to Marlun Manufacturing Company, Inc., New York, N. Y. Electric broiler. 152,292, Jan. 4.
Shaw, Jack, Brooklyn, N. Y. Hanging flower basket. 152,293, Jan. 4.
Siegel, Harold E., and M. Paull, Rochester, N. Y. Advertising display device for attachment to parking meters. 152,294, Jan. 4.
Simun, Vavrince, Detroit, Mich. Trolling spinner. 152,295, Jan. 4.
Smith, Frasier, Wheeling, W. Va., assignor to L. Perrigo Company, Allegan, Mich. Bottle. 152,296, Jan. 4.
Smith, Jesse E., Greenbelt, Md. Badge or the like. 152,297, Jan. 4.
Speidel Corporation, assignee: *See*—
Augenstein, Karl C.
Sta-Rite Products, Incorporated, assignee: *See*—
Patterson, Glenn A.
Strassner, John F., New York, N. Y. Coat. 152,298, Jan. 4.
Strassner, John F., New York, N. Y. Jacket. 152,299, Jan. 4.
Strassner, John F., New York, N. Y. Coat. 152,300, Jan. 4.
Strassner, John F., New York, N. Y. Jacket. 152,301, Jan. 4.
Teague, James, Chicago, Ill., assignor to Modine Manufacturing Company, Racine, Wis. Unit heater casing. 152,302, Jan. 4.
Teague, Walter D., Annandale, assignor to Finch Telecommunications, Inc., Passaic, N. J. Facsimile recorder. 152,303, Jan. 4.
Thuernau, Henry A., Clayton, assignor to Globe-Democrat Publishing Co., St. Louis, Mo. Illuminable outdoor advertising display. 152,304, Jan. 4.
Thuernau, Henry A., Clayton, assignor to Globe-Democrat Publishing Co., St. Louis, Mo. Outdoor advertising bulletin board. 152,305, Jan. 4.
Turner, Lawson E., assignor to Diecha Industries, Owosso, Mich. Electric circulating heater. 152,306, Jan. 4.
Valsey, Harold C., assignor to Hickok Manufacturing Co. Inc., Rochester, N. Y. Chain tie clip. 152,307, Jan. 4.
Wells, Russell W., Pomona, Calif. Fish lure. 152,308, Jan 4..
Williams, William T., Johnson City, assignor to Endicott Johnson Corporation, Endicott, N. Y. Over-the-shoe boot. 152,309, Jan. 4.
Wince, Veari: *See*—
Franck, Kurt, and Wince.
Winnek, Douglas F., Margate City, N. J. Photographic film developing unit or similar article. 152,310, Jan. 4.
Winnek, Douglas F., Margate City, N. J. Photographic film developing unit or similar article. 152,311, Jan. 4.
Zeisel, Eva S., assignor to China & Glass Distributors, Inc., New York, N. Y. Hot water plate. 152,312, Jan. 4.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 4TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott, Ward D., Orchard Park, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. High velocity motor ventilation. 2,457,967, Jan. 4.
Abner, Willard, Burbank, Calif. Tire tube tester. 2,458,126, Jan. 4.
Adams, Charles R., Donavon, Saskatchewan, Canada. Top endgate. 2,457,857, Jan. 4.
Adams, Clyde S., Yellow Springs, assignor to The National Cash Register Company, Dayton, Ohio. 2(4,4' bis dimethylaminobensohydryl) 5 dimethylaminobenzoic acid. 2,458,328, Jan. 4.
Aero Supply Mfg. Co. Inc., assignee: *See*—
Suska, Charles R.
Aeroquip Corporation, assignee: *See*—
Main, Donald W.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Jansen, Eugene F., Jang, and MacDonnell.
Nichols, Peter L., Jr., and Smith.
Ahrens, Charles R., Glendale, Calif. Convertible vehicle. 2,458,127, Jan. 4.
Airpath Instrument Company, assignee: *See*—
Phelps, James O., and Cottrill.
Air Reduction Company, Incorporated, assignee: *See*—
Hooper, Harry.
Alexander, Crusan, Bartlesville, Okla., assignor to Phillips Petroleum Company. Recovering hydrogen fluoride from an azeotropic mixture by crystallization. 2,458,044. Jan. 4.
Alexander, Joseph, New York, N. Y. Package carrier and cord cutting device. 2,457,858, Jan. 4.
Allen, Charles C., River Forest, and J. J. Filliung, Jr., Chicago, Ill.; said Fillung assignor to said Allen. Automatic racing system. 2,457,968, Jan. 4.
Allen, Joseph W., Washington, D. C. Self-sealing vent cap. 2,457,800, Jan. 4.
Allmanna Svenska Elelstriska Aktiebolaget, assignee: *See*—
Arnemo, Helge.
Malmberg, Tore G.
Altenberg, Orville L., Long Beach, Calif. Instrument for detecting strain in translucent materials. 2,457,799, Jan. 4.
Alterio, Eugene, New York, N. Y. Rotary engine. 2,458,128, Jan. 4.
Alvarez, Octavio J.: *See*—
Fulton, Robert E., Jr., and Alvarez.
American Bag & Paper Corporation, assignee: *See*—
Kardon, Emanuel S.
American Bakers Machinery Company, assignee: *See*—
Buechek, John.
American Coach & Body Company, The, assignee: *See*—
Farrar, Alvin J.
American Hoist & Derrick Co., assignee: *See*—
Stoddard, Robert J.
American Locomotive Company, assignee: *See*—
Farkas, George B., and Gunter.
American Machine and Metals, Inc., assignee: *See*—
Davis, Archibald H., Jr.
American Steel Foundries, assignee: *See*—
Schlegel, Walter L., Jr.
Amstutz, Walter R., Forest Park, assignor to Metal Specialties Manufacturing Co., Chicago, Ill. Letter scale and the like. 2,458,129, Jan. 4.
Anderson, James H., Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y. Rotation device for rock drills. 2,457,969, Jan. 4.
Andreau, Jean E., Danrat near Leognan, France. Fairing for automobile vehicles. 2,458,130, Jan. 4.
Angus, Everett N., Oaklyn, N. J. Blower unit and assembly. 2,458,045, Jan. 4.
Anthes Force Oiler Company, assignee: *See*—
Tolbert, William P.
Appliance Corporation of America, assignee: *See*—
Horvath, John F.
Archer, Edward N., Inglewood, Calif. Clamp for applying and removing jar covers. 2,458,329, Jan. 4.
Armstrong Cork Company, assignee: *See*—
Stubblebine, Warren.
Arnemo, Helge, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Short-circuited winding. 2,458,237, Jan. 4.
Attorney General of the United States, Vested in: *See*—
Weston, Herbert.
Zeehuisen, Jacob J.
Audet, Esdras, Shawinigan Falls, Quebec, Canada. Key controlled lock. 2,458,046, Jan. 4.
Audler, Mark, Milwaukee, and W. H. Elliott, Shorewood, assignors to Cutler-Hammer, Inc., Milwaukee, Wis. Control of energy supplied to translating devices. 2,458,131, Jan. 4.
Austin, Harold S., Dallas, Tex. Hypodermic syringe. 2,457,859, Jan. 4.
Automatic Electric Laboratories, Inc., assignee: *See*—
Grimes, Harlan E.
McCreary, Harold J.
Staats, Henry N.
Taylor, Reginald, and Baker.
Babcock, Verner E., Oak Harbor, Ohio. Backlash preventer for fishing reels. 2,458,047, Jan. 4.
Bachle, Carl F.: *See*—
Vincent, Edward T.
Bacon, Ardell E., executrix: *See*—
Larkin, William J., and Bacon.
Bacon, Dana H.: *See*—
Larkin, William J., and Bacon.
Bailey, George B., and O. Ziegler, assignors to The Hays Corporation, Michigan City, Ind. Making packing material for chemical apparatus. 2,458,238, Jan. 4.
Bailey, Lillian D., Leominster, Mass. Nursing bottle holder. 2,457,972, Jan. 4.
Bailie, James C., assignor to Standard Oil Company, Chicago, Ill. Producing microspherical silica gels. 2,457,970, Jan. 4.
Baker, George T.: *See*—
Taylor, Reginald, and Baker.
Baker, James G., Waban, Mass., assignor to The Perkin-Elmer Corporation, Glenbrook, Conn. Schmidt image former with spherical aberration corrector. 2,458,132, Jan. 4.
Baldwin Locomotive Works, The, assignee: *See*—
De Forest, Alfred V.
Ruge, Arthur C.
Ball, Charles F., Franklin, Pa., assignor to Joy Manufacturing Company. Friction clutch with adjustment for torque transmitting capacity. 2,457,801, Jan. 4.
Balluff, Edwin J.: *See*—
Hammell, Kemper M., and Balluff.
Bartgis Bros. Company, assignee: *See*—
Lupton, Elmer H.
Bartlett, Edward T., Philadelphia, Pa. Support for fowl or the like. 2,458,239, Jan. 4.
Baskerville, Ralph J., Merwood Park, Pa., assignor to General Electric Company. Operating mechanism for electric circuit breakers. 2,458,240, Jan. 4.
Bauer, August, Beechhurst, N. Y. Silencer and recoil reducer for firearms. 2,457,802, Jan. 4.
Bauer, Harold G., Eden, Idaho. Swinging hitch. 2,458,330, Jan. 4.
Bauman, John J., Abington, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Humidity control system. 2,458,048, Jan. 4.
Baur, John W.: *See*—
Striegel, Harold L., Gustafson, and Baur.
Beall, III, Benjamin S.: *See*—
Tower, Dell K., and Beall, III.
Beck, Lester E., Danville, Iowa. Posthole digger. 2,458,241, Jan. 4.
Behrens, Walter A., Jamaica, N. Y., assignor to The Canister Company, Inc., Phillipsburg, N. J. Bottle carrier. 2,458,133, Jan. 4.
Belden, Clark D., Minneapolis, Minn. Adjustable ventilator. 2,458,134, Jan. 4.
Bell, Alfred B., Philadelphia, Pa., assignor to Heywood-Wakefield Company, Gardner, Mass. Adjustable footrail. 2,458,463, Jan. 4.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Dubuar, Arthur S.
Edson, James O.
Hibbard, Frank H.
Ingram, Sydney B.
Kolding, Aaron R.
Little, John B., and Munson.
Rea, Wilton T.
Bemis Bro. Bag Company, assignee: *See*—
Kindseth, Harold V.
Bendix Aviation Corporation, assignee: *See*—
Gilbert, Samuel.
Gordon, James F.
MacNeil, Charles I.
Waldron, Claude F.
Bennett, Arthur E. C.: *See*—
Straub, Eugene L., and Bennett.
Bennett, Owen G., and J. Dubin, Baltimore, Md., assignors to Catalyst Research Corporation, Pittsburgh, Pa. Delay fuse compositions. 2,457,860, Jan. 4.
Bently, Emmett C., and W. L. Reese, Abilene, Tex. Cigarette humidor. 2,458,135, Jan. 4.

Ben Venue Laboratories, Inc., assignee: *See*—
Goorley, John T.

Berger, Kornel, Kew Gardens, N. Y. Lamp. 2,458,136, Jan. 4.

Berger, Samuel I., Newark, N. J. Toy typewriter. 2,458,137, Jan. 4.

Berry, Christopher A.: *See*—
Bubler, Eugen, and Berry.

Bescherer, Palmer, York, Pa., assignor to Diebold, Incorporated, Canton, Ohio. Vault wall construction. 2,458,242, Jan. 4.

Biddle, Arthur, assignor to Reynolds Metals Company, Richmond, Va. Aluminum covered glass thread. 2,458,243, Jan. 4.

Binks Manufacturing Company, assignee: *See*—
Striegel, Harold L., Gustafsson, and Baur.

Bixby, Guy T., Dayton, Ohio. Spring clip fabric ammunition belt. 2,457,803, Jan. 4.

Black, Robert A., assignee: *See*—
Murray, Victor E.

Blanchard, Benjamin W., Jr., Pine Hill, N. J. Electromagnetic receptacle for lamps. 2,458,138, Jan. 4.

Blau, Marietta, assignor to International Rare Metals Refinery, Inc., New York, N. Y. Ionizing means and ionization. 2,457,973, Jan. 4.

Bliss, Warren H., Orono, Maine, assignor to Radio Corporation of America. Pulse type telegraph receiver. 2,457,974, Jan. 4.

Blits, Daniel: *See*—
Sanders, Jr., Royden C., and Blits.

Bloch, Herman S., Chicago, and G. L. Hervert, Berwyn, assignors to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbons containing neutral organic sulfate. 2,458,049, Jan. 4.

Blondelle, Abel L. C., Sartouville, assignor to Society Entreprises Metropolitaines & Coloniales, S. A., Paris, France. System for laying or removing railway tracks. 2,458,050, Jan. 4.

Bohl, Hermann F., Palisade, N. J. Cutting tool. 2,458,244, Jan. 4.

Bolt, John A., assignor to Standard Oil Company, Chicago, Ill. Removing mercaptans. 2,457,975, Jan. 4.

Bordelon, Lawrence J., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Underwing fueling system. 2,458,245, Jan. 4.

Borell, George L., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Flowmeter. 2,458,331, Jan. 4.

Boschan, Francis, Philadelphia, Pa. Shelf hanger. 2,458,332, Jan. 4.

Bosma, Alfred S., New Holstein, Wis., assignor to Hart-Carter Company, Peoria, Ill. Outboard motor lubricating system. 2,458,051, Jan. 4.

Boucher, Percival L., Troon, assignor to Glenfield and Kennedy Limited, Kilmarnock, Scotland. Filter or strainer for liquids. 2,458,139, Jan. 4.

Bower, John O., Wyncote, Pa. Synthetic blood suture and method. 2,457,804, Jan. 4.

Brady, Francis E., Jr., Muncie, Ind. Method and apparatus for cleansing water-cooling systems and the like. 2,458,333, Jan. 4.

Brassert, H. A., & Company, assignee: *See*—
Brassert, Herman A.

Brassert, Herman A., Washington, Conn., assignor to H. A. Brassert & Company, New York, N. Y. Manufacturing metal products. 2,457,861, Jan. 4.

Breese Corporation, Inc.: *See*—
Wright, Frank.

Breitbarth, Henry, Chicago, Ill. Eye exerciser. 2,458,140, Jan. 4.

Brereton, Gilbert, Toronto, Ontario, Canada. Container. 2,458,246, Jan. 4.

Briskin, Theodore S., assignor to Excel Auto Radiator Company, Chicago, Ill. Combustion heater with thermally controlled fuel supply. 2,457,862, Jan. 4.

British Power Boat Company, The, Limited, assignee: *See*—
Hill, Harry.

Bromley, Frank D., Portsmouth, R. I. Crucible handling device. 2,458,141, Jan. 4.

Broslus, John, Jr., Seattle, Wash. Light control. 2,458,334, Jan. 4.

Broughton, Douglas J., assignor to Buxton, Incorporated, Springfield, Mass. Attaching panel for key cases. 2,458,335, Jan. 4.

Brown, Barremore B., Princeton, N. J., assignor to Radio Corporation of America. Electrode assembly for electron discharge devices. 2,458,142, Jan. 4.

Brown, Chester W., assignor to Line Material Company, Milwaukee, Wis. Three-phase transformer construction. 2,458,052, Jan. 4.

Brown, Norman F., Stow, Scotland, assignor of one-half to Indo-Burma Petroleum Company Limited, Calcutta, India. Apparatus for raising natural oils and other liquids by gaseous pressure. 2,458,053, Jan. 4.

Brown, Russell M., Prince Georges County, Md. Draftsman's device. 2,458,054, Jan. 4.

Brownlee, Allen L., assignor to Wico Electric Company, West Springfield, Mass. Field magnet unit for flywheel magnetos. 2,458,336, Jan. 4.

Bruson, Herman A., Rydal, and T. W. Riener, assignors, by mesne assignments, to Röhm & Haas Company, Philadelphia, Pa. Preparing gamma-dialkyl butyronitriles. 2,458,337, Jan. 4.

Bryan, Ernest A., Bexley, assignor to Siemens Brothers & Co. Limited, London, England. Electromagnetic relay. 2,458,247, Jan. 4.

Buebke, Carl C., Portland, Oreg. Car pit form. 2,458,055, Jan. 4.

Buechek, John, Kokomo, Ind., assignor, by mesne assignments, of one-half to American Bakers Machinery Company, St. Louis, Mo. Dough folding machine. 2,458,338, Jan. 4.

Buffalo Electrical-Chemical Company, Inc.: *See*—
Rudolph, Hans A., and McEwen.

Buhler, Engen, and C. A. Berry, Poughkeepsie, assignors to International Business Machines Corporation, New York, N. Y. Machine adapted for typing Chinese ideographs. 2,458,339, Jan. 4.

Bujan, Ramon, New York, N. Y. Hand driven device. 2,458,248, Jan. 4.

Bulgarini, Luis, Buenos Aires, Argentina, assignor of 32½% to Sara Maria Iribarren de Olariaga, and 32½% to Percy Forster. Electric switch. 2,458,056, Jan. 4.

Bunting, Ernest V., assignor to Harry Ferguson, Inc., Dearborn, Mich. Adjustable wheel and axle assembly. 2,458,249, Jan. 4.

Bureau, Arthur A., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrically welding composite metal reel heads. 2,458,340, Jan. 4.

Burks, Arthur W., assignor to Decatur Pump Company, Decatur, Ill. Air charger. 2,457,863, Jan. 4.

Burn, Philip H., Forest Hills, N. Y. Purchase sheet marking device. 2,457,864, Jan. 4.

Burnham Corporation, assignee: *See*—
Wilson, Walter.

Burns, Frank B., Chicago, Ill., M. S. Larrison, Frankford, Pa., and M. C. Higgs, North Riverside, assignors to United States Gypsum Company, Chicago, Ill. Fire resistant asphalt roofing. 2,458,143, Jan. 4.

Burtle, William R., Upper Darby, Pa. Power transmission belt. 2,458,057, Jan. 4.

Busacker, John W., Houston, Tex., assignor to the United States of America as represented by the Secretary of the Navy. Centrifugal switch. 2,458,465, Jan. 4.

Busacker, John W., Houston, Tex., and T. M. Perry, Bennington, Vt., assignors to the United States of America as represented by the Secretary of the Navy. Switch. 2,458,464, Jan. 4.

Bush, Burton T., Inc., assignee: *See*—
Cade, Arthur R., and Gump.

Bush, George L., Flushing, assignor to The Teleregister Corporation, New York, N. Y. Telegraph code converter. 2,458,144, Jan. 4.

Buxton, Incorporated, assignee: *See*—
Broughton, Douglas J.

Cade, Arthur R., Rutherford, and W. S. Gump, Upper Montclair, N. J., assignors to Burton T. Bush, Inc., New York, N. Y. Aliphatic esters of 2,4,5-trichlorophenol. 2,457,805, Jan. 4.

Cake, Andrew R., Norfolk, Va. Carton folding machine. 2,458,341, Jan. 4.

Campbell, Lawrence F., Silver Spring, Md. Camera adapter for stereopictures. 2,458,466, Jan. 4.

Canister Company, Inc., The, assignee: *See*—
Behrens, Walter A.

Caprice Limited, assignee: *See*—
Levy, Sabine.

Caputi, Alfred A., Buffalo, N. Y. Shoeshine shield. 2,458,250, Jan. 4.

Carbide and Carbon Chemical Corporation, assignee: *See*—
Carter, Clare A.

Carbuhn, Harold G., Spokane, Wash. Control lever booster. 2,458,342, Jan. 4.

Carleton, Emile J., assignor to Hydraulic Engineering Co. Inc., Holyoke, Mass. Rotary seal. 2,458,343, Jan. 4.

Carmichael, Asa B., Tujunga, Calif. Toy wagon. 2,457,865, Jan. 4.

Carrol, Raleigh S., Lebanon, Oreg. Holder for chain saw sharpeners. 2,458,058, Jan. 4.

Carroll, Richard S., Longmeadow, Mass. Precision dial indicator mounting for machine tools. 2,458,344, Jan. 4.

Carter, Clare A., South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation. Condensation of alcohols. 2,457,866, Jan. 4.

Casner Patents, Inc., assignee: *See*—
Roters, Herbert C.

Cass, John A., Moolfontein, Transvaal, Union of South Africa. Apparatus for threshing podded or shell inclosed field crops. 2,458,345, Jan. 4.

Catalyst Research Corporation, assignee: *See*—
Bennett, Owen G., and Dubin.

Caterpillar Tractor Co., assignee: *See*—
Van Zandt, Rollin P.

Celanese Corporation of America, assignee: *See*—
Dort, Robert G.
Schweizer, Ernest.
Sitzler, Richard R., and Dennison.

Central Commercial Company, assignee: *See*—
Langer, Nicholas.

Challet, Etienne, assignor to Entreprises Electriques Fribourgeoises, Fribourg, Switzerland. Solid electric heating plate. 2,458,251, Jan. 4.

Chambers, William J., Chicago, Ill. Apparatus for vacuum sealing canned food. 2,457,867, Jan. 4.

Charlin, André M. B., Montrouge, France. Picture centering mechanism for motion-picture projection apparatus. 2,458,346, Jan. 4.

Chatterton, Lloyd N., Cleveland, Ohio. Securing device. 2,458,252, Jan. 4.

Chicago Fire Brick Company, assignee: *See*—
Young, William G.

Chicago Pneumatic Tool Company, assignee: *See*—
Fischer, Howard R.

Chiesa, Robert R., Johnsonburg, Pa. Magnetic windshield wiper. 2,457,868, Jan. 4.

Chisholm, Douglas S., and T. Griswold, Jr., assignors to The Dow Chemical Company, Midland, Mich. Apparatus for metals distillation. 2,458,253, Jan. 4.

Christensen, Norman V., Chicago, Ill., and H. J. Le Vesconte, Glendale, Calif., and A. M. Schweda, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill. Electrical seaming apparatus. 2,458,059, Jan. 4.

Christiansen, William J., Bogota, N. J. Form tool grinding attachment for grinding machines. 2,458,347, Jan. 4.

Christianson, Carl R.: *See*—
Smith, Leathem D., Stearn, and Christianson.

Chrysler Corporation, assignee: *See*—
Edwards, Franklin W.

City National Bank and Trust Company of Chicago, assignee: *See*—
Frankel, Leo.

Clapper, Clyde E., Kansas City, Mo. Tractor hitch. 2,457,976, Jan. 4.

Clayton, William J.: *See*—
Svendsen, Edward C., and Clayton.

Clemens, Earl L., assignor of one-half to M. Clemens, Saginaw, Mich. Circuit testing apparatus. 2,457,869, Jan. 4.

Clemens, Mildred, assignee: *See*—
Clemens, Earl L.

Cleveland, Harry W., assignor to Eastman Kodak Company, Rochester, N. Y. Electric resistance film hygrometer. 2,458,348, Jan. 4.

Clower, Joseph B., Woodstock, Va. Ice-cream receptacle holding device. 2,458,060, Jan. 4.

Coffey, Earl G., Sioux City, Iowa. Impression taking means. 2,458,145, Jan. 4.

Coggeshall, Norman D.: *See*—
Muskat, Morris, and Coggeshall.

Colburn, Edward D., South Glens Falls, N. Y. Control means for aircraft. 2,458,146, Jan. 4.

Cole, Fred B., San Anselmo, Calif. Can opener. 2,458,254, Jan. 4.

Colgate-Palmolive-Peet Company, assignee: *See*—
Ittner, Martin H.

Collins Radio Company, assignee: *See*—
Maki, George J.

Combined Optical Industries, Limited, assignee: *See*—
Jeffree, John H.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Bordelon, Lawrence J.
Smith, Herbert A.

Continental Aviation & Engineering Corporation, assignee: *See*—
Hulbert, Edward A.
Vincent, Edward T., and Bachle.

Continental, Incorporated, assignee: *See*—
Fulton, Robert E., Jr., and Alvarez.

Cook, John, Ridgewood, N. J. Three-phase electric resistance wire heating apparatus. 2,457,870, Jan. 4.

Cookson, Leonard T., assignor to The Upjohn Company, Kalamazoo, Mich. Continuous injection machine. 2,457,977, Jan. 4.

Cooper, Clifford E., Newtown, near Sydney, New South Wales, Australia. Adjustable louver shutter or blind. 2,457,781, Jan. 4.

Cooper, Kenneth C., Portland, assignor to United Aircraft Corporation, East Hartford, Conn. Control for free-piston units. 2,458,147, Jan. 4.

Cottrill, George W.: *See*—
Phelps, James O., and Cottrill.

Coulter, Harold B., Larchmont, assignor to The Dorr Company, New York, N. Y. Slurry mixer. 2,458,061, Jan. 4.

Courtaulds Limited, assignee: *See*—
MacGregor, James H.

Couse, Kibbey W., Newark, N. J. Releasing mechanism for power take-offs. 2,458,255, Jan. 4.

Craig, William L., Westport, Conn., assignor to R. T. Vanderbilt Company, Inc., New York, N. Y. Preparation of a pigment complex, including a reacted starch. 2,457,797, Jan. 4.

Crippa, Eugene R., United States Army. Inductance coil. 2,457,806, Jan. 4.

Crompton & Knowles Loom Works, assignee: *See*—
Turner, Richard G.

618 O. G.—21*o*

Cronstedt, Val, Marlboro, assignor to United Aircraft Corporation, East Hartford, Conn. Rotor construction for turbines. 2,458,148, Jan. 4.

Cronstedt, Val, Marlboro, assignor to United Aircraft Corporation, East Hartford, Conn. Rotor construction for turbines. 2,458,149, Jan. 4.

Cross, Carroll N., Middleboro, Mass. Mount of cellular material having depressed display area. 2,458,349, Jan. 4.

Crouse, Abram, assignee: *See*—
Thompson, Albion J.

Crowley, John A., Jr., Scarsdale, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for conducting gas-solid contact operations. 2,458,350, Jan. 4.

Crowley, John A., Jr., Scarsdale, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for conducting the regeneration of a moving bed catalyst. 2,458,487, Jan. 4.

Crozier, Harold E. and A. G. H. Vanderpoel, Los Angeles, Calif. Water carburetor. 2,458,266, Jan. 4.

Cuklerski, Leo J., Melrose Park, Ill., assignor to The Richardson Company, Lockland, Ohio. Hard rubber. 2,458,351, Jan. 4.

Curran, Frank J., Hinsdale, Ill. Self-opening collapsible chair. 2,457,978, Jan. 4.

Cutler-Hammer, Inc., assignee: *See*—
Audier, Mark, and Elliot.

Dairy Specialties, Inc., assignee: *See*—
Jones, John P.

D'Alelio, Gaetano F., Cleveland, Ohio, assignor to Pro-phylac-tic Brush Company, Northampton, Mass. Vulcanizable copolymers of a vinyl aryl compound, butadiene and maleic esters. 2,457,872, Jan. 4.

D'Alelio, Gaetano F., Cleveland, Ohio, assignor to Pro-phylac-tic Brush Company, Northampton, Mass. Vulcanizable copolymers of acrylonitrile, butadiene and maleic esters. 2,457,873, Jan. 4.

D'Alelio, Gaetano F., Cleveland, Ohio, assignor to Pro-phylac-tic Brush Company, Northampton, Mass. Method of preparing molecularly oriented copolymers of acrylonitrile, butadiene 1,3, and diethyl maleate. 2,458,352, Jan. 4.

Dancy, Lila G., executor, et al.: *See*—
Larkin, John J.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorbing mechanism for railway draft appliances. 2,457,979, Jan. 4.

Davenport, Gertrude, New York, N. Y. Garment structure. 2,458,062, Jan. 4.

Davidson, John T., and J. H. Kroemer, assignors to The Standard Register Company, Dayton, Ohio. Autographic register. 2,457,807, Jan. 4.

Davie, Robert B.: *See*—
Lark, Gordon T. K., and Davie.

Davis, Archibald H., Jr., Cleveland, Ohio, assignor to American Machine and Metals, Inc., East Moline, Ill. Fluid level indicator. 2,457,874, Jan. 4.

Day, Amina R., Los Angeles, Calif. Compartmented hatbox having fixed and removable radial partitions. 2,457,875, Jan. 4.

Decatur Pump Company, assignee: *See*—
Burks, Arthur W.

Decker, Ted S., Chicago, Ill., assignor to Society Brand Clothes, Inc. Men's trousers. 2,458,353, Jan. 4.

Deere & Company, assignee: *See*—
Korum, Henry E.

Deere Manufacturing Co., assignee: *See*—
Tuft, Miles H.

De Forest, Alfred V., Marlboro, N. H., assignor to The Baldwin Locomotive Works. Electric strain device with temperature compensator. 2,458,354, Jan. 4.

De Forest, Lee, Los Angles, Calif. Method of and apparatus for bunching electrons. 2,457,980, Jan. 4.

De Forest, Lee, Los Angeles, Calif. Cathode beam tube. 2,457,981, Jan. 4.

Deichmann, Otto A., San Francisco, Calif. Producing building panels. 2,457,982, Jan. 4.

Dennison, George E.: *See*—
Sitzler, Richard R., and Dennison.

De Olariaga, Sara M. I., assignee et al.: *See*—
Bulgarini, Luis.

D'Errico, John, Brooklyn, N. Y. Roundabout. 2,458,150, Jan. 4.

Derungs, Ernest A., Le Locle, Switzerland. Selecting control device. 2,457,876, Jan. 4.

De Swart, Jan, Los Angeles, Calif., assignor, by mesne assignments, to Shellmar Products Corporation, Mount Vernon, Ohio. Pressure-tight grommet. 2,457,983, Jan. 4.

Detroit Seamless Steel Tubes Company, assignee: *See*—
Sleeman, Earl C.

Dickey, Joseph B., assignor to Eastman Kodak Company, Rochester, N. Y. Copolymers of 2-acylamino-1,3-butadienes and vinyl compounds. 2,458,355, Jan. 4.

Diebold, Incorporated, assignee: *See*—
Bescherer, Palmer.

Dietz, R. E., Company, assignee: *See*—
Knapp, George A.

Dike, Sheldon H., Ventnor, N. J., assignor to the United States of America as represented by the Secretary of the Navy. Centrifugal delay switch. 2,458,467, Jan. 4.

Di Petta, Angelo R., Lakewood, Ohio. Humidifier for air-heating furnaces. 2,458,064, Jan. 4.

Dolecam Corporation, assignee: *See*—
Wilson, John J.
Domaniale Mijn-Maatschappy, N. V., assignee: *See*—
Tromp, Klaas F.
Doner, Halbert C., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Cooking unit. 2,457,877, Jan. 4.
Donovan, Albert E., Laniel, Quebec, Canada. Safety razor and blade sharpener. 2,458,257, Jan. 4.
Dorfman, Hiller D., Forest Hills, and G. J. Freese, East McKeesport, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,458,151, Jan. 4.
Dornbos, Leo J.: *See*—
Salmons, George C., and Dornbos.
Dorr Company, The, assignee: *See*—
Coulter, Harold B.
Dorr Company (Inc.), The, assignee: *See*—
Swenson, Walter R.
Dort, Robert G., Summit, N. J., assignor to Celanese Corporation of America. Fluorescent red cellulose acetate fibers. 2,457,808, Jan. 4.
Dougherty, Daniel J., Snohomish, assignor of forty-nine one-hundredths to O. A. Gregorson, Seattle, Wash. Floor nailing machine. 2,457,984, Jan. 4.
Douglas, H. A., Mfg. Co., assignee: *See*—
Penfold, Charles S.
Dow Chemical Company, The, assignee: *See*—
Chisholm, Douglas S., and Griswold, Jr.
Young, Arthur E.
Drummond, Donald L., Santa Maria, Calif. Envelope having tamper detection means. 2,457,809, Jan. 4.
Dubilier Condenser Company (1925) Limited, assignee: *See*—
Straub, Eugene L., and Bennett.
Dubin, Jack: *See*—
Bennett, Owen G., and Dubin.
Dubuar, Arthur S., East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Solenoid operated switch. 2,457,878, Jan. 4.
Dulberg, Murray, New York, N. Y. Cosmetic receptacle. 2,458,063, Jan. 4.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
Nagle, Wesley M.
Sharkey, William H.
Vaala, Gordon T.
Dyson, Beatrice N., administratrix: *See*—
Dyson, Louis M.
Dyson, Louis M.; B. N. Dyson, administratrix of said L. M. Dyson, deceased, assignor to The American Hardware Corporation, New Britain, Conn. Closure fastener. 2,457,985, Jan. 4.
Eakins, Everett A., Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y. Plastic rivet and making same. 2,458,152, Jan. 4.
Earle, Ralph H., Wauwatosa, assignor to Line Material Company, Milwaukee, Wis. Protecting device for transformers. 2,457,879, Jan. 4.
Eastman Kodak Company, assignee: *See*—
Cleveland, Harry W.
Dickey, Joseph B.
Hagemeyer, Hugh J., Jr.
Henn, Richard W.
Hughey, Carter J.
Hutchison, Miller R., Jr.
Isaac, Joseph.
Luboshez, Benjamin E.

Stauffer, Robert E., and Smith.
Tuttle, Fordyce.
Utermohlen, William P., Jr.
Ebelshauser, Gustave A.: *See*—
Schott, Abel, and Ebelshauser.
Edson, James O., Great Kills, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Synchronization of time division multiplex communication system. 2,457,986, Jan. 4.
Edwards, Franklin W., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Drive means for compressors or the like. 2,457,880, Jan. 4.
Egedi, Joseph, Buffalo, N. Y. Helm wheel. 2,457,987, Jan. 4.
Elliot, William H.: *See*—
Audler, Mark, and Elliot.
Ellis, Grenville B., Red Bank, N. J., assignor to the United States of America as represented by the Secretary of War. Sealing device for dry cells. 2,457,810, Jan. 4.
Emerson, William S., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Preparation of p-acetyliphenyl acetate. 2,457,988, Jan. 4.
Emrich, Albert F., Valley Stream, N. Y. Work holding device. 2,457,811, Jan. 4.
Entreprises Electriques Friboungeoises, assignee: *See*—
Challet, Etienne.
Eppink, Donald L.: *See*—
Hemker, Herman W., and Eppink.
Eppe, Thomas Byrd, Boston, Mass. Storage and display box. 2,457,812, Jan. 4.
Ettleson, Ruth, Chicago, Ill. Brassière. 2,457,989, Jan. 4.
Eureka Williams Corporation, assignee: *See*—
Hammell, Kemper M., and Balluff.
Evans, Louis P., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for burning contaminants from a moving bed contact mass. 2,458,356, Jan. 4.
Evans, Louis P., Woodbury, N. J., assigned to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for conducting reactions in the presence of a contact mass. 2,458,357, Jan. 4.
Evans, Louis P., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Regenerating a moving bed of solid catalyst. 2,458,358, Jan. 4.
Evans, Louis P., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Process of multiple-zone regeneration of a moving bed catalyst. 2,458,359, Jan. 4.
Excel Auto Radiator Company, assignee: *See*—
Briskin, Theodore S.
Ex-Cell-O Corporation, assignee: *See*—
Monroe, Charles Z.
Stewart, Gilbert.
Farkas, George B., Jackson Heights, and Addison Y. Gunter, Larchmont, assignors to American Locomotive Company, New York, N. Y. Combustion chamber. 2,458,066, Jan. 4.
Farrar, Alvin J., assignor to The American Coach & Body Company, Cleveland, Ohio. Level winding device. 2,458,065, Jan. 4.
Fay, Joseph W., and R. Fay, Villa Park, Ill.; said R. Fay assignor to said J. W. Fay. Closure device. 2,458,360, Jan. 4.
Fay, Rudolph: *See*—
Fay, Joseph W., and Fay.
Federal-Mogul Corporation, assignee: *See*—
Ferguson, Alfred L.
Ferguson, Alfred L., Ann Arbor, assignor to Federal-Mogul Corporation, Detroit, Mich. Productiton of tin fluoborate. 2,457,798, Jan. 4.
Ferguson, Harry, Inc., assignee: *See*—
Bunting, Ernest W.
Fernstrum, Robert W., assignor to Gray Marine Motor Company, Detroit, Mich. Engine temperature control device. 2,457,991, Jan. 4.
Ferris, Donald K., assignor to General Motors Corporation, Dayton, Ohio. Ironing machine control. 2,457,990, Jan. 4.
Ferris Instrument Laboratories, assignee: *See*—
Montcalm, Surrius R.
Festge, Charles, Milwaukee, Wis. Safety device for electric plugs. 2,458,153, Jan. 4.
Field, Henry M., Dayton, Ohio. Abrasive cutting roll. 2,458,362, Jan. 4.
Field, Oscar S., and S. N. Wight, assignors to General Railway Signal Company, Rochester, N. Y. Airway traffic control system. 2,458,361, Jan. 4.
Filliung, Jacques J., Jr.: *See*—
Allen, Charles C., and Filliung, Jr.
Finer, Bernard, New York, N. Y. Convertible furniture. 2,458,363, Jan. 4.

Grosvenor, Woodward & Company Limited, assignee: *See*—
Perry, Frederick S., and Huskinson.
Gross, Francis B., Sr., New Orleans, La. System for preventing film fire in motion-picture projectors. 2,458,161, Jan. 4.
Grote Manufacturing Company, The, assignee: *See*—
Ryder, Charles D.
Gruetjen, Frederick A., assignor to A. O. Smith Corporation, Milwaukee, Wis. Wide propeller blade manufacture. 2,457,889, Jan. 4.
Gulf Research & Development Company, assignee: *See*—
Muskat, Morris, and Coggeshall.
Rocchini, Albert G.
Gump, William B.: *See*—
Cade, Arthur R., and Gump.
Gunter, Addison Y.: *See*—
Farkas, George B., and Gunter.
Gustafsson, Eric: *See*—
Striegel, Harold L., Gustafsson, and Baur.
Hafstad, Lawrence R., and W. J. Flett, Washington, D. C., assignors to the United States of America as represented by the Secretary of the Navy. Centrifugal unshorting device. 2,458,470, Jan. 4.
Hagemeyer, Hugh J., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparing nitriles of dicarboxylic acids. 2,458,373, Jan. 4.
Hagerbaumer, William A., Westfield, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for conversion of liquid hydrocarbons with a moving catalyst. 2,458,162, Jan. 4.
Hall Laboratories, Inc., assignee: *See*—
Munter, Casimir J.
Hall, William M., Stockton, Calif. Window pulley gauge. 2,458,072, Jan. 4.
Hallander, Arthur L., University City, assignor of one-half to C. L. Martin, St. Louis, Mo. Leash for animals. 2,458,489, Jan. 4.
Hammell, Kemper M., and E. J. Balluff, assignors to Eureka Williams Corporation, Detroit, Mich. Embedded heating element and making the same. 2,458,471, Jan. 4.
Hampton, Joe E., assignee: *See*—
Purvis, Thomas A.
Harlin Brothers, assignee: *See*—
Harlin, J. D.
Harlin, J. D., assignor to Harlin Brothers, Indianapolis, Ind. String musical instrument with chord tuning mechanism. 2,458,263, Jan. 4.
Harrell, Garland L., Hurst, Ill. Bomb. 2,457,817, Jan. 4.
Hart-Carter Company, assignee: *See*—
Bosma, Alfred S.
Hart, Richard H., New Orleans, La. Parachute. 2,458,264, Jan. 4.

Hartford National Bank and Trust Company, assignee, trustee: *See*—
Vermeulen, Roslof, and Six.

Hartley, Walter, Radcliffe, England. Rayon and like spinning machines. 2,458,374, Jan. 4.

Hartough, Howard D.: *See*—
Kosak, Alvin I., and Hartough.

Haubert, Leo, Tulsa, Okla. Gear rack load binder. 2,458,375, Jan. 4.

Hayes, Edward J. and F. Winter, Chicago, Ill. Coin-holding device. 2,457,998, Jan. 4.

Hays, Clyde C., Waco, Tex. Sewage treating process. 2,458,163, Jan. 4.

Hays Corporation, The, assignee: *See*—
Bailey, George B., and Ziegler.

Head, Sol, New York, N. Y. Bow tie and making same. 2,458,265, Jan. 4.

Hedrick, Gale H., assignor to Maremont Automotive Products, Inc., Chicago, Ill. Muffler. 2,457,890, Jan. 4.

Heider, Rudolph L., and C. J. Stehman, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Making ethylene oxide. 2,458,266, Jan. 4.

Helman, Sidney J., St. Louis, Mo. Downward forced flow air heater for rooms. 2,457,818, Jan. 4.

Heisig, Garth J.: *See*—
Tyler, George W.

Hemker, Herman W., Euclid, and D. L. Eppink, assignors to The Parker Appliance Company, Cleveland, Ohio. Coating magnesium and magnesium alloys. 2,458,073, Jan. 4.

Henn, Richard W., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic developer antioxidants. 2,458,376, Jan. 4.

Henninger, Andrew F., and G. D., and R. W. Reitherman, Chicago, Ill.; said Reitherman assignor of one-sixth of the whole to said A. F. Henninger and one-sixth of the whole to said G. D. Henninger. Electron discharge device. 2,457,891, Jan. 4.

Henninger, George D., assignee: *See*—
Henninger, Andrew F., Henninger, and Reitherman.

Henninga, William E., Springfield, Mass. Light fuel injector. 2,458,377, Jan. 4.

Henry, James W., Gooding, Idaho. Rotating cylinder type of bean cleaning machines. 2,458,267, Jan. 4.

Herbolsheimer, Glenn, Bartlesville, Okla., assignor to Phillips Petroleum Company. Separating metallic sodium from high molecular weight polymers made by polymerisation of vinyl compounds. 2,458,378, Jan. 4.

Hertzing, George A.: *See*—
Green, Walter H., McBride, and Hertzing.

Hervert, George L.: *See*—
Bloch, Herman S., and Hervert.

Heywood-Wakefield Company, assignee: *See*—
Bell, Alfred B.

Hibbard, Frank H., Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Pulse testing equipment. 2,457,892, Jan. 4.

Higgs, Morton C.: *See*—
Burns, Frank B., Larrison, and Higgs.

Highway Trailer Company, assignee: *See*—
Stephen, James.

Hill, Donald C., Los Angeles, and W. A. McGlashen, Huntington Park, Calif. Gravitometer. 2,458,164, Jan. 4.

Hill, Harry, assignor of one-half to The British Power Boat Company, Limited, Hampshire, England. Building unit joint construction. 2,458,074, Jan. 4.

Himel, Chester M., Bartlesville, Okla., assignor to Phillips Petroleum Company. Preparation of thiolesters. 2,458,075, Jan. 4.

Hinds, John M., assignor to Northeast Electric & Engineering, Seattle, Wash. Forced circulation electrically heated space heater. 2,458,268, Jan. 4.

Hlinsky, Emil J., Milwaukee, assignor to Kearney & Trecker Corporation, West Allis, Wis. Machine tool lubricating system. 2,457,893, Jan. 4.

Hobourn, Percival L., Leamington Spa, and W. H. Joy, Coventry, England. Braiding machine. 2,458,379, Jan. 4.

Hoeppner, Conrad H., Washington, D. C. Signal generation system. 2,457,819, Jan. 4.

Hoffmann-La Roche Inc., assignee: *See*—
Schlapfer, Reinhard.
Solmssen, Ulrich V., and Lee.
Spiegelberg, Hans.
Warnat, Kurt.

Hohwart, George, Detroit, and J. Simmons, Washington, assignors to N. A. Woodworth Company, Detroit, Mich. Grinding fixture. 2,457,895, Jan. 4.

Hoke, Harry A.: *See*—
Steins, Carleton K., and Hoke.

Holm, Herbert K., Chicago, Ill., assignor to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for conversion of fluid hydrocarbons. 2,458,165, Jan. 4.

Homeyer, Henry N., Jr., Elmhurst, Ill., assignor to The Kendall Company, Boston, Mass. Composite pressure-sensitive adhesive sheet material. 2,458,166, Jan. 4.

Hooper, Harry, New York, N. Y., assignor to Air Reduction Company, Incorporated. Carbide feed mechanism for batteries of acetylene generators. 2,457,894, Jan. 4.

Hoover Company, The, assignee: *See*—
Snyder, Eugene L.

Hornberg, Charles V.: *See*—
Simpson, Thomas P., and Hornberg.

Horsley, Caperton B., Stamford, assignor to Machlett Laboratories Incorporated, Springdale, Conn. Electrical discharge device having cavity resonators. 2,458,167, Jan. 4.

Horvath, John F., assignor to Appliance Corporation of America, Milwaukee, Wis. Closure for laundry machine tubs. 2,458,380, Jan. 4.

Houston, Charles O., Washington County, Pa. Ladder extension. 2,458,076, Jan. 4.

Howe, Eugene E., Linden, and M. Tishler, assignors to Merck & Co., Inc., Rahway, N. J. Amino acid solution and preparing the same. 2,457,820, Jan. 4.

Huebner, William C., New York, N. Y. Reproducing camera. 2,458,269, Jan. 4.

Huelster, Otto J., assignor to Scovill Manufacturing Company, Waterbury, Conn. Staple setting die. 2,457,896, Jan. 4.

Hughey, Carter J., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic print straightener. 2,458,381, Jan. 4.

Hulbert, Edward A., assignor, to Continental Aviation and Engineering Corporation, Detroit, Mich. Lubrication means for dual propeller shaft assemblies. 2,457,999, Jan. 4.

Hull, Raymond J. and R. W. Hursh, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Tire and attachable vane therefor. 2,457,897, Jan. 4.

Humason, Granville A., Houston, Tex. Gas controller for well pumps. 2,458,270, Jan. 4.

Hummel, Frederick E., Chicago, Ill. Auxiliary handle. 2,457,898, Jan. 4.

Hursh, Robert W.: *See*—
Hull, Raymond J. and Hursh.

Hursh, Robert W., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Vaned tire. 2,457,899, Jan. 4.

Husek, Helen P., Allston, assignor to Polaroid Corporation, Cambridge, Mass. Production of light-polarising images. 2,458,168, Jan. 4.

Huskinson, Joseph A.: *See*—
Perry, Frederick S. and Huskinson.

Huston, William M., Lima, Ohio. Rotating base for load handling machines. 2,458,271, Jan. 4.

Hutchison, Miller R., Jr., assignor to Eastman Kodak Company, Rochester, N. Y. Shock testing. 2,458,382, Jan. 4.

Hydraulic Engineering Co. Inc., assignee: *See*—
Carleton, Emile J.

Hyland, William A., Horicon, Wis., assignor to John Deere Van Brunt Company. Grain drill feed mechanism. 2,457,900, Jan. 4.

Ilford Limited, assignee: *See*—
Kendall, John D. and Fry.

Indo-Burma Petroleum Company Limited, assignee: *See*—
Brown, Norman F.

Inflico Incorporated, assignee: *See*—
Green, Walter H., McBride, and Hertzing.

Ingersoll-Rand Company, assignee: *See*—
Anderson, James H.
Metzgar, Chester W.
Morrison, William A.

Ingram, Sydney B., Fairlawn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Feedback amplifier or oscillator. 2,458,000, Jan. 4.

International Business Machines Corporation, assignee: *See*—
Buhler, Eugen and Berry.
Nichols, Harry J.
Rast, Frederick O.

International Rare Metals Refinery, Inc., assignee: *See*—
Blau, Marietta.

Iowa State College Research Foundation, assignee: *See*—
Johns, Iral B.

Irmscher, Hans O., East Hempstead, Long Island, N. Y., assignor to National Urn Bag Co. Inc. Infusion package with nontangling string handle. 2,458,169, Jan. 4.

Irwin, Henry, assignor to General American Transportation Corporation, Chicago, Ill. Jaw grinding mechanism for car wheel boring mills. 2,458,272, Jan. 4.

Isaac, Joseph, assignor to Eastman Kodak Company, Rochester, N. Y. Exposure-indicating spool. 2,458,383, Jan. 4.

Ittner, Martin H., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J. Continuous fat splitting. 2,458,170, Jan. 4.

Ivers-Lee Company, assignee: *See*—
Salfisberg, Leroy L.

Jackson, James G., Port Alberni, British Columbia, assignor of one-half to J. N. Trumpour, New Westminster, Canada. Reel signal unit. 2,457,901, Jan. 4.

Jacobsen, Richard S., Los Angeles, Calif. Conveyer. 2,458,077, Jan. 4.

Jang, Rosie: *See*—
Jansen, Eugene F., Jang, and MacDonnell.

Jansen, Eugene F., Berkeley, R. Jang, San Francisco, and L. E. MacDonnell, Oakland, Calif., assignors to United States of America as represented by the Secretary of Agriculture. Isolation of acetylesterase from citrus waste. 2,458,171, Jan. 4.

Jeffree, John H., Cobham, assignor to Combined Optical Industries, Limited, Slough, England. Grinding of lenses or of dies therefor. 2,458,384, Jan. 4.

Jennese, Langdon M., Palos Heights, Ill., assignor to Worth Insulation & Mfg. Co. Inc. Storm window assembly. 2,458,385, Jan. 4.

Johns, Iral B., assignor to Iowa State College Research Foundation, Ames, Iowa. Preparing an elastomer. 2,458,001, Jan. 4.

Johnson, Agnar, Rockford, Ill. Convertible coaster wagon. 2,458,080, Jan. 4.

Johnson, Alfred T., San Jose, Calif., assignor to Food Machinery and Chemical Corporation. Tractor power plant and drive wheel unit. 2,457,821, Jan. 4.

Johnson, Clarence A.: *See*—
Volkmann, Maurice C., and Johnson.

Johnson, Edward H., Coventry, assignor to The Keelavite Company Limited, Allesley, Coventry, England. Compensating valve for fluid pressure systems. 2,458,386, Jan. 4.

Johnson, John F., Ludington, Mich. Power steering and propelling mechanism. 2,458,177, Jan. 4.

Johnson, Philip H. and L. W. Tripp, assignors to Roadless Traction Limited, Hounslow, England. Self-propelled track-laying vehicle. 2,458,078, Jan. 4.

Johnson, Philip H. and L. W. Tripp, assignors to Roadless Traction Limited, Hounslow, Middlesex, England. Rigidifying means for flexible endless tracks. 2,458,079, Jan. 4.

Jones, Claude, assignor of one-sixth to E. E. Varble, Jefferson City, Mo. Animal trap. 2,458,176, Jan. 4.

Jones, David D., Norwalk, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y. Pressure measuring apparatus. 2,457,902, Jan. 4.

Jones, John P., assignor to Dairy Specialties, Inc., Omaha, Nebr. Milk container. 2,457,822, Jan. 4.

Jones, Robert R., Akron, assignor to Ohio Ferro Alloys Corporation, Canton, Ohio. Electrode splicing device. 2,458,272, Jan. 4.

Jordan, Edwin M., Miami, Fla. Pole supporting hinge. 2,458,081, Jan. 4.

Jordan, James D., Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy. Detonator. 2,458,473, Jan. 4.

Jordan, James D., Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy. Centrifugally operated control device. 2,458,474, Jan. 4.

Joy Manufacturing Company, assignee: *See*—
Ball, Charles F.

Joy, William H.: *See*—
Hobourn, Percival L. and Joy.

Jurin, Joyce L., New York, N. Y. Woman's sanitary undergarment. 2,458,273, Jan. 4.

Kads, Harald D., Glendale, Calif., assignor to Kay-Brunner Steel Products, Inc. Carrying scraper. 2,458,274, Jan. 4.

Kalitinsky, Andrew, Eagleville, and W. A. Ledwith, Hartford, assignors to United Aircraft Corporation, East Hartford, Conn. Assembly of free-piston units. 2,458,172, Jan. 4.

Kamin, Vernon A., Elgin, L. J. Mattingly, and R. R. Wingert, assignors to Motorola, Inc., Chicago, Ill. Television receiver cabinet and cathode-ray tube mounting. 2,458,368, Jan. 4.

Kantor, James, and E. F. Rosenberg, assignors to The Liquid Carbonic Corporation, Chicago, Ill. Beverage premix system. 2,457,903, Jan. 4.

Kardon, Emanuel S., Melrose Park, assignor to American Bag & Paper Corporation, Philadelphia, Pa. Shopping bag handle. 2,458,173, Jan. 4.

Karpen, S., & Bros., assignee: *See*—
McDonald, Sterling B.

Kaskouras, Thomas, Chicago, Ill. Lock. 2,458,002, Jan. 4.

Kay-Brunner Steel Products, Inc., assignee: *See*—
Kads, Harald D.

Kearney & Trecker Corporation, assignee: *See*—
Hlinsky, Emil J.

Keelavite Company, Limited, The, assignee: *See*—
Johnson, Edward H.

Kenck, Richard C., Augusta, Mont. Buck rake winch clutch and brake control. 2,457,904, Jan. 4.

Kendall Company, The, assignee: *See*—
Homeyer, Henry N., Jr.

Kendall, John D., and D. J. Fry, Ilford, assignors to Ilford Limited, Ilford, Essex, England. Production of pyrazolone azo dyes. 2,457,823, Jan. 4.

Kennedy, Dewey M., Rochester, N. Y. Infant bathing device. 2,458,003, Jan. 4.

Kenyon, William O.: *See*—
Reynolds, Delbert D.
Reynolds, Delbert D., and Kenyon.

Kern, Edward O., assignor to Wagner Manufacturing Company, Cedar Falls, Iowa. Elevator control apparatus. 2,458,005, Jan. 4.

Kerr, Roy H., assignor to St. Croix Garment Company, Stillwater, Minn. Outdoor jacket. 2,458,004, Jan. 4.

Kidde Manufacturing Co., Inc., assignee: *See*—
Taft, Irving W.

Kilgore, Lee A., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Bidirectional blower. 2,458,006, Jan. 4.

Kilpatrick, Myron O., Bartlesville, Okla., assignor to Phillips Petroleum Company. Production of diolefins. 2,458,082, Jan. 4.

Kincaid, Vivian N., San Diego, Calif. Bed lamp. 2,458,174, Jan. 4.

Kindseth, Harold V., assignor to Bemis Bro. Bag Company, Minneapolis, Minn. Machine for compacting material in containers. 2,458,387, Jan. 4.

Knapp, George A., Syracuse, assignor to R. E. Dietz Company, New York, N. Y. Securing band or ring. 2,458,007, Jan. 4.

Kobs, Edward A., Minneapolis, Minn. Simulated football game. 2,458,388, Jan. 4.

Kochem, George E., Schenectady, N. Y. Game scoring device with score indicating lights. 2,458,083, Jan. 4.

Kochevar, John H., Bisbee, Ariz. Gun mount with foldable firing control frame. 2,457,824, Jan. 4.

Kolding, Aaron R., Elmhurst, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Directive antenna control system. 2,458,175, Jan. 4.

Koon, Arthur J.: *See*—
McKay, William J. A., and Koon.

Korody, Arthur J., Cardington, Ohio. Fuel tank indicator. 2,457,905, Jan. 4.

Korum, Henry E., East Moline, assignor to Deere & Company, Moline, Ill. Centrifugally controlled planetary gearing. 2,458,389, Jan. 4.

Kosak, Alvin I., Columbus, Ohio, and H. D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Acylating thiophene. 2,457,825, Jan. 4.

Kothny, Gottdank L., Strafford, assignor to Sperry-Sun Well Surveying Company, Philadelphia, Pa. Well surveying device. 2,457,826, Jan. 4.

Kriebel, Richard T., Belmont, assignor to Polaroid Corporation, Cambridge, Mass. Adjustable cap. 2,458,275, Jan. 4.

Kroemer, John H.: *See*—
Davidson, John T., and Kroemer.

Kruse, Peter, Brooklyn, N. Y., assignor to Lima-Hamilton Corporation, Hamilton, Ohio. Can-body maker. 2,458,008, Jan. 4.

L. & M. Rubber Products, Inc., assignee: *See*—
MacGregor, Laurence B.

Land, Edwin H., assignor to Polaroid Corporation, Cambridge, Mass. Antiglare system for automotive vehicles employing polarised light. 2,458,179, Jan. 4.

Langer, Nicholas, New York, N. Y., assignor to Central Commercial Company, Chicago, Ill. Electrical musical instrument with split keyboard. 2,458,178, Jan. 4.

Langley, Stanley, West Toronto, Ontario, Canada, and A. Warring, assignors of one-third to said Warren, one-third to N. A. Grams, and one-third to W. Noponen, all of Detroit, Mich. Electric conduit connector. 2,458 276, Jan. 4.

Lark, Gordon T. K., R. Gill, and R. B. Davie, assignors to Sturdy Electric Company Limited, Dipton, England. Control of electric discharge lamps. 2,458,277, Jan. 4.

Larkin, John J.; St. Louis Union Trust Company, L. V. Larkin, and L. G. Dancy, executors of said J. J. Larkin, deceased, assignors to Larkin Packer Company, St. Louis, Mo. Cementing equipment. 2,458,278, Jan. 4.

Larkin, Lillian V., executor, et al.: *See*—
Larkin, John J.

Larkin Packer Company, assignee: *See*—
Larkin, John J.

Larkin, Peter G., New York, N. Y. Beer faucet. 2,457,906, Jan. 4.

Larkin, William J., Lynnfield, and D. H. Bacon, deceased, late of Arlington, Mass., by A. E. Bacon, executrix, Arlington, assignors to National Company, Inc., Malden, Mass. Socket for electronic tubes with associated condensers. 2,458,390, Jan. 4.

Larrison, Millard S.: *See*—
Burns, Frank B., Larrison, and Higgs.

Lauritsen, Charles C., and J. McMorris, Pasadena, Calif., assignors to the United States of America as represented by the Secretary of the Navy. Rocket device. 2,458,475, Jan. 4.

Lauritsen, Charles C., Pasadena, and J. McMorris, deceased, late of Pasadena, by H. C. McMorris, administratrix, Pasadena, Calif., assignors to the United States of America as represented by the Secretary of the Navy. Rocket launcher. 2,458,476, Jan. 4.

Lavietes, David P., Sparta, N. C. Screw and driver. 2,458,391, Jan. 4.

Ledwith, Walter A.: *See*—
Kalitinsky, Andrew, and Ledwith.

Ledwith, Walter A., Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Auxiliary pump for free-piston units. 2,458,180, Jan. 4.

Lee, Jess M., Los Angeles, Calif. Heat-treating system. 2,458,084, Jan. 4.

Lee, John: *See*—
Solmssen, Ulrich V., and Lee.

Le Vesconte, Harold J.: *See*—
Christensen, Norman V., Le Vesconte, and Schweda.

Levy, Sabine, Stoken Church, assignor to Caprice Limited, London, England. Corset and wearing apparel of similar character. 2,458,279, Jan. 4.

Lewyt Corporation, assignee: *See*—
Meyerhoefer, Carl F.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Doner, Halbert C.

Lima-Hamilton Corporation: *See*—
Kruse, Peter.

Lindenblad, Nils E., Rocky Point, N. Y., assignor to Radio Corporation of America. Radio direction finder. 2,458,280, Jan. 4.

Line Material Company, assignee: *See*—
Brown, Chester W.
Earle, Ralph H.
Salmons, George C., and Dornbos.
Steinmayer, Alwin G.

Liquid Carbonic Corporation, The, assignee: *See*—
Kantor, James, and Rosenberg.

Little, John B., Summit, and W. A. Munson, Chatham, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Speed reduction mechanism. 2,458,181, Jan. 4.

Lloyd, Edward C., Silver Spring, Md. Marine fuel system. 2,457,828, Jan. 4.

Lockheed Aircraft Corporation, assignee: *See*—
Pimaire, John S.
Simon, Eli and G., Jr.

Logan, Joseph A., Hadley, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Air supply control for oil burners. 2,458,392, Jan. 4.

Lory, George, Los Angeles, Calif. Square root radial averager. 2,458,009, Jan. 4.

Loudfoot, David J., Springfield, Mass. Tool for turning threaded container caps. 2,458,393, Jan. 4.

Love, Cecil P., Rock Island, Ill. One-revolution latch-operated clutch. 2,457,827, Jan. 4.

Lowell Specialty Company, assignee: *See*—
Fletcher, Lynn, and Winks.

Luboshez, Benjamin E., assignor to Eastman Kodak Company, Rochester, N. Y. Film processing unit. 2,458,394, Jan. 4.

Ludwig, Carl L., Los Angeles, Calif. Plunger fed dropper. 2,458,085, Jan. 4.

Ludwig, Leon R., Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Totally enclosed nonventilated motor. 2,458,010, Jan. 4.

Ludwig, Leon R., and W. H. Formhals, Buffalo, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Deep-neck high-flux motor. 2,458,011, Jan. 4.

Luley, John C., Teaneck, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Swaging apparatus. 2,458,395, Jan. 4.

Lupton, Elmer H., Ilchester, Md., assignor to The Bartgis Bros. Company. Bottle carrier. 2,458,281, Jan. 4.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,458,490, Jan. 4.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,458,491, Jan. 4.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,458,492. Jan. 4.

Lyon Metal Products, Incorporated, assignee: *See*—
O'Conner, John B.

MacDonald, Frank J., Brookline, Mass., assignor to The B. F. Goodrich Company, New York, N. Y. Molding apparatus. 2,458,162, Jan. 4.

MacDonnell, Leonard R.: *See*—
Jansen, Eugene F., Jang, and MacDonnell.

MacGregor, James H., Bocking, Braintree, assignor to Courtaulds Limited, London, England. Dyeing of nylon fibers by treating with nitrogenous condensation products. 2,458,397, Jan. 4.

MacGregor, Laurence B., Long Beach, Calif., assignor to L. & M. Rubber Products, Inc. Transmission gearing. 2,458,396, Jan. 4.

Machlett Laboratories Incorporated, assignee: *See*—
Horsley, Caperton B.
Skehan, Joseph W.

MacKenzie, William C., New York, N. Y. Coupling for water hose and the like. 2,458,477, Jan. 4.

MacMillan, Charles W., Alexandria, Va. Engine combustion regulating device. 2,458,086, Jan. 4.

MacNeil, Charles I., Glen Ridge, assignor to Bendix Aviation Corporation, Teterboro, N. J. Engine speed control. 2,458,398, Jan. 4.

Madsen, Carl J., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Apparatus for high frequency dielectric heating of condenser bushings. 2,458,012, Jan. 4.

Maier, August R., Oil City, Pa., assignor to Oil Well Supply Company. Drive shaft assembly. 2,458,087, Jan. 4.

Main, Donald W., assignor, by mesne assignments, to Aeroquip Corporation, Jackson, Mich. Coupling. 2,458,088, Jan. 4.

Maintenance Company, Inc., The, assignee: *See*—
Myers, Mortimer A.

Maki, George J., assignor to Collins Radio Company, Cedar Rapids, Iowa. High-power permeability core inductance. 2,458,282, Jan. 4.

Malmberg, Tore G., Ludvika, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Selenium rectifier element and manufacturing same. 2,458,013, Jan. 4.

Malmsten, Philip C., assignor to A. O. Smith Corporation, Milwaukee, Wis. Clutch and brake device. 2,457,907, Jan. 4.

Maneval, Richard L., Houston, Tex., assignor to the United States of America as represented by the Secretary of the Navy. Setback switch. 2,458,478, Jan. 4.

Manning, Charles E., Warren, Ohio, assignor to General Motors Corporation, Detroit, Mich. Forming manifolds. 2,458,182. Jan. 4.

Maremont Automotive Products, Inc., assignee: *See*—
Hedrick, Gale H.

Marick, Louis, Grosse Pointe Farms, Mich., assignor to United States Rubber Company, New York, N. Y. Electrically conducting panel. 2,458,184, Jan. 4.

Martin, Charles L.: *See*—
Hallander, Arthur L.

Mashburn, W. O., Jr., assignee: *See*—
Murray, Victor E.

Matson, Leroy A., Forest Lake, Ill., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis. Thermocouple safety pilot switch. 2,458,014, Jan. 4.

Mattingly, Lawrence J.: *See*—
Kamin, Vernon A., Mattingly, and Wingert.

Maxson, W. L., Corporation, The, assignee: *See*—
McLaren, Peter J., Vaughan, and Svensson.

McBride, George A.: *See*—
Green, Walter H., McBride, and Hertzing.

McCreary, Harold J., Lombard, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Impulse generator. 2,458,283, Jan. 4.

McDonald, Gordon S., Itasca, Tex. Eyeglass wiping device. 2,458,015, Jan. 4.

McDonald, Sterling B., Grayslake, assignor to S. Karpen & Bros., Chicago, Ill. Seat. 2,458,185, Jan. 4.

McEwen, Robert L.: *See*—
Radolph, Hans A., and McEwen.

McFarlane, Gordon E., Ville Emard, Quebec, Canada. Solid axle drive mechanism for vehicles. 2,458,089, Jan. 4.

McGlashen, William A.: *See*—
Hill, Donald C., and McGlashen.

McKay, William J. A., and A. J. Koon, Grand Rapids, Mich. Hydraulic chuck. 2,457,909, Jan. 4.

McLaren, Peter J., New York, J. A. Vaughan, Hempstead, and V. A. Svenson, assignors to The W. L. Maxson Corporation, New York, N. Y. Flexible cable. 2,457,910, Jan. 4.

McMorris, Helen C., administratrix: *See*—
Lauritsen, Charles C., and McMorris.

McMorris, John: *See*—
Lauritsen, Charles C.

Merck & Co., Inc., assignee: *See*—
Howe, Eugene E., and Tishler.

Messina, Rosario J., West Roxbury, and O. E. Wolff, assignors to Polaroid Corporation, Cambridge, Mass. Developing camera. 2,458,186, Jan. 4.

Metal Specialties Manufacturing Co., assignee: *See*—
Amstutz, Walter R.

Metzgar, Chester W., Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y. Cooling-water supply apparatus for compressors. 2,458,284, Jan. 4.

Meyer-Balser Fuel Unit, Incorporated: *See*—
Meyer, David.

Meyer, David, Canton, assignor to Meyer-Balser Fuel Unit, Incorporated, Dover, Ohio. Lining combustion tubes and the like. 2,458,285, Jan. 4.

Meyer, Wm., Company, The, assignee: *See*—
Wehmer, Bruno F.

Meyerhoefer, Carl E., assignor to Lewyt Corporation, Brooklyn, N. Y. Coupling. 2,457,908. Jan. 1.

Mihalyi, Joseph, and H. D. Phillips, assignors to Eastman Kodak Company, Rochester, N. Y. Swivel mount. 2,458,390, Jan. 4.

Miller, Charles D., Davenport, Iowa. Power-driven hand hacksaw. 2,457,829. Jan. 4.

Miller, Frederick H., assignor of one-half to S. O. Pearson, Portland, Oreg. Slicer. 2,458,090. Jan. 4.

Miller, Neville F., Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y. Phosphorescent pigment. 2,458,286. Jan. 4.

Milliken, Owen J., Davenport, Wash. Adjustable drive mechanism for tractors. 2,458,400, Jan. 4.

Milwaukee Gas Specialty Company, assignee: *See*—
Matson, Leroy A.

Miner, W. H., Inc., assignee: *See*—
Dath, George E.

Mink, Leon D.: *See*—
Urbain, Walter M., and Mink.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Borell, George L.
Smith, Edgar M.

Modine Manufacturing Company, assignee: *See*—
Spieth, Benjamin.

Monroe, Charles Z., assignor to Ex-Cell-O Corporation, Detroit, Mich. Power transmission for reversible machine elements. 2,458,290, Jan. 4.

Monsanto Chemical Company, assignee: *See*—
Emerson, William S.
Heider, Rudolph L., and Stehman.
Mowry, David T.
Owens, Grafton R.

Montesalm, Surrina R., assignor to Ferris Instrument Laboratories, Boonton, N. J. Variable condenser with trimmer. 2,458,187, Jan. 4.

Moon, John M., Evanston, assignor to Signode Steel Strapping Company, Chicago, Ill. Snubber plate. 2,458,287, Jan. 4.

Moore, Edmund W., assignor to General Railway Signal Company, Rochester, N. Y. Light signal for railroads. 2,458,401, Jan. 4.

Moore, John S., Modesto, Calif. Disk harrow hitch locking means. 2,458,091, Jan. 4.

Moran, Joseph, Chicago, Ill. Drafting instrument. 2,458,188, Jan. 4.

Morgan, David B., Philadelphia, Pa., assignor to Warren Webster & Company, Camden, N. J. Expanding tubing by freezing liquid therein. 2,458,189, Jan. 4.

Moriarty, Charles D., Schenectady, N. Y., assignor to General Electric Company. Piezoelectric crystal holder. 2,458,288, Jan. 4.

Morris, Joseph C., Chicago, Ill. Intermittently and pawl driven, single axis, multiple drum calender. 2,458,092, Jan. 4.

Morrison, Montford, Upper Montclair, N. J. Integrating accelerometers. 2,458,016, Jan. 4.

Morrison, William A., Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y. Rock drill. 2,458,289, Jan. 4.

Motorola, Inc., assignee: *See*—
Fyler, George W.
Fyler, George W., and Heisig.
Kamin, Vernon A., Mattingly, and Wingert.

Mowry, David T., Dayton, Ohio, assignor to Monsanto Chemical Company, 1-phenylethylidenemalononitrile. 2,458,017, Jan. 4.

Moynahan, George F., Jr., Sacramento, Calif. Spot frequency oscillator system. 2,457,830, Jan. 4.

Munson, Wilder A.: *See*—
Little, John B., and Munson.

Munster, Allen C., assignor to Philco Corporation, Philadelphia, Pa. Deviation correction for cathode-ray beams. 2,457,911, Jan. 4.

Munster, Allen C., Philadelphia, and D. E. Sunstein, Cynwyd, assignors to Philco Corporation, Philadelphia, Pa. Deviation correction for cathode-ray beams. 2,458,291, Jan. 4.

Munter, Casimir J., Upper St. Clair Township, Allegheny County, assignor to Hall Laboratories, Inc., Pittsburgh, Pa. Retarding the reversion of alkali-metal phosphate glass in aqueous solutions and a composition of matter thereof. 2,458,292, Jan. 4.

Murphy, Frank P., assignee: *See*—
Rohrman, Henry C.

Murphy, John M., assignor to General Motors Corporation, Dayton, Ohio. Refrigeration compressor starting unloader. 2,458,018, Jan. 4.

Murray, Victor E., assignor of three-fifths to W. O. Mashburn, Jr., and one-fifth to R. A. Black, Cincinnati, Ohio. Egg opener with an annular cutting flange and suction cup holder. 2,457,912, Jan. 4.

Muskat, Morris, Oakmont, and N. D. Coggeshall, O'Hara Township, Allegheny County, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Determining the fluid content of well cores. 2,458,092, Jan. 4.

Myers, Mortimer A., Bellaire, assignor to The Maintenance Company, Inc., New York, N. Y. Automatic operator for elevator doors and hall doors. 2,458,402, Jan. 4.

Nadeau, Gale F., and C. B. Starck, assignors to Eastman Kodak Company, Rochester, N. Y. Photographic film employing hydrolyzed cellulose acetate emulsions. 2,458,403, Jan. 4.

Nagle, Wesley M., Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of sodium hydroxylamine sulfonates. 2,458,404. Jan. 4.

Nathanson, Matthew A., Brookline, Mass. Foundation garment. 2,458,094, Jan. 4.

National Cash Register Company, The, assignee: *See*—
Adams, Clyde S.

National Company, Inc., assignee: *See*—
Larkin, William J., and Bacon.

National Lead Company, assignee: *See*—
Van Mater, Henry L.

National Tank Company, assignee: *See*—
Walker, Jay F.

National Urn Bag Co, Inc., assignee: *See*—
Irmscher, Hans O.

Navy, United States of America, as represented by the Secretary of the, assignee: *See*—
Busacker, John W.
Busacker, John W., and Perry.
Dike, Sheldon H.
Flett, William J.
Hafstad, Lawrence R., and Flett.

Lauritsen, Charles C., and McMorris.
Maneval, Richard L.
Perry, Thomas M.
Sterner, John E.
Tatel, Howard E.

Nemeth, Otto R., Chicago, Ill. Film gate. 2,457,913, Jan. 4.

Nemeth, Otto R., Chicago, Ill. Convertible film gate construction. 2,457,914. Jan. 4.

Nemeth, Otto R., assignor to Otto R. Nemeth, Inc., Chicago, Ill. Film gate. 2,457,915, Jan. 4.

Nemeth, Otto R., Inc., assignee: *See*—
Nemeth, Otto R.

Neumann, William J., East Detroit, Mich. Dust excluding device for carpeted stairs. 2,458,293, Jan. 4.

Newburger, Samuel, Chicago, Ill. Popcorn warming device. 2,458,190, Jan. 4.

New Jersey Zinc Company, The, assignee: *See*—
Miller, Neville F.

Newton, Thabous A., Flomaton, Ala. Ignition apparatus. 2,457,916, Jan. 4.

Nichols, Harry J., New York, N. Y. Fuse. 2,458,405, Jan. 4.

Nichols, Harry J., assignor to International Business Machines Corporation, New York, N. Y. Ciphering and checking device. 2,458,406, Jan. 4.

Nichols, Peter L., Jr., and L. T. Smith, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Resinous compositions of starch ethers with other resins. 2,458,191, Jan. 4.

Nicholson, Douglas G., Pittsburgh, Pa. Purification of titanium halides by treatment with metal hydrides and distillation. 2,457,917, Jan. 4.

Niederhauser, Alfred, Basel, Switzerland. Toggle link jack with two lifting phases. 2,458,407, Jan. 4.

Niles, Harold H., Mount Kisco, assignor by mesne assignments, to Edward Spierer, Brooklyn, N. Y. Sterilising toilet seats. 2,458,019, Jan. 4.

Niles, William R., Herington, Kans. Automatic signal device for automobiles. 2,458,192, Jan. 4.

Noponen, William, assignee: *See*—
Langley, Stanley, and Warring.

Nordberg Manufacturing Company, assignee: *See*—
Tacchella, Adolph.

Norman, T. E., assignee: *See*—
Parsons, Oliver F.

Northeast Electric & Engineering, assignee: *See*—
Hinds, John M.

O'Brien, Joseph F., Jersey City, N. J., assignor to John B. Pierce Foundation, New York, N. Y. Electricity conductor unit. 2,457,831, Jan. 4.

O'Connor, John B., assignor to Lyon Metal Products, Incorporated, Aurora, Ill. Seat construction for chairs. 2,458,095, Jan. 4.

Ohio Crankshaft Company, assignee: *See*—
Strickland, Harold A., Jr.

Ohio Ferro Alloys Corporation, assignee: *See*—
Jones, Robert R.

Oil Well Supply Company, assignee: *See*—
Maier, August R.

Olsen, Donald E., Chicago, Ill. Combined cosmetic holder and mirror or the like. 2,458,020, Jan. 4.

Owens, Grafton R., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Acrolein-phenol resin. 2,458,408, Jan. 4.

Pacific Plush Tank Company, assignee: *See*—
Schlens, Harry E.

Packard Motor Car Company, assignee: *See*—
Vincent, Jesse G.

Packheiser, Joseph A., Chicago, Ill. Xylophone. 2,458,193. Jan. 4.

Paige Electrical Products Corp., assignee: *See*—
Paige, Isaac A.

Paige, Isaac A., assignor to Paige Electrical Products Corp., Chicago, Ill. Outlet box connector. 2,458,409, Jan. 4.

Pako Corporation, assignee: *See*—
Sardeson, Robert, and Savela.

Panosh, Carl M., Berwyn, Ill. Sliding shoe rack. 2,458,194, Jan. 4.

Park, Ross A., Detroit, Mich. Water closet. 2,458,096, Jan. 4.

Parker Appliance Company, The, assignee: *See*—
Hemker, Herman W., and Eppink.

Parker, Lenious G., Oakland, Calif. Oil distributing system. 2,458,294, Jan. 4.

Parsons, Oliver F., assignor to E. A. Spring, Phoenix, Ariz., and T. E. Norman, Denver, Colo. Casting. 2,458,410, Jan. 4.

Payne, John W., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Contacting gases with a solid contact material. 2,458,411, Jan. 4.

Payne, John W., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Apparatus for contacting gases with a solid material. 2,458,412, Jan. 4.

Pearl, Irwin A., assignor, by mesne assignments, to Sulphite Products Corporation, Appleton, Wis. Production of vanillic acid. 2,458,295, Jan. 4.

Pearse, Daniel S., Wild Horse, Colo. Loader attachment for tractors. 2,458,195, Jan. 4.

Pearson, S. O., assignee: *See*—
Miller, Frederick H.

Penfold, Charles S., assignor to H. A. Douglas Mfg. Co., Bronson, Mich. Electrical connection means. 2,458,097, Jan. 4.

Pennell, Ford, assignor to Jane Booth Pennell, Webster Groves, Mo. Wire connector. 2,458,413, Jan. 4.

Pennell, Jane Booth: *See*—
Pennell, Ford.

Penney, James H.: *See*—
Formhals, William H., and Penney.

Pennsylvania Railroad Company, The, assignee: *See*—
Steina, Carleton K., and Hoke.

Penton, Edgar W., Fairfax County, Va. Navigation signal system. 2,458,414. Jan. 4.

Peralta, Roberto J., Mexico City, Mexico. Fuse plug of regenerable type. 2,458,296, Jan. 4.

Perkin-Elmer Corporation, The, assignee: *See*—
Baker, James G.

Permoflux Corporation, assignee: *See*—
Gilman, Webster E.

Perry, Frederick S., Clifton Gardens, Sydney, New South Wales, Australia, and J. A. Huskinson, assignors of one-third to Woodward Grosvenor & Company Limited, Kid-

derminster, England. Rewinding gear for bobbins and other yarn carriers. 2,458,021, Jan. 4.
Perry, Thomas M.: *See*—
Busacker, John W., and Perry.
Perry, Thomas M., Bennington, Vt., assignor to the United States of America as represented by the Secretary of the Navy. Setback switch. 2,458,479, Jan. 4.
Peterson, Robert E., Danvers, assignor to Submarine Signal Company, Boston, Mass. Apparatus for echo distance measurement. 2,458,415, Jan. 4.
Petty, Wiley, Farmersburg, Ind., assignor to United States Gypsum Company, Chicago, Ill. Cement applicator for building tape. 2,458,297, Jan. 4.
Phelps, James O., Richmond Heights, and G. W. Cottrill, University City, assignors to Airpath Instrument Company, St. Louis, Mo. Altimeter, 2,458,022, Jan. 4.
Philco Corporation, assignee: *See*—
Bauman, John H.
Munster, Allen C.
Munster, Allen C., and Sunstein.
Sunstein, Devid E.
Phillips, Harlow D.: *See*—
Mihalyi, Joseph and Phillips.

Vermeulen, Roelof, and W. Six, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Device for artificially generating speech sounds by electrical means. 2,458,227, Jan. 4.

Vestal, Edwin C., Jr., Siler City, N. C. Controllable output circuit. 2,457,854, Jan. 4.

Vincent, Edward T., Ann Arbor and C. F. Bachle, assignors to Continental Aviation & Engineering Corporation, Detroit, Mich. Fluid energy machine. 2,458,037, Jan. 4.

Vincent, Jesse G., Grosse Pointe, assignor to Packard Motor Car Company, Detroit, Mich. Rocker arm construction. 2,457,943, Jan. 4.

Vlastos, Andreas G., New York, N. Y. Ventilated shoe. 2,457,944, Jan. 4.

Vogt, Curt G., Union, N. J., and J. M. Wilkinson, Jr., Easton, Pa., assignors to General Aniline & Film Corporation, New York, N. Y. Preparing 4-substituted-ar-tetrahydro-2-naphthols. 2,458,485, Jan. 4.

Volker, John, Brooklyn, N. Y. Electrical warning light system for motor vehicles and a switch for use in such a system. 2,458,323, Jan. 4.

Volkmann, John E., Indianapolis, Ind., assignor to Radio Corporation of America. Acoustical apparatus. 2,458,038, Jan. 4.

Volkmann, Maurice C., and C. A. Johnson, Elkhart, Ind.; said Johnson assignor to said Volkmann. Ventilator. 2,458,324, Jan. 4.

Volpini, Vincent, Springfield, Mass., Corn buttering device. 2,458,120, Jan. 4.

Von Soden, Adolph F., Los Angeles, Calif. Self-locking nut means and the like. 2,457,945, Jan. 4.

Voorhees, Vanderveer, Homewood, assignor to Standard Oil Company, Chicago, Ill. Silica sol. 2,457,971, Jan. 4..

Vredenburg, Edric W., Berkeley, Calif. Weighing device with bag filling and bag vibrating means. 2,458,228, Jan. 4.

Vredenburg, Edric W., Berkeley, Calif. Variable-speed drive. 2,458,229, Jan. 4.

Wachs, Herman, Brooklyn, assignor, by mesne assignments, to U. S. Industrial Chemicals, Inc., New York, N. Y. Insecticidal composition of pyrethrins and 3,4-oxymethylene-phenyl-1-butylglycol synergist. 2,457,957, Jan. 4.

Wagner Manufacturing Company, assignee: *See*—
Kern, Edward O.

Wait, Bertrand H., New Rochelle, N. Y. Aggregate for improving Portland cement concretes. 2,458,039, Jan. 4.

Waldron, Claude F., Unadilla, assignor to Bendix Aviation Corporation, New York, N. Y. Radio shielded ignition means. 2,458,121, Jan. 4.

Walker, Earl C., Altadena, Calif. Filter. 2,457,958, Jan. 4.

Walker, Esper L., Decatur, Tex. Ice cleat unit for engagement on shoes. 2,458,122, Jan. 4.

Walker, Jay P., assignor to National Tank Company, Tulsa, Okla. Filtering tank for water disposal systems. 2,457,959, Jan. 4.

Walker, William E., Houston, Tex. Drill bit. 2,457,960, Jan. 4.

War, the United States of America as represented by the Secretary of, assignee: *See*—
Ellis, Grenville B.
Skinner, Leslie A.

Warcup, Frederick J., Nyack, N. Y. Cleaning means for beer dispensers. 2,458,230, Jan. 4.

Warnat, Kurt, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Producing thiamin derivatives. 2,458,453, Jan. 4.

Warren, Henry E., Ashland, Mass. Prime mover dynamo plant with speed governor. 2,458,325, Jan. 4.

Warring, Alfred: *See*—
Langley, Stanley, and Warring.

Wasserlein, Henry G., Joliet, assignor to Phillips Control Corp., Chicago, Ill. Solenoid actuated valve. 2,458,123, Jan. 4.

Webster, Warren, & Company, assignee: *See*—
Morgan, David E.

Weeks, Wesley D., Phillips, Tex. Cooling system for car wheel axles. 2,458,231, Jan. 4.

Wehmer, Bruno F., Melrose Park, assignor to The Wm. Meyer Company, Chicago, Ill. X-ray unit. 2,457,961, Jan. 4.

Weitkamp, Alfred W.: *See*—
Swenson, Reuben A., and Weitkamp.

Welding Engineers Incorporated, assignee: *See*—
Fuller, Lawrence J.

Weller, Harvey C., assignor to Surface Combustion Corporation, Toledo, Ohio. Lehr. 2,458,040, Jan. 4.

Wells, Albert L., Atlanta, Ga. Soldering flux. 2,458,232, Jan. 4.

Wemyss, Robert B., Louisville, Ky., assignor to Reynolds Metals Company, Richmond, Va. Metal suitcase. 2,458,233, Jan. 4.

Wessel, John H., assignor to Utility Appliance Corp., Los Angeles, Calif. Rotor. 2,458,041, Jan. 4.

Western Electric Company, Incorporated, assignee: *See*—
Bureau, Arthur A.
Jones, David D.
Luley, John C.

Westinghouse Electric Corporation, assignee: *See*—
Abbott, Ward D.
Dorfman, Hiller D., and Freese.
Formhals, William H., and Penney.
Goldthwaite, George R.
Kolgore, Lee A.
Ludwig, Leon R.
Ludwig, Leon R., and Formhals.
Madsen, Carl J.
Redding, Arnold H.

Weston, Herbert, New York, N. Y., vested in the Attorney General of the United States. Accounting and filing device. 2,457,855, Jan. 4.

Whaley, Thomas H., Bartlesville, Okla., assignor to Phillips Petroleum Company. Agglomeration of powdered material. 2,457,962, Jan. 4.

Wheeler, Donald H.: *See*—
Terry, David E., and Wheeler.

Wico Electric Company, assignee: *See*—
Brownlee, Allen L.

Wight, Sedgwick N.: *See*—
Field, Oscar S., and Wight.

Wilcox, Granville M., Lincoln, and M. L. Grant, Providence, R. I.; said Wilcox assignor to said Grant. Coin collector selective apparatus. 2,458,234, Jan. 4.

Wilkinson, Joseph M., Jr.: *See*—
Vogt, Curt G., and Wilkinson, Jr.

Williams, Joe I., Sterling City, Tex. Umbrella holder. 2,458,235, Jan. 4.

Williams, Lynn A., Jr., Northfield, assignor to Stewart-Warner Corporation, Chicago, Ill. Fuel feeding system for liquid fuel burners having means for disposing of fuel vapors. 2,458,042, Jan. 4.

Wilmotte, Raymond M., Washington, D. C. Synchronous frequency broadcasting. 2,458,124, Jan. 4.

Wilson, John J., Watertown, assignor to Doelcam Corporation, West Newton, Mass. Apparatus for removing residual thread from bobbins. 2,458,326, Jan. 4.

Wilson, Walter, Yonkers, N. Y., assignor to Burnham Corporation. Greenhouse construction. 2,458,455, Jan. 4.

Wingert, Raymond R.: *See*—
Kamin, Vernon A., Mattingly and Wingert.

Winkler, James S., assignor to M. Shayne, Los Angeles, Calif. Auto glare shield. 2,458,125, Jan. 4.

Winks, John: *See*—
Fletcher, Lynn, and Winks.

Winter, Frank: *See*—
Hayes, Edward J.

Winther, Anthony, Kenosha, Wis., assignor to M. P. Winther, trustee, Waukegan, Ill. Electronic control apparatus. 2,458,454, Jan. 4.

Winther, Martin P., trustee: *See*—
Winther, Anthony.

Wolff, Edward L., assignor to Scovill Manufacturing Company, Waterbury, Conn. Continuous pouring furnace. 2,458,236, Jan. 4.

Wolff, Otto E.: *See*—
Messina, Rosario J., and Wolff.

Wolk, I. Louis, Bartlesville, Okla., assignor to Phillips Petroleum Company. Emulsion polymerisation. 2,458,456, Jan. 4.

Wood, Robert O., Upper Montclair, N. J. Production of molded articles. 2,458,327, Jan. 4.

Woodworth, N. A., Company, assignee: *See*—
Hohwart, George.

Worth Insulation & Mfg. Co. Inc., assignee: *See*—
Jenness, Langdon M.

Wright, Charles A., Milwaukee, Wis. Dust collar. 2,458,457, Jan. 4.

Wright, Charles V., Jr., Tamaqua, Pa. Tobacco smoke pipe. 2,458,460, Jan. 4.

Wright, Frank M., Calif., assignor to Breese Corporation, Inc., Newark, N. J. Cushioning means for engine starters. 2,458,458, Jan. 4.

Wright, William F., Lisbon, Ohio. Transmission mechanism. 2,458,459, Jan. 4.

Wyche, John McCord, Hugo, Okla. Panelling construction. 2,457,964, Jan. 4.

Young, Arthur E., assignor to The Dow Chemical Company, Midland, Mich. Fusible and readily removable protective coating for metal articles, comprising ethyl cellulose and mineral oil. 2,458,486, Jan. 4.

Young, Cyril C. and D. F. Troupe, assignors to The Vendo Company, Kansas City, Mo. Combination door lock and valve for steam cookers. 2,458,461, Jan. 4.

Young, L. A., Spring & Wire Corporation, assignee: *See*—
Stackhouse, George A.

Young, William G., Chicago, Ill., assignor to Chicago Fire Brick Company. Replaceable furnace arch nose construction. 2,457,965, Jan. 4.

Zaidan, Joseph P., Philadelphia, Pa. Dispensing cigarette case. 2,457,966, Jan. 4.

Zeehuisen, Jacob J., Scheveningen, Netherlands; vested in the Attorney General of the United States. Chemical retting process of producing bast fibers. 2,457,856, Jan. 4.

Zenner, Walter J., Des Plaines, Ill. Sound reproduction system. 2,458,043, Jan. 4.

Ziegler, Otto: *See*—
Bailey, George B. and Ziegler.

Zimmerman, Harry, New York, N. Y. Xylophone. 2,458,462, Jan. 4.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 4TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Clothes washer. N. H. Henderson. Re. 23,070. Jan. 4.

Electrolytic polishing of stainless steel. A. L. Feild. Re. 23,068, Jan. 4.

Electrolytic polishing of stainless steel. A. L. Feild. Re. 23,069, Jan. 4.

Loom, hand. M. K. Durrin. Re. 23,071, Jan. 4.

Shaping device, shirt collar. M. M. Newman. Re. 23,072, Jan. 4.

LIST OF PLANT INVENTIONS

Ligustrum plant. F. Tresca. 818, Jan. 4.

LIST OF DESIGN INVENTIONS

Advertising display, Illuminable outdoor. H. A. Thuernau. 152,304, Jan. 4.

Attachment for a power lawn mower or the like, Trailer. R. N. Leonard. 152,278, Jan. 4.

Badge or the like. J. E. Smith. 152,297, Jan. 4.

Boot, Over-the-shoe. W. T. Williams. 152,309, Jan. 4.

Booth. C. N. Manville. 152,277, Jan. 4.

Bottle. F. Smith. 152,296, Jan. 4.

Bottle, Perfume. M. R. Bocher. 152,239, Jan. 4.

Bracelet or the like. K. C. Augenstein. 152,235–6, Jan. 4.

Brewing device, Beverage. P. Muller-Munk. 152,284, Jan. 4.

Broiler, Electric. H. Sado. 152,292, Jan. 4.

Brooch or similar article. L. Kramer. 152,271, Jan. 4.

Bulletin board, Outdoor advertising. H. A. Thuernau. 152,305, Jan. 4.

Cabinet, Amusement machine. E. J. Collins. 152,241, Jan. 4.

Cabinet, Television receiver. A. L. Jenks. 152,266, Jan. 4.

Cap, Railroader's. A. O. Hatleli. 152,265, Jan. 4.

Cart for service stations and the like, Service. A. P. Fox. 152,249, Jan. 4.

Casing, Unit heater. J. Teague. 152,302, Jan. 4.

Chain for a bracelet or similar article, Link. H. Reinstein. 152,289, Jan. 4.

Clip, Chain tie. H. C. Valsey. 152,307, Jan. 4.

Coat. J. Freedman. 152,251, Jan. 4.

Coat. J. F. Strassner. 152,298, Jan. 4.

Coat. J. F. Strassner. 152,300, Jan. 4.

Connector, Electric. H. B. Gould. 152,258, Jan. 4.

Crane, Bridge. F. M. Gustafson and J. M. Little. 152,259–63, Jan. 4.

Display device for attachment to parking meters, Advertising. H. R. Siegel and M. Paull. 152,294, Jan. 4.

Film developing unit or similar article, Photographic. D. F. Winnek. 152,310–11, Jan. 4.

Fish lure. N. W. Dahm and A. F. Keller. 152,242, Jan. 4.

Fish lure. C. J. Gorman. 152,256, Jan. 4.

Fish lure. F. Nemeth. 152,285, Jan. 4.

Fish lure. M. E. Pope. 152,287, Jan. 4.

Fish lure. R. W. Wells. 152,308, Jan. 4.

Fishing lure. G. C. De Bay, Jr. 152,243, Jan. 4.

Flower basket, Hanging. J. Shaw. 152,293, Jan. 4.

Heater, Electric circulating. L. E. Turner. 152,306, Jan. 4.

Holder, Foam scraper. F. Farrell. 152,245, Jan. 4.

Holder for eyeglasses. M. S. Gallo. 152,254, Jan. 4.

Jack-in-the-box display figure. L. V. Barofsky. 152,238, Jan. 4.

Jacket. S. Etkin. 152,244, Jan. 4.

Jacket. J. F. Strassner. 152,299, Jan. 4.

Jacket. J. F. Strassner. 152,301, Jan. 4.

Jewelry finding. M. Chernow. 152,240, Jan. 4.

Jewelry setting or similar article. F. J. Gaertner. 152,252–3, Jan. 4.

Jigger or similar article, Liquor. T. B. McKiernan. 152,279–80, Jan. 4.

Lamp. H. Rubin. 152,291, Jan. 4.

Lamp and magnifier, Combined. J. A. Mehr. 152,282, Jan. 4.

Lamp, Ultraviolet. J. A. Mehr. 152,281, Jan. 4.

Link for a watch bracelet or similar article, Terminal. K. C. Augenstein. 152,237, Jan. 4.

Mounting for a hand telephone, Wall. G. R. Lum. 152,276, Jan. 4.

Overshoe. D. A. Goeller. 152,255, Jan. 4.

Panel for a television receiver or the like, Front. V. A. Kamin. 152,267, Jan. 4.

Pin, Jewelry. D. Kasoff. 152,268–9, Jan. 4.

Plate for lighting fixtures, Glass. K. Franck and V. Wince. 152,250, Jan. 4.

Plate, Hot water. E. S. Zeisel. 152,312, Jan. 4.

Pull toy. H. C. Roberts. 152,290, Jan. 4.

Punch, Paper. W. H. Misson. 152,283, Jan. 4.

Range. M. Hallward. 152,264, Jan. 4.

Receptacle body, Electrical cleat. L. Ludwig. 152,275, Jan. 4.

Receptacle, Pin. D. M. Gould and A. E. Lewis. 152,257, Jan. 4.

Recorder, Facsimile. W. D. Teague. 152,303, Jan. 4.

Screen protector, Television. T. Fortino. 152,248, Jan. 4.

Spinner, Trolling. V. Simun. 152,295, Jan. 4.

Squeezer, Fruit. J. Kasprzak. 152,270, Jan. 4.

Suit, Lady's. J. Lipman. 152,274, Jan. 4.

Telephone desk stand and handset, Combined. E. F. McKenna. 152,278, Jan. 4.

Textile fabric. E. Raphaels. 152,288, Jan. 4.

Tool chest or the like. J. B. Federico. 152,246, Jan. 4.

Tripod head for a camera or similar article. S. J. Flesh. 152,247, Jan. 4.

Vanity case or the like, Illuminable. F. Kueppersbusch. 152,272, Jan. 4.

Water treatment apparatus, Base exchange. G. A. Patterson. 152,286, Jan. 4.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 4TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Accelerometers, Integrating. M. Morrison. 2,458,016, Jan. 4.
Accounting and filing device. H. Weston. 2,457,855, Jan. 4.
Acetate fibers, Fluorescent red cellulose. R. G. Dort. 2,457,808, Jan. 4.
Acetate filaments, Fluorescent cellulose. R. R. Sitzler and G. E. Dennison. 2,457,838, Jan. 4.
Acetyl peroxide, Manufacturing. H. A. Rudolph and R. L. McEwen. 2,458,207, Jan. 4.
Acetylesterase from citrus waste, Isolation of. E. F. Jansen, R. Jang, and L. R. MacDonnell. 2,458,171, Jan. 4.
Acoustical apparatus. J. E. Volkmann. 2,458,038, Jan. 4.
Acrolein-phenol resin. G. R. Owens. 2,458,408, Jan. 4.
Acrylic diester-propionamides and polymers thereof. D. D. Reynolds and J. H. Van Campen. 2,458,422, Jan. 4.
Acrylic ester-amides and polymers thereof. D. D. Reynolds and W. O. Kenyon. 2,458,420, Jan. 4.
Acylating thiophene. A. I. Kosak and H. D. Hartough. 2,457,825, Jan. 4.
Adapter for stereopictures, Camera. L. F. Campbell. 2,458,466, Jan. 4.
Adhesive sheet material, Composite pressure-sensitive. H. N. Homeyer, Jr. 2,458,166, Jan. 4.
Adjustable cap. R. T. Kriebel. 2,458,275, Jan. 4.
Adjusting and holding means for rotary disk tools and the like. A. E. Spindt. 2,458,216, Jan. 4.
Aggregate for improving Portland cement concretes. B. H. Walt. 2,458,039, Jan. 4.
Agitating device. D. S. Stevens. 2,458,313, Jan. 4.
Air charger. A. W. Burks. 2,457,863, Jan. 4.
Aircraft gunnery practice range. F. S. Poorman. 2,457,832, Jan. 4.
Airplane, Roadable. R. E. Fulton, Jr. and O. J. Alvarez. 2,457,884, Jan. 4.
Alarm, Fire. U. S. Fisher. 2,457,881, Jan. 4.
Aliphatic esters of 2,4,5-trichloro-phenol. A. R. Cade and W. S. Gump. 2,457,805, Jan. 4.
Alkali-metal phosphate glass in aqueous solutions and a composition of matter thereof, Retarding the reversion of. C. J. Munter. 2,458,292, Jan. 4.
Altimeter. J. O. Phelps and G. W. Cottrill. 2,458,022, Jan. 4.
Amino acid solution and preparing the same. E. E. Howe and M. Tishler. 2,457,820, Jan. 4.
Amplifier or oscillator, Feedback. S. B. Ingram. 2,458,000, Jan. 4.
Anchor, Truck. E. G. Ulrich. 2,458,226, Jan. 4.
Animal trap. C. Jones. 2,458,176, Jan. 4.
Antenna control system, Directive. A. R. Kolding. 2,458,175, Jan. 4.
Antiglare system for automotive vehicles employing polarized light. E. H. Land. 2,458,179, Jan. 4.
Apparatus for and method of digesting garbage. H. E. Schlenz. 2,458,431, Jan. 4.
Apparatus for contacting gases with a solid material. J. W. Payne. 2,458,412, Jan. 4.
Apparatus for determining the cutting and chipping resistance of plastic and rubberlike materials. W. E. Phillips. 2,458,196, Jan. 4.
Apparatus for echo distance measurement. R. E. Peterson. 2,458,415, Jan. 4.
Apparatus for forming composite bearings. J. M. Robertson. 2,458,202, Jan. 4.
Apparatus for high frequency dielectric heating of condenser bushings. C. J. Madsen. 2,458,012, Jan. 4.
Apparatus for metals distillation. D. S. Chisholm and T. Griswold, Jr. 2,458,253, Jan. 4.
Apparatus for photographing titles on motion-picture films. J. L. Rex. 2,458,301, Jan. 4.
Apparatus for producing seamless tubes. E. C. Sleeman. 2,458,110, Jan. 4.
Apparatus for raising natural oils and other liquids by gaseous pressure. N. F. Brown. 2,458,053, Jan. 4.
Apparatus for removing residual thread from bobbins. J. J. Wilson. 2,458,326, Jan. 4.
Apparatus for thrashing podded or shell inclosed field crops. J. A. Cass. 2,458,345, Jan. 4.
Apparatus for vacuum sealing canned food. W. J. Chambers. 2,457,867, Jan. 4.
Appliance for use in repairing automobile bodies. J. W. Geddes. 2,458,370, Jan. 4.
Applicator for building tape, Cement. W. Petty. 2,458,297, Jan. 4.
Arc extinguishing means for electric circuit breakers. D. K. Tower and B. S. Beall. 2,458,317, Jan. 4.
Artificial aqueous dispersions of natural and synthetic rubbers, rubber substitutes, and rubberlike substances, Manufacture of. N. Talalay. 2,458,222, Jan. 4.

Assembly for air-cooled tubes, Socket. E. H. Potter. 2,458,026, Jan. 4.
Assembly for electron discharge devices, Electrode. B. B. Brown. 2,458,142, Jan. 4.
Assembly of free-piston units. A. Kalitinsky and W. A. Ledwith. 2,458,172, Jan. 4.
Assembly structure, Filament. J. W. Skehan. 2,458,218, Jan. 4.
Attachment for lawn mowers, Rake. M. Pimentel. 2,458,416, Jan. 4.
Attachment for plastic block machines, Rodding. F. C. George. 2,457,906, Jan. 4.
Attachment for shotguns, Safety. J. E. Slockbower. 2,457,929, Jan. 4.
Attachment for tractors, Loader. D. S. Pearse. 2,458,195, Jan. 4.
Auxiliary handle. F. E. Hummel. 2,457,898, Jan. 4.
Bacitracin, Purification of. J. T. Goorley. 2,457,887, Jan. 4.
Backup light switch. A. E. Forssell. 2,458,154, Jan. 4.
Band or ring, Securing. G. A. Knapp. 2,458,007, Jan. 4.
Base for load handling machines, Rotating. W. M. Huston. 2,458,271, Jan. 4.
Bathing device, Infant. D. M. Kennedy. 2,458,003, Jan. 4.
Bean cleaning machines, Rotating cylinder type of. J. W. Henry. 2,458,267, Jan. 4.
Bed lamp. V. N. Kincaid. 2,458,174, Jan. 4.
Belt, Power transmission. W. R. Burtle. 2,458,057, Jan. 4.
Belt, Spring clip fabric ammunition. G. T. Bixby. 2,457,803, Jan. 4.
Bilge pump. A. R. Pierce, Jr. 2,458,197, Jan. 4.
Binder, Gear rack load. L. Haubert. 2,458,375, Jan. 4.
Bit: *See*—
Drill bit.
Blade attachment, Propeller. M. C. Green. 2,457,815, Jan. 4.
Blade manufacture, Wide propeller. F. A. Gruetjen. 2,457,889, Jan. 4.
Blood suture and method, Synthetic. J. O. Bower. 2,457,804, Jan. 4.
Blower, Bidirectional. L. A. Kilgore. 2,458,006, Jan. 4.
Blower unit and assembly. E. N. Angus. 2,458,045, Jan. 4.
Boiler: *See*—
Electric boiler.
Bolt, Gun. S. Schiff. 2,457,835, Jan. 4.
Bomb. G. L. Harrell. 2,457,817, Jan. 4.
Bomb release system, Radio. R. C. Sanders, Jr. and D. Blitz. 2,458,429, Jan. 4.
Booster, Control lever. H. G. Carbuhn. 2,458,342, Jan. 4.
Bottle carrier. W. A. Behrens. 2,458,133, Jan. 4.
Bottle carrier. R. H. Lupton. 2,458,281, Jan. 4.
Box: *See*—
Storage and display box.
Braiding machine. P. L. Hobourn and W. H. Joy. 2,458,379, Jan. 4.
Brassière. R. Ettleson. 2,457,989, Jan. 4.
Brassière construction. Z. M. Silva. 2,457,928, Jan. 4.
Broadcasting, Synchronous frequency. R. M. Wilmotte. 2,458,124, Jan. 4.
Brush, Fountain. C. M. Quist. 2,458,027, Jan. 4.
Building panels, Producing. O. A. Deichmann. 2,457,982, Jan. 4.
Bunching electrons, Method of and apparatus for. L. de Forest. 2,457,980, Jan. 4.
Burner of the high-low type, Atomizing oil. H. O. Grimmelsen. 2,458,372, Jan. 4.
Burning contaminants from a moving bed contact mass, Method and apparatus for. L. F. Evans. 2,458,356, Jan. 4.
Buttering device, Corn. V. Volpini. 2,458,120, Jan. 4.
Cable: *See*—
Flexible cable.
Cable cutout, Aerial. G. C. Salmons and L. J. Dornbos. 2,457,925, Jan. 4.
Camera, Developing. R. J. Messina and O. E. Wolff. 2,458,186, Jan. 4.
Camera, Reproducing. W. C. Huebner. 2,458,269, Jan. 4.
Can-body maker. P. Kruse. 2,458,008, Jan. 4.
Cap: *See*—
Adjustable cap. Self-sealing vent cap.
Car pit form. C. C. Buebke. 2,458,055, Jan. 4.
Carbon, The preparation of. J. H. Simons. 2,458,107, Jan. 4.
Carburetor, Water. H. E. Crosier and A. G. H. Vanderpoel. 2,458,256, Jan. 4.
Carriage, Collapsible child's. G. A. Stackhouse. 2,457,935, Jan. 4.

Carrier: *See*—
Bottle carrier.
Carrier and cord cutting device, Package. J. Alexander. 2,457,858, Jan. 4.
Case: *See*—
Dispensing cigarette case.
Case for containing a coat hanger, shoe box, and supports for small personal articles, Garment. B. C. Titus. 2,458,116, Jan. 4.
Casting. O. F. Parsons. 2,458,410, Jan. 4.
Castor oil Mineral. R. A. Swenson and A. W. Weitkamp. 2,458,034, Jan. 4.
Cathode beam tube. L. de Forest. 2,457,981, Jan. 4.
Cementing equipment. J. J. Larkin. 2,458,278, Jan. 4.
Center joint form. R. R. Robertson. 2,458,303, Jan. 4.
Centrifugal delay switch. S. H. Dike. 2,458,467, Jan. 4.
Centrifugal safety delay switch. H. E. Tatel. 2,458,483, Jan. 4.
Centrifugal switch. J. W. Busacker. 2,458,465, Jan. 4.
Chair: *See*—
Self-opening collapsible chair.
Chamber, Combustion. G. B. Farkas and A. Y. Gunter. 2,458,066, Jan. 4.
Chamber, Ionization. H. D. Roop. 2,458,099, Jan. 4.
Chemical retting process of producing bast fibers. J. J. Zeehuisen. 2,457,856, Jan. 4.
Chromium and manganese ores, Deironing. A. Greffe. 2,458,469, Jan. 4.
Chuck, Hydraulic. W. J. A. McKay and A. J. Koon. 2,457,909, Jan. 4.
Ciphering and checking device. H. J. Nichols. 2,458,406, Jan. 4.
Circuit: *See*—
Controlled output circuit.
Circuit arranged to simultaneously test a selected group of trunks, Relay selector. H. E. Grimes. 2,458,262, Jan. 4.
Circuit breaker. H. D. Dorfman and G. J. Freese. 2,458,151, Jan. 4.
Circuit interrupter, Electric. S. R. Smith, Jr. 2,458,307, Jan. 4.
Clamp: *See*—
Self-tightening rope clamp.
Clamp. Z. E. Snow. 2,457,931, Jan. 4.
Clamp for applying and removing jar covers. E. N. Archer. 2,458,329, Jan. 4.
Clamp for holding electric lamps, Spring. G. F. Grice. 2,458,371, Jan. 4.
Cleaner: *See*—
Suction cleaner.
Cleaning means for beer dispensers. F. J. Warcup. 2,458,230, Jan. 4.
Cleansing water-cooling systems and the like, Method and apparatus for. F. E. Brady, Jr. 2,458,333, Jan. 4.
Closure device. J. W. and R. Fay. 2,458,360, Jan. 4.
Closure fastener. L. M. Dyson. 2,457,985, Jan. 4.
Closure for laundry machine tubs. J. F. Horvath. 2,458,380, Jan. 4.
Closure for pressure vessels. C. M. Scudder. 2,457,927, Jan. 4.
Clutch: *See*—
One-revolution latch-operated clutch.
Clutch actuator and adjustor. E. E. Foster. 2,458,364, Jan. 4.
Clutch and brake control, Buck rake winch. R. C. Kenck. 2,457,904, Jan. 4.
Clutch and brake device. P. C. Malmsten. 2,457,907, Jan. 4.
Clutch with adjustment for torque transmitting capacity, Friction. C. F. Ball. 2,457,801, Jan. 4.
Coating compositions for moisture-proofing by hot melt coating. M. Salo. 2,458,428, Jan. 4.
Coating for metal articles, comprising ethyl cellulose and mineral oil, Fusible and readily removable protective. A. E. Young. 2,458,486, Jan. 4.
Coating magnesium and magnesium alloys. H. W. Hemker and D. L. Eppink. 2,458,073, Jan. 4.
Coil, Inductance. E. R. Crippa. 2,457,806, Jan. 4.
Coil provided with stress-relieving supports, Induction heating. H. A. Strickland, Jr. 2,457,844, Jan. 4.
Coin-holding device. E. J. Hayes and F. Winter. 2,457,998, Jan. 4.
Collar, Dust. C. A. Wright. 2,458,457, Jan. 4.
Comb and hair curler, Combined. F. Rosiello. 2,458,426, Jan. 4.
Combination beam shift-grid control tube. A. G. Thomas. 2,457,949, Jan. 4.
Compositions of starch ethers with other resins, Resinous. P. L. Nichols, Jr., and L. T. Smith. 2,458,191, Jan. 4.
Condensation of alcohols. C. A. Carter. 2,457,866, Jan. 4.
Condenser with trimmer, Variable. S. R. Montcalm. 2,458,187, Jan. 4.
Conducting gas-solid contact operations, Method and apparatus for. J. A. Crowley, Jr. 2,458,350, Jan. 4.
Conducting reactions in the presence of a contact mass, Method and apparatus for. L. P. Evans. 2,458,357, Jan. 4.
Conductor for induction heating, Flexible. H. A. Strickland, Jr. 2,457,843, Jan. 4.
Conductor unit, Electricity. J. F. O'Brien. 2,457,831, Jan. 4.
Connector: *See*—
Electric conduit connector. Outlet box connector.
Fused plug connector. Wire connector.
Connection means, Electrical. C. S. Penfold. 2,458,097, Jan. 4.
Construction for chairs, Seat. J. B. O'Connor. 2,458,095, Jan. 4.
Construction for turbines, Rotor. V. Cronstedt, 2,458,148–9, Jan. 4.
Contact material regeneration. T. P. Simpson. 2,458,423, Jan. 4.
Contacting gases with a solid contact material. J. W. Payne. 2,458,411, Jan. 4.
Container: *See*—
Freight container. Soap container.
Milk container. Wire dispensing container.
Container. G. Brereton. 2,458,246, Jan. 4.
Continuous pouring furnace. E. L. Wolff. 2,458,236, Jan. 4.
Control apparatus, Electronic. A. Winther. 2,458,454, Jan. 4.
Control apparatus, Elevator. E. O. Kern. 2,458,005, Jan. 4.
Control device, Centrifugally operated. J. D. Jordan. 2,458,474, Jan. 4.
Control device for vacuum cylinders. H. E. Ricketson. 2,457,834, Jan. 4.
Control device, Selecting. E. A. Derunga. 2,457,876, Jan. 4.
Control for free-piston units. K. C. Cooper. 2,458,147, Jan. 4.
Control for internal-combustion engines, Automatic speed. R. G. Reynoldson. 2,458,424, Jan. 4.
Control for oil burners, Air supply. J. A. Logan. 2,458,292, Jan. 4.
Control for spill ports for free-piston units. D. M. Poole. 2,458,198, Jan. 4.
Control means for aircraft. E. D. Colburn. 2,458,146, Jan. 4.
Control of electric discharge lamps. G. T. K. Lark, R. Gill, and R. B. Davie. 2,458,277, Jan. 4.
Control of energy supplied to translating devices. M. Audier and W. H. Elliot. 2,458,131, Jan. 4.
Control of ion exchange systems. W. R. Swenson. 2,458,115, Jan. 4.
Control system, Airway traffic. O. S. Field and S. N. Wight. 2,458,361, Jan. 4.
Control system, Automatic frequency. G. L. Predendall. 2,458,156, Jan. 4.
Control system, Humidity. J. J. Bauman. 2,458,048, Jan. 4.
Controllable output circuit. E. C. Vestal, Jr. 2,457,854, Jan. 4.
Controller for well pumps, Gas. G. A. Humason. 2,458,270, Jan. 4.
Conversion of fluid hydrocarbons, Method and apparatus for. H. K. Holm. 2,458,166, Jan. 4.
Conversion of hydrocarbons. T. P. Simpson. 2,458,109, Jan. 4.
Conversion of hydrocarbons with a moving catalyst, Method and apparatus for. W. A. Hagerbaumer. 2,458,162, Jan. 4.
Converter, Telegraph code. G. L. Bush. 2,458,144, Jan. 4.
Convertible vehicle. C. R. Ahrens. 2,458,127, Jan. 4.
Conveyer. R. S. Jacobsen. 2,458,077, Jan. 4.
Cooking unit. H. C. Doner. 2,457,877, Jan. 4.
Cooling system for car wheel axles. W. D. Weeks. 2,458,231, Jan. 4.
Copolymers of a vinyl aryl compound, butadiene, and maleic esters, Vulcanizable. G. F. D'Alelio. 2,457,872, Jan. 4.
Copolymers of acrylonitrile, butadiene and maleic esters, Vulcanizable. G. F. D'Alelio. 2,457,873, Jan. 4.
Copolymers of acrylonitrile, butadiene 1,3, and diethyl maleate, Preparing molecularly oriented. G. F. D'Alelio. 2,458,352, Jan. 4.
Copolymers of 2-acylamino-1,3-butadienes and vinyl compounds. J. B. Dickey. 2,458,355, Jan. 4.
Core inductance, High-power permeability. G. J. Maki. 2,458,282, Jan. 4.
Corer, Tomato. T. B. Sparks. 2,458,215, Jan. 4.
Corset and wearing apparel of a similar character. S. Levy. 2,458,279, Jan. 4.
Cosmetic receptacle. M. Dulberg. 2,458,063, Jan. 4.
Coupler, Tractor. S. W. Gordon. 2,458,259, Jan. 4.
Coupling. D. W. Main. 2,458,088, Jan. 4.
Coupling. C. E. Meyerhoefer. 2,457,908, Jan. 4.
Coupling. F. C. Sawatzki. 2,458,209, Jan. 4.
Coupling for water hose and the like. W. C. MacKenzie. 2,458,477, Jan. 4.
Cover: *See*—
Wheel cover.
Covering, Floor and wall. W. Stubblebine. 2,457,848, Jan. 4.
Crystalliser. J. W. Stafford. 2,458,440, Jan. 4.
Cushioning means for engine starters. F. M. Wright. 2,458,458, Jan. 4.
Cutter for pneumatic thread receivers for looms, Thread. R. G. Turner. 2,457,956, Jan. 4.
Cutter for weft replenishing looms, Thread. R. G. Turner. 2,457,953, Jan. 4.
Cutter with shear bar arranged on a chord, Rotary feed. M. H. Tuft. 2,457,951, Jan. 4.
Cutting tool. H. F. Bohl. 2,458,244, Jan. 4.
Cylinder, Engine. A. Tacchella. 2,458,447, Jan. 4.

Decolorization of esters of acrylic and α-alkyl-acrylic acids. W. P. Utermohlen, Jr. 2,458,450, Jan. 4.
Deep-neck high-flux motor. L. R. Ludwig and W. H. Formhals. 2,458,011, Jan. 4.
Deflector, Air. B. Spieth. 2,457,934, Jan. 4.
Derivatives of ethylene diamine and polymers thereof, Unsaturated. D. D. Reynolds and W. O. Kenyon. 2,458,421, Jan. 4.
Detector, Leak. T. C. Rothfus. 2,458,101, Jan. 4.
Determining the fluid content of well cores. M. Muskat and N. D. Cogreshall. 2,458,093, Jan. 4.
Detonator. J. D. Jordan. 2,458,473, Jan. 4.
Deviation correction for cathode-ray beams. A. C. Munster. 2,457,911, Jan. 4.
Deviation correction for cathode-ray beams. A. C. Munster and D. E. Sunstein. 2,458,291, Jan. 4.
Device for artificially generating speech sounds by electrical means. R. Vermeulen and W. Six. 2,458,227, Jan. 4.
Device for inserting cushion pads, Fluid pressure operated. H. A. Smith. 2,457,930, Jan. 4.
Device for use in connection with defrosting refrigerators. I. W. Taft. 2,457,851, Jan. 4.
Die: *See*—
Staple setting die.
Digger, Posthole. L. E. Beck. 2,458,241, Jan. 4.
Dimpling machine. H. R. Fischer. 2,457,992, Jan. 4.
Dioleins, Production of. M. O. Kilpatrick. 2,458,082, Jan. 4.
Direction finder. C. G. Sontheimer. 2,458,310, Jan. 4.
Direction finder, Radio. N. E. Lindenblad. 2,458,280, Jan. 4.
Discharge device, Electron. A. F. and G. D. Henninger, and R. W. Reitherman. 2,457,891, Jan. 4.
Discharge device, Electron. A. G. Thomas. 2,457,948, Jan. 4.
Discharge device having cavity resonators, Electrical. C. B. Horsley. 2,458,167, Jan. 4.
Discharging peeled fruit from grooved cups of half-fruit peeling machines. H. A. Skog. 2,457,840, Jan. 4.
Dispensing cigarette case. J. P. Zaidan. 2,457,966, Jan. 4.
Double-end-ventilated motor. W. H. Formhals and J. H. Penney. 2,457,994, Jan. 4.
Draftsman's device. R. M. Brown. 2,458,054, Jan. 4.
Dressing mechanism. G. Stewart. 2,458,444, Jan. 4.
Drill: *See*—
Rock drill.
Drill bit. W. E. Walker. 2,457,960, Jan. 4.
Drive means for compressors or the like. F. W. Edwards. 2,457,880, Jan. 4.
Drive mechanism for tractors, Adjustable. O. J. Milliken. 2,458,400, Jan. 4.
Drive mechanism for vehicles, Solid axle. G. E. McFarlane. 2,458,089, Jan. 4.
Drive shaft assembly. A. R. Maier. 2,458,087, Jan. 4.
Driving device for revolving members. P. G. Vanni. 2,458,452, Jan. 4.
Dropper, Plunger fed. C. L. Ludwig. 2,458,085, Jan. 4.
Drum calendar, Intermittently and pawl driven, single axis, multiple. J. C. Morris. 2,458,092, Jan. 4.
Dust excluding device for carpeted stairs. W. J. Neumann. 2,458,293, Jan. 4.
Dyeing of nylon fibers by treating with nitrogenous condensation products. J. H. MacGregor. 2,458,397, Jan. 4.
Effecting chemical reactions, Process and apparatus for. W. H. Green, G. A. McBride, and G. A. Hertzing. 2,458,261, Jan. 4.
Egg improving process. W. M. Urbain and L. D. Mink. 2,458,449, Jan. 4.
Egg opener with an annular cutting flange and suction cup holder. V. E. Murray. 2,457,912, Jan. 4.
Elastomer, Preparing an. I. B. Johns. 2,458,001, Jan. 4.
Electric boiler. E. Schwartz. 2,458,103, Jan. 4.
Electric conduit connector. S. Langley and A. Warring. 2,458,276, Jan. 4.
Electric switch. L. Bulgarini. 2,458,056, Jan. 4.
Electronic device. A. G. Thomas. 2,457,950, Jan. 4.
Electronic tube. A. G. Thomas. 2,458,223, Jan. 4.
Emulsion polymerisation. I. L. Wolk. 2,458,456, Jan. 4.
Engine: *See*—
Rotary engine.
Engine speed control. C. I. MacNeil. 2,458,398, Jan. 4.
Envelope having tamper detecting means. D. L. Drummond. 2,457,809, Jan. 4.
Epoxy derivatives from unsaturated aliphatic compounds, Preparing. D. E. Terry and D. H. Wheeler. 2,458,484, Jan. 4.
Ethylene oxide, Making. R. L. Helder and C. J. Stehman. 2,458,266, Jan. 4.
Exerciser, Eye. H. Breitbarth. 2,458,140, Jan. 4.
Expanding tubing by freezing liquid therein. D. E. Morgan. 2,458,189, Jan. 4.
Expansion joint. J. S. Pinaire. 2,458,024, Jan. 4.
Fairing for automobile vehicles. J. E. Andreau. 2,458,130, Jan. 4.
Fastener: *See*—
Closure fastener.
Fat splitting, Continuous. M. H. Ittner. 2,458,170, Jan. 4.
Faucet, Beer. P. G. Larkin. 2,457,906, Jan. 4.
Feed mechanism for batteries of acetylene generators, Carbide. H. Hooper. 2,457,894, Jan. 4.
Feed mechanism, Grain drill. W. A. Hyland. 2,457,900, Jan. 4.
Feeding mechanism for seed separators. W. A. Rice. 2,458,201, Jan. 4.
Feeding system for liquid fuel burners having means for disposing of fuel vapors, Fuel. L. A. Williams, Jr. 2,458,042, Jan. 4.
Film gate. O. R. Nemeth. 2,457,913, Jan. 4.
Film gate. O. R. Nemeth. 2,457,915, Jan. 4.
Film processing unit. B. E. Luboshez. 2,458,394, Jan. 4.
Film splicer, L. Frankel. 2,457,995, Jan. 4.
Filter. E. C. Walker. 2,457,958, Jan. 4.
Filter or strainer for liquids. P. L. Boucher. 2,458,139, Jan. 4.
Fishing reel. S. V. Polevoy. 2,458,298, Jan. 4.
Fixture, Grinding. G. Hohwart and J. Simmons. 2,457,895, Jan. 4.
Flag, Taxi hailing. T. Swertlow. 2,458,316, Jan. 4.
Flexible cable. P. J. McLaren, J. A. Vaughan, and V. A. Svensson. 2,457,910, Jan. 4.
Flowmeter. G. L. Borell. 2,458,331, Jan. 4.
Flow tube. H. M. Unschuld. 2,458,320–1, Jan. 4.
Fluid energy machine. E. T. Vincent and C. F. Bachle. 2,458,037, Jan. 4.
Fluid level indicator. A. H. Davis, Jr. 2,457,874, Jan. 4.
Fluorescent materials. E. Schweitzer. 2,458,104, Jan. 4.
Flux, Soldering. A. L. Wells. 2,457,232, Jan. 4.
Folding machine, Carton. A. R. Cake. 2,458,341, Jan. 4.
Folding machine, Dough. J. Buechek. 2,458,338, Jan. 4.
Footrail, Adjustable. A. B. Bell. 2,458,463, Jan. 4.
Forced circulation electrically heated space heater. J. M. Hinds. 2,458,268, Jan. 4.
Forming nonthermoplastic synthetic resin films. G. T. Vaala. 2,458,451, Jan. 4.
4-substituted-artetrahydro-2-naphthols, Preparing. C. G. Vogt and J. M. Wilkinson, Jr. 2,458,485, Jan. 4.
Freight container. L. D. Smith and R. A. Stearn. 2,457,842, Jan. 4.
Freight container. L. D. Smith, R. A. Stearn and C. R. Christianson. 2,457,841, Jan. 4.
Fuel system, Marine. E. C. Lloyd. 2,457,828, Jan. 4.
Fuel tank indicator. A. J. Korody. 2,457,905, Jan. 4.
Fueling system, Underwing. L. J. Bordelon. 2,458,245, Jan. 4.
Furnace: *See*—
Continuous pouring furnace.

Hydration of olefins. F. E. Frey. 2,457,882, Jan. 4.
Hydrocarbons containing neutral organic sulfate, Treatment of. H. S. Bloch and G. L. Hervert. 2,458,049, Jan. 4.
Hydrogen fluoride from an azeotropic mixture by crystallization, Recovering. C. Alexander. 2,458,044, Jan. 4.
Hydrogenation of nitro compounds. M. Souders, Jr. 2,458,214, Jan. 4.
Hygrometer, Electric resistance film. H. W. Cleveland. 2,458,348, Jan. 4.
Ice cleat unit for engagement on shoes. E. L. Walker. 2,458,122, Jan. 4.
Ignition apparatus. T. A. Newton. 2,457,916, Jan. 4.
Ignition means, Radio shielded. C. F. Waldron. 2,458,121, Jan. 4.
Impression taking means. E. G. Coffey. 2,458,145, Jan. 4.
Impulse generator. H. J. McCreary. 2,458,283, Jan. 4.
Indicator: *See*—
Fluid level indicator.
Fuel tank indicator.
Inductor, Adjustable. J. F. Gordon. 2,458,071, Jan. 4.
Inhibitor for photographic emulsions, Fog. R. E. Stauffer and W. F. Smith. 2,458,442, Jan. 4.
Injection machine, Continuous. L. T. Cookson. 2,457,977, Jan. 4.
Injector, Light fuel. W. E. Hennings. 2,458,377, Jan. 4.
Insecticidal composition of pyrethrins and 3,4-oxymethylene-phenyl-1-butylglycol synergist. H. Wachs. 2,457,957, Jan. 4.
Instrument, Continuous and intermittent recording. F. Q. Rast. 2,458,418, Jan. 4.
Instrument, Drafting. J. Moran. 2,458,188, Jan. 4.
Instrument for detecting strain in trunslucent materials. O. L. Altenberg. 2,457,799, Jan. 4.
Instrument, Scribing. J. Ruger. 2,458,208, Jan. 4.
Instrument with chord tuning mechanism, String musical. J. D. Harlin. 2,458,263, Jan. 4.
Instrument with split keyboard, Electrical musical. N. Langer. 2,458,178, Jan. 4.
Ionizing means and ionisation. M. Blau. 2,457,973, Jan. 4.
Iron: *See*—
Soldering iron.
Jack with two lifting phases, Toggle link. A. Niederhauser. 2,458,407, Jan. 4.
Jacket, Outdoor. R. H. Kerr. 2,458,004, Jan. 4.
Joint: *See*—
Expansion joint.
Rail joint.
Joint. H. A. Schofield. 2,457,836, Jan. 4.
Joint construction, Building unit. H. Hill. 2,458,074, Jan. 4.
Key controlled lock. E. Audet. 2,458,046, Jan. 4.
Ladder extension. C. O. Houston. 2,458,076, Jan. 4.
Lamp: *See*—
Bed lamp.
Lamp. K. Berger. 2,458,186, Jan. 4.
Leash for animals. A. L. Hallander. 2,458,489, Jan. 4.
Lehr. H. C. Weller. 2,458,040, Jan. 4.
Letoff for looms, Warp beam. T. M. Russell, Jr. 2,457,923, Jan. 4.
Lever control, Self-locking. C. R. Suska. 2,458,446, Jan. 4.
Lever, Wheel. J. G. Staus. 2,458,219, Jan. 4.
Light control. J. Broeslus, Jr. 2,458,334, Jan. 4.
Light-polarising images, Production of. H. P. Husek. 2,458,168, Jan. 4.
Loading device, Film. R. Sardeson and E. H. Savela. 2,457,926, Jan. 4.
Lock: *See*—
Key controlled lock.
Lock. T. Kaskouras. 2,458,002, Jan. 4.
Lock and valve for steam cookers, Combination door. C. C. Young and D. F. Troupe. 2,458,461, Jan. 4.
Locking means, Disk harrow hitch. J. S. Moore. 2,458,091, Jan. 4.
Lubricating system, Machine tool. E. J. Hlinsky. 2,457,893, Jan. 4.
Lubricating system, Outboard motor. A. S. Bosma. 2,458,051, Jan. 4.
Lubrication means for dual propeller shaft assemblies. E. A. Hulbert. 2,457,999, Jan. 4.
Lubricator and mixing device. H. A. Flagge. 2,457,813, Jan. 4.
Machine adapted for typing Chinese ideographs. E. Buhler and C. A. Berry. 2,458,339, Jan. 4.
Machine control, Ironing. D. K. Ferris. 2,457,990, Jan. 4.
Machine for compacting material in containers. H. V. Kindseth. 2,458,387, Jan. 4.
Machine for pneumatically separating potatoes from rocks. A. J. Thompson. 2,458,224, Jan. 4.
Magazine unit for typesetting machines, Movable multiple. C. J. Romyns. 2,458,204, Jan. 4.
Magic trick. K. S. Franke. 2,458,488, Jan. 4.
Magnet unit for flywheel magnetos, Field. A. L. Brownlee. 2,458,336, Jan. 4.
Manifolds, Forming. C. E. Manning. 2,458,183, Jan. 4.
Marking device, Purchase sheet. P. H. Burn. 2,457,864, Jan. 4.
Measuring apparatus, Pressure. D. D. Jones. 2,457,902, Jan. 4.
Measuring system, Ultra high frequency power. R. W. George. 2,457,997, Jan. 4.
Medicinal solutions. R. Schlipfer. 2,458,430, Jan. 4.
Metal products, Manufacturing. H. A. Brassert 2,457,861, Jan. 4.
Metering by discriminating selector repeaters, Toll. R. Taylor and G. T. Baker. 2,457,946, Jan. 4.
Method and chuck for assembling mold walls. J. H. Richardson. 2,458,302, Jan. 4.
Methyl methacrylate plastics, Cementing. E. Simon and M. F. George, Jr. 2,458,032, Jan. 4.
Milk container. J. P. Jones. 2,457,822, Jan. 4.
Mixer: *See*—
Slurry mixer.
Mold for molding concrete structural units. J. B. Fraser. 2,458,155, Jan. 4.
Molded articles, Production of. R. O. Wood. 2,458,327, Jan. 4.
Molding apparatus. F. J. MacDonald. 2,458,182, Jan. 4.
Molecularly oriented copolymers of acrylonitrile, butadiene 1, 3, and diethyl maleate, Preparing. G. F. D'Alelio. 2,458,352, Jan. 4.
Motor: *See*—
Deep-neck high-flux motor.
Totally enclosed non-ventilated motor.
Double - end - ventilated motor.
Split-phase induction motor.
Motor control system and operation, Hysteresis. H. C. Roters. 2,458,100, Jan. 4.
Motor ventilation, High velocity. W. D. Abbott. 2,457,967, Jan. 4.
Motor with emergency supply reservoir, Fluid. C. K. Steins and H. A. Hoke. 2,457,937, Jan. 4.
Mount of cellular material having depressed display area. C. N. Cross. 2,458,349, Jan. 4.
Mount, Swivel. J. Mihalyi and H. D. Philips. 2,458,399, Jan. 4.
Mount with foldable firing control frame, Gun. J. H. Kochevar. 2,457,824, Jan. 4.
Mounting for looms, Lam. E. E. Gilmore. 2,458,069, Jan. 4.
Mounting for machine tools, Precision dial indicator. R. S. Carroll. 2,458,344, Jan. 4.
Mounting with concealed lens-carrying and nose-guard-carrying arms, Ophthalmic. F. A. Stevens. 2,457,938, Jan. 4.
Mower and hedge clipper, Electric lawn. L. C. and C. C. Renfroe. 2,458,200, Jan. 4.
Muffler. G. H. Hedrick. 2,457,890, Jan. 4.
Muffler, Silencing. A. Schott and G. A. Ebelshauser. 2,458,102, Jan. 4.

N-allyl derivatives of acrylic esteramides and polymers thereof. D. D. Reynolds and J. H. Van Campen. 2,458,423, Jan. 4.
Nailing machine, Floor. D. J. Dougherty. 2,457,984, Jan. 4.
Net. H. V. Robinson. 2,457,922, Jan. 4.
Nitriles of dicarboxylic acids, Preparing. H. J. Hagemeyer, Jr. 2,458,373, Jan. 4.
Nursing bottle holder. L. D. Bailey. 2,457,972, Jan. 4.
Oil compositions. A. G. Rocchini. 2,458,425, Jan. 4.
Oil distributing system. L. G. Parker. 2,458,294, Jan. 4.
Olefins from paraffins, Separating. B. S. Friedman and R. F. Stedman. 2,458,067, Jan. 4.
1-phenylethylidenemalononitrile. D. T. Mowry. 2,458,017, Jan. 4.
One-revolution latch-operated clutch. C. P. Love. 2,457,827, Jan. 4.
Open foot superheater support. E. Rawson. 2,458,029, Jan. 4.
Opener, Can. F. B. Cole. 2,458,254, Jan. 4.
Operating mechanism for electric circuit breakers. R. J. Baskerville. 2,458,240, Jan. 4.
Operating mechanism for machine guns. F. I. Rataicsak. 2,458,028, Jan. 4.
Operator for elevator doors and hall doors, Automatic. M. A. Myers. 2,458,402, Jan. 4.
Ornamentation. E. Troy. 2,458,493, Jan. 4.
Oscillator system, Spot frequency. G. F. Moynahan, Jr. 2,457,830, Jan. 4.
Outlet box connector. I. A. Paige. 2,458,409, Jan. 4.
Oven, By-product coke. P. M. Pinckard. 2,458,480, Jan. 4.
Overshoe with lining for shining shoes. H. B. W. Snelling. 2,458,438, Jan. 4.
P-acetyliphenyl acetate, Preparation of. W. S. Emerson. 2,457,988, Jan. 4.
Pacing system, Automatic. C. C. Allen and J. J. Filliung, Jr. 2,457,968, Jan. 4.
Package. L. L. Salisberg. 2,457,924, Jan. 4.
Package with nontangling string handle, Infusion. H. O. Irmscher. 2,458,169, Jan. 4.
Packing material for chemical apparatus, Making. G. B. Bailey and O. Ziegler. 2,458,238, Jan. 4.
Panel, Electrically conducting. L. Marick. 2,458,184, Jan. 4.
Panel for key cases, Attaching. D. J. Broughton. 2,458,335, Jan. 4.
Panelling construction. J. M. Wyche. 2,457,964, Jan. 4.
Parachute. R. H. Hart. 2,458,264, Jan. 4.
Parachute deploying means. P. F. Smith. 2,458,212, Jan. 4.
Pelleting carbon black. G. Thodos. 2,457,963, Jan. 4.
Pentonic acid lactones, Electrolytic reduction of. H. Spiegelberg. 2,457,933, Jan. 4.
Photographic developer antioxidants. R. W. Henn. 2,458,376, Jan. 4.
Photographic film employing hydrolysed cellulose acetate emulsions. G. F. Nadeau and C. B. Starck. 2,458,403, Jan. 4.
Photographic gamma control. C. H. Smith. 2,458,437, Jan. 4.
Photographic images on plastic, Making. H. C. Staehle. 2,458,439, Jan. 4.
Photographic print straightener. C. J. Hughey. 2,458,381, Jan. 4.
Picture centering mechanism for motion-picture projection apparatus. A. M. B. Charlin. 2,458,346, Jan. 4.
Piesoelectric crystal holder. C. D. Moriarty. 2,458,288, Jan. 4.
Pigment complex, including a reacted starch, The preparation of a. W. L. Craig. 2,457,797, Jan. 4.
Pigment, Phosphorescent. N. F. Miller. 2,458,286, Jan. 4.
Pipe: *See*—
Tobacco smoke pipe.
Pistol, Automatic cap. W. Riederich. 2,457,921, Jan. 4.
Piston for internal-combustion engines, Multiple. R. Soltess. 2,458,111, Jan. 4.
Planetary gearing, Centrifugally controlled. H. E. Korum. 2,458,389, Jan. 4.
Plate, Snubber. J. M. Moon. 2,458,287, Jan. 4.
Plate, Solid electric heating. E. Challet. 2,458,251, Jan. 4.
Plug of regenerable type, Fuse. R. J. Peralta. 2,458,296, Jan. 4.
Potentiometer, Sealed. I. Gordy. 2,457,814, Jan. 4.
Powdered material, Agglomeration of. T. H. Whaley. 2,457,962, Jan. 4.
Power plant and drive wheel unit, Tractor. A. C. Johnson. 2,457,821, Jan. 4.
Power transmission and speed reducing apparatus. T. Veitch and T. Veitch, Jr. 2,458,036, Jan. 4.
Power transmission, Bidirectional no-back. W. C. Starkey. 2,458,441, Jan. 4.
Power transmission for reversible machine elements. C. Z. Monroe. 2,458,290, Jan. 4.
Premix system, Beverage. J. Kantor and E. F. Rosenberg. 2,457,903, Jan. 4.
Preventor for fishing reels, Backlash. V. E. Babcock. 2,458,047, Jan. 4.
Prime mover dynamo plant with speed governor. H. E. Warren. 2,458,325, Jan. 4.
Protecting device for transformers. R. H. Earle. 2,457,879, Jan. 4.
Protractor, Layout. R. H. Storch. 2,458,114, Jan. 4.
Pulse testing equipment. F. H. Hibbard. 2,457,892, Jan. 4.
Pump: *See*—
Bilge pump.
Variable stroke pump.
Pump for free-piston units, Auxiliary. W. A. Ledwith. 2,458,180, Jan. 4.
Punch machine. M. L. Grappe. 2,458,160, Jan. 4.
Pyrazolone azo dyes, Production of. J. D. Kendall and D. J. Fry. 2,457,823, Jan. 4.
Rack: *See*—
Sliding shoe rack.
Radial averager, Square root. G. Lory. 2,458,009, Jan. 4.
Rail joint. L. Gagnon. 2,458,369, Jan. 4.
Rearview mirror support. W. P. Tolbert. 2,458,117, Jan. 4.
Receiver cabinet and cathode-ray tube mounting, Television. V. A. Kamin, L. J. Mattingly, and R. R. Wingert. 2,458,368, Jan. 4.
Receiver, Pulse type telegraph. W. H. Bliss. 2,457,974, Jan. 4.
Receiver, Television. G. W. Fyler. 2,458,365, Jan. 4.
Receptacle: *See*—
Cosmetic receptacle.
Receptacle for lamps, Electromagnetic. B. W. Blanchard, Jr. 2,458,138, Jan. 4.
Receptor, Colostomy. R. W. Smoot. 2,458,308, Jan. 4.
Record dies, Manufacturing. E. E. and M. I. Russell. 2,458,427, Jan. 4.
Rectifier element and manufacturing same, Selenium. T. G. Maimberg. 2,458,013, Jan. 4.
Reducer for firearms, Silencer and recoil. A. Bauer. 2,457,802, Jan. 4.
Reducing odor and surface tack of neoprene objects. E. C. Svendsen and W. J. Clayton. 2,458,221, Jan. 4.
Reed structure. J. Tiefenthal. 2,457,852, Jan. 4.
Reel: *See*—
Fishing reel.
Refrigerator with pivoted rotatable shelves, Circular. J. E. Ramsey. 2,457,919, Jan. 4.
Regenerating a moving bed contact material, Method and apparatus for. T. P. Simpson. 2,458,435, Jan. 4.
Regenerating a moving bed of solid catalyst. L. P. Evans. 2,458,358, Jan. 4.
Regenerating moving bed particle form contact mass materials, Method and apparatus for. T. P. Simpson. 2,458,434, Jan. 4.
Regeneration of a moving bed catalyst, Method and apparatus for conducting the. J. A. Crowley, Jr. 2,458,487, Jan. 4.
Regeneration of a moving bed catalyst, Multiple-zone. L. P. Evans. 2,458,359, Jan. 4.
Regeneration of a moving bed catalyst, Multistage. T. P. Simpson and C. V. Hornberg. 2,457,837, Jan. 4.
Register, Autographic. J. T. Davidson and J. H. Kroemer. 2,457,807, Jan. 4.
Regulating device, Engine combustion. C. W. MacMillan. 2,458,086, Jan. 4.
Relay, Electromagnetic. E. A. Bryan. 2,458,247, Jan. 4.
Relay, Self-unlocking lockup. H. N. Staats. 2,458,311, Jan. 4.
Releasing mechanism for power take-offs. K. W. Couse. 2,458,255, Jan. 4.
Removing mercaptans. J. A. Bolt. 2,457,975, Jan. 4.
Reproducer, Magnetically shielded electrodynamic sound. W. E. Gilman. 2,458,158, Jan. 4.
Reproduction of angular magnetic recording, Method and apparatus for. D. E. Sunstein. 2,458,315, Jan. 4.
Reproduction system, Sound. W. J. Zenner. 2,458,043, Jan. 4.
Resilient wheel. T. A. Purvis. 2,458,300, Jan. 4.
Resistor, Variable electrical. E. L. Straub and A. E. C. Bennett. 2,458,314, Jan. 4.
Rigidifying means for flexible endless tracks. P. H. Johnson and L. W. Tripp. 2,458,079, Jan. 4.
Rivet and making same, Plastic. E. A. Eakins. 2,458,152, Jan. 4.
Rock drill. W. A. Morrison. 2,458,289, Jan. 4.
Rocker arm construction. J. G. Vincent. 2,457,943, Jan. 4.
Rocket. L. A. Skinner. 2,457,839, Jan. 4.
Rocket device. C. C. Lauritsen and J. McMorris. 2,458,475, Jan. 4.
Rocket launcher. C. C. Lauritsen and J. McMorris. 2,458,476, Jan. 4.
Roll, Abrasive cutting. H. M. Field. 2,458,362, Jan. 4.
Roofing, Fire resistant asphalt. F. B. Burns, M. S. Larrison, and M. C. Higgs. 2,458,143, Jan. 4.
Rotary engine. E. Alterio. 2,458,128, Jan. 4.
Rotation device for rock drills. J. H. Anderson. 2,457,969, Jan. 4.
Rotor. J. H. Wessel. 2,458,041, Jan. 4.
Rotor for rotary wing aircraft, Jet-powered lifting. E. A. Stalker. 2,457,936, Jan. 4.
Roundabout. J. D'Errico. 2,458,150, Jan. 4.
Rubber, Hard. L. J. Cukierski. 2,458,351, Jan. 4.
Safety device for electric plugs. C. Festge. 2,458,153, Jan. 4.
Salts of tocopheryl phosphoric acid esters. U. V. Solmssen and J. Lee. 2,457,932, Jan. 4.
Sander, Drum. F. H. Staggs. 2,458,217, Jan. 4.
Saw-tooth voltage generator. G. W. Fyler. 2,458,366, Jan. 4.
Saw-tooth voltage generator. G. W. Fyler and G. J. Heisig. 2,458,367, Jan. 4.
Scale and the like, Letter. W. R. Amstuts. 2,458,129, Jan. 4.

Schmidt image former with spherical aberration corrector. J. G. Baker. 2,458,132, Jan. 4.
Scraper, Carrying. H. D. Kads. 2,458,274, Jan. 4.
Screw and driver. D. P. Lavietes. 2,458,391, Jan. 4.
Seal, drip tube, and dispensing unit, Combination. J. Shaw. 2,458,106, Jan. 4.
Seal, Rotary. E. J. Carleton. 2,458,343, Jan. 4.
Sealing device for dry cells. G. B. Ellis. 2,457,810, Jan. 4.
Seaming apparatus, Electrical. N. V. Christensen, H. J. Le Ves Conte, and A. M. Schweda. 2,458,059, Jan. 4.
Seat. S. B. McDonald. 2,458,185, Jan. 4.
Securing device. L. N. Chatterton. 2,458,252, Jan. 4.
Selective apparatus, Coin collector. G. M. Wilcox and M. L. Grant. 2,458,234, Jan. 4.
Self-locking nut means and the like. A. F. von Soden. 2,457,945, Jan. 4.
Self-opening collapsible chair. F. J. Curran. 2,457,978, Jan. 4.
Self-propelled track-laying vehicle. P. H. Johnson and L. W. Tripp. 2,458,078, Jan. 4.
Self-sealing vent cap. J. W. Allen. 2,457,800, Jan. 4.
Self-tightening rope clamp. K. R. Runde. 2,458,304, Jan. 4.
Separating metallic sodium from high molecular weight polymers made by polymerization of vinyl compounds. G. Herbolsheimer. 2,458,378, Jan. 4.
Separator: *See*—
Gravity liquid separator.
Setback switch. R. L. Maneval. 2,458,478, Jan. 4.
Setback switch. T. M. Perry. 2,458,479, Jan. 4.
Sewage treating process. C. C. Hays. 2,458,163, Jan. 4.
Sharpener, Razor blade. O. C. Stemland. 2,458,443, Jan. 4.
Sharpener, Safety razor and blade. A. E. Donovan. 2,458,257, Jan. 4.
Shaver, Dry. F. Pollifrone. 2,458,417, Jan. 4.
Shelf hanger. F. Boschan. 2,458,332, Jan. 4.
Shield, Auto glare. J. S. Winkler. 2,458,125, Jan. 4.
Shield, Shoeshine. A. A. Caputi. 2,458,250, Jan. 4.
Shock absorber. M. Funkhouser. 2,458,157, Jan. 4.
Shock absorber. E. F. Rossman. 2,458,206, Jan. 4.
Shock absorbing mechanism for railway draft appliances, Friction. G. E. Dath. 2,457,979, Jan. 4.
Shock testing. M. R. Hutchison, Jr. 2,458,382, Jan. 4.
Shoe, Ventilated. A. G. Vlastos. 2,457,944, Jan. 4.
Shopping bag handle. E. S. Kardon. 2,458,173, Jan. 4.
Short-circuited winding. H. Arnemo. 2,458,237, Jan. 4.
Shutter or blind, Adjustable louver. C. E. Cooper. 2,457,871, Jan. 4.
Signal device for automobiles, Automatic. W. R. Niles. 2,458,192, Jan. 4.
Signal for railroads, Light. E. W. Moore. 2,458,401, Jan. 4.
Signal generation system. C. H. Hoeppner. 2,457,819, Jan. 4.
Signal system, Navigation. E. W. Penton. 2,458,414, Jan. 4.
Signal unit, Reel. J. G. Jackson. 2,457,901, Jan. 4.
Signaling apparatus and system, Selective. W. T. Rea. 2,458,030, Jan. 4.
Silica gels, Producing microspherical. J. C. Bailie. 2,457,970, Jan. 4.
Silica sol. V. Voorhees. 2,457,971, Jan. 4.
Slicer. F. H. Miller. 2,458,090, Jan. 4.
Sliding shoe rack. C. M. Panosh. 2,458,194, Jan. 4.
Slurry mixer. H. B. Coulter.
Soap container. M. A. Pierce. 2,457,918, Jan. 4.
Socket for electronic tubes with associated condensers. W. J. Larkin and D. H. Bacon. 2,458,390, Jan. 4.
Sodium hydroxylamine sulfonates, Manufacture of. W. M. Nagle. 2,458,404, Jan. 4.
Soldering iron. C. L. Uhing. 2,458,319, Jan. 4.
Solenoid actuated valve. H. G. Wasserlein. 2,458,123, Jan. 4.
Solenoid operated switch. A. S. Dubuar. 2,457,878, Jan. 4.
Speed control, Revolving fan. E. Primeaux. 2,458,098, Jan. 4.
Speed reduction mechanism. J. B. Little and W. A. Munson. 2,458,181, Jan. 4.
Spinning machines, Rayon and like. W. Hartley. 2,458,374, Jan. 4.
Splicing device, Electrode. R. R. Jones. 2,458,272, Jan. 4.
Split-phase induction motor. E. M. Smith. 2,458,436, Jan. 4.
Spool, Exposure-indicating. J. Isaac. 2,458,383, Jan. 4.
Spraying device. L. Fletcher and J. Winks. 2,457,993, Jan. 4.
Spreading and loading device, Sand. J. Rome. 2,458,031, Jan. 4.
Staple setting die. O. J. Huelster. 2,457,896, Jan. 4.
Starter for combustion gas turbines, Cartridge. A. H. Redding. 2,457,833, Jan. 4.
Steering and propelling mechanism, Power. J. F. Johnson. 2,458,177, Jan. 4.
Stoker. R. W. Suman. 2,457,849, Jan. 4.
Storage and display box. T. B. Epps. 2,457,812, Jan. 4.
Strain device with temperature compensator, Electric. A. V. De Forest. 2,458,354, Jan. 4.
Strainer, Adjustable. C. M. Tursky. 2,458,118, Jan. 4.
Strainer for pump jacks. E. P. Grime. 2,457,888, Jan. 4.
Suction cleaner. H. L. Snyder. 2,458,309, Jan. 4.
Suitcases, Metal. R. B. Wemyss. 2,458,233, Jan. 4.
Supply apparatus for compressors, Cooling-water. C. W. Metzgar. 2,458,284, Jan. 4.
Support: *See*—
Open foot superheater support.
Traffic signalling device support.
Rearview mirror support.
Support and silencer, Telephone transmitter. A. C. Reinhold. 2,458,199, Jan. 4.
Support for fowl or the like. E. T. Bartlett. 2,458,239, Jan. 4.
Support for inductor furnace workpieces, Slide rail. H. A. Strickland, Jr. 2,457,846, Jan. 4.
Support for trailer vehicles. J. Stephen. 2,458,312, Jan. 4.
Surveying device, Well. G. L. Kothny. 2,457,826, Jan. 4.
Swaging apparatus. J. C. Luley. 2,458,395, Jan. 4.
Sweeper, Suction-type street. W. R. Furr. 2,458,258, Jan. 4.
Switch: *See*—
Backup light switch.
Centrifugal delay switch.
Centrifugal safety delay switch.
Centrifugal switch.
Electric switch.
High-voltage switch.
Setback switch.
Solenoid operated switch.
Thermocouple safety pilot switch.
Switch. J. W. Busacker and T. M. Perry. 2,458,464, Jan. 4.
Switch and dialite assembly, Unitary volume control. J. F. Rider. 2,457,920, Jan. 4.
Synchronization of time division multiplex communication system. J. O. Edson. 2,457,986, Jan. 4.
Syringe, Hypodermic. H. S. Austin. 2,457,859, Jan. 4.
System for laying or removing railway tracks. A. L. C. Blondelle. 2,458,050, Jan. 4.
System for preventing film fire in motion-picture projectors. F. B. Grosz, Sr. 2,458,161, Jan. 4.
System for the treatment of material. L. J. Fuller. 2,458,068, Jan. 4.
Tall oil-cellulose ether composition. W. Stubblebine. 2,457,847, Jan. 4.
Tank for water disposal systems, Filtering. J. P. Walker. 2,457,959, Jan. 4.
Television pickup tube. A. Rose. 2,458,205, Jan. 4.
Temperature control device, Engine. R. W. Fernstrum. 2,457,991, Jan. 4.
Tester, Microphonics. J. E. Sterner. 2,458,033, Jan. 4.
Tester, Tire tube. W. Abner. 2,458,126, Jan. 4.
Testing apparatus, Circuit. E. L. Clemens. 2,457,869, Jan. 4.
Textiles and composition therefor, Treatment of. H. L. Van Mater. 2,457,853, Jan. 4.
Thermocontact. H. Szabó. 2,457,941, Jan. 4.
Thermocouple safety pilot switch. L. A. Matson. 2,458,014, Jan. 4.
Thiamin derivatives, Producing. K. Warnat. 2,458,453, Jan. 4.
Thiol ester modification of synthetic rubbers. W. H. Sharkey. 2,458,432, Jan. 4.
Thiolesters, Preparation of. C. M. Himel. 2,458,075, Jan. 4.
Thread control for bobbins in magazines. R. G. Turner. 2,457,955, Jan. 4.
Thread control for looms, Pneumatic. R. G. Turner. 2,457,952, Jan. 4.
Tie and making same, Bow. S. Head. 2,458,265, Jan. 4.
Time set control. F. R. Van Sickle. 2,458,322, Jan. 4.
Tin fluoborate, Production of. A. L. Ferguson. 2,457,798, Jan. 4.
Tire and attachable vane therefor. R. J. Hull and R. W. Hursh. 2,457,897, Jan. 4.
Tire, Vaned. R. W. Hursh. 2,457,899, Jan. 4.
Titanium hadlides by treatment with metal hydrides and distillation, Purification of. D. G. Nicholson. 2,457,917, Jan. 4.
Tobacco smoke pipe. C. V. Wright, Jr. 2,458,460, Jan. 4.
Toilet seats, Sterilizing. H. H. Niles. 2,458,019, Jan. 4.
Tool: *See*—
Cutting tool.
Tool for turning threaded container caps. D. J. Loudfoot. 2,458,393, Jan. 4.

Wind wheel. M. A. Reinmann. 2,458,419, Jan. 4.
Winding device, Level. A. J. Farrar. 2,458,065, Jan. 4.
Window assembly, Storm. L. M. Jenness. 2,458,385, Jan. 4.
Window pulley gauge. W. M. Hall. 2,458,072, Jan. 4.
Wiper, Magnetic windshield. R. R. Chiesa. 2,457,868, Jan. 4.
Wiper mechanism, Windshield. R. B. Gray. 2,458,260, Jan. 4.
Wiping device, Eyeglass. G. S. McDonald. 2,458,015, Jan. 4.
Wire connector. F. Pennell. 2,458,413, Jan. 4.
Wire dispensing container. M. H. Tuft. 2,458,318, Jan. 4.
Wire letter with fabric covering, Detachable. I. W. Fuller. 2,457,883, Jan. 4.
X-ray unit. B. F. Wehmer. 2,457,961, Jan. 4.
Xylophone. J. A. Packheiser. 2,458,193, Jan. 4.
Xylophone. H. Zimmerman. 2,458,462, Jan. 4.

CLASSIFICATION OF PATENTS

ISSUED JANUARY 4, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

Condition of Applications Under Examination at Close of Business Dec. 24, 1948

Total number of patent applications awaiting action, 154,156. Date of oldest new application, December 12, 1946; date of oldest amended application, April 18, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	7-11-47	5-19-47	2838
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	3-25-47	11-25-46	2949
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	3-30-48	3 25-48	1234
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	4-28-47	3-12-47	4165
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	8-11-47	1-4-47	1629
6. SURLE, H., Carbon Chemistry (part)	2-17-48	11-12-47	1909
7. HANLIN, GEORGE, Optics; Photographic Apparatus	3-27-48	12-26-47	1640
8. LEWIS, R. O., Beds; Chairs, Seats; Racks, Cabinets; Miscellaneous Furniture	4-30-47	1-17-47	4498
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	7-25-47	2-26-47	2471
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	3-27-48	1-24-48	1554
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	9-6-47	11-14-46	1974
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	3-20-48	10-14-46	2231
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	12-12-46	12-23-46	2396
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	2-25-48	12-11-47	1348
15. HENKIN, B. Plastics; Plastic Block and Earthenware Apparatus; Glass	9-16-47	6-19-47	2002
16. LOVEWELL, N. N., Television; Telephony	4-3-48	8-28-47	1653
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	6-10-47	11-21-46	2132
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	10-7-47	12-19-46	2152
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	12-29-47	3-17-47	1869
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	8-1-47	3-20-47	2046
21. MADER, R. C., Textiles	12-31-47	10-27-47	1257
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices (part)	1-2-48	5-11-47	1739
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	2-6-48	12-21-46	1180
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	11-14-47	11-13-47	2334
25. BLAKELY, O. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	3-30-48	5-15-47	1780
26. YOUNG, R. R., Electricity—Generation, Motive Power, Transmission to Vehicles; Elevators	8-15-47	3-7-47	1219
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	8-5-47	2-15-47	3671
28. BRAUNER, R. H., (Acting), Internal-Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Land Vehicles, Dumping, Wheel Substitutes; Vehicle Fenders.	3-4-48	12-24-47	916
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	4-23-47	4-17-47	3213
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating and Heating Systems; Illuminating Burners; Ammunition and Explosive Devices.	3-17-48	2-19-48	1063
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	4-16-48	4-16-48	2091
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	5-16-47	11-5-46	2091
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	4-19-47	1-20-47	3652
34. SAPERSTEIN, S., Railways; Track Sanders; Signals and Indicators	8-11-47	2-3-47	1399
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	7-22-47	12-31-46	3488
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	1-3-47	1-8-47	2009
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	4-6-48	6-19-47	1388
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	10-6-47	9-9-47	1629
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	5-19-47	11-13-46	3096
40. DRUMMOND, E. J., Receptacles (part); Packages	2-18-48	3-4-47	3229
41. GURLEY, R. B., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	2-2-48	11-29-46	2271
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	8-1-48	3-24-48	1140
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	3-20-48	1-21-48	1248
44. HARVEY, L. P., Refrigeration; Preserving	12-19-46	10-15-46	1012
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	7-8-47	1-8-47	2514
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	9-29-47	1-29-47	1866

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 154,156. Date of oldest new application, December 12, 1946; date of oldest amended application, April 18, 1946.

NOTICES

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 154,156. Date of oldest new application, December 12, 1946; date of oldest amended application, April 18, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	4-1-48	9-23-47	2181
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	3-27-48	7-5-47	1467
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	1-14-48	11-28-47	1857
50. LEVIN, SAMUEL, Synthetic Resins	4-16-48	12 30-47	2150

NOTICES

Classification Order No. 43

December 17, 1948

The following transfers are hereby ordered to take effect Monday, December 20, 1948:

Class 210, Liquid Separation or Purification, from Division 49 to Division 56.

Class 225, Earth Boring, and Class 166, Wells, from Division 32 to Division 49.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Classification Order No. 44

December 21, 1948

The following transfers are hereby ordered to take effect December 22, 1948:

Class 30, Cutlery, from Division 53 to Division 11.

Class 54, Harness, from Division 11 to Division 53.

Class 231, Whips and Whip Apparatus, from Division 11 to Division 53.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

Disclaimers

Re. 20,676.—*Gustav O. Wilms*, Milwaukee, and *Hans Petersen*, Wauwatosa, Wis. ELECTRIC SWITCH. Patent dated Mar. 22, 1938. Disclaimer filed Dec. 13, 1948, by the assignee, *Allen-Bradley Company*.

Hereby enters this disclaimer to claims 1, 2, 4, 5, and 6 in said specification.

2,071,149.—*Gustav O. Wilms*, Milwaukee, and *Hans Petersen*, Wauwatosa, Wis. ELECTRIC SWITCH. Patent dated Feb. 16, 1937. Disclaimer filed Dec. 13, 1948, by the assignee, *Allen-Bradley Company*.

Hereby enters this disclaimer to claim 2 and claims 19 to 26, inclusive, in said specification.

2,422,649.—*James R. Bland*, Eastport, Md. SLIDE RULE. Patent dated June 17, 1947. Disclaimer filed Dec. 16, 1948, by the assignee, *Keuffel & Esser Company*.

Hereby enters this disclaimer to claim 3 in the specification.

2,425,607.—*Martin A. Edwards*, Scotia, and *Hugh M. Ogle*, Schenectady, N. Y. CONTROL SYSTEM FOR AIRCRAFT TURBOSUPERCHARGERS. Patent dated Aug. 12, 1947. Disclaimer filed Dec. 8, 1948, by the assignee, *General Electric Company*.

Hereby enters this disclaimer to claims 1, 2, 3, and 5 of said patent.

Interference Notice

William Henry Dean, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Patent No. 2,438,777, granted March 30, 1948, to William Henry Dean, 18, Cleveland Ave., Darlington, County Durham, England, and the application for patent of Joseph J. Mohr, Route 1, Encinitas, Calif., and a notice of such declaration sent by registered mail to said Dean at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Dean, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

December 9, 1948.

Cancellation Notice

Les Parfums Marly, Inc., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Wolf Drug Company, 21 West Park St., Newark, N. J., to effect the cancellation of trade-mark registration of Les Parfums Marly, Inc., 610 Fifth Ave., New York, N. Y., No. 315,639, dated August 7, 1934. Regent Laboratories, Inc., New York, N. Y., has been joined as a respondent party to defend the right of registration evidenced thereby. The notice of this proceeding sent by registered mail to the said Les Parfums Marly, Inc., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Les Parfums Marly, Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

December 8, 1948.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,448,969. KEY RETAINER. Patented Sept. 7, 1948. Key retainer has a straight bar for supporting keys, provided with a fixed head at one end and a detachable keeper at opposite end. Two spring-pressed plungers encircle the bar, one telescoping within the head and the other telescoping within the keeper. Plungers engage opposite sides of the keys, holding keys on the bar midway between head and keeper. (Owner) Roy B. French, Superior, W. Va. Groups 31—72; 34—41; 39—81; 40. Reg. No. 16,235.

Vol. 618 • No. 2 Tuesday, January 11, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Pat. 2,449,353. DOOR LATCH. Patented Sept. 14, 1948. Door latch for garages, barns, and the like has a casing enclosing a latch bolt and an oscillating lever. Upper end

cessively released for free rotation to change into intermediate drive and then low speed drive. Once the clutches are released, they occasion no frictional drag on their sur-

Pat. 2,448,800. WINDOW SHADE. Patented Sept. 7, 1948. A window shade formed of a series of over-lapping vertical slats pivotally suspended from a toggle device is

Pat. 2,450,292. SOLE EDGE TRIMMER. Patented Sept. 28, 1948. Sole edge trimmer for shoe-finishing machines has a cutter guard which may be easily adjusted for use

Pat. 2,449,353. DOOR LATCH. Patented Sept. 14, 1948. Door latch for garages, barns, and the like has a casing enclosing a latch bolt and an oscillating lever. Upper end of lever is pivoted to center of latch bolt, and its lower end is rigidly secured to door knob shaft. A spring normally urges latch bolt outwardly, with an integral lug of lever limiting such outward movement. Turning knob pivots lever withdrawing latch bolt. (Owner) Robert E. Whitmore, Route 2, Keokuk, Iowa. Groups 33—59—73; 40. Reg. No. 16,236.

Pat. 2,451,091. KEY RING. Patented Oct. 12, 1948. Normally closed resilient split key ring carries an opening member suspended from ring so that keys may be applied or removed. Outer end of opening member is formed with a cam surface (or may carry cam wheel) and a stop. Opening member is used to force opposite sides of ring outwardly to separate and hold meeting ends of ring apart. The stop limits movement of opening member when maximum separation of the ends is achieved, and serves as an operating lever. Several modified forms of the operating member are shown. (Owner) Keith Whitaker Johnson, 2319 Roanoke Ave., Dallas 9, Tex. Groups 33—73; 40. Reg. No. 16,237.

Pat. 2,434,362. DEVICE FOR ATTACHING ANTISKID CHAINS TO VEHICLE WHEELS. Patented Jan. 13, 1948. Device for holding anti-skid chains on vehicle wheels is removably clamped to wheel. Four of the devices may be secured to and remain permanently on each wheel. Consists of a bracket having an integral tongue portion and a detachable yoke wedge. Bracket is placed on one side of wheel with tongue extending beneath rim to opposite side. Yoke wedge is placed on opposite side of wheel with its legs inserted through openings in bracket. Bracket and yoke head are clamped to wheel rim and upper edge of wheel disc by nuts on protruding ends of yoke legs. Opposite ends of anti-skid chain are provided with a hook and a flexible link for connection to body of bracket and end of tongue. (Owner) Benjamin D. Landes, 2859 Race St., Denver 5, Colo. Group 38—31. Reg. No. 16,238.

Pat. 2,404,305. RADIAL RECIPROCATING PISTON DEVICE. Patented July 16, 1946. Device is designed primarily for use as an oil pump, although it may be operated as a fluid motor when desired. It embodies a stationary cylinder block having an axial bore with a drive shaft in bore and a plurality of radial cylinders communicating with bore. The drive shaft acts as a single valve to control the flow of fluid into and out of the cylinders. Drive shaft is formed with an axial supply conduit and an axial discharge conduit, with ports in the conduits at their inner ends separated by shaft portions acting as rotating valves. All pistons are reciprocated by identical pitmans which form connecting rods between the pistons and eccentric surfaces of short shafts journaled in housing of device. Gears on these shafts all mesh with a single gear secured to drive shaft at one side of cylinder block. A cooling medium is circulated through housing and block and out through a port into supply conduit of drive shaft. When desired, this cooling medium may be circulated in a manner to cause device to operate as a fluid motor. (Owner) Anthony T. Logus, 5242 West 63rd Place, Chicago 38, Ill. Group 35—61. Reg. No. 16,239.

Pat. 2,046,468. AUTOMATIC VARIABLE SPEED MECHANISM AND BRAKE ELEMENT THEREFOR. Patented July 7, 1936. Transmission normally operates to drive a driven shaft through a pair of differential ring gears and pinions connecting driving and driven shaft until the load on driven shaft is increased above predetermined limits. During normal operation a pair of differential housings of transmission are restrained from rotating by spring clutches, which are releasable in response to predetermined torque. When the load successively increases above predetermined limits, the differential housings are successively released for free rotation to change into intermediate drive and then low speed drive. Once the clutches are released, they occasion no frictional drag on their surroundings. A lever may be manually set to one position to lock one differential housing against rotation so that normal drive will prevail at all times. The lever may be set in another position to lock transmission in intermediate drive so that the clutches act as brakes to limit the speed of the driven shaft regardless of whether it is being driven by or has a tendency to rotate driving shaft. (Owner) Mrs. A. C. Link, 1647 North Melvina Ave., Chicago 39, Ill. Groups 35—66; 38—31. Reg. No. 16,240.

Pat. 2,038,943. VALVE CONTROL. Patented Apr. 28, 1936. This patent shows a mixing valve for hot and cold water with a single control for varying proportions of the mixture and volume delivered. The control, enclosed in a casing, is connected to opposed ends of the valve stems of a pair of valves discharging through a common outlet. A pair of opposed bevel gears are slidably keyed on ends of valve stems. A pinion meshing with both gears is mounted on inner end of a control stem extending radially through one side of casing. Both valves may be opened same amount by partially revolving control casing. When both valves are open, proportions of mixture may be varied by rotating control stem. When both valves are closed, either valve may be opened and closed without disturbing the other by rotating control stem. (Owner) Mrs. A. C. Link, 1647 North Melvina Ave., Chicago 39, Ill. Group 33—61. Reg. No. 16,241.

Pat. 2,442,758. INJECTION APPARATUS. Patented June 8, 1948. A hypodermic injection apparatus for injecting a full and exact dose of medicament without risk of contamination. Consists of a disposable ampule and an applicator which snaps open to receive ampule. No operation of aspiration is required to fill the device, which is also capable of withdrawing a preliminary sample of body fluid. Ampule is transparent, may be factory sterilized, and is adapted to receive a hypodermic needle. The other end is provided with a flange for holding ampule rigidly in applicator. After insertion of ampule, applicator is snapped shut, and its plunger screws into a piston packaged in the ampule. Ampule projects free of the finger grip of applicator so its contents can be seen by person giving the hypodermic. (Owner) Creviston and Company, Inc., 5154 North Clark St., Chicago, Ill. Group 39—15. Reg. No. 16,242.

Pat. 2,041,929. ROOF CLEAT AND GUARD. Patented May 26, 1936. A combined cleat and gravel guard for protecting the usual felt drip of a gravel roof. A felt layer supported on the deck of roof overhangs the edge of roof to provide a drip. A layer of gravel combined with pitch is secured to the felt layer. A triangularly shaped cleat and gravel guard is secured to the deck adjacent the drip for securing the felt layer to deck and preventing gravel being washed over the drip into the gutter. Made in a standard size adaptable for application to edges of any roof. (Owner) Minnie Hitzman Klein, 3630 Flad Ave., St. Louis, Mo. Groups 29—32; 33—12—73; 34—31. Reg. No. 16,243.

Des. Pat. 150,533. SHORT DRESS BELT. Patented Aug. 17, 1948. (Owner) Lee Roy Baggett, Broadway Hotel, Benton, Ark. Group 23—83. Reg. No. 16,244.

Pat. 2,448,845. COLLAR CLASP. Patented Sept. 7, 1948. An adjustable collar clasp has a pair of overlapping strips of resilient material attached to a leaf spring and mounted in a channel-shaped connector. A knob on outer end of each strip engages the free end of a spring clip to hold edges of collar. (Owner) Theodore Thoreson, Lock Box 411, Wausau, Wis. Groups 39—71; 40. Reg. No. 16,245.

Pat. 2,448,800. WINDOW SHADE. Patented Sept. 7, 1948. A window shade formed of a series of over-lapping vertical slats pivotally suspended from a toggle device is movable horisontally by pull cords. Upper and lower edges of slats are connected by a tape or cord. A series of spaced knots are provided on one cord for engagement with a bracket on window casing for adjusting the shade. (Owner) W. A. Harju, Route 1, Box 9A, Mountain View, Calif. Group 25—63. Reg. No. 16,246.

Pat. 2,445,004. ELEVATING PLATFORM TRUCK. Patented July 13, 1948. This device shows a series of frames positioned between a base and storage platform. The frames form a lazy tongs arrangement which may be raised or lowered by the operation of gear-carrying rotatable shafts journaled in the base. A floor truck is provided when the base is set on wheels on which goods may be conveniently loaded and transported from place to place. The platform may be raised to any height within the limits of movement of the lazy tongs arrangement. Diagonal braces on all frames combine to provide a substantially rigid structure. (Co-owner) Frank M. Reynolds, 1304 Ardendale Ave., San Gabriel, Calif. Groups 35—63; 37—99. Reg. No. 16,247.

Pat. 2,444,979. TELESCOPING DRAWBAR. Patented July 13, 1948. Drawbar for coupling a trailer to a vehicle is composed of a pair of end members connected by a tube in which a pull bar is positioned. One of the end members has a rectangular chamber in which a pair of pivoted clamping arms are mounted. The pull bar includes a head with a portion slidable in the tube and an outwardly tapering portion having a cylindrical pilot received in the chamber. Each arm has an arc-shaped shoulder adapted to engage one face of the head. The clamping arms are urged into engagement with the head by the action of a spring-urged lever and cam arrangement associated with the clamping arms. (Co-owner) Frank M. Reynolds, 1304 Ardendale Ave., San Gabriel, Calif. Groups 35—69; 38—41. Reg. No. 16,248.

Pat. 2,437,448. HYDRAULIC TRANSMISSION. Patented Mar. 9, 1948. Hydraulic transmission of the jet reaction type consists of a casing which rotates with driving shaft and a rotor inside casing connected to driven shaft. The casing is spaced from periphery of rotor and is almost filled with fluid. The fluid flows through inlets into gear pumps disposed entirely within rotor and is discharged through curved radial passages to periphery of rotor in a general tangential direction. Pivoted pressure-operated valves in outer ends of passages control discharge of fluid from rotor and maintain substantially constant pressure in the passages regardless of the speed of or load on rotor. Rotor consists essentially of two end sections with three identical segmental sections arranged circumferentially between end sections of rotor. These inner sections are shaped so that when they are assembled they form chambers for the pumps (which consist of a sun gear and three planet gears) and discharge passages of rotor. Inlet passages communicating with pumps are drilled inwardly through these inner sections. (Owner) Scott V. E. Taylor, 1472 South High St., Columbus 7, Ohio. Groups 35—66; 38—31. Reg. No. 16,249.

Pat. 2,451,281. RETAINER AND DISPENSER FOR SANITARY TISSUES. Patented Oct. 12, 1948. Rack or frame into which a box of disposable tissues may be fitted is made from a single strand of wire, and shaped so that it does not interfere with the removal of the tissues from their original container. The frame comprises an intermediate portion which forms the bottom, side arches which constitute ends, front and top portions of the back. Eyelets may be formed in the strand to accommodate screws, or the free ends of the strand may be pointed to provide another means of mounting the rack. (Co-owner) H. L. Elfner, 2625 North Central Ave., Indianapolis, Ind. Groups 33—12; 40. Reg. No. 16,250.

Pat. 2,450,292. SOLE EDGE TRIMMER. Patented Sept. 28, 1948. Sole edge trimmer for shoe-finishing machines has a cutter guard which may be easily adjusted for use with trimmers of various sizes without using a tool. Inner end of the guard is threaded into one end of a sleeve. The flanged end of a tapered holding sleeve is slidably but non-rotatably telescoped within the other flanged end of the sleeve. A coil spring inside the non-tapered sleeve bears against guard and flanged end of tapered sleeve to maintain guard in adjusted position toward cutter. Tapered sleeve at its outer end is split longitudinally to form segmental clamping arms, which contract and tightly grip shaft of machine to hold the assembly in place when a clamping nut threaded on this sleeve is tightened. (Owner) Arthur C. Nelson, Alexandria, Minn. Group 35—59. Reg. No. 16,251.

Pat. 2,098,854. AUTOMOBILE THEFT PREVENTER. Patented Nov. 9, 1937. Device may be set in operative position to sound an alarm when an unauthorized person drives vehicle. A semi-circular casing closed at its open end by a disc houses a semi-circular bell, gearing, and a bell striker having radiating arms with pivoted bell clappers on free ends of arms. This whole assembly is mounted on a lever which carries a friction wheel to rotate striker. Device is mounted for swinging movement on a vehicle by pivotally mounting lower end of lever on stationary brake part, and connecting upper end of lever by a wire to push rod on dash. A spring urges lever rearwardly to normally maintain friction wheel out of contact with rotatable brake drum. When lever is pulled forwardly, friction wheel contacts brake drum for rotation therewith. (Owner) William H. Blaney, 5128 Zenith Ave. South, Minneapolis, Minn. Group 38—31. Reg. No. 16,252.

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 16,253 through 16,603) are the balance of Schedule 6, Schedules 7 and 8, Groups 22; 26—24; 28; 35—52; 39—12.

Inquiries concerning these patents should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 6—Continued

Patents Relating to the Use of Viscose Rayon Yarns

Pat. 1,902,871. Reenforced Vulcanized Rubber Articles and Process of Making the Same. Mar. 28, 1933. Undesulphurized viscose rayon threads are imbedded in vulcanized articles such as cord tires.

Pat. 2,067,667. Liner Cloth. Jan. 12, 1937. A rayon liner cloth of superior flexibility to that of Holland cloth for interleaving between sheets of milled rubber.

Pat. 2,099,178. Process and Apparatus for the Utilisation of Artificial Thread. Nov. 16, 1937. In knitting directly from spun cakes of artificial thread, the use of both furnisher rolls and a tension head, tension equalizers, and a suitable cake support.

Pat. 2,141,396. Artificial Cellulosic Structure. Dec. 27, 1938. The use of high tenacity viscose yarn in laundry and clothes pressing fabrics.

Pat. 2,149,091. Cellulosic Article. Feb. 28, 1939. The use of high tenacity rayon in the manufacture of sail cloth.

Pat. 2,178,759. Circular Knit Goods Comprising High Tenacity Rayon. Nov. 7, 1939. The use of fine denier high tenacity viscose yarn for sheer circular knit goods.

Pat. 2,232,532. Knit Fabric. Feb. 18, 1941. A novel

Pat. 2,011,227. Method of Treating Cellulosic Solu-

Pat. 2,072,738. Process of Stabilising Cellulose Xanthate. Mar. 2, 1937. Cellulose xanthate is stabilized

corporating a carbon disulfide derivative of deacetylated chitin in the spinning solution therefor.

Pat. 2,232,532. Knit Fabric. Feb. 18, 1941. A novelty knit fabric of abraded brushed filament nubby yarn in which the nubs all appear on one side of the fabric, giving depth thereto.

Pat. 2,337,986. Packing. Dec. 28, 1943. Use of continuous filament regenerated cellulose tow in the manufacture of packing for pumps.

Pat. 2,419,922. Method of Producing Reinforcing Elements. Apr. 29, 1947. Loss in strength of cords of regenerated cellulose, used for reinforcing rubber articles, during the operation of applying adhesive for the bonding of rubber thereto, is prevented by holding the cords under a tension of 0.015 to 0.1 gram per denier during the adhesive dipping operation.

Patents Relating to the Manufacture of Chemical Cellulose

Pat. 1,919,329. Purification of Cellulose. July 25, 1933. A process for producing a high alpha, low viscosity cellulose.

Pat. 1,931,933. Manufacture of High Alpha Cellulose Pulp. Oct. 24, 1933. Making high alpha cellulose pulp by countercurrent digestion of raw gramineous pith-free fiber in hot alkaline liquor until the pulp contains not less than 95 per cent alpha cellulose, and then washing.

Pat. 2,033,782. Cellulose Treatment. Mar. 10, 1936. Reducing the solution viscosity of cellulose by treating with a solution containing dilute mineral acid, removing excess acid, and drying.

Pat. 2,048,775. Purification of Cotton Linters. July 28, 1936. Purifying cotton linters by heating in dilute caustic solution containing a sodium salt of a sulfuric acid ester of a long chain saturated aliphatic alcohol.

Pat. 2,182,274. Preparation of Cellulose Pellets. Dec. 5, 1939. Preparation of small pellets of cellulose from a cellulose containing fibrous pulp slurry by depositing small platelets of pulp onto a forming screen, removing free liquid by suction, rolling the platelets into pellets and removing and drying.

Patents Relating to the Manufacture of Viscose, Including Viscose Additive Compositions

Pat. 1,931,239. Process of Producing Artificial Silk. Oct. 17, 1933. The preparation of a regenerated cellulose yarn, having an opaque luster resembling that of mother-of-pearl, by the spinning of viscose containing more than 7.5 per cent cellulose and possessing an index of 12 or more according to the Hottenroth or ammonium chloride scale.

Pat. 1,952,604. Viscose and Process of Producing Same. Mar. 27, 1934. A viscose solution, substantially free from insoluble particles which tend to clog spinneret holes, is prepared by adding thereto a small amount of a viscose solution made from cellulose xanthate containing a higher ratio of carbon bisulfide per unit of cellulose than used in the preparation of the first-mentioned viscose solution.

Pat. 1,956,034. Spinning Solution. Apr. 24, 1934. The use of creaming preventative to maintain a uniform dispersion of low luster inducing materials where the latter are incorporated into spinning solutions for the purpose of producing regenerated cellulose threads and the like possessing a subdued luster.

Pat. 1,999,043. Method of Steeping Cellulose and Steeping Press Therefor. Apr. 23, 1935. A V-shaped steeping press is used for the support and automatic alignment of rectangular cellulose sheets during their soaking in caustic soda solution for the production of alkali cellulose.

Pat. 2,009,110. Artificial Silk and Method of Producing Same. July 23, 1935. Artificial silk having a subdued luster is produced by incorporating both a pigment and an oil into the spinning solution therefor.

Pat. 2,011,227. Method of Treating Cellulosic Solutions. Aug. 13, 1935. Water soluble cyanides are added to viscose to retard the ripening rate thereof.

Pat. 2,012,232. Composition of Matter and Process of Producing Same. Aug. 20, 1935. Sodium pyrophosphate is used to produce a uniform dispersion of titanium dioxide in cellulosic solutions, as in the preparation of viscose solutions containing titanium dioxide for the spinning of yarns possessing a subdued luster.

Pat. 2,024,711. Shredder. Dec. 17, 1935. The corners of the hoppers of shredders, used for the comminution of alkali cellulose, are provided with rounded fillets which permit the use of larger sized charges, give improved shredding, and prevent pocketing of alkali cellulose.

Pat. 2,042,944. Method of Producing Rayon. June 2, 1936. Rayon of low luster is produced by spinning a cellulosic solution containing terpineol.

Pat. 2,060,210. Preparation of Dispersions. Nov. 10, 1936. Finely divided organic materials suitable for use in artificial silk spinning solutions to produce low luster yarns are prepared by a series of grinding and classification steps; slurries containing 25 to 30 per cent solid matter of which 90 per cent or more of the solid material is below 4 microns in diameter can be produced.

Pat. 2,069,773. Delustered Cellulosic Product and Method of Preparing Same. Feb. 9, 1937. Low luster cellulosic structures are produced from cellulosic solutions by the incorporation therein of a highly insoluble and difficultly saponifiable salt of a metal and an organic acid.

Pat. 2,069,774. Delustered Cellulosic Structure and Method for Preparing Same. Feb. 9, 1937. Low luster cellulosic structures are produced by incorporating a sulfone or a sulfoxide in the cellulosic solution from which the structure is produced.

Pat. 2,069,800. Cellulosic Structures. Feb. 9, 1937. Organic ethers of polyhydric alcohols containing at least three carbocyclic nuclei for use as delusterants in the spinning solutions for the production of cellulosic filaments having a subdued luster.

Pat. 2,069,801. Cellulosic Structures. Feb. 9, 1937. Organic ethers containing at least three carbocyclic nuclei are employed as delusterants for the production of cellulosic structures having a subdued luster.

Pat. 2,069,802. Cellulosic Structures. Feb. 9, 1937. Polynuclear derivatives of pyrane, such as methyl dinaphthoxanthene, are employed to impart subdued luster to cellulosic structures.

Pat. 2,069,803. Cellulosic Structures. Feb. 9, 1937. Heterocyclic organic compounds in which the heterocyclic nucleus is of the furane, thioxane, or dioxane class, are employed to impart subdued luster to cellulosic structures.

Pat. 2,069,804. Cellulosic Material and Method for Making Same. Feb. 9, 1937. Cellulosic structures possessing a subdued luster are produced by incorporating a substituted amide in the cellulosic solution from which the structure is prepared.

Pat. 2,069,805. Cellulosic Structures and Methods for Producing Same. Feb. 9, 1937. Cellulosic structures of subdued luster are produced by incorporating a polycyclic tertiary amine in the cellulosic solution from which the structure is prepared.

Pat. 2,069,806. Cellulosic Products and Method for Preparing Same. Feb. 9, 1937. Cellulosic structures of subdued luster are produced by incorporating a heterocyclic nitrogen compound having four or more cyclic nuclei highly deficient in hydrogen, in the cellulosic solution from which the structure is prepared.

Pat. 2,069,807. Cellulosic Substances and Method for Preparing Same. Feb. 9, 1937. Cellulosic structures having a subdued luster are prepared by incorporating a mixed heterocyclic compound having therein one or more cyclic nitrogen atoms and one or more cyclic atoms of the group consisting of oxygen, selenium and tellurium, in the cellulosic solution from which the structure is produced.

Pat. 2,072,738. Process of Stabilizing Cellulose Xanthate. Mar. 2, 1937. Cellulose xanthate is stabilized against decomposition by exposing to a current of warm air until the xanthate is substantially dry.

Pat. 2,077,699. Cellulosic Structures. Apr. 20, 1937. Cellulosic structures of subdued luster are produced by incorporating in the solution from which the structures are prepared a completely chlorinated aromatic hydrocarbon, such as hexachlorobenzene or octachlornaphthalene.

Pat. 2,077,700. Artificial Silk Having Subdued Luster. Apr. 20, 1937. Artificial silk of subdued luster is produced by incorporating decachlor diphenyl in the spinning solution therefor.

Pat. 2,087,016. Viscose Process and Apparatus. July 13, 1937. An apparatus of feeding viscose of a constant degree of maturity or ripeness to the product forming room comprises in combination a homogenizer and agitated tank through which the viscose is passed.

Pat. 2,089,606. Dispersion Method. Aug. 10, 1937. The method of preparing emulsions and dispersions with controlled particle size which comprises processing the material to be dispersed in a solution containing a dispersing agent to a particle size distribution such that a substantial proportion of the particles lie in the range of 0 to 4 microns in diameter, adding a precipitating agent, filtering said solution, and redispersing the residue with a peptizing agent.

Pat. 2,099,441. Cellulosic Product and Method for Preparing Same. Nov. 16, 1937. A cellulosic structure of subdued luster is produced by incorporating into the cellulosic solution therefor a ketone having two or more cyclic nuclei highly deficient in hydrogen and in which not more than one carboxyl group is present in a single nucleus.

Pat. 2,099,443. Valve. Nov. 16, 1937. A non-sticking, automatic, throttling or relief valve for regulation of the flow of viscous, gelable or sticky liquids, such as viscose.

Pat. 2,099,455. Cellulosic Article of Manufacture and Method for Preparing Same. Nov. 16, 1937. Cellulosic structures of subdued luster are produced by incorporating difficultly hydrolyzable ester in the cellulosic solution used for producing the structure.

Pat. 2,100,398. Regenerated Cellulose Structure and Method for Preparing Same. Nov. 30, 1937. Improved basic dyeing of rayon is obtained by the addition of the sodium salt of an alkyl sulfuric acid and similar substances to the viscose.

Pat. 2,107,668. Method of Producing Artificial Silk. Feb. 8, 1938. Producing delustered rayon by adding a vaporizable high boiling hydrocarbon to viscose and spinning the same.

Pat. 2,114,605. Cellulose Derivative Manufacture. Apr. 19, 1938. Preparation of alkali cellulose of improved physical characteristics such as small particle size and increased bulk by the steeping of cotton cellulose in caustic alkali solution containing up to 0.5 per cent of a wetting agent, such as the alkali metal salts of sulfuric acid esters of saturated aliphatic alcohols having 4 to 8 carbon atoms, phenols, cresols, xylenols and their homologs.

Pat. 2,157,544. Cellulosic Structure and Process for Preparing Same. May 9, 1939. Producing low luster cellulosic structures by incorporating in the spinning solution aromatic hydrocarbons having at least four cyclic nuclei.

Pat. 2,162,460. Viscose-Cellulose Ether Solution. June 13, 1939. Regenerated cellulose threads having greater affinity for direct dyes are prepared by incorporating up to five per cent of an alkali soluble cellulose ether, such as low substituted glycol cellulose or methyl cellulose, in the viscose spinning solution therefor.

Pat. 2,202,003. Cellulosic Product and Process for Producing Same. May 28, 1940. Cellulosic threads possessing greater affinity for acid dyestuffs are prepared by incorporating a carbon disulfide derivative of deacetylated chitin in the spinning solution therefor.

Pat. 2,211,931. Cellulosic Product and Process for Preparing Same. Aug. 20, 1940. Incorporating wax and a wax compatible resin in viscose to produce water repellent fibers and other cellulosic structures.

Pat. 2,224,693. Formation of Threads and the Like. Dec. 10, 1940. Regenerated cellulose threads having the dyeing characteristics, the hand, and the insulating properties of wool are produced by incorporating purified casein in the viscose spinning solution therefor, and spinning into a coagulation bath containing a high concentration of ammonium sulfate.

Pat. 2,253,140. Sheet Separating Apparatus. Aug. 19, 1941. An apparatus for automatic, continuous feeding of single sheets of cotton linters or wood pulp from a stack to a receiving means.

Pat. 2,292,901. Shredding Method and Apparatus. Aug. 11, 1942. A shredding apparatus for sheets or slabs of alkali cellulose comprising cylindrical toothed rollers rotating at a peripheral speed of 100,000 inches per minute.

Pat. 2,308,081. Separation Apparatus. Jan. 12, 1943. An apparatus for the continuous separation of the solid components from the liquid suspension medium of a slurry useful for producing a slab of alkali cellulose from a slurry of alkali cellulose in aqueous caustic soda solution.

Pat. 2,335,980. Process for Producing Water-Repellent Synthetic Textiles. Dec. 7, 1943. Preparation of water-repellent cellulose filaments by incorporating in the viscose certain quaternary ammonium compounds which decompose on heating to yield a "Zelan" type compound.

Pat. 2,355,057. Apparatus for Deaerating Viscose Compositions. Aug. 8, 1944. An apparatus for the continuous deaeration of viscose comprising a cylindrical evacuated tank provided with a means for continuously feeding viscose to a trough in the upper portion of the tank which distributes the viscose downward in the form of a thin film over the walls of the tank. Deaerated viscose collects at the bottom of the tank and is continuously withdrawn from the vacuum chamber.

Pat. 2,360,984. Screw Press. Oct. 24, 1944. A positive action screw press having a definite compression ratio between the inlet and outlet openings.

Pat. 2,364,392. Production of Alkali Metal Cellulose Xanthate. Dec. 5, 1944. A slurry of alkali cellulose in excess liquid carbon bisulfide is heated to form sodium cellulose xanthate.

Pat. 2,369,718. Concentration of Viscose. Feb. 20, 1945. The concentration of viscose solutions to produce solutions of high cellulose and high caustic content is accomplished by mixing therewith pyridene and decanting off the aqueous pyridene layer.

Pat. 2,371,052. Process and Products Therefrom. Mar. 6, 1945. Cellulosic structures, especially viscose rayon, of improved dyeing characteristics are produced by incorporating in the spinning solution therefor a condensation product of a maleic anhydride-olefin interpolymer which is capable of reacting with a diazonium salt.

Pat. 2,383,085. Material Feeding Apparatus. Aug. 21, 1945. An apparatus for use in the continuous feeding of cellulose sheets at a uniform rate to a receiving means; the equipment is especially adapted for use in the continuous production of alkali cellulose.

Pat. 2,392,269. Method and Apparatus for the Production of Alkali Cellulose. Jan. 1, 1946. Consistency meter to insure the formation of alkali cellulose of uniform composition in a continuous process.

Pat. 2,397,454. Polymeric Cellulose Structure and Process for Making Same. Mar. 26, 1946. Dyeings of improved fastness and uniformity for cellulosic structures, particularly viscose rayon threads, are obtained by incorporating in the spinning solution therefor a polymeric azo dye coupling agent.

Pat. 2,052,731. Apparatus for Production of Artificial

Pat. 2,265,646. Production of Regenerated Cellulose

Pat. 2,412,969. Spinning Process. Dec. 24, 1946. A process for producing a yarn of subdued luster capable of being dyed a dull black by spinning viscose containing a quaternary ammonium hydrexide into a fast acting coagulating bath, and subsequently regenerating the yarn.

Patents Relating to Spinnerets for Use in the Spinning of Artificial Filaments

Pat. 2,045,722. Manufacture of Thread. June 30, 1936. A spinneret having a large filtering area.

Pat. 2,258,073. Thread Production. Aug. 19, 1941. A vortex type spinneret adapter comprising a metal cup with cylindrical walls, an opening in said wall, and a supply conduit so positioned therein that the spinning solution will enter the adapter on a tangent to the inner wall.

Pat. 2,385,856. Large Rectangular Spinneret. Oct. 2, 1945. A rectangular spinneret comprising a spinneret adapter containing an approach chamber having the shape of a pyramid, the base of which is open, and one side of which is connected to an inlet port.

Patents Relating to the Spinning of Viscose Yarns

Pat. 1,930,516. Bucket Spinning Process. Oct. 17, 1933. In the production of artificial thread by the centrifugal or bucket spinning process, the employment of a bucket peripheral speed of 9100 feet per minute or above enables good cake formation to be obtained without necessitating the use of a bucket cover.

Pat. 1,935,787. Guide. Nov. 21, 1933. Rubber covered stationary hook guides are employed as a means for imparting uniform tension to threads in the coagulating bath in the process of producing artificial filaments by the wet spinning method, such as the viscose process.

Pat. 1,949,919. Method of Producing Artificial Threads. Mar. 6, 1934. A process for producing strong regenerated cellulose threads by spinning viscose prepared from cellulose xanthate having a relatively low ratio of carbon bisulfide per unit of cellulose, into a high acid bath.

Pat. 1,975,188. Bucket. Oct. 2, 1934. In the manufacture of viscose rayon wherein the yarn is collected in a rapidly rotating bucket, ventilation of the bucket compartments is improved by making the outside of the bucket larger in diameter at the bottom than at the top, causing the bucket thereby to act as a blower and force the saturated air in the compartment downward into a conventional ventilating duct.

Pat. 1,977,611. Guide Mechanism. Oct. 23, 1934. A roller guide having a frusto-conical body is employed to enable a thread to be wrapped one or more times, without riding of the thread on itself, about a feed wheel which constitutes a part of the stretch mechanism for the production of artificial filaments.

Pat. 1,984,853. Spinning Machine for Spinning Artificial Silk. Dec. 18, 1934. A stretch spinning process for producing cuprammonium cellulose yarn involving rotatable stretching members in the spinning bath operating at progressively increasing peripheral speeds from one member to another.

Pat. 1,986,433. Cover. Jan. 1, 1935. A bucket cover which is expansible by centrifugal force into sealing contact with the bucket walls, for use in the spinning of threads by the bucket process.

Pat. 1,986,434. Wringing Machine. Jan. 1, 1935. A centrifugal wringing machine to mechanically remove liquid from cakes of yarn, such as those produced by the bucket process of rayon manufacture.

Pat. 1,986,613. Process of and Apparatus for Spinning. Jan. 8, 1935. In the manufacture of rayon by the bucket process two threads are simultaneously introduced into the collecting bucket, one at the top and another through the bottom thereof, thereby producing two separate bucket cakes.

Pat. 1,988,490. Bucket Motor. Jan. 22, 1935. A hollow shafted motor adapted to receive a yarn collecting bucket as employed in the manufacture of rayon by the bucket process.

Pat. 1,990,556. Funnel. Feb. 12, 1935. A funnel thread guide of hard rubber having a porcelain facing and inserts for use in directing yarn into a rotating bucket yarn collecting device as used in the manufacture of rayon.

Pat. 1,994,472. Mechanical Motion and Its Use. Mar. 19, 1935. In the manufacture of rayon by the bucket process, a means for traversing both the yarn collecting bucket and the funnel thread guide with respect to one another for the purpose of forming and collecting a cake of yarn.

Pat. 1,996,864. Preparation of Thread. Apr. 9, 1935. A method of laying thread down on a bobbin in a sinuous path through the use of gears which may be elliptical. A soft yarn package readily permeable to treating fluids is produced.

Pat. 1,999,048. Manufacture of Thread. Apr. 23, 1935. A machine for making thread comprising an electric motor provided with an armature having a hollow core and an extension on said core to which a rotating yarn collecting bucket is fixed. A traversing funnel guide is operated through the hollow core of the electric motor and supplies freshly spun yarn to the collecting bucket.

Pat. 2,004,162. Bobbin Traverse Motion. June 11, 1935. Means are provided, involving the use of elliptical gears, to produce a traverse motion to give yarn packages having tapered ends. Yarn cakes of this type are easily washed and possess good winding characteristics.

Pat 2,006,960. Motor Mounting. July 2, 1935. In order to reduce vibration of spinning bucket motors used in the manufacture of viscose yarn, a cantilever type bracket of resilient construction is employed for mounting the motor.

Pat. 2,012,851. Bucket. Aug. 27, 1935. In order to provide a driving means capable of slipping while the driving member picks up speed and of providing a positive drive thereafter, as in the driving of a centrifugal bucket of the type used in rayon manufacture, a driving washer is attached to the bottom of the bucket adjacent to the driving means with which it is brought into contact by centrifugal action at high speeds of rotation.

Pat. 2,012,984. Apparatus for Tension Spinning. Sept. 3, 1935. Stretch spinning by means of two or more positively driven wheels together with a roller snubber guide under each wheel to enable a complete wrap of thread to be made around the wheel and to prevent the thread from tracking on itself.

Pat. 2,043,750. Processing Artificial Thread. June 9, 1936. In order to change the structure of rayon cakes produced by the bucket spinning process, so that they may be quickly purified by treating liquids, the cakes are mechanically worked and elongated by passing between pressure rollers, one of said rollers contacting the inner periphery and another the outer periphery of the cake.

Pat. 2,045,252. Bucket. June 23, 1936. A centrifugal bucket for washing cakes of yarn having a sloping ledge on which the cake rests and which will deflect the treating liquor up under the cake.

Pat. 2,045,708. Process and Apparatus for Production of Artificial Thread. June 30, 1936. In the manufacture of viscose rayon by the bucket process, crystal formation within the bucket compartment is prevented through regulating the humidity therein by means of refrigeration.

Pat. 2,045,717. Humidification. June 30, 1936. In the manufacture of viscose rayon by the bucket process, crystal formation within the bucket compartment resulting from evaporation of coagulating bath carried therein by the yarn is prevented by passing air from one compartment to another through grids moistened with water or coagulating bath.

Pat. 2,052,731. Apparatus for Production of Artificial Thread. Sept. 1, 1936. A funnel guide with thread contacting inserts mounted so as to be freely revolvable for the purpose of guiding a freshly formed artificial thread into a centrifugal spinning bucket.

Pat. 2,060,097. Method of Spinning Rayon. Nov. 10, 1936. A process for preparing viscose yarn by the bucket spinning process of uniform dyeing characteristics by progressively and simultaneously increasing the thread speed and the pump delivery.

Pat. 2,073,839. Manufacture of Thread. Mar. 16, 1937. In order to collect yarn in a bucket in the form of cakes which are more permeable to treating liquids and possessing other improved characteristics, an obliquely cut cylinder is held centrally and axially in the bucket to traverse the thread up and down.

Pat. 2,073,840. Spinning Bucket. Mar. 16, 1937. A spinning bucket, such as used in the manufacture of viscose yarn, is constructed with an imperforate liner permitting lateral drainage of the interior but provided with discharge of the drainage fluid in a direction other than lateral.

Pat. 2,083,251. Rotating Guide. June 8, 1937. As a means for applying a uniform and constant tension for stretching freshly formed artificial filaments, a thread driven rotor bath guide with vanes affixed to its back is employed.

Pat. 2,083,252. Method of Producing Artificial Thread. June 8, 1937. A method for preparing artificial threads of improved tenacity and elongation from viscose solutions by applying uniform tension without substantial sliding friction as a means for stretching the freshly extruded threads in the coagulating bath. Bath rollers and rotors of various types are employed as the tension applying means.

Pat. 2,098,620. Artificial Thread Treatment. Nov. 9, 1937. In order to improve the shrinkage uniformity of cakes of artificial yarn during drying, the outer surface of the package is covered with a moisture impermeable rubber sleeve.

Pat. 2,098,628. Artificial Thread and Process of Producing Same. Nov. 9, 1937. In the wet spinning process for the production of artificial silk, threads of high tenacity and high denier are produced by the use of a rotating vane guide having an attachment to induce a flow of coagulating bath across the filaments between the points where stretch is applied.

Pat. 2,098,633. Apparatus for the Production of Artificial Thread. Nov. 9, 1937. An imperforate centrifugal spinning bucket having a plurality of internal, axially extending grooves therein to permit the drainage of liquids therefrom.

Pat. 2,131,180. Thread Winding Apparatus. Sept. 27, 1938. A spinning bobbin chuck for removably mounting a bobbin or spool on a rotating spindle.

Pat. 2,133,715. Method of Producing Artificial Thread. Oct. 18, 1938. The use of roller bath guides in combination with a 45 per cent sulfuric acid bath for producing high tenacity viscose yarn.

Pat. 2,139,449. Method and Apparatus for Producing Artificial Thread. Dec. 6, 1938. The spinning and winding of a plurality of threads simultaneously as a single bobbin spin cake.

Pat. 2,218,461. Manufacture of Thread. Oct. 15, 1940. A yarn collecting bucket having a "cloverleaf" cross-section for the purpose of producing a cake of yarn having uniform characteristics.

Pat. 2,218,462. Manufacture of Thread. Oct. 15, 1940. A process for producing yarn to obtain uniform characteristics which comprises the formation and treatment of a bucket cake having a "cloverleaf" cross-section.

Pat. 2,244,492. Process and Apparatus for Yarn Winding. June 3, 1941. Method and apparatus for winding transfer tails on bobbin spinning packages.

Pat. 2,265,646. Production of Regenerated Cellulose Threads. Dec. 9, 1941. Viscose process yarn of high tenacity is prepared by the hot dip process using a short travel in an aqueous hot bath, which is held above 60° C., comprising sulfuric acid or normal coagulating bath.

Pat. 2,267,055. Production of Regenerated Cellulose Yarn. Dec. 23, 1941. Viscose process yarn of less than 1.0 denier per filament as made by the hot dip process.

Pat. 2,273,240. Production of Yarn. Feb. 17, 1942. Bath guide arrangement for tension spinning, employing roller guides which float on the bath surface when not in use, but submerge when in use.

Pat. 2,307,863. Spinning of Artificial Filaments. Jan. 12, 1943. Spinning process wherein the spinning bath immediately surrounding the spinneret is maintained at a higher temperature than the remainder of the bath.

Pat. 2,307,864. Method of Spinning Artificial Filaments. Jan. 12, 1943. Yarn is spun at high speed into a single bath maintained at a temperature above 60° C.

Pat. 2,324,437. Yarn Production. July 13, 1943. Avoiding substantial cratering of spinnerets while using a coagulating bath containing a high concentration of zinc sulfate by spinning a low caustic viscose thereinto.

Pat. 2,333,278. Yarn Apparatus. Nov. 2, 1943. The use of conical nip rolls in automatically controlling the rate and point at which a yarn is removed from a slowly moving conveyor belt.

Pat. 2,333,279. Yarn Handling. Nov. 2, 1943. The use of a snubbing tension device to automatically control the rate and point at which a yarn is removed from a slowly moving conveyor belt.

Pat. 2,340,611. Yarn Production. Feb. 1, 1944. A stationary rod for eliminating oscillation from the path of a freely descending yarn.

Pat. 2,345,601. Yarn Winding. Apr. 4, 1944. An improved mechanism comprising a single non-symmetrical cam, for activating the traverse guide of a bobbin spinning machine, and preventing the formation of shoulder ridges in the resulting yarn package.

Pat. 2,347,883. Production of Cellulosic Structures. May 2, 1944. A sulfuric acid spinning bath containing from 1 to 8 per cent manganous sulfate together with from 0.1 to 1 per cent zinc sulfate.

Pat. 2,347,884. Method of Producing Cellulosic Structures. May 2, 1944. A sulfuric acid spinning bath containing from 1 to 8 per cent chromic sulfate together with from 0.1 to 1 per cent zinc sulfate.

Pat. 2,350,182. Yarn Production. May 30, 1944. Method and apparatus for passing yarn in a helical manner about a pair of spaced rotating rollers.

Pat. 2,364,273. Production of Cellulosic Structures. Dec. 5, 1944. Sulfuric acid spinning baths containing from 1 to 10 per cent ferrous sulfate together with from 0.1 to 1.0 per cent zinc sulfate are employed for the production of high tenacity viscose rayon yarns.

Pat. 2,364,407. Yarn Production. Dec. 5, 1944. Reduction of cratering by reducing and maintaining reduced the concentration of lead and sulfide ions in the coagulating-regenerating bath.

Pat. 2,370,180. Yarn Forwarding Apparatus. Feb. 27, 1945. A simple, expedient method of stringing-up freshly formed viscose rayon yarn around successively larger steps of a stepped feed wheel whereon the yarn is subjected to stretch.

Pat. 2,395,136. Method and Apparatus for Yarn Processing. Feb. 19, 1946. A stream of liquid directed from a nozzle upon yarn held between the walls of a V-shaped groove as a device for guiding an advancing yarn.

Pat. 2,410,419. Snubber Roller. Nov. 5, 1946. An

Pat. 2,237,844. Method of Washing Threadlike Struc-

Pat. 2,038,789. Thread Winding and Treating Machine.

Pat. 2,223,914. Thread Production. Dec. 3, 1940. Tension fluctuations during winding are reduced by pass-

Pat. 2,410,419. Snubber Roller. Nov. 5, 1946. An improved snubber roller with a plurality of stepped thread-contacting portions constructed with a slight taper towards the front of the roller and a flanged portion in advance of each step.

Pat. 2,434,963. Yarn-Transfer Mechanism. Jan. 27, 1948. A device for transferring yarn from a high tension zone (rollers), to substantially a zero tension zone (belt) comprising a roller having a plurality of flippers which are moved at an accelerated speed at a certain position to free the yarn therefrom.

Pat. 2,434,964. Yarn-Transfer Mechanism. Jan. 27, 1948. A yarn transfer device for advancing yarn from a high tension level to a low tension level, as from draw rollers to a belt, which comprises a plurality of rollers mounted in a planetary system and automatic means for driving only the yarn contacting rollers while maintaining other rollers stationary whereby to permit easy removal of wraps.

Patents Relating to Methods and Equipment for the Purification of Viscose Rayon Yarns

Pat. 1,931,245. Process of Treating Artificial Thread. Oct. 17, 1933. Addition of sodium silicate to the hypochlorite solution, employed for the bleaching of viscose rayon, to prevent corrosion of the aluminum carriers on which the yarn is disposed during the bleaching treatment.

Pat. 1,931,266. Process of Treating Artificial Threads. Oct. 17, 1933. Addition of sodium cyanide to the alkaline solutions, employed for desulfuring viscose rayon, in order to inhibit corrosion of the aluminum carriers on which the yarn is disposed during the desulfuring treatment.

Pat. 1,979,929. Process of Treating Artificial Threads. Nov. 6, 1934. Tightly wound bobbins of freshly spun viscose rayon are washed acid free and dried, then desulfured by immersing the bobbin package in a treating solution for a time sufficient to remove sulfur, no additional operations being employed to induce flow of solution through the yarn package during the latter treatment.

Pat. 2,064,300. Manufacture of Artificial Thread. Dec. 15, 1936. Compact, centrifugally spun cakes of viscose rayon are bleached with a solution which does not appreciably swell the yarn, such as an aqueous chlorine solution having a pH between 1.0 and 8.0.

Pat. 2,094,579. Artificial Thread and Method of Preparing Same. Oct. 5, 1937. Centrifugally spun cakes of washed and purified viscose yarn are centrifugally wrung at high speed prior to drying, to improve quality, especially uniformity of shrinkage throughout the cake.

Pat. 2,112,827. Apparatus for the Production of Yarn Packages. Apr. 5, 1938. A cake wash and bleach machine for treating cakes by the drip method in which the driving mechanism is protected from the treating solutions by panels fixed to the carriers and forming a substantially continuous wall between the treating zone and the driving mechanisms.

Pat 2,116,210. Regenerated Cellulose Structures and Method for Preparing Same. May 3, 1938. In the bleaching of dense packages of viscose rayon by the use of chlorine water, the pH is controlled in the range of 2.0 to 4.0 for the purpose of eliminating discoloration of the water layers of the cake by lead compounds.

Pat. 2,122,290. Artificial Thread and Method for Preparing Same. June 28, 1938. Washed bobbins of viscose rayon yarn are given a preliminary drying, in which the outer layers of yarn are dried to a greater extent than the inner layers thereof, as an aid in the production of a yarn having uniform shrinking characteristics.

Pat. 2,123,689. Apparatus for Washing Artificial Threads. July 12, 1938. An improved bobbin wash spindle especially suited for holding large bobbins of viscose rayon yarn.

Pat. 2,237,844. Method of Washing Threadlike Structures. Apr. 8, 1941. The use of recirculated water in the washing of rayon spinning cakes.

Pat. 2,287,517. Yarn Processing Apparatus. June 23, 1942. A yarn storing and advancing reel.

Pat. 2,300,254. Yarn Production. Oct. 27, 1942. Bucket cakes are supported in a deep, tapered bucket during a centrifugal purification operation, the taper being such that as the cake shrinks and drops deeper into the bucket, it is supported in place only by side wall contact with the same.

Pat. 2,317,747. Yarn Processing Apparatus. Apr. 27, 1943. A yarn storing and advancing reel.

Pat. 2,340,577. Yarn Treatment. Feb. 1, 1944. Wet yarn is dried by being ballooned as it is continuously passed through a drying medium.

Pat. 2,420,537. Advancing Reel Threading Device. May 13, 1947. Apparatus for automatically threading yarn onto an advancing reel especially onto an enclosed reel such as might be used for steaming or otherwise treating yarn thereon.

Pat. 2,428,703. Yarn-Advancing Reel. Oct. 7, 1947. A yarn advancing reel wherein a rotatable valve arrangement is used to regulate movement of the bars pneumatically.

Pat. 2,428,704. Yarn-Advancing Reel. Oct. 7, 1947. A yarn advancing reel provided with pneumatic means for moving the yarn supporting bars radially.

Pat. 2,429,534. Yarn-Advancing Reel. Oct. 21, 1947. A yarn advancing reel having a sealed enclosure around the central shaft and cam with radial bars connecting the movable yarn contacting bars to the cam followers, with the radial bars slidably mounted in packed glands.

Pat 2,432,046. Yarn-Advancing Reel. Dec. 2, 1947. A yarn advancing reel wherein the movable yarn-supporting bars are maintained parallel with the fixed bars by means of ball and socket mountings affixed to skewed discs.

Pat. 2,435,430. Yarn-Advancing Reel. Feb. 3, 1948. A yarn advancing reel involving double face cams which effect a plurality of advancing cycles per revolution.

Patents Relating to Processing and Treating of Viscose Rayon Yarns

Pat. 1,981,885. Thread-Treating Device. Nov. 27, 1934. An oiling device for winding machines in which the thread is brought into contact with an oil coated roll. Uniform application of oil over a wide range of thread speeds, as in the winding of yarn onto a cone at constant spindle speed, is regulated by a compensating mechanism, actuated by surface contact with the cone, which changes the length of yarn contacting the oiler roll as the linear thread speed changes by continuously shifting the point of departure of the yarn from an oiler roll.

Pat. 2,004,153. Apparatus for Winding Thread on a Bobbin. June 11, 1935. A soft, liquid permeable yarn package is produced by use of a sponge rubber roll for surface driving a take-up bobbin on a throwing machine.

Pat. 2,015,392. Manufacture of Artificial Threads. Sept. 24, 1935. Shrinkage of bobbin process yarn is equalized by washing and drying a freshly spun bobbin package, rewinding to a second bobbin so that the yarn originally on the inside of the first package is now on the outside of the second, and then rewetting and drying the second bobbin package.

Pat. 2,017,242. Dressing Composition. Oct. 15, 1935. A coning oil composition comprising a phosphatide, such as lecithin, a mineral oil and a vegetable oil.

Pat. 2,038,789. Thread Winding and Treating Machine. Apr. 28, 1936. A roll-type oiler for regulating the quantity of oil applied to yarn during winding, wherein the thread is caused to wipe over a greater arc of the roll and at a decreasing angle to the axis of the roll as the linear speed of the thread increases.

Pat. 2,046,847. Method of Making Artificial Thread. July 7, 1936. A method for improving the uniformity of shrinkage of bobbin yarn which comprises throwing the washed yarn in the gel state so that it dries substantially during its travel from the spinning bobbin to a take-up bobbin.

Pat 2,054,280. Disintegration of Fibers. Sept. 15, 1936. A method of opening chips of rayon staple fibers which comprises blowing the aggregates at high velocity into contact with pin baffles inclined in the direction of flow.

Pat. 2,060,733. Process of Treating Cellulose and Derivatives Thereof. Nov. 10, 1936. Cellulosic fibers are stabilized against aging by treating with organic carbamates or thiocarbamates.

Pat. 2,080,043. Fabric and Process of Preparing Same. May 11, 1937. A crush resistant pile fabric comprising a formaldehyde treated regenerated cellulose pile and a backing which is substantially non-reactive to formaldehyde.

Pat. 2,086,418. Treatment of Cellulosic Bodies. July 6, 1937. Cellulosic materials are stabilized against aging by treatment with a polycyclic phenol having at least two non-condensed carbocyclic nuclei.

Pat. 2,086,419. Process of Treating Cellulosic Bodies. July 6, 1937. Cellulosic materials are stabilized against light, oxidative, hydrolytic and other deleterious effects by treatment with organic or inorganic thiocyanates.

Pat. 2,119,963. Package and Method of Producing Same. June 7, 1938. A yarn package adapted for direct mounting on a throwing spindle of an uptwister for the production of crepe yarn.

Pat. 2,126,000. Dressing Textile Threads. Aug. 9, 1938. An improved oiling composition for textile threads comprising at least 50 per cent unsubstituted napthenes in combination with one or more animal or vegetable oils.

Pat. 2,154,609. Artificial Thread Production. Apr. 18, 1939. An improved tensioning guide for the spinning of high tenacity staple rayon comprising a plurality of thread driven rollers.

Pat. 2,167,546. Skein Lacing. July 25, 1939. Skein lacings made of artificial staple fiber, especially useful for the lacing of fine denier rayon.

Pat. 2,170,024. Cellulose Esters and Method. Aug. 22, 1939. Crease-resistant cellulosic materials are obtained by treatment with dicarboxylic acids, dianhydrides or dichlorides.

Pat. 2,193,117. Thread Winding. Mar. 12, 1940. A method and means for automatically winding transfer tails on the end of cores or supports for yarn packages.

Pat. 2,211,954. Apparatus for the Production of Artificial Thread. Aug. 20, 1940. An apparatus for twisting and winding soft cakes of bobbin yarn wherein the take-up bobbin on an uptwister is driven by a roll pressing against its side with only enough pressure to prevent slip.

Pat. 2,217,766. Staple Cutting Apparatus. Oct. 15, 1940. Continuous filaments are cut into fibers of staple length by concurrently passing filaments and a liquid downward through a conduct, severing, the filaments by means of a flying knife cutter positioned at the lower end of the conduct and removing the cut filaments and liquid through a second and larger conduct positioned in axial alignment with the initial one.

Pat. 2,223,912. Thread Production. Dec. 3, 1940. A thread tensioning device of the pinching type.

Pat. 2,223,914. Thread Production. Dec. 3, 1940. Tension fluctuations during winding are reduced by passing yarn over a positively driven roller having a surface speed greater than that of the windup device and so arranged to permit yarn slippage thereon.

Pat. 2,223,923. Thread Production. Dec. 3, 1940. A process for winding yarn from cakes with substantial elimination of "shiners" which comprises reducing the total amount of snubbing angle between the cake and the cone.

Pat. 2,224,665. Production of Rayon Structures. Dec. 10, 1940. A beam package of untwisted high tenacity yarn, the yarn being sized to such an extent and with a suitable composition so as to bind the yarn filaments together during beaming while not interfering with good twisting and subsequent operations.

Pat. 2,232,542. Process for the Production of Artificial Thread. Feb. 18, 1941. The method of twisting and winding cakes of bobbin yarn on an uptwister whereby a uniformly soft-wound package adapted to be subjected to liquid purification is produced.

Pat. 2,265,624. Yarn Winding. Dec. 9, 1941. An apparatus for automatically stopping the action of a winding machine when a cone or other package of yarn being produced has reached a desired size.

Pat. 2,300,073. Yarn Winding. Oct. 27, 1942. An automatic transfer tail winding device for cone winding machines.

Pat. 2,311,027. Textile Treatment. Feb. 16, 1943. A crushproofing treatment wherein regenerated cellulose textiles are impregnated with formaldehyde and an acid reacting catalyst, dried, and then heated by immersion in a hot organic liquid bath having a basic reaction.

Pat. 2,311,080. Textile Treatment. Feb. 16, 1943. Crushproofing textile material by treatment with an aqueous solution of formaldehyde together with an acid reacting catalyst, drying, then heating by immersion in a hot, substantially anhydrous non-hydrolysable liquid.

Pat. 2,317,874. Yarn Winding Device. Apr. 27, 1943. A roll-type oiler for regulating the quantity of oil applied to yarn during winding, wherein the yarn is caused to balloon during removal from a supply package, then passed over the surface of an oiler roll and the magnitude of the balloon increased, allowing greater contact of the yarn with the oiler roll, as the linear speed of the yarn increases.

Pat. 2,324,584. Yarn Winding. July 20, 1943. Method of winding a plurality of yarns onto beam packages so that they may be unwound without entanglement of adjacent yarns or filaments thereof, which comprises winding a single yarn with a traverse from end to end of the beam between the layers formed by the plurality of yarns.

Pat. 2,325,147. Fiber Producing Apparatus. July 27, 1943. An apparatus for picking or tearing apart a blanket of fibers.

Pat. 2,328,541. Yarn Guide. Sept. 7, 1943. A quick-threading guide which is capable of confining the yarn under adverse conditions so that the yarn leaves the guide only when it has run through or has become broken.

Pat. 2,339,854. Tension Device for Yarn Winding Machines. Jan. 25, 1944. A pinch tension device with a corrugated back plate.

Pat. 2,350,168. Processing Yarn. May 30, 1944. Compensation stretching of package-spun yarn on a slasher to eliminate non-uniformities in physical properties, particularly elongation.

Pat. 2,357,079. Winding Apparatus. Aug. 29, 1944. A disc-type oiler for regulating the quantity of oil applied to yarn during winding, wherein the yarn is passed against the flat, end face of a disc rotating in an oil bath and the cord of contact of the yarn with the disc face is continuously increased as the speed of the yarn increases.

Pat. 2,360,946. Reinforced Rubber Structures. Oct.

Patents Relating to Protein Fibers

Pat. 1,905,188. Positive Photographic Film. Apr. 25, 1933. A multilayer film having a relatively insensitive

non-hardening bleach bath, re-developing an outer layer of said element without re-exposing the element, directly removing an inner silver salt image and printing a com-

Pat. 2,360,946. Reinforced Rubber Structures. Oct. 24, 1944. A non-resinous, non-polymeric tannin-amine reaction product as an adhesive for bonding rubber to tire cord.

Pat. 2,364,375. Yarn Production. Dec. 5, 1944. A yarn tensioning apparatus comprising a yarn driven roller which is held by spring tension against a felt pad and imparts tension to the yarn as it is passed around the roller.

Pat. 2,392,268. Thread Breaker. Jan. 1, 1946. A roll for holding and breaking the waste end of a yarn after it is tied into a web of yarns as in a continuous spinning process.

Pat. 2,406,768. Yarn Twisting Apparatus. Sept. 3, 1946. A bobbin cap, for use in uptwisting from spin bobbins, which automatically locks in place.

Pat. 2,410,807. Apparatus for Converting Tow to Top. Oct. 29, 1946. An apparatus for converting tow to top comprising knives affixed to the faller bars of a gill box in accordance with a predetermined pattern to cause severance of the filaments into predetermined lengths as the tow is passed therethrough.

Pat. 2,419,756. Process of Sizing Packages of Yarn. Apr. 29, 1947. A sized cake of viscose rayon yarn suitable for flat-knitting is obtained by treating a spun cake of yarn with an aqueous emulsion of waxy materials.

Patents Relating to the Production of Novelty Yarns

Pat. 2,133,322. Manufacture of Threads From Solutions of Materials. Oct. 18, 1938. Unevenly coated yarn, such as regenerated cellulose yarn, is produced by applying a coating to a preformed thread and allowing the coating to run back on the thread to form small beads or globular irregularities along the length thereof.

Pat. 2,161,034. Production of Textiles. June 6, 1939. A process for producing yarn, such as regenerated cellulose yarn, having high shrinkage characteristics by treating with a shrinking agent, such as a calcium chloride or potassium thiocyanate, while under tension.

Pat. 2,278,879. Yarn Structure and Method and Apparatus for Producing Same. Apr. 7, 1942. Process and apparatus for the production of a novelty yarn by cutting, tearing or breaking some of the filaments of a continuous filament yarn at spaced points and collecting the ends into nubs which are well anchored to the yarn body.

Pat. 2,293,003. Yarn Structure. Aug. 11, 1942. As a product, a nubby yarn produced by breaking some of the filaments of a continuous filament yarn at spaced intervals and collecting the ends into bunches which are well anchored to the yarn body.

Pat. 2,316,245. Yarn Preparation. Apr. 13, 1943. In an apparatus for forming a novelty yarn by breaking some of the filaments of a continuous filament yarn at spaced intervals and collecting the ends into nubs anchored to the yarn body, the device for anchoring the nubs to the yarn body comprises two resilient surfaces between which the yarn is traversed.

Pat. 2,328,074. Manufacture of Textile Yarn. Aug. 31, 1943. A novelty ripple yarn is produced by combining two or more gel yarns having different shrinkage characteristics and allowing them to dry.

Pat. 2,391,978. Apparatus for the Production of Artificial Filaments. Jan. 1, 1946. Producing uneven denier yarn with abrupt and irregular changes in nub formation by extruding a spinning solution through a geared valve mechanism that opens and closes at least 400 times per minute.

Pat. 2,392,349. Apparatus. Jan. 8, 1946. An apparatus for obtaining a variable speed drive from a constant speed input involving a planetary gear system, especially useful for variably driving a viscose spinning pump to produce uneven denier yarn.

Patents Relating to Protein Fibers

Pat. 2,143,023. Protein Derivative. Jan. 10, 1939. Acid soluble protein derivatives, which may be formed into films or filaments, are prepared by reacting zein or other proteins with an aldehyde or ketone and a primary or secondary amine.

Pat. 2,211,961. Artificial Product and Method for Producing Same. Aug. 20, 1940. Stretching a coagulated globular protein 200 to 2000 per cent in hot aqueous bath, such as a sodium chloride bath.

Pat. 2,399,084. Production of Shaped Structures From Proteins. Apr. 23, 1946. Protein solutions of improved stability and which lead to the production of shaped articles therefrom characterized by a reduced tendency to stick together are obtained by adding salts of synthetic linear polymeric acid, such as a hydrolysed interpolymer of maleic anhydride and vinylidene chloride, thereto.

Pat. 2,403,251. Production of Fibers From Proteins. July 2, 1946. A wetting agent, such as sodium dodecyl sulfate, is added as a solubilizing agent to casein solutions used for the preparation of artificial filaments.

Pat. 2,409,475. Shaped Protein Structures and Their Preparation. Oct. 15, 1946. High tenacity protein fibers are produced by spinning into a coagulating bath containing a mineral acid, in organic salts, and formaldehyde.

Pat. 2,429,214. Shaped Protein Structures and Their Preparation. Oct. 21, 1947. Prolamine synthetic fibers are prepared by spinning an alkaline solution of a prolamine into a bath containing a mineral acid, formaldehyde, a water soluble salt and a cation-active wetting agent and then subjecting to a hardening process.

Pat. 2,436,156. Preparation of Shaped Objects, Filaments, and the Like. Feb. 17, 1948. Alkaline spinning solutions of acid coagulated reduced wool containing sodium or ammonium hydroxide and the alkali metal salt of a polymeric carboxylic acid, such as sodium salt of a styrene-maleic acid interpolymer.

Patents Relating to Deacetylated Chitin

Pat. 2,040,880. Process for the Preparation of Films and Filaments and Products Thereof. May 19, 1936. Preparation of films and filaments from partially deacetylated but substantially undegraded chitin by forming the amine salt with an organic acid to effect solution and coagulating in the desired form employing a suitable bath.

Pat. 2,047,218. Compositions Comprising Deacetylated Chitin. July 14, 1936. Sizing of fabrics with deacetylated chitin.

Pat. 2,072,771. Chemical Products and Process of Preparing the Same. Mar. 2, 1937. The preparation of alkyl and alkyl substituted derivatives of deacetylated chitin wherein deacetylated chitin is reacted in acid, neutral or alkaline medium with an alkylating agent.

Pat. 2,099,363. Textile. Nov. 16, 1937. Textile finishes comprising deacetylated chitin and higher aliphatic anhydride emulsions.

SCHEDULE 7

Patents Relating to Color Photography

Pat. 1,900,459. Multipack Negative System. Mar. 7, 1933. In a multi-pack negative system, a front light sensitive emulsion having coated thereon a relatively thin, transparent, water-permeable, dyed colloid as a filter, and a rear emulsion having a like coating thereon which is undyed. The use of like colloids improves contact.

Pat. 1,900,468. Multipack Negative System. Mar. 7, 1933. A color separation negative material suitable for use in a multipack system, said negative material comprising a transparent support, a light sensitive emulsion upon said support, the emulsion having coated thereon a relatively thin, transparent, water permeable, gelatinous coating, having a light filtering dye mordanted therein.

Pat. 1,905,188. Positive Photographic Film. Apr. 25, 1933. A multilayer film having a relatively insensitive light-restraining fine-grained, silver halide layer, between two light-sensitive emulsion layers, to prevent light from passing through one sensitive layer into another.

Pat. 2,166,617. Photographic Processing. July 18, 1939. A process of fixing the outer image layer only of a photosensitive element for color photography having at least two superposed layers which comprises using an excessively viscous fixing bath containing 50 to 90% by weight of water soluble thiosulfates or thiocyanates.

Pat. 2,206,054. Method of Forming Color Screens. July 2, 1940. A color screen is formed by moving a photosensitized film past a high frequency intermittent narrow beam of light at an angle to the beam axis. The exposed element is developed and the lines formed are colored one color. The element is re-exposed in a similar manner at a different angle and the exposed lines colored a different color. A third color is formed by exposing the remaining sensitive material and coloring.

Pat. 2,220,929. Photographic Developing Solutions Containing Aromatic Hydrazines, Their Preparation and Use. Nov. 12, 1940. The preparation and use of a photographic developer formed by solubilizing a primary aromatic hydrazine in an aqueous solution of a long chain surface active polar compound containing a hydrophilic group and a hydrophobic group comprising a hydrocarbon group of 8 or more carbon atoms.

Pat. 2,224,163. Color Photography. Dec. 10, 1940. Individual color component records are produced by printing an intermediate record of a processed multilayer image record, fully bleaching the outer image layer of the multilayered image record, fixing and reforming the bleached record by re-exposing through said intermediate record and the remaining record of said multilayer image record.

Pat. 2,297,732. Photographic Color Process Involving the Formation of Azo Dye Images. Oct. 6, 1942. The process comprises exposing an element having at least one silver halide emulsion layer containing an immobile dye former capable of forming a dye by color development and an azo dye, said dye former being a colloid containing water and weak alkali solubilizing groups, color developing the exposed elements forming an azo dye and bleaching the color developed dye images.

Pat. 2,310,980. Reducing Bath for Color Photography and Process of Using the Same. Feb. 16, 1943. An aqueous reducing bath incapable of distinguishing between exposed and unexposed silver halides in reducing action containing an arylene diamino photographic developing agent and a water-soluble nitrogenous base free from negative and hydroxyl groups attached to carbon.

Pat. 2,310,981. Reversal Process of Color Photography. Feb. 16, 1943. The process of developing an exposed silver salt layer to a negative and developing the reversed image without re-exposure in the presence of a color former with reducing agent free of nuclear hydroxyl groups and an aliphatic amine free of negative and hydroxyl groups.

Pat. 2,310,982. Photographic Reversal Process of Producing Dye Images Without Re-Exposure. Feb. 16, 1943. Black and white reversal dyestuff images are obtained by developing an exposed silver salt layer to a negative and then developing the residual silver salt image without re-exposure in the presence of a black color former with a reducing agent free of nuclear hydroxyl groups and a nitrogenous base free of negative and hydroxyl groups.

Pat. 2,316,294. Process for Obtaining Individual Color Component Records From Multilayer Differentially Color Sensitised Film Element. Apr. 13, 1943. A process for obtaining individual color-component records from a multilayer differentially color sensitised film element containing developed component images which comprises printing an intermediate record of said superposed records, converting the silver images to silver salt images by using a non-hardening bleach bath, re-developing an outer layer of said element without re-exposing the element, directly removing an inner silver salt image and printing a combination of said intermediate record with the remaining images in said film.

Pat. 2,328,034. Photographic Element and Process. Aug. 31, 1943. A color-yielding element which comprises a water-permeable layer containing a dyestuff forming component is contacted with a separate element bearing a bleached silver image in the presence of a color-forming developing agent until a colored image is formed in the color element. The elements are separated and the color element is superimposed in register with similarly obtained elements to form a color print.

Pat. 2,335,972. Photographic Process and Composition. Dec. 7, 1943. The process of treating a photographic element containing bleached silver images in a bath containing a water-soluble reducing compound of sulfur or selenium capable of forming an insoluble silver compound image consisting of silver sulfide or silver selenide and treating the resulting image in a coloring and toning bath containing a water-soluble hydrocyanic acid salt and a water-soluble heavy metal salt which forms a yellow compound with the sulfides or selenides.

Pat. 2,339,213. Color Development Process Using Aromatic Hydrazines. Jan. 11, 1944. A process of color photography which comprises developing a photographic element having at least one layer containing reducible silver salts in a developing solution containing as the sole type of organic reducing agent a primary aromatic hydrazine in the presence of an azo coupling component to form a dye.

Pat. 2,342,620. Azo Reversal Process of Color Photography. Feb. 22, 1944. A photographic process which comprises exposing a multilayer photographic element, each layer being in operable contact with immobile color formers, developing the element in a developer having a color coupling developing agent treating the element with a diazotised 4-nitroaniline containing a 2-substituent, decolorising the dyes formed and removing the silver and silver salts subsequent to said development.

Pat. 2,365,206. Processes of Color Photography. Dec. 19, 1944. A photographic reversal process which comprises developing an exposed photographic element with an ordinary developer and developing without re-exposure the reversal silver halide image with a developer containing a primary aromatic amino developing agent, a color former and a heterocyclic amine.

Pat. 2,369,171. Methods of Photography. Feb. 13, 1945. In multilayer color yielding elements, colored image records are made by exposing and developing one layer and coloring by dye coupling or toning. The other layer is colored by coupling on imbibition contact with a separate photographic element bearing a color record comprised of a reducible silver salt in the presence of a color-forming developer.

Pat. 2,376,297. Process of Color Photography. May 15, 1945. To produce a positive dye image, a colloid layer containing a negative silver image and diffusely dyed with dyes which can be bleached or destroyed by reducing agents is treated with an aqueous solution of imino-aminomethanesulfinic acid which bleaches the dye in proportion to the silver image. The silver image is then bleached and removed.

Patents Relating to Photographic Sensitizing Dyes

Pat. 2,010,388. Photographic Emulsion. Aug. 6, 1935. A photographic emulsion which is sensitive to that region of the spectrum to which a silver bromide emulsion is normally sensitive but not to red light nor to any substantial extent to green light, said emulsion comprising silver chloride and a sensitising dye of the oxacarbocyanine group.

Pat. 2,272,163. Methine Dyestuffs. Feb. 3, 1942. A process for the production of merocyanine dyestuffs—com-

ing a thin layer of a compound taken from the group consisting of N-monoaryl-hydroxylamines and their nitrones

anti-halation layer composed of an alkali soluble resin

ortho-phenylenediamine, characterised in that said three compounds are present in molecular ratios of small whole

Pat. 2,272,163. Methine Dyestuffs. Feb. 3, 1942. A process for the production of merocyanine dyestuffs—comprising condensing a 5-membered ring containing nitrogen—adjacent to a carbonyl which is attached to an active methylene group in the presence of an anhydride of a monobasic organic carboxylic acid and an acid binding agent with quaternary salts of heterocyclic nitrogen compounds having a reactive methyl group in the alpha or gamma position to the nitrogen atom.

Pat. 2,310,640. Production of Compounds of the Cyanine Type. Feb. 9, 1943. Process for the production of dyes of the cyanine type consisting of forming the quaternary ammonium salt of an alpha or gamma alkyl thioether of a heterocyclic nitrogen base in the presence of a quaternary cyclic ammonium salt having a reactive methyl group. The resulting dyes are photographic sensitizers.

Patents Relating to Photographic Emulsion Additions, Modifications, Etc.

Pat. 2,090,607. Selective Desensitizer. Aug. 17, 1937. A gelatine-silver halide emulsion of reduced yellow-red sensitivity containing a purine in the approximate proportion of 50 milligrams to 3 grams per kilogram of gelatine and silver halide in said emulsion.

Pat. 2,112,217. Making Sensitized Elements. Mar. 22, 1938. X-ray sensitive elements are produced by incorporating in the silver halide emulsion from .015 to 1.5 grams of Pontacyl Fast Violet 10B, Crystal Violet, National Amaranth, National Azure, or National Nocturne per kilogram of emulsion. The resulting elements are unaffected by screen after glow while the sensitivity to X-rays and primary screen glow is unimpaired.

Pat. 2,197,809. Photographic Process and Emulsion Utilizing Cation-Active Surface Active Agents. Apr. 23, 1940. Cation-active surface-active agents including quaternary ammonium salts and particularly betaine compounds are claimed for use in emulsion layers, processing baths, or separate layers to improve the wetting characteristics of the emulsion and eliminate air bubbles.

Pat. 2,376,005. Photographic Emulsion and Process of Making Same. May 15, 1945. A process of flexibilizing photosensitive gelatin layers which comprises adding to a molten emulsion before coating an aqueous dispersion of a water-insoluble synthetic resin polymerized to the state of a soft gel-like solid.

Pat. 2,392,503. Temporary Support for Photographic Gelatin Layers and Method of Transferring Same to Permanent Supports. Jan. 8, 1946. A photosensitive emulsion transfer element composed of a paper support, a water insoluble prolamine interlayer and an emulsion layer. Upon wetting the back of the paper support after cementing the emulsion to a permanent support the paper retaining the prolamine layer readily separates from the emulsion layer.

Patent Relating to Non-Gelatin, Light-Sensitive Elements

Pat. 2,405,523. Light-Sensitive Photographic Compositions and Elements. Aug. 6, 1946. A coating composition comprising a water-miscible organic solvent having dissolved therein a water-insoluble resinous polyvinyl acetate free from hydroxyl groups and having a water absorption of at least 10%, a light sensitive diazonium salt, a diazo stabilizer, a diazo coupling component and not more than 10% of water.

Patent Relating to New Light Sensitive Compounds

Pat. 2,426,894. Light-Sensitive Layers of N-Monoaryl-hydroxylamines and Their Nitrones and Process of Printing Thereon. Sept. 2, 1947. The process which comprises printing a photographic image by means of light rays onto a radiation-sensitive element comprising a support bearing a thin layer of a compound taken from the group consisting of N-monoaryl-hydroxylamines and their nitrones and washing the undeveloped colorless compound from the layer with an aqueous solution.

Patents Relating to Film Base Compositions

Pat. 1,961,251. Reduction of Viscosity of Cellulose Acetate. June 5, 1934. The process of preparing a low viscosity cellulose acetate comprising acetylating cellulose at at least 30° C. and then hydrolysing at 50–70° C. for about 3¼ hours with a water ratio to original cellulose of substantially 10–100 and a sulphuric acid ratio to original cellulose of substantially 20–100.

Pat. 1,973,886. X-Ray Film. Sept. 18, 1934. An X-ray sensitive film for intensifying and clarifying the detail of the finished radiograph, said film having added thereto a permanent tint with a light transmission curve having a maximum transmission in the short-wave area and minimum transmission in the long-wave area of the visible spectrum.

Pat. 2,140,089. Moisture Proofed Film. Dec. 13, 1938. A transparent cellulosic film support having a moisture-proofing coating containing a material selected from the group consisting of the polymers and interpolymers of an alkyl methacrylate with di-butyl phthalate as plasticizer applied to both surfaces of said support; and a gelatino-silver halide emulsion applied over at least one of said moisture-proofing coats.

Patents Relating to Treatments for Improving Film Base

Pat. 1,947,160. Treating Photographic Film. Feb. 13, 1934. The method of cockle-proofing photographic film of cellulose acetate containing moisture repelling agents which comprise thoroughly and carefully drying the film, and subsequently applying to both sides thereof a relatively thin coating of a solution containing by weight not more than 10% nitrocellulose, and redrying.

Pat. 1,947,419. Treating Cellulose Esters. Feb. 13, 1934. The method of rapidly seasoning transparent film base containing cellulose acetate which includes the steps of bathing in methanol and subsequently drying said base under only enough tension to prevent wrinkling during said drying.

Patents Relating to Films With Non-Halation or Day-Light Loading Backings

Pat. 2,203,767. Antihalation Photographic Element. June 11, 1940. A film comprising a transparent support, a photosensitive coating on one side of the support and a layer coated on the other side of the support formed of a water soluble vinyl alcohol polymer which layer contains a water soluble sulfate of an aliphatic monohydric alcohol containing at least 8 carbon atoms and an antihalation dye. This film may be used in a daylight loading cartridge.

Pat. 2,203,768. Antihalation Photographic Element. June 11, 1940. A photographic film comprising a transparent support, a photosensitive layer on one side of the support, and a layer coated on the other side of the support formed of a water soluble carbohydrate glycollate which contains a water soluble sulfate of an aliphatic monohydric alcohol containing at least 8 carbon atoms and an antihalation dye. This film may be used in a daylight loading cartridge.

Pat. 2,258,609. Non-Halation Photographic Element. Oct. 14, 1941. A photographic film element comprising a light sensitive emulsion layer on the opposite face, consisting of a water-insoluble-ethyl cellulose which is soluble in water-ethanol mixtures predominating in the latter, and containing a dye.

Pat. 2,278,457. Non-Halation Photographic Element. Apr. 7, 1942. A non-halation photographic element comprising a light-transmitting support, a photosensitive layer on one face thereof, an anti-halation layer composed of a water-soluble glue and an anti-halation dye upon the other face and a protective layer superimposed upon said anti-halation layer composed of an alkali soluble resin containing about an equal amount of an anionic surface active substance.

Pat. 2,289,397. Photographic Element Having Removable Anti-Halation Layers. July 14, 1942. A photographic element comprising a transparent base, a gelatino silver halide emulsion on one side of the base and a removable anti-halation layer on the other side of the base composed of a water soluble high molecular weight binding agent and a dye having soap-like properties.

Patents Relating to Film Processing, Chemicals, Solutions, Etc.

Pat. 2,173,739. Fine-Grain Photography. Sept. 19, 1939. A fine-grained photographic image of low silver opacity and of normal printing opacity comprising a combined silver and dye image, said image being formed in situ with the silver image, the silver portion of said combined image being developed to a gamma not greater than approximately 0.5.

Pat. 2,195,405. Photographic Fixative Composition. Apr. 2, 1940. At least one compound taken from the group consisting of sulfamic acids, substances which readily yield sulfamic acids by hydrolysis in aqueous baths, and water soluble salts of sulfamic acids in a photographic fixing composition to inhibit sludging and sulfurization.

Pat. 2,195,419. Process for Reducing the Density of Silver Images and Compositions Therefor. Apr. 2, 1940. An aqueous photographic bleach bath comprising an oxidizing agent and a compound taken from the group consisting of sulfamic acids and their easily hydrolysable salts.

Pat. 2,214,216. Chemical Composition for Acid Hardening Photographic Fixing Baths. Sept. 10, 1940. A dry mixture of chemicals which when dissolved in water produces an acid hardening, non-sludging photographic fixing bath, including a silver halide solvent, a sulfite, and a dextro-gluconate material, particularly aluminum gluconate, which produces gluconic ions in a fixing bath.

Pat. 2,214,765. Process for Recovering Silver From Photographic Solutions. Sept. 17, 1940. A process of recovering precious metals from solutions of their salts which comprises treating the solutions with an organic hydrophilic colloid containing a finely divided metal which is higher in the electromotive series than the metal to be recovered.

Pat. 2,295,734. Photographic Fixative Composition Containing Boric Acid Esters of Polyhydric Alcohols of at Least Six Carbon Atoms. Sept. 15, 1942. A fixative composition comprising an aqueous solution containing a soluble thiosulfate fixing salt and at least one ester of a boric acid with a polyhydric alcohol having at least 6 carbon atoms and 6 hydroxyl groups as a stabilizer.

Pat. 2,315,534. Preparation of Ammonium Thiosulfates. Apr. 6, 1943. A process for preparing ammonium thiosulfate and amino-thiosulfates, which comprises treating an ammonium polysulfide with SO_2 in the presence of an excess of the hydroxide of the same ammonium group. High conc. of solution, higher yields and high purity are claimed.

Pat. 2,339,309. Photographic Reducing Composition and Process. Jan. 18, 1944. A reaction product of hydrogen peroxide with thiourea called amino-imino-methane sulfinic acid, formamidine sulfinic acid, or thiourea dioxide is capable of reducing silver salts in either an acid or an alkaline medium. In acid solution, the development is preferential. In basic solution, the reduction is complete, making possible reversal development. Redevelopment of a bleached image gives sepia tones through sulfide formation.

Pat. 2,368,255. Crystalline Ternary Addition Compounds. Jan. 30, 1945. As a new product the crystalline ternary addition compound of each of the three compounds, a polyhydroxy benzene, para-amino-phenol, and ortho-phenylenediamine, characterized in that said three compounds are present in molecular ratios of small whole numbers, said addition compound having a sharp melting point. The resulting compound is useful in photographic developers.

Pat. 2,397,676. Photographic Developer Compositions. Apr. 2, 1946. A process which comprises developing a silver halide latent image with a developer comprising the crystalline addition compound of each of the three compounds, a poly-hydroxy-benzene, a member of the group consisting of ortho-amino-phenols and para-amino-phenols, and an ortho-phenylene-diamine with hydrogen, a halogen, or an alkyl in the 4 position.

Patents Relating to Packages, Containers, Etc., for Photographic Materials

Pat. 1,962,959. Spooled Film. June 12, 1934. In combination, a curl-preventing, non-contaminating cinema reel for a camera magazine comprising a non-fogging, non-disintegrating smooth-surfaced, one piece, seasoned spool, integrally molded from a phenol formaldehyde resin, and a roll of light-sensitive cellulose ester cine film wound thereon.

Pat. 2,072,625. Reloadable Film Cartridge. Mar. 2, 1937. A light proof cartridge comprising a casing which will not spring open and provided with a light seal that acts as a brake to prevent accidental unwinding of the film. The cartridge is particularly adapted to 35 mm. miniature still cameras.

Pat. 2,082,257. Film Holder. June 1, 1937. A film package comprising an envelope formed of light weight material including an exposure wall and a back wall, a light guard separate and removable from the envelope, and a sheet of photographic film located in light-tight relation to the envelope and light guard and fixed against endwise movement.

Pat. 2,140,515. Holder for Sensitized Elements. Dec. 20, 1938. A cassette for photosensitive sheet film comprising a back member and a cover member one of which has a marginal elevation fitting a marginal depression in the other to bend a portion of the film out of the plane of the portion intended to receive the primary image exposure, and a closable aperture in the area of the marginal elevation to permit marking the film without fogging the image area.

Pat. 2,158,573. Non-Abrading Reloadable Cartridge. Apr. 11, 1939. A non-abrading reloadable photosensitive film cartridge comprising an unlined tubular casing provided with a straight longitudinal outwardly projecting slotted film guide having lips lined with light-excluding material; a removable and resealable cup-shaped cap sealed over each end of said casing; having portions covering and positioning the edges of the film guide and a flanged spool to rotate in light-excluding contact in the cartridge.

Pat. 2,173,505. Numbered Motion Picture Film. Sept. 19, 1939. A roll of cinema film comprising a film base; having on one side thereof, nonsmearing, permanently indelible, ink-printed marginal indicia; the other side of said base supporting an unexposed photosensitive emulsion unaffected by its close association with said indicia on said roll; and cinematic marginal perforations in said film in spaced relation to said indicia.

Pat. 2,188,690. Film Magazine. Jan. 30, 1940. A film magazine for a camera is constructed to receive for successive exposure a number of individual film packages or envelopes inserted in the magazine one at a time after each previously inserted film has been exposed; the several film packages being retained in the magazine until capacity is reached and the magazine removed in the dark room.

Pat. 2,327,713. Antistatic Photographic Package. Aug. 24, 1943. A package for photosensitized elements comprising a lightproof container at least one photosensitized element in said container having its photosensitive surfaces in contact with a surface of a felted, lightproof,

flexible, antistatic wrapping paper, the contacting surface of the paper surface being soft, resilient, non-abrasive, and of low physical density for reduced contact area.

Pat. 2,335,766. Package of Coiled Photographic Film. Nov. 30, 1943. A coil of film is loosely mounted on a floating sheet of substantially rigid material which has a hub portion which extends into the aperture at the center of the coil. The sheet has a greater diameter than that of the film coil and fits snugly into the outer container or film can, but can be removed therefrom.

Pat. 2,354,706. Photographic Package. Aug. 1, 1944. A lightproof box for photosensitive materials having a hinged cover fitting into a peripheral channel around three sides of the box to form a light lock. A tape sealing the lid to the box and a rip cord for rupturing the tape.

Patents Relating to Apparatus, Equipment, Etc., for Manufacturing or Processing Photographic Materials

Pat. 1,897,621. Cassette. Feb. 14, 1933. A cassette for screened X-ray exposures comprising an open frame, front and rear cover plates adapted to be held in said frame by edge pressure only and having interlocking edges for properly spacing said plates.

Pat. 1,898,858. Wrapping Machine. Feb. 21, 1933. A combined wrapping, taping and tape-severing machine for wrapping and sealing rolls of light sensitive film. Wrapping material is placed on the flat surfaces of the cylindrical roll. The sheets are crimped around the periphery and sealed together with tape.

Pat. 1,947,462. Method of Making Casting Wheels. Feb. 20, 1934. The method of making a wheel for casting film which includes preparing a wheel body, applying to said body, a non-continuous peripheral sheet of corrosion resisting steel, heating the sheet to expand it, welding the ends of the sheet together to form a continuous surface, and simultaneously locking the sheet to the wheel body, cooling the sheet to shrink it onto the wheel body, and then finishing surfaces of said sheet to render it suitable for casting film.

Pat. 1,987,387. Film Tinting Machine. Jan. 8, 1935. A machine for tinting a motion picture film in a stripe, the width of the picture space, leaving sufficiently clear untinted space between the picture space and the perforation to permit the photography of the sound track on the clear untinted space.

Pat. 2,051,222. Moisture Applying Machine. Aug. 18, 1936. A moisture applying machine, including a rotatable roll the outer surface of which is formed of resilient material such as soft rubber, the outer surface of which is annularly grooved, and a reservoir or container for applying liquid to the roll, mechanism for moving a sheet past said roll in contact therewith, and means such as a pressure roll to vary the amount of liquid carried by the moisture roll.

Pat. 2,058,670. Casting Wheel. Oct. 27, 1936. A wheel for casting films from solutions containing cellulose derivatives, that comprises a wheel body having mechanically attached thereto a peripheral integral casting element of substantial thickness composed principally of non-flaking corrosion resisting steel, said wheel body and said casting element having substantially the same coefficient of expansion.

Pat. 2,140,525. Method of Inscribing Photographic Elements. Dec. 30, 1938. The method of recording inscriptions on a photosensitized element that includes the steps of writing on an uncovered portion of said element; exposing said uncovered portion to a fogging illumination; taking a picture on the covered portion of said element; and subsequently developing and finishing said element.

Pat. 2,162,178. X-Ray Shielding Compound. June 13, 1939. An X-ray shielding compound plastic at room temperature comprising a mixture of a vinyl polymer, copolymer or interpolymer, a plasticiser and a metallic powder such as lead powder or litharge.

Pat. 2,166,051. Method of Manufacturing Continuous Coated Sheets of Paper, Film, or the Like. Aug. 1, 1939. A process of reducing the drying time of a continuous sheet coated with aqueous light sensitive material by applying concentrated liquid alcohol to harden the coating and extract part of the water and removing the surface liquid by pressure.

Pat. 2,265,571. Color Filter for Photographic Safelight Lamp. Dec. 9, 1941. A photographic safelight lamp color filter composed of dyed plastic material and having a grooved edge around the periphery to form a flange overlapping or interlocking with the lamp-housing to prevent light leaks.

Pat. 2,290,767. Fluoroscopes. July 21, 1942. A portable fluoroscope to be supported by the head of an individual combining an X-ray shielding face piece and a viewing aperture therein to hold a fluorescent screen.

Pat. 2,316,845. Method of Chilling Photographic Emulsions. Apr. 20, 1943. The method which consists in rapidly, uniformly, and progressively chilling a molten photographic emulsion containing water, gelatin and silver halides by forcing it under pressure in a thin film through a cooling chamber while stirring the emulsion and maintaining its temperature and rate of travel to prevent freezing the water in the emulsion.

Pat. 2,356,668. Photographic Filter Holder. Aug. 22, 1944. A combination package for a series of light-filters so constructed as to be convertible to a filter holder and having gripping means for attachment to the lens tube of an enlarger, etc.

Pat. 2,356,694. Optical Filter and Method of Producing Same. Aug. 22, 1944. A photographic filter for obtaining uniform densities on exposure through a wide angle lens. The filter is of clear material of uniform index of refraction and thickness throughout and imprinted with light screening material of uniform density in a pattern having a circular central portion and outwardly tapering symmetrically arranged radiating portions.

Pat. 2,392,502. Apparatus for Making Photographic Prints on Variable Contrast Light-Sensitive Material. Jan. 8, 1946. A two-color light filter having a checkerboard color arrangement and having a shutter composed of an equally sized checkerboard pattern of transparent and opaque areas in slideable relationship therewith to vary the ratio of the two colors.

SCHEDULE 8

Patents Relating to Colored Pigments

Pat. 1,993,971. Quinone-Oxime Pigments. Mar. 12, 1935. Green lake pigments, particularly of nitroso-betanaphthol.

Pat. 2,013,074. Organic Coloring Materials Comprising an Azo Compound and Oxidized Rosin as a Substratum. Sept. 3, 1935. Developing pigment in presence of insoluble salt of an oxidized rosin.

Pat. 2,013,075. Organic Coloring Materials Comprising an Azo Compound and an Arylated Rosin as the Substratum. Sept. 3, 1935. Developing pigment in presence of an insoluble salt of an arylated rosin.

Pat. 2,013,076. Organic Coloring Materials Comprising an Azo Compound and Chlorinated Rosin as a Substratum. Sept. 3, 1935. Developing pigment in presence of an insoluable salt of a chlorinated rosin.

Pat. 2,013,077. Organic Coloring Materials Comprising an Azo Compound and Nitro Rosin as a Substratum. Sept. 3, 1935. Developing color in presence of an insoluble salt of a nitrated rosin.

Pat. 2,013,084. Organic Coloring Materials Comprising Azo Compounds and Sulfonated Derivatives of Pyrogenic Decomposition Products of Rosin. Sept. 3, 1935. Developing color in presence of sulfonated derivative of a pyrogenic decomposition product of rosin.

Pat. 2,013,090. Organic Coloring Material Comprising Azo Compound and Hydrogenated Rosins. Sept. 3, 1935. Developing color in presence of insoluble salt of hydrogenated resin.

Pat. 2,013,091. Organic Coloring Material Comprising an Azo Compound and a Petroleum Sulfonate as the Substratum. Sept. 3, 1935. Developing color in presence of insoluble salt of a sulfonated petroleum.

Pat. 2,013,092. Organic Coloring Material Comprising an Azo Compound and a Naphthenate as a Substratum. Sept. 3, 1935. Developing color in presence of an insoluble naphthenate.

Pat. 2,013,099. Organic Coloring Material Comprising an Azo Compound and Natural Gums and Balsams as a Substratum. Sept. 3, 1935. Developing color in presence of a soap of a natural gum.

Pat. 2,013,100. Azo Lakes and Pigments. Sept. 3, 1935. Developing color in presence of a soap of liquid styrax.

Pat. 2,062,159. Dispersible Carbon Blacks. Nov. 24, 1936. Carbon black containing from 1–10% of adsorbed metal naphthenate to improve color, luster and gloss.

Pat. 2,092,750. Processes of Making Green Pigment. Sept. 14, 1937. Incorporating an insoluble heavy metal compound of a dispersing agent in nitroso-beta-naphthol to improve softness of pigment.

Pat. 2,117,860. Colored Rubber Products. May 17, 1938. Light-fast, colored rubber product containing lake of the azo from coupling diazotised 2-chlor-4-amino-1-toluene-5-sulfonic acid with 2-naphthol-3-carboxylic acid.

Pat. 2,127,874. Process of Making Nitroso-Beta-Naphthol Pigments. Aug. 16, 1938. Green pigment from reaction of nitroso-beta-naphthol with a ferrous salt of a polycarboxylic or hydroxy carboxylic acid in certain proportions.

Pat. 2,139,753. Lead Chromate Pigments and Process for Producing Same. Dec. 13, 1938. Treatment of lead chromate pigment with an inorganic reducing agent, particularly a metal sulfide or stannous halide or sulfate for purposes of restraining crystal growth.

Pat. 2,153,515. Processes of Preparing Pigment in Organic Vehicle Compositions Useful for Making Coating Compositions. Apr. 4, 1939. Transferring pigment from aqueous medium to organic vehicle by subjecting to hydraulic shearing action, such as passage through a colloid mill and in the absence of agents to assist the transfer.

Pat. 2,168,888. Azo Pigment Production. Aug. 8, 1939. Lake pigment containing metallic rosinate and precipitated in presence of a sulfate of a higher aliphatic alcohol.

Pat. 2,173,699. Liquid Coating Compositions and Lakes Therefor. Sept. 19, 1939. Printing ink and color lake, e. g., phthalocyanines, the latter containing a metallic resinate.

Pat. 2,173,920. Azo Dyestuff and Process for Making Same. Sept. 26, 1939. Maroon azo color consisting of diazotized meta-nitro-para anisidine coupled with beta-naphthol.

Pat. 2,187,108. Process of Purifying Lead Nitrate Solutions. Jan. 16, 1940. Reacting lead nitrate solution with a soluble ferrocyanide to precipitate copper impurity.

Pat. 2,192,955. The Use of Amines With Pigments. Mar. 12, 1940. A free-flowing, non-livering pigment comprising a phosphotungstic acid toner and an amine.

Pat. 2,195,258. Production of Color Lakes. Mar. 26, 1940. Improving strength and light-fastness of pigments from basic dyes by completely or partially substituting for the tungstates or molybdates present in a complex phospho-heteropoly acid precipitant, vanadium, columbium, or tantalum.

Pat. 2,212,917. Inorganic Chrome Pigment Production. Aug. 27, 1940. Titanium or zirconium hydrous oxide treatment of lead chromate.

Pat. 2,212,956. Azo Dyestuffs and Process for Producing Same. Aug. 27, 1940. Maroon pigment consisting of diazotised 3-nitro-4-amino anisol combined with the meta nitranilide of 2-hydroxy-3-naphthoic acid.

Pat. 2,213,546. Colored Pigment. Sept. 3, 1940. Yellow light-fast lead cyanamid pigment.

Pat. 2,225,664. Coating Composition. Dec. 24, 1940. Maroon coating containing manganese salt of azo formed by coupling diazotised alpha-naphthylamine with 1-naphthol-5-sulfonic acid.

Pat. 2,225,665. Azo Pigment and Coating Composition Containing the Same. Dec. 24, 1940. Manganese salts of Red 2B.

Pat. 2,237,768. Production of Azo Colors. Apr. 8, 1941. Preparation of azo dye pigments by separately preparing the accessory intermediate and adding to a component of the principal coupling as a completely-formed dye.

Pat. 2,259,641. A Nitroso-Beta-Naphthol Iron Pigment and a Process of Making It. Oct. 21, 1941. Treating pigment with colorless organic amine to impart dry soft-textured characteristics thereto.

Pat. 2,294,381. Treatment of Pigments With Ammonium Naphthenate. Sept. 1, 1942. Improving pigment (iron blue) texture by mixing small amount of ammonium naphthenate with aqueous pigment suspension.

Pat. 2,365,171. Lead Chromate Pigment Production. Dec. 19, 1944. Treating lead chromate with small amount of hydrous oxides of aluminum and titanium, together with a hydrous oxide of a rare earth metal to improve pigment light-fastness.

Pat. 2,387,528. Basic Alkaline Earth Chromito Chromate Pigment and Method of Making. Oct. 23, 1945. Intimate mixture of controlled amounts of an alkaline earth chromate and an alkaline earth compound heat-decomposable to the oxide ground to a pigment particle size state of subdivision.

Pat. 2,406,472. Manufacture of Cadmium Yellow Pigments. Aug. 27, 1946. Precipitating cadmium sulfide in presence of suspended, insoluble zinc compound, such as zinc sulfide, raw lithopone.

Pat. 2,410,187. Coating Composition. Oct. 29, 1946. Metal-protective calcium chromate-pigmented coating composition, the vehicle therefor being an alkyd or a phenol-phenol-formaldehyde resin having a specific water-impermeability value.

Pat. 2,416,064. Chromite Ore Pigment. Feb. 18, 1947. A disintegrated black pigment composition comprising the calcined reaction product of a mixture consisting of chromite ore and an alkaline earth compound heat-decomposable to the oxide in the ratio between 50/50 and 60/40.

Pat. 2,419,017. Metal Protective Pigment. Apr. 15, 1947. Metal protective pigment composition consisting of a mixture of ammonium ferrous phosphate and zinc yellow, the former being in an amount ranging from 5–30% by weight of the total pigmenting ingredients.

Pat. 2,419,027. Production of Cadmium Seleno-Cyanide. Apr. 15, 1947. Precipitated cadmium selene cyanide compound containing 2 atoms of selenium for each atom of cadmium and process for preparing cadmium selenocyanide by dissolving selenium in a solution of an inorganic cyanide salt and reacting the resulting solution with a solution of a soluble cadmium salt.

Pat. 2,419,094. Chromite Ore Pigment. Apr. 15, 1947. Chromium-containing pigment composition and method for preparing same comprising the disintegrated reaction product of a calcined mixture of a chromite ore, an alkaline earth metal compound, and from 5–50% on the pigment basis of an added phosphate, particularly calcium phosphate.

Pat. 2,430,589. Light-Stable Calcium Chromate Pigment. Nov. 11, 1947. Calcium chromate containing from 3–15% of a colored water-insoluble trivalent metal oxide, particularly chromic oxide.

Patents Relating to Zinc Sulfide White Pigments

Pat. 1,906,074. Processes for the Production of Zinc Salt Solutions. Apr. 15, 1933. Dissolving zinc content of oxydic zinciferous material by regulated addition of acid (sulfuric) with acid concentration in suspension not exceeding 2%.

Pat. 1,912,332. Recovery of Zinc Compounds From Technical Zinc Liquors. May 30, 1933. Precipitating a zinc oxysulfate by addition of a basic alkaline earth metal compound.

Pat. 1,936,849. Process of Making Barium Salts. Nov. 28, 1933. Reacting aqueous barium sulfide solution with calcium chloride in an amount less than that equivalent to barium sulfide.

Pat. 1,949,925. Pigments and Process for Making Same. Mar. 6, 1934. Passing calcined lithopone through colloid mill and adding small amount of sodium silicate thereto.

Pat. 1,977,583. Methods of Producing Zinc Sulphide Pigments and Products Thereof. Oct. 16, 1934. Heat and pressure treatment of lithopone.

Pat. 2,016,536. Processes of Producing Lithopones of Low Oil Absorption. Oct. 8, 1935. Calcining lithopone in presence of an alkali metal sulfate.

Pat. 2,016,537. Calcium Sulphate-Zinc Sulphide Pigments. Oct. 8, 1935. Co-precipitating zinc sulfide and calcium sulfate by reacting zinc sulfate with calcium hydrosulfide and neutralizing free acid formed in the reaction.

Pat. 2,111,137. Calcium Sulphate-Zinc Sulfide Pigments. Mar. 15, 1938. Calcium sulphate-zinc sulphide pigment containing small amount of zinc oxide.

Pat. 2,111,236. Recovery of Barium From Black Ash Residues. Mar. 15, 1938. Calcining black ash residue in presence of steam to convert its acid-insoluble barium values to acid-soluble form.

Pat. 2,112,357. Process of Making Calcium Sulfate-Zinc Sulfid Pigments. Mar. 29, 1938. Rapid strike and handling of reactants, i. e., mixing solutions and completing formation of precipitate in less than 5 minutes.

Pat. 2,113,381. Extended Zinc Pigments. Apr. 5, 1938. Non-coalesced composite zinc pigment and a difficultly water-soluble fluorine compound extender having a refractive index less than 1.44.

Pat. 2,123,698. Calcium Sulfate-Zinc Sulfide Pigments. July 12, 1938. Maintaining excess of zinc sulfate and sulfuric acid in reaction mixture at end of precipitation.

Pat. 2,163,388. Treatment of Barytes. June 20, 1939. Washing barytes ore prior to reduction with inorganic acid.

Pat. 2,166,230. Tinted Pigments and Process for Producing Same. July 18, 1939. Tinted zinc sulfide pigment coalesced with colored metal sulfide.

Pat. 2,173,895. Process for Producing Sulphide Pigments. Sept. 26, 1939. Producing zinc, cadmium, and antimony sulfide pigments by reaction with an alkaline earth metal thiosulfate.

Pat. 2,173,912. Barium Hydroxide Production. Sept. 26, 1939. Pure barium hydroxide production by reacting barium sulfide with zinc oxide under superatmospheric pressures and temperatures.

Pat. 2,175,273. Cyclic Process for Making Zinc Sulphide Pigment. Oct. 10, 1939. Recovering zinc from ammoniacal solution by adding to such solution sulfur compounds capable of precipitating zinc as sulfide.

Pat. 2,177,251. Process for Producing Blended Pigments. Oct. 24, 1939. Producing composite pigment by mixing zinc sulfide with hydrated calcium sulfate and subjecting mixture to shearing action, followed by dehydration treatment.

Pat. 2,178,334. Water Dispersing Zinc Sulfide Pigment. Oct. 31, 1939. Treating pigment with small amount of an alkali metal pyrophosphate.

Pat. 2,186,095. Pigment Process. Jan. 9, 1940. Hydro-separating zinc sulfide pigment and wet grinding in presence of small amount of an alkali metal pyrophosphate.

Pat. 2,187,130. Treated Pigment and Process for Producing Same. Jan. 16, 1940. Rendering zinc sulfide pigments stain-resistant by incorporating therein a small amount of a thiocyanate, thiosulfate, or xanthate.

Pat. 2,213,555. Process for Producing Calcium Sulfate-Zinc Sulfide Pigments. Sept. 3, 1940. Reacting zinc sulfate solution with solution containing ammonium sulfide and calcium salt.

Pat. 2,229,130. Process for Making Luminescent Zinc Pigments. Jan. 21, 1941. Calcining zinc pigment in presence of a compound of copper.

Pat. 2,248,632. Lithopone and Process of Producing Same. July 8, 1941. Introducing barium sulfide and zinc sulfate solutions at separated points in reaction vessel to provide one or more zones of excess barium sulfide and zinc sulfate and repeatedly circulating precipitated crude lithopone through said zones.

Pat. 2,261,177. Zinc Sulphide Pigment. Nov. 4, 1941. Treating calcined pigment with protective agent such as hydrate aluminum oxide to inhibit yellowing or darkening.

Pat. 2,296,638. High Surface Hiding Pigment Materials and Process of Making Same. Sept. 22, 1942. Mixing with an aqueous suspension of the pigment a water-soluble acid and an alkali metal silicate cellulose xanthate or a soluble cellulose compound.

Miscellaneous

Pat. 2,125,143. Process of Recovering Sulphuric Acid From Hot Gas Mixtures Containing Sulfur Oxides. July 26, 1938.

Pat. 2,128,311. Method of Carrying Out Chemical Reactions. Aug. 30, 1938. Oxidizing dissolved ferrous compound in a solution of a heavy metal salt by means of a jet nozzle.

Pat. 2,213,211. Method of Precipitation. Sept. 3, 1940. Reacting liquids by forcing solution of one reactant by means of a jet nozzle at specific velocities.

Pat. 2,213,907. Method of Precipitation. Sept. 3, 1940. Effecting reaction by forcing one reactant through a jet nozzle at specific velocities.

Pat. 2,289,462. Production of Vanadyl Sulfate. July 14, 1942. Product obtained by electrolytic reduction of a suspension of vanadium pentoxide.

Pat. 2,316,039. Cement Composition. Apr. 6, 1943. Mixing equimolecular proportions of iron sulfate of specific hydrate water content and an alkaline calcium compound (oxide, hydroxide and carbonate).

Pat. 2,413,778. Production of Titanium Nitride. Jan. 7, 1947. Process for preparing pure titanium nitride by reacting a halide of titanium with anhydrous ammonia and then subjecting the reaction product to decomposition at a temperature above 1000° C. in the presence of a current of nitrogen and hydrogen.

Pat. 2,437,174. Production of Active Carbon. Mar. 2, 1948. Impregnating sheeted cellulosic substance with boric acid, igniting impregnated material and thereafter extracting residual boric acid with water from the resulting active carbon or carbonaceous ash.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 11, 1949

[VOL. 618. No. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 513,910. THE VITRON CORPORATION, Wilmington, Del. Filed Dec. 7, 1946.

Vitron

FOR BLANKETS AND BATS MADE FROM GLASS FIBER CONTAINING MATERIALS AND ADAPTED TO BE USED FOR MAKING SUCH ITEMS AS THERMAL INSULATION, CEMENTS, AERATION PADS, PLASTIC REINFORCING MATERIALS, ROOF MATS, ROOF FELTS, PIPE WRAPS, TUBING, AND LAGGING TAPE.
Claims use since Oct. 30, 1946.

Ser. No. 522,232. ERI FOUTS, Kansas City, Mo. Filed May 12, 1947.

GARDENLAND

FOR NURSERY AND GREENHOUSE PRODUCTS—NAMELY, SHRUBS, TREES, AND PLANTS.
Claims use since Apr. 1, 1947.

CLASS 2

RECEPTACLES

Ser. No. 500,635. STOUT-LINDSAY, INC., East Cleveland, Ohio. Filed Apr. 20, 1946.

BABY BUFFET'

The word "Baby" is disclaimed apart from the mark.
FOR TRAINING DEVICES COMPOSED OF A TRAY AND COMPARTMENTED FOOD DISH ATTACHABLE TO HIGH CHAIRS OR TABLES.
Claims use since Jan. 10, 1946.

Ser. No. 512,232. THE B. F. GOODRICH COMPANY, Akron, Ohio, and New York, N. Y. Filed Nov. 8, 1946.

Koroseal

FOR IMPERVIOUS CORROSION-RESISTANT PLASTIC LININGS FOR METAL STORAGE TANKS.
Claims use since 1936.

CLASS 5

ADHESIVES

Ser. No. 482,088. BEMIS BRO. BAG CO., Minneapolis, Minn. Filed Apr. 13, 1945.

PLASTAPE

FOR SEALING TAPES, USED AS CLOSURES FOR FLEXIBLE WALLED PAPER AND TEXTILE BAGS.
Claims use since Mar. 21, 1945.

Ser. No. 507,155. TEX PRODUCTS, INC., Newark, N. J. Filed Aug. 9, 1946.

SUPER-TEX

FOR SYNTHETIC ADHESIVE CEMENT—NAMELY, SYNTHETIC POLYMERS OF A RESIN TYPE FOR LAMINATING AND BONDING TOGETHER WOOD, TEXTILES, FABRICS, PAPER, AND VARIOUS COMPOSITION MATERIALS.
Claims use since July 12, 1946.

CLASS 19

Ser. No. 525,607. BERNARD L. LATOUSEK, doing business

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 492,511. THE PENNSYLVANIA SALT MANUFACTURING COMPANY, Philadelphia, Pa. Filed Dec. 1, 1945.

DB-50

The number "50" appearing on the drawing is disclaimed apart from the mark. The additional lines following each of the letters and digits in the drawing indicate shading.

FOR INSECTICIDES.

Claims use since May 17, 1945.

Ser. No. 497,492. PLANT PRODUCTS CORPORATION, Blue Point, N. Y. Filed Mar. 1, 1946.

AZOFUME-70

The number "70" is disclaimed apart from the mark.

FOR FUMIGANT USED FOR CONTROL OF RED SPIDER.

Claims use since Nov. 9, 1945.

Ser. No. 510,619. JOHN RUBEL, doing business as John Rubel Co., New York, N. Y. Filed Oct. 10, 1946.

Be A Gentleman

FOR DEODORANTS FOR PERSONAL USE.

Claims use since August 1946.

Ser. No. 511,342. LINCOLN LABORATORIES, INCORPORATED, Decatur, Ill. Filed Oct. 23, 1946.

BETATHIOLIN

FOR MEDICINAL PREPARATION SOLD ONLY ON A PHYSICIAN'S PRESCRIPTION AND ADMINISTERED BY INTRA-MUSCULAR INJECTION FOR THE TREATMENT OF HYPERTROPHIC, DEGENERATIVE, AND SENESCENT ARTHRITIS, AND NEURITIS, AVITAMINOSIS B COMPLEX, AND OTHER CONDITIONS WHERE B COMPLEX IS INDICATED.

Claims use since Mar. 17, 1944.

Ser. No. 513,466. HELENA RUBINSTEIN, INC., New York, N. Y. Filed Nov. 29, 1946.

lipstick quartet

No claim is made to the word "Lipstick" apart from the mark.

FOR KIT CONTAINING LIPSTICKS.

Claims use since Nov. 27, 1945.

Ser. No. 515,956. O. E. LINCK COMPANY, INC., Clifton, N. J. Filed Jan. 18, 1947.

TAT FORMULA '83'

Applicant disclaims the word "Formula."

FOR POISONS FOR RODENTS, INSECTS, AND OTHER PESTS.

Claims use since Jan. 24, 1946.

Ser. No. 517,850. CAROLYN WALKER KEIN, doing business as Valley Sales Company, Seneca, Ill. Filed Feb. 20, 1947.

Tui

FOR HAIR AND SCALP TONIC.

Claims use since October 1946.

Ser. No. 523,798. ORLEANS COMPANY, INC., New York, N. Y. Filed June 7, 1947.

ORLEON

FOR ANILINE DYES.

Claims use since Jan. 5, 1947.
